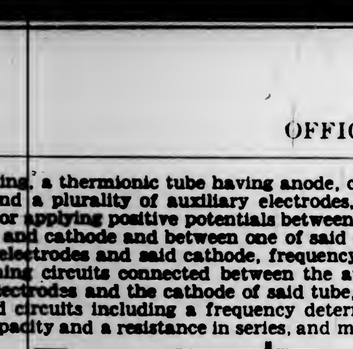
1. A mechanism for supplying ink to a type cylinder rotatable about a horizontal axis comprising an ink reservoir, an ink supply roller rotatable about an axis parallel to the type cylinder and engaging said type cylinder, means for driving said roller at the same surface speed as said type cylinder, a rotatable scraper engaging said roller for spreading the ink on said roller, and means for rotating said scraper in the opposite direction to that of the roller at less average surface speed than the surface speed of the roller whereby the ink will be spread and foreign material such as lint and grit will be released from the scraper as the scraper rotates.

2,001,891
MODULATION
Hans Otto Roosenstein, Berlin, Germany, assignor to Telefunken Gesellschaft für Drahtlose Telegraphie, m. b. H., Berlin, Germany, a corporation of Germany
Application May 5, 1932, Serial No. 609,422
In Germany May 21, 1931
3 Claims. (Cl. 179—171)

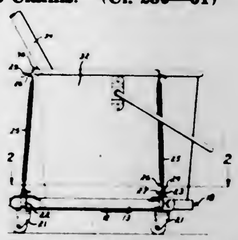


2. Means for producing undulatory electrical energy comprising, oscillation generating means

including, a thermionic tube having anode, cathode, and a plurality of auxiliary electrodes, circuits for applying positive potentials between said anode and cathode and between one of said auxiliary electrodes and said cathode, frequency determining circuits connected between the auxiliary electrodes and the cathode of said tube, one of said circuits including a frequency determining capacity and a resistance in series, and means

for modulating the frequency of the oscillations produced linearly at signal frequency including, a second resistance in parallel with said series resistance and capacity, a second thermionic tube having anode, cathode and control grid, a circuit connecting the anode to cathode impedance of said second thermionic tube in parallel with said second resistance, and circuits for applying modulating potentials between the control grid and cathode of said last-named tube.

2,001,892
CLUTCH WITH SYNCHRONIZING MEANS
Joseph P. Ruth and George H. Weelbing, Denver, Colo., assignors to The Ruth Company, Denver, Colo., a corporation of Colorado
Application November 7, 1933, Serial No. 696,991
3 Claims. (Cl. 192—53)

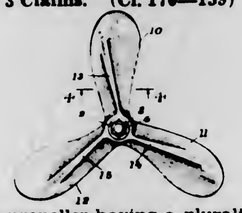


3. A clutch mechanism for interlocking a driven shaft with a driving power transmission member comprising a clutch member slidably but nonrotatably connected with the driven shaft, the adjacent surfaces of the clutch member and the power transmission member having teeth adapted to interlock, a friction clutch mechanism slidably but nonrotatably connected with the clutch member, a positive latching device for holding the clutch member and the friction clutch mechanism against relative longitudinal movement, the friction clutch mechanism and the power transmission member having cooperating friction surfaces, means for moving the clutch means and the friction clutch mechanism towards the power transmission member, means operated by the movement of the clutch member for bringing the friction surfaces into operative position and for forcing them together whereby the driving member and the driven shaft will be forced to rotate at the same speed, means operated by the further movement of the clutch member for releasing the friction clutch, and means operative by the still further movement of the clutch member for releasing the latching device before the teeth are brought into interengaging position.

2,001,893
GUY WIRE GUARD
Howard P. Seelye, Royal Oak, Mich.
Application April 11, 1932, Serial No. 604,566
1 Claim. (Cl. 189—31.5)

In combination, an inclined guy wire, anchorage means for the lower end of said guy wire, and a guard for said guy wire, said guard having a laterally opening open-ended slot and comprising a series of elongated blocks arranged in non-overlapping abutting engagement upon and frictionally engaging said wire, said blocks being so constructed and arranged that upon being struck they will permit flexing of the guy wire to cushion the blow.

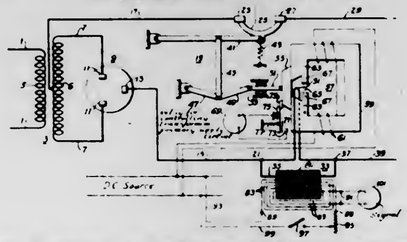
2,001,894
SCRUB BUCKET DOLLY
Arthur Smith, Pasadena, Calif.
Application June 2, 1934, Serial No. 728,731
5 Claims. (Cl. 280—61)



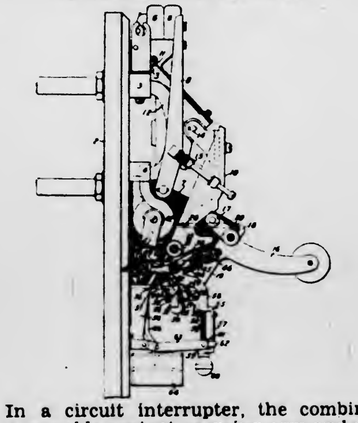
1. In a scrub bucket dolly, a base including a rim hoop member and a plurality of arms engaging the lower edge of said rim member, each of said arms terminating in a U-shaped end, the upper portion of said ends engaging the top of said hoop, the lower portion of said U-shaped ends having an aperture, the upper portion of said ends having an aperture in alignment with said first aperture, a caster having a base, said caster base engaging the lower portion of said U-shaped end, the caster including a shank fitting said aligned apertures and bucket engaging means on said shank.

2,001,895
ENGINE
Harold H. Timian, Detroit, Mich., assignor to Continental Motors Corporation, Detroit, Mich., a corporation of Virginia
Application June 4, 1931, Serial No. 542,014
28 Claims. (Cl. 123—52)

1. An intake manifold structure for an internal combustion engine having a fuel mixture forming device and including a runner communicating with said fuel mixture forming device, and wet fuel conducting means extending substantially the full length of the runner for inducing a stratified fuel flow in a predetermined defined path longitudinally of the runner for distributing the fuel to the engine.

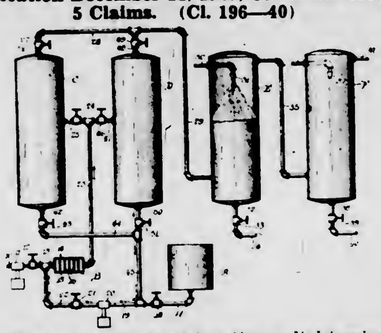


2,001,896
SHIP PROPELLER
Charles J. Ward, Grassmere, Staten Island, N. Y.
Application August 24, 1933, Serial No. 686,662
3 Claims. (Cl. 170—159)



1. A ship propeller having a plurality of blades rigidly connected to the central portion thereof and screw pitched to produce a propulsive action in water, the blades being inclined rearwardly of the normal axis of forward rotation to present sloping external surfaces to the water, the inner surface portions of the blades being connected to screw pitched webs.

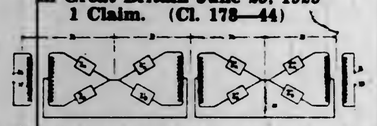
2,001,897
CIRCUIT INTERRUPTER
Donald C. West and Herbert A. Rose, Forest Hills, Pa., assignors to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa., a corporation of Pennsylvania
Application December 21, 1932, Serial No. 648,193
14 Claims. (Cl. 175—294)



2. In electrical apparatus, an electro-responsive means including a core member having an energizing winding and a normally ineffective deenergizing winding for supplying a magneto-motive force opposing that of said energizing winding, said deenergizing winding being effective upon the occurrence of predetermined electrical conditions, said deenergizing winding being paralleled by an inductive shunt having a core of magnetic material and means for substantially saturating said core when normal current is flowing through said deenergizing winding, the flux density in said core when the current flowing through said deenergizing winding has dropped to zero, being at least equal to two-thirds the flux density at saturation.

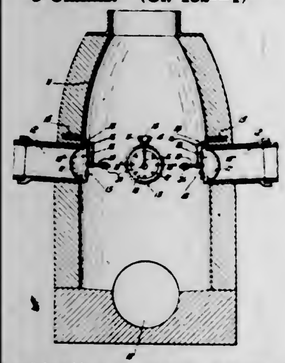
2,001,898
CIRCUIT INTERRUPTER
Walter M. Austin, Swissvale, Pa., assignor to Westinghouse Electric & Manufacturing Company a corporation of Pennsylvania
Application January 8, 1919, Serial No. 270,110
13 Claims. (Cl. 200—109)

1. In a circuit interrupter, the combination with a movable contact-carrying arm and an operating lever therefor, of a latch mechanism comprising an adjustable stop-member disposed on said lever, a pivoted main latch member having arms of different lengths, the shorter of which has a pair of oppositely disposed shoulders thereon for engagement with said stop member, a pivoted auxiliary latch member for engagement with the longer of the said main latch arms and having a projection, said projection extending to a position adjacent said contact-carrying arm to prevent the operation of said auxiliary latch member when the interrupter is in its open position, a spring connecting said latch members, a stop member for said auxiliary latch member and means for operating said auxiliary latch member.



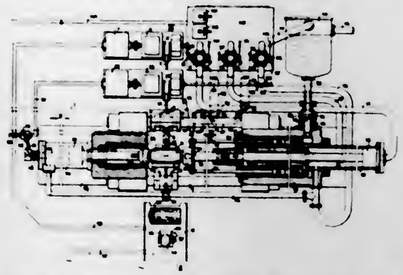
2,001,899
PROCESS AND APPARATUS FOR ACID TREATING LIGHT MINERAL OIL
Frank O. Blair, Laramie, Wyo., assignor to Standard Oil Company, Chicago, Ill., a corporation of Indiana
Application December 11, 1929, Serial No. 413,351
5 Claims. (Cl. 196—40)

3. The process of acid treating a light mineral oil which comprises thoroughly mixing and agitating said oil and sulfuric acid sludge, passing said mixture of oil and acid sludge to a settling zone where the sulfuric acid sludge is permitted to settle, removing the settled sludge, thorough-



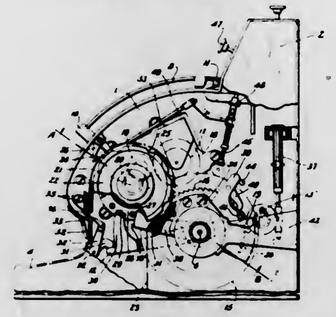
ly mixing and agitating said settled acid sludge with another portion of untreated light mineral oil, the amount of sulfuric acid sludge being greater than the amount used in the first treatment, passing the second mixture of sulfuric acid sludge and oil to a second settling zone where the sludge is again permitted to settle, and removing the used sulfuric acid sludge from the treated oil.

2,001,900
TELEPHONE AND LIKE TRANSMISSION SYSTEM
Alan Dower Blumlein, London, England, assignor to Columbia Phonograph Company, Inc., Bridgeport, Conn., a corporation of New York
Application April 24, 1930, Serial No. 446,892
In Great Britain June 29, 1929
1 Claim. (Cl. 178—44)



An electrical transmission net-work comprising two inductive windings tightly coupled to each other and two impedances, said inductances and impedances being adjacent each other and being connected to form a bridge, a pair of terminals connected to the junction point of said impedances and to the junction point of said inductances, another pair of terminals connected to the extreme ends of said inductances and a resistance shunt connected across said first-named pair of terminals to correct the impedance change introduced by the parallel inductive opposing impedance of the magnetically coupled arms.

2,001,901
ODOR-SEALING VALVE FOR COMBINATION SEWER DRAINS
Brant A. Cunningham, Akron, Ohio
Application October 14, 1933, Serial No. 693,627
3 Claims. (Cl. 182—4)

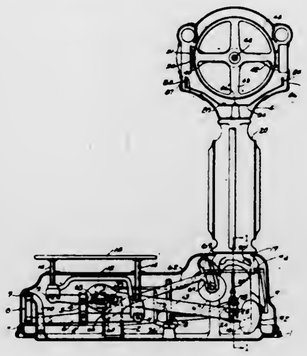


1. In combination, a sewer system having a manhole therein, a drain conduit leading to said manhole and having an outlet in said manhole, a valve structure of waterproof, flexible, deformable material disposed on a horizontal axis and having a surface thereof shaped to cooperate with and enter said outlet end of the conduit, means disposed co-axially of said valve structure for supporting the same, and means operating through said support for yieldingly retaining said valve under deforming pressure against said outlet end of said conduit.

2,001,902
APPARATUS FOR THE MANUFACTURE OF SEAMLESS HOLLOW BODIES
William H. Engelberts, Pittsburgh, Pa.
Application June 3, 1933, Serial No. 674,196
6 Claims. (Cl. 78—9)

2. An apparatus for manufacturing hollow bodies from heated solid-metal billets, comprising a main cylinder with a plunger therein, a mandrel and a mandrel guide, means connecting the mandrel and mandrel guide with the plunger, a second cylinder, a piston therein extended at both ends, a mandrel connected to, and carried by, one of said piston extensions, a stationary billet holder, in alignment with, and between, said cylinders, with a pocket therein to accommodate the billet, an auxiliary cylinder, partially projecting into the main cylinder and partially engaging the plunger therein, having a piston rigidly connected to said plunger, pressure fluid applied to said piston for advancing the plunger with the mandrel and mandrel guide, to place the billet into working position within said holder, high pressure fluid, supplied to the plunger in the main cylinder and to the piston in the second-mentioned cylinder, for advancing both mandrels, connected to said plunger and piston, respectively, in opposite direction to each other, into the stationarily held billet, thus piercing the billet longitudinally while displacing the metal of the billet laterally so as to form a hollow body open at both ends, pressure fluid applied to the plunger for further advancing the mandrel connected thereto, thereby returning the second-mentioned mandrel and the piston, carrying the same, to their initial position, pressure fluid supplied to the auxiliary cylinder for reversing the direction of motion of the piston therein, thereby withdrawing the mandrel from the hollow body and returning the plunger with said mandrel to their initial position, pressure fluid supplied to the second-mentioned cylinder for re-advancing the piston therein, causing relative movement of said piston-extensions, thereby effecting, the ejection of the hollow body from its holder and the return of the mandrel guide to its initial position by means of one of said piston extensions and, thereafter, the expulsion of the hollow body from its support by means of the second piston extension and cooperatively connecting means projecting into the path of the last-mentioned piston-extension, a delivery table for receiving the hollow body after its expulsion, a switch on said table, a billet supplying device, means connecting said switch with the billet supplying device, means connected to said switch and extending into the path of the hollow body upon said table, acting upon said switch to impart relative movement to said supplying device, thereby placing another billet in alignment with, and between, the punching mandrels.

2,001,903
TICKET DISPENSING MEANS
Carl Fürrer, Zug, Switzerland, assignor to Landis & Gyr, A-G., Zug, Switzerland, a corporation of Switzerland
Application March 23, 1933, Serial No. 662,215
In Switzerland March 29, 1932
1 Claim. (Cl. 164—42)



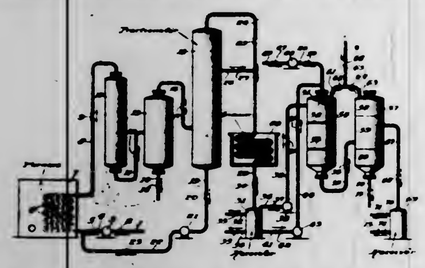
A ticket-dispensing mechanism including in combination a strip-feeding member comprising a drum having a plurality of stops thereon, manually-actuated means for setting said drum to a predetermined stop and spring power means for thereafter rotating the drum to feed a predetermined number of units from said strip, for severing said units from the strip, and for thereafter returning said mechanisms to their initial positions the severing device being retracted manually to permit the feeding action and being power actuated to effect cutting.

2,001,904
COMBINATION HAIR CURLING INSTRUMENT
Dewey E. Harmon, Dallas Center, Iowa
Application October 16, 1933, Serial No. 693,766
6 Claims. (Cl. 132—33)

1. In a hair curling instrument, a hollow tube, a rod rotatably mounted in said tube, a means for preventing the rotation of said rod in one direction relative to said tube, a sleeve rotatably and slidably mounted on said tube, a means for restriction of rotation of said sleeve in one direction, a means to facilitate the securement of hair to said rod, a means for securement of hair to said tube at times, and a means for securing hair to said second-mentioned tube.

2,001,905
WEIGHING SCALE
Halvor O. Hem, Toledo, Ohio, assignor to Toledo Scale Manufacturing Company, Toledo, Ohio, a corporation of New Jersey
Application December 23, 1932, Serial No. 648,540
9 Claims. (Cl. 265—37)

5. In a device of the class described, in combination, weighing mechanism, automatic load counterbalancing and indicating means connected thereto, manually manipulative load counterbalancing means in operative relation thereto, indicating means actuated thereby, said automatic indicating means comprising a rotatable cylindrical chart and said indicating means for said manipulative load counterbalancing means including a two-armed member pivoted below said chart and having portions extending above the plane of the lower edge of said cylindrical chart, the ends of said upwardly extending portions having surfaces which bear indicia, denoting weights of loads offset by said manipulative load counterbalancing means.



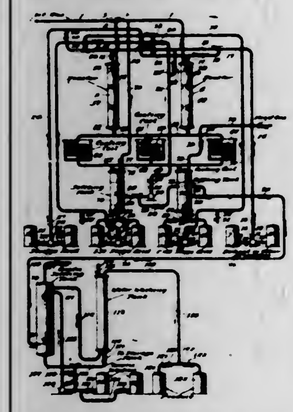
2,001,906
TREATMENT OF HYDROCARBON OILS
Vladimir Ipatieff, Chicago, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a corporation of Delaware
No Drawing. Application October 26, 1932, Serial No. 639,615
3 Claims. (Cl. 196—10)

1. A process for the production of high anti-knock motor fuel, which comprises simultaneously subjecting a straight run distillate containing gasoline hydrocarbons and gases resulting from a cracking process to the action of sulphuric acid, and reacting olefins contained in the gases with a portion of the distillate to form alkylated derivatives of high anti-knock rating.

2,001,907
TREATMENT OF MOTOR FUEL
Vladimir Ipatieff, Chicago, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a corporation of Delaware
Application October 26, 1932, Serial No. 639,618
2 Claims. (Cl. 196—10)

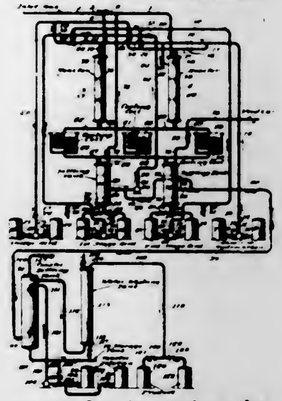
1. A process for increasing the anti-knock value of light hydrocarbon distillates containing a substantial quantity of hydrocarbons within the gasoline boiling range, which comprises reforming the distillate by pyrolytic conversion thereby forming condensible aromatics and gaseous ole-

fins, reacting such olefins and aromatics in the presence of sulphuric acid to form alkylated de-



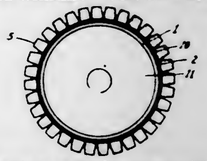
rivatives, and recovering a liquid product containing said derivatives.

2,001,908
TREATMENT OF HYDROCARBONS
Vladimir Ipatieff, Chicago, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a corporation of Delaware
No Drawing. Application October 26, 1932, Serial No. 639,620
5 Claims. (Cl. 196—10)



1. A process for the production of liquid products suitable for use as motor fuel and possessing high anti-knock characteristics from gaseous products, which comprises subjecting the gases resulting from a hydrocarbon oil cracking process to the action of preformed sludge acid produced in the treatment of hydrocarbons with sulphuric acid, and recovering the desired resulting liquid product.

2,001,909
TREATMENT OF HYDROCARBONS
Vladimir Ipatieff, Chicago, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a corporation of Delaware
Application October 26, 1932, Serial No. 639,621
6 Claims. (Cl. 196—10)

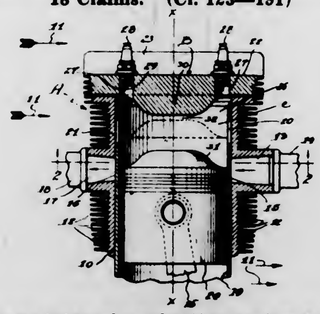


6. In the alkylation of cyclic hydrocarbons of a benzenoid character, the method which comprises reacting the cyclic hydrocarbon with olefine hydrocarbon in the presence of preformed sludge acid produced in the treatment of hydrocarbons with sulphuric acid.

2,001,910
TREATMENT OF HYDROCARBON OILS
Vladimir Ipatieff, Chicago, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a corporation of Delaware
Application October 28, 1932, Serial No. 640,123
6 Claims. (Cl. 196—10)

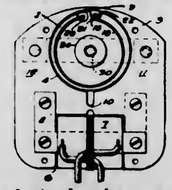
5. A process for increasing the anti-knock value of light distillates containing a substantial quantity of hydrocarbons within the gasoline boiling range, which comprises forming alkylated compounds in the distillate by reacting components of the latter with olefins in the presence of preformed sludge acid derived from the treatment of hydrocarbons with sulphuric acid.

2,001,911
ABRASIVE ARTICLES
Charles E. Wooddell and Charles S. Nelson, Niagara Falls, and Roy Lincoln, Buffalo, N. Y., assignors to The Carborundum Company, Niagara Falls, N. Y., a corporation of Pennsylvania
Application April 21, 1932, Serial No. 606,632
11 Claims. (Cl. 51—190)



8. An abrasive article comprising a flexible backing and a plurality of blocks of bonded abrasive material attached to said backing by a layer of resilient material of sufficient thickness to permit substantial yielding of said blocks under the pressures applied in grinding.

2,001,912
THERMAL INSULATION
Martin C. Huggett, Chicago, Ill., assignor, by mesne assignments, to Research Inc., a corporation of Illinois
No Drawing. Application September 30, 1933, Serial No. 691,696
2 Claims. (Cl. 154—44)



1. A thermal insulation unit consisting of a base sheet having thereon a highly polished heat-reflective non-metallic mineral film; said film having a heat-reflective power approximating that of polished silver.

2,001,913
ENGINE
James W. Kinnucan, Detroit, Mich., assignor to Continental Motors Corporation, Detroit, Mich., a corporation of Virginia
Application March 3, 1932, Serial No. 596,417
18 Claims. (Cl. 123—191)

1. In an internal combustion engine, a cylinder, sleeve valve means associated with said cylinder and acting to induce the fuel mixture introduced into the cylinder to swirl in one direction about the cylinder axis, a cylinder head structure closing one end of said cylinder and having heat radiating fins extending across the outer face of the head structure, a piston operable within said cylinder, and a spark plug having its terminals positioned radially inwardly and adjacent the outer end of the wall of said cylinder, said spark plug having its end portion remote from its spark terminals projecting outwardly substantially axially of the cylinder from said cylinder head structure into a space intermediate two of said fins.

2,001,914
NON-SELF-STARTING CLOCK-MOTOR
Bernard E. Lenehan, Bloomfield, N. J., assignor to Westinghouse Electric & Manufacturing Company, a corporation of Pennsylvania
Application October 21, 1931, Serial No. 570,092
22 Claims. (Cl. 172—275)

3. A slow-speed, single-phase, synchronous motor comprising a rotor and a stator, the rotor being a single circular disk of magnetizable material having a large number of spaced teeth on its periphery, the stator having two co-planar polar portions each embracing substantially half of the rotor and having teeth spaced with a tooth pitch to cooperate with the rotor teeth, characterized by a diametrically disposed, non-magnetic bridge spanning the two polar portions and provided with a stationary rotor-supporting pin disposed centrally, the rotor having some freedom of longitudinal movement on said pin and being normally held in an intermediate longitudinal position by the attraction of the stator during the normal operation of the motor.

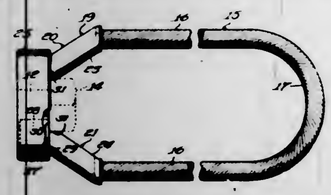
9. A synchronous-motor drive-mechanism comprising, in combination with the motor-rotor, a stiff spring for transmitting the entire torque of the motor-rotor, the stiffness being such that the spring is deflected through an angle somewhere of the order of eight times as much as the angle of deflection of the motor-rotor at the pull-out torque of the motor under normal voltage conditions, a flywheel driven by said spring, and a substantially freely running spur reduction-gear driven by the flywheel and constituting a fluctuating load on the flywheel.

21. A single-phase motor of a type having teeth of identical tooth-pitches on the stator and the rotor, characterized by having a one-piece, two-pile magnetizable stator member having a multi-toothed bore for receiving the rotor, and having magnetically saturated reduced-section portions of said material at diametrically opposite sides of said bore for holding the alinement of the two polar halves of said material.

2,001,915
HAIR WAVING APPARATUS
Macia Smith Mabie, San Francisco, Calif.
Application April 30, 1934, Serial No. 723,160
4 Claims. (Cl. 132—33)

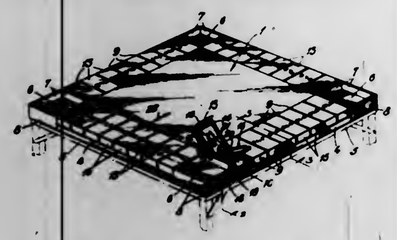
1. In a hair waving device, a pair of hair clamping bars pivoted to each other at one end, one of the bars at its free end having an inwardly protruding blade, the other of the bars at its free end having spaced prongs with which the blade is adapted to frictionally engage to maintain the bars in clamping positions alongside one another, and a lever member pivoted on one of the bars for separating the bars.

2,001,916
SOUND ABSORBING MATERIAL
Jacob Mazer, Stonehurst, Pa.
Application July 23, 1929, Serial No. 380,328
3 Claims. (Cl. 154—44)



1. A sound-absorbing body containing cells whose walls are flexible and highly elastic, and of such thinness that they will vibrate under the influence of sound waves, the cells in one portion of the body being of a predetermined average size, and the cells in another portion of the body being of another predetermined average size.

2,001,917
STRAIN DEVICE
Herbert E. Miller, Allentown, Pa., assignor to Utilities Service Company, Inc., Allentown, Pa., a corporation of Pennsylvania
Application January 4, 1933, Serial No. 650,153
6 Claims. (Cl. 248—31)



1. A device of the character described comprising a flexible article embracing member, and a yoke formed of a pair of complementary members each secured to one end of said flexible member, one of said complementary members being provided with an opening extending longitudinally with respect to the flexible member and

surrounded by the material of such complementary member, the other complementary member having a projecting portion corresponding in shape and size to and movable longitudinally into

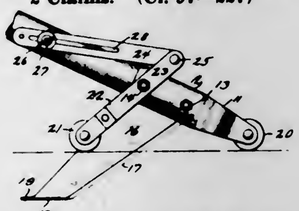
said opening, the members of said pair having portions facing in the direction of said flexible member and lying substantially in the same plane to be engaged by a common securing element.

2,001,918
CARD TABLE TOP
Wilford J. Nevius, Washington, D. C.
Application January 12, 1935, Serial No. 1,584
7 Claims. (Cl. 273—151)

1. A portable card table top for duplicate games, comprising a substantially flat playing surface terminating in depending marginal flanges for removable engagement with the edge portions of a card table, the playing surface of the table being offset downwardly at opposite sides to provide recesses extending along opposed edges of the table, a plurality of card-containing compartments each having an outer wall and side flanges arranged in side by side relation in said recesses, each compartment being pivotally mounted for swinging movement towards and away from its said recess, said outer wall of each compartment being disposed flush with and constituting a continuation of said playing surface when said compartment is in closed position, and means within each of said compartments for yieldably retaining one or more groups of cards; each group constituting a hand to be played on the playing surface, the side flanges of said compartments preventing displacement of the cards therein when the table top is removed and in stored position on its edge.

2,001,919
MEANS OF PREPARING, PACKAGING, AND SERVING FROZEN CONFECTIONS
John J. Nolte, Los Angeles, Calif.
Application February 14, 1933, Serial No. 656,702
8 Claims. (Cl. 206—56)

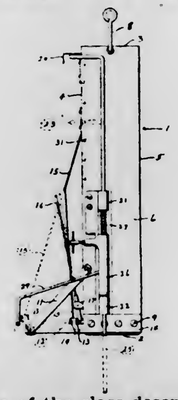
1. A device as described, consisting of a paper cone, a drip plate of larger diameter than the open widest portion of said paper cone and designed to close the same and providing an annular groove around the outside face of the paper cone, a thimble in said drip plate having a closed terminal projecting into the cone and a stick de-



tachably and frictionally anchored in said thimble.

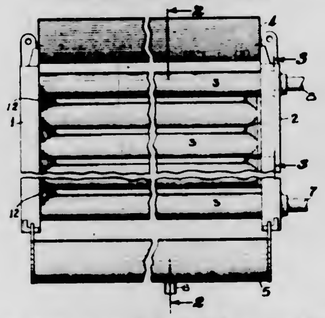
2,001,920
MOTOR DRIVEN SWITCH MECHANISM
Georg Ogurkowski, Zug, Switzerland, assignor to Landis & Gyr, A-G., a limited joint-stock company, Zug, Switzerland
Application May 24, 1928, Serial No. 280,312
In Switzerland June 11, 1927
1 Claim. (Cl. 200—92)

Switching mechanism including in combination side frames, a shaft rotatably mounted in said frames to be driven by a motor mounted between said frames, stop pins on one side frame, a stop arm mounted eccentrically on said shaft, a spring connected to said arm and shaft to drive said arm from said shaft, a switch and operating means therefor controlled by said arm, said switch and operating means being positioned between said frames and between said shaft and motor.



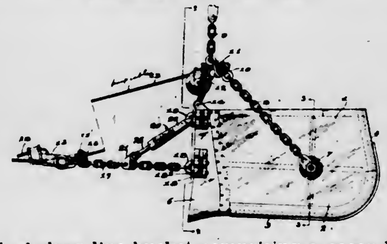
2,001,921
LAWN EDGER
Howard Lester Petteys, Perrysburg, Ohio
Application August 26, 1932, Serial No. 630,504
2 Claims. (Cl. 97—227)

1. In a lawn edger, a handle shaft, a roller journalled on the forward end thereof, a blade depending from the shaft parallel to the plane of the shaft axis and perpendicular to the axis of the roller, said blade having a forward cutting edge, a rear roller mounted below the handle shaft and rearwardly of said forward roller, an arm on the end of which said rear roller is mounted, said arm being pivoted intermediate its



ends on the shaft, a link pivoted to the other end of the arm, and an adjustable connection between said link and the shaft, said arm extending downwardly and rearwardly and said link movable longitudinally alongside said handle.

2,001,922
APPARATUS FOR SAMPLING LIQUIDS
Emerson W. Pribble, Oklahoma City, Okla.
Application August 7, 1933, Serial No. 683,937
4 Claims. (Cl. 137—18)



1. In a device of the class described, the combination with a body having open ends, and a slidable closure for the lower end thereof, of a spring carried by the exterior of the body and connected to the closure for urging it to a closing position, longitudinally movable rods carried by opposite sides of the body and adapted to extend below the bottom thereof, said rods connected together for simultaneous movement, and a latch for holding the closure in an open position, said latch slidably carried by the rods and adapted to be adjustably connected thereto for movement therewith, and adapted to release said closure to the action of said spring when the rods are moved upwardly with relation to the body.

2,001,923
LIQUID COOLER
James Robertson and George H. Purdy, San Francisco, Calif.
Application April 16, 1934, Serial No. 720,823
4 Claims. (Cl. 257—183)

3. In a cooler, a pair of spaced vertical headers, and a plurality of tubes having hollow lips thereon, the tubes being connected in series and mounted between the headers with the lip of one tube being positioned in close proximity to the wall of an adjacent tube, each pair of those tubes which are connected having their walls at points adjacent their ends bent outwardly to provide a channel connecting the interior of one tube with the interior of another tube.

2,001,924
EXCAVATING BUCKET
Basil P. Strong, Atwater Village, Ohio, assignor to Blaw-Knox Company, Pittsburgh, Pa., a corporation of New Jersey
Application October 26, 1932, Serial No. 639,683
8 Claims. (Cl. 37—135)

1. A drag-line bucket comprising a scoop having side walls, a drag-line flexibly connected to the front edge portion of each of said side walls, a rigid lengthwise adjustable tension-compression member interposed diagonally between each drag line and the upper part of each of said side walls and connected to the drag-line and to the upper part of each side wall, a dump cable connected to the front edge portions of each side wall, a drag cable, a pulley carried by the drag cable, the medial portion of the dump cable passing about said pulley, a hoist line, and sheave wheels supported by the hoist line and arranged at the front edge potrions of the top of the scoop, said dump cable passing over the said sheave wheels.

2,001,925
PROCESS FOR THE MANUFACTURE OF STARCHES
Francis H. Thurber, Washington, D. C., dedicated to the free use of the Public
No Drawing. Application August 15, 1932, Serial No. 628,890
5 Claims. (Cl. 127—66)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A process for the manufacture of starch which comprises treating a freshly ground sweet potato pulp with an alkaline sodium sulphite solution.

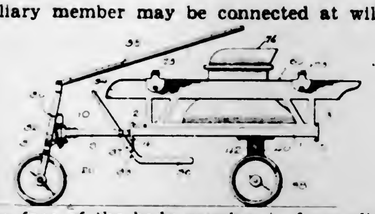
2,001,926
ESTERIFICATION OF ORGANIC ACIDS WITH SEPARATION OF THE ESTERS IN HIGHLY CONCENTRATED FORM
Gábor Török, Budapest, Hungary
No Drawing. Application June 9, 1932, Serial No. 616,314. In Germany June 13, 1931
5 Claims. (Cl. 260—106)

1. A process for the direct conversion of water-soluble lower fatty acids with monohydric aliphatic alcohols into highly concentrated esters which are practically free from alcohols, in which the esterification of the aqueous lower fatty acid is effected in two consecutive, conjoint, but separately proceeding working stages, in the first stage with an excess of alcohol and in the second stage

with an excess of acid, practically completely esterifying the said fatty acid by subjecting the liquid acid coming from the excess acid stage to the action of excessive quantities of alcohol vapors led in counter-current to it, and practically completely removing any alcohol vapors from the ester by subjecting the ester vapors resulting from the excess alcohol stage to the action of an excess of unreacted liquid lower fatty acid led in counter-current to them.

2,001,927
PACKAGE DIVERTING DEVICE
Paul Van Wyk and Irvine R. Acheson, Portland, Oreg., assignors to Food Machinery Corporation, San Jose, Calif., a corporation of Delaware
Application April 13, 1933, Serial No. 666,036
13 Claims. (Cl. 198—185)

2. A main conveyor for moving packages along a predetermined path comprising a frame work, a flexible conveyor and supporting rollers, a package diverter consisting of a portable unit conveyor attachable to any one of said supporting rollers and wholly supported by said main conveyor, friction means on said portable unit conveyor for contact with said main conveyor to derive movement therefrom, means carried by said unit conveyor for directing packages from said main conveyor to said unit conveyor to transfer them to a place of disposal.



2,001,928
PLACARD
Antonino Alfano, Rome, Italy
Application September 21, 1931, Serial No. 634,248
In Italy September 21, 1931
1 Claim. (Cl. 41—34)

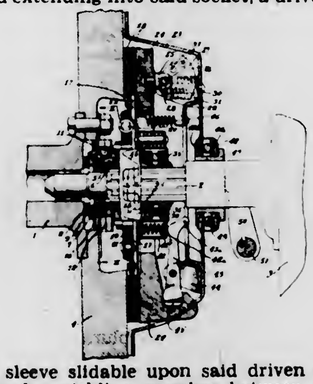
A method of producing placard reproductions, consisting in making a sketch of the placard to be reproduced, enlarging the switch to the size of the desired reproduction, dividing the enlargement into its elements of equal color and light effect, forming patterns corresponding to the shapes of the elements as divided, superimposing the patterns on a pile of sheets of materials of different colors and effects, cutting the sheets in accordance with the pattern in a single operation, and fixing the cutouts on a support in correspondence with the arrangement of the similar elements in the sketch.

2,001,929
CONVERTIBLE CHILD'S VEHICLE
Shearman Botteese, Washington, D. C.
Application February 12, 1934, Serial No. 710,927
11 Claims. (Cl. 280—8)

1. A convertible child's vehicle comprising a main body member, having rotatable surface-engaging elements on one face, locking elements on both faces of said body member, and an auxiliary member having gliding surface-engaging elements and locking elements for cooperative engagement with the locking elements on either of the faces of the body member whereby the auxiliary member may be connected at will to

either face of the body member to form gliding supports or a rack body.

2,001,930
PROCESS AND APPARATUS FOR THE FERMENTATION OF CARBOHYDRATES
Stephan Carl Daránvi, Hamburg, Germany
No Drawing. Application October 5, 1931, Serial No. 567,107. In Germany March 20, 1931
10 Claims. (Cl. 260—135)



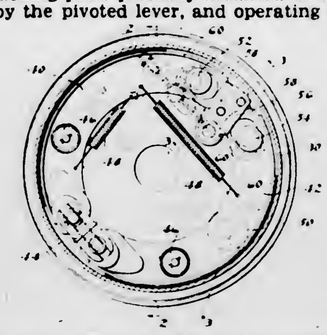
1. A method of producing butyl alcohol and acetone by bacterial fermentation of carbohydrates, consisting in inoculating an aseptically prepared, carbohydrate-containing mash with butyl alcohol and acetone producing bacteria, bringing it into vigorous fermentation, adding to the fermenting mash a further, also aseptically prepared mash having a higher carbohydrate concentration than the fermenting mash initially had, in quantity so that the total carbohydrate concentration, calculated on the fermented and unfermented carbohydrates, of the mash mixture resulting after the addition exceeds the total carbohydrate concentration of the initial mash, but its actual unfermented carbohydrate concentration does not rise above the initial total carbohydrate concentration of the starting mash, but is equal to that at the most, and then continuing the fermentation until completion.

10. A method of producing butyl alcohol and acetone by bacterial fermentation of carbohydrates with the recovery of a fermented product having a so-called "solvent"-content of about 3.6%, consisting in inoculating an aseptically prepared mash having a carbohydrate-content of about 7%, at a temperature of 36–37° C., with a bacterial culture of a type producing butyl alcohol and acetone, bringing the mash into vigorous fermentation, intermittently adding to the partly fermented mash, with maintenance of the fermentation temperature and of the fermentation, an also aseptically prepared further mash, having a carbohydrate concentration of about 14%, in quantities which are at first only small, amounting to 1/8 to 1/5 of the starting mash of about 7% carbohydrate concentration, and thereafter at 3 to 6 hour intervals in larger quantities, amounting to 1/3 to 1/2 of the starting mash of about 7% carbohydrate concentration, the additions being continued until the total amount of mash by volume attains to about double the amount of the starting mash by volume, whereupon the fermentation is continued until at the most 1% of unfermented carbohydrates will be left in the mash, then the "solvents" are separated by distillation, and the liquor remaining after distillation is employed instead of water for the production of further mash.

2,001,931
AUTOMATIC CLUTCH
Kenneth E. Lyman, Rockford, Ill.
Application November 25, 1932, Serial No. 644,228
3 Claims. (Cl. 192—52)

1. In an automatic clutch, a driving shaft having a fly wheel, a friction device for engaging

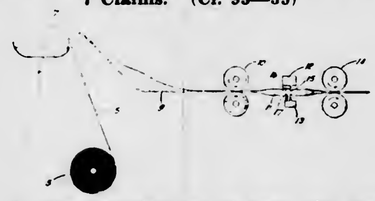
said fly wheel, a casing attached to said fly wheel, a friction plate engaging said friction device, said plate having a socket, a lever pivoted to said casing and extending into said socket, a driven mem-



ber, a sleeve slidable upon said driven member, an annular yielding member between the free end of said lever and sleeve, and means operable upon rotation of said driving shaft for shifting said sleeve.

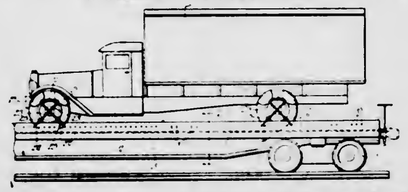
2,001,932
ROLL ROOFING FASTENER
Hamilton Maze, Peru, Ill., assignor to W. H. Maze Company, Peru, Ill., a corporation of Illinois
Application May 20, 1933, Serial No. 671,957
11 Claims. (Cl. 108—33)

1. A nail of the character described, comprising a completely threaded pointed shank, a comparatively large thin flat head integral therewith, said point being of angular cross-section conforming to the number of threads, the sides and corners thereof forming a continuation of said threads, said head being sufficiently thin to conform to the surface of a roof when the shank is driven angularly therein by the normal blow of a hammer, the threads being of sufficiently high pitch to cause the nail to rotate in accordance therewith when the nail is driven through roll roofing and into wood sheathing, and a coating of galvanized metal over the entire nail.



2,001,933
BRAKE
George K. McCann, South Bend, Ind., assignor to Bendix Brake Company, South Bend, Ind., a corporation of Illinois
Application September 17, 1930, Serial No. 482,430
12 Claims. (Cl. 188—78)

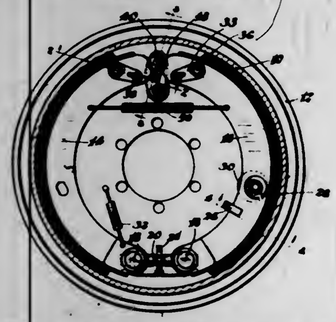
1. A brake comprising a backing plate having an opening therethrough and a bracket adjacent the opening, a lever swinging in a plane crosswise of the plane of the backing platen and passing through the opening and pivoted on the bracket to rotate about an axis substantially parallel to the plane of the backing plate and having portions inside and outside of the backing plate, a floating brake-applying lever inside the backing plate pivotally mounted on and carried by the pivoted lever, and operating connec-



tions outside of the backing plate engaging the pivoted lever.

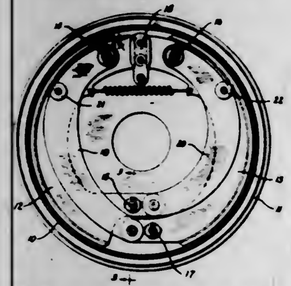
2,001,934
BAG AND METHOD OF MAKING SAME
John Mitchell Munson, Lakewood, Ohio, assignor to The Munson Bag Company, Cleveland, Ohio, a corporation of Ohio
Application September 6, 1932, Serial No. 631,845
7 Claims. (Cl. 93—35)

1. In the manufacture of bags, the method which consists in forming a continuous tube from stock material, severing the tube into a series of blanks in such manner as to define a projecting tab at one end of the blank and a cut-out portion defining the tab at the opposite end of the blank, and then forming a bottom fold at the end of the blank having the cut-out portion.



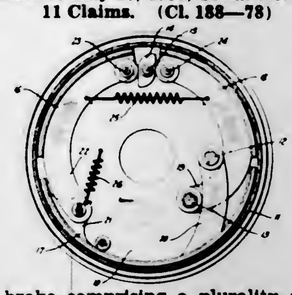
2,001,935
TRANSPORTATION MEANS
Harold A. Otis, Glen Ellyn, Ill., assignor to Chicago North Shore & Milwaukee Railroad Company, Chicago, Ill., a corporation of Illinois
Original application June 10, 1931, Serial No. 543,258. Divided and this application December 11, 1931, Serial No. 580,237
5 Claims. (Cl. 105—159)

1. In combination, a track vehicle, a wheeled road vehicle on the track vehicle, a saddle structure engaging over the upper portion of a wheel of the road vehicle and extending forward and rearward of the axis of said wheel, and securing means comprising two tension members disposed substantially radially of said wheel and connect-



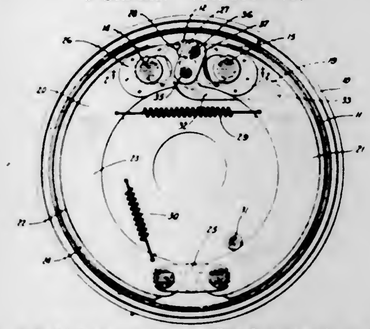
ing the rearward and forward portions, respectively, of the saddle structure to the track vehicle at points disposed within the width of the wheel, said members being independently secured at their lower ends to said track vehicle, one of said members extending downward and rearward from the forward portion of said saddle structure and the other of said members extending downward and forward from the rearward portion of said saddle structure.

2,001,936
BRAKE
Humphrey F. Parker, South Bend, Ind., assignor to Bendix Brake Company, South Bend, Ind., a corporation of Illinois
Application July 26, 1929, Serial No. 381,195
1 Claim. (Cl. 188—78)



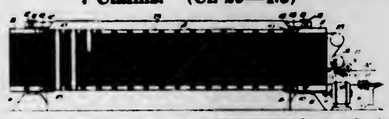
A brake applying device including a thrust member having an arm on which it is pivoted, said arm having a stop holding the thrust member from turning.

2,001,937
BRAKE
Humphrey F. Parker, South Bend, Ind., assignor to Bendix Brake Company, South Bend, Ind., a corporation of Illinois
Application May 17, 1930, Serial No. 453,380
12 Claims. (Cl. 188—78)



1. A brake comprising a fixed support, a plurality of friction elements positioned for movement thereon, a drum associated with the friction elements, means for actuating the friction elements for co-operation with the drum, means connecting the toe of one friction element to the heel of the other friction element and means carried by the connecting means engaging the friction elements at a distance removed from the toes thereof to force the friction elements in engagement with the drum.

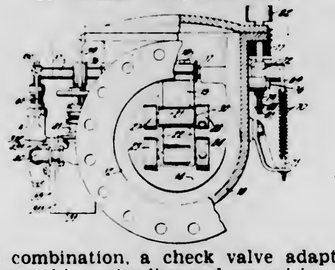
2,001,938
BRAKE
Humphrey F. Parker, South Bend, Ind., assignor to Bendix Brake Company, South Bend, Ind., a corporation of Illinois
Application May 17, 1930, Serial No. 453,385
11 Claims. (Cl. 188—78)



1. A brake comprising a plurality of friction elements each having its own anchor and at least one of the elements having a radially-yieldable extended flexible heel projecting past the anchor of the adjacent element.

2,001,939
BRAKE
Humphrey F. Parker, South Bend, Ind., assignor to Bendix Brake Company, South Bend, Ind., a corporation of Illinois
Application May 17, 1930, Serial No. 453,390
9 Claims. (Cl. 188—78)

1. A brake comprising a fixed support, a plurality of friction elements positioned for movement on the support, an operating shaft positioned for rotation on the support, an operating member extending substantially at right angles to a radius of the brake passing through the operating shaft and supported on the separable ends of the friction members and means floatingly connecting the operating member with the operating shaft lying between the support and operating member.



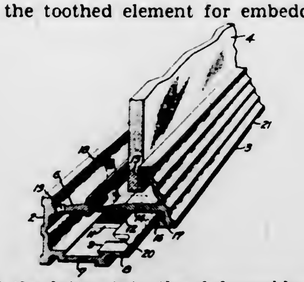
2,001,940
MACHINE FOR MAKING METAL WOOL
Levander Peterson, Chicago, Ill., assignor to James H. Rhodes & Company, Chicago, Ill., a corporation of Illinois
Application January 7, 1929, Serial No. 330,892
7 Claims. (Cl. 29—4.5)

2. A machine for making metal wool from wire, comprising a block having grooves therein,

means for drawing a number of strands of wire across the block in the grooves, means in opposition to the block for cutting shavings from the strands, and a plate detachably secured to the block flush with the bottoms of the grooves for backing the wire at the point of engagement of said cutting means.

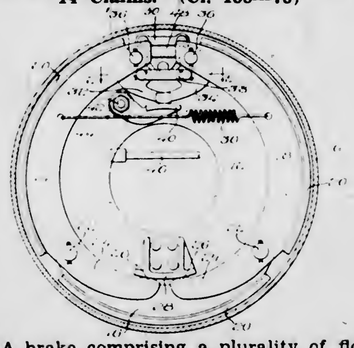
2,001,941
CHECK VALVE OPERATING DEVICE
Ellis L. Rowe, Round Lake, and Stanley Taylor, Cohoes, N. Y., assignors to Rensselaer Valve Company, Cohoes, N. Y., a corporation of New York
Application September 14, 1934, Serial No. 743,954
15 Claims. (Cl. 137—139)

1. In combination, a check valve adapted to be interposed in a pipe line and comprising a pivotally mounted gate movable from closed to open position, power operated means operable after an initial movement of said gate from closed position for completing the movement thereof to open position, said power operated means being operatively disconnected from said gate when the latter is in open position.



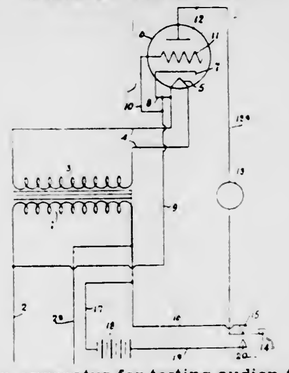
2,001,942
SEPARABLE FASTENER
George G. Sabins, Glendale, Calif., assignor to Samuels-Kleiner, Ltd., Los Angeles, Calif., a corporation of California
Application March 30, 1934, Serial No. 718,151
9 Claims. (Cl. 24—226)

1. A separable fastener, comprising; one part having an eye and another part having a hook adapted to be extended through the eye for securing the parts to each other; and attaching devices for the respective hook and eye parts for securing them to the respective ends of a strap, each of said devices comprising a body having fingers with portions spaced therefrom to receive a strap end between the fingers and the body and bendable to clamp the strap, each of said fingers having on its free end a tongue adapted to bite into the strap.



2,001,943
GLASS HOLDING CONSTRUCTION
Reginald C. Steeple, San Mateo, Calif.
Application July 12, 1933, Serial No. 680,062
10 Claims. (Cl. 20—56.4)

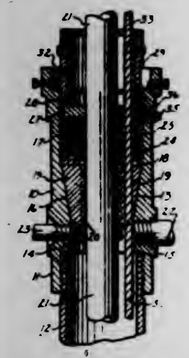
1. A glass holding construction comprising a pair of glass engaging bars, a toothed element on one of the bars, a deformable element on the other bar, and pressure means mounted on the bar carrying the deformable elements and bearing against the toothed element for embedding the



teeth of the latter into the deformable element for locking said bars together.

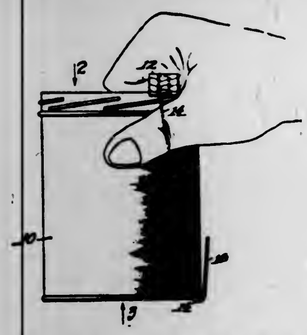
2,001,944
BRAKE
Cecil H. Taylor, South Bend, Ind., assignor to Bendix Brake Company, South Bend, Ind., a corporation of Illinois
Application May 3, 1928, Serial No. 274,698
14 Claims. (Cl. 188—78)

1? A brake comprising a plurality of floating shoes, in combination with a single abutment slidably engaged by two of the shoes and on which said two shoes pivotally fulcrum to apply another shoe.



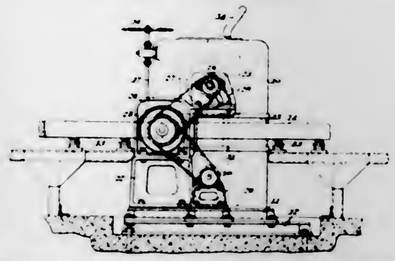
2,001,945
AUDION TUBE TESTER
Ray L. Triplett, Bluffton, Ohio
Original application January 11, 1932, Serial No. 585,937. Divided and this application March 13, 1933, Serial No. 660,559
8 Claims. (Cl. 250—27)

1. In an apparatus for testing audion tubes, an audion tube, a circuit supplied with current, a



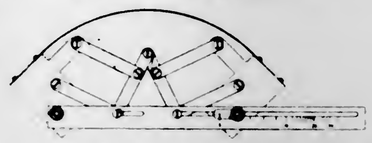
transformer associated therewith having its primary therein, a plate circuit connected into one side of said circuit containing the primary of the transformer, a switch in the plate circuit, an additional source of potential, means for connecting it into said plate circuit by said switch, and a measuring instrument in said plate circuit whereby the differences in applied potential to the plate may be indicated on the measuring instrument to show the condition of the tube.

2,001,946
TUBING HEAD
Sheridan P. Tschappat, Tulsa, Okla.
Application December 17, 1934, Serial No. 757,908
11 Claims. (Cl. 166—14)



1. A well tubing head comprising, a housing, means for hanging a tubing in said housing, packing in said housing for sealing off the housing and the tubing, the hanging means and packing having provision for the extension of a cable or the like therethrough, and means to seal off the housing and the tubing as well as to seal around the cable.

2,001,947
ATTACHMENT FOR CONTAINERS
George F. Upham, Bronxville, N. Y.
Application August 4, 1934, Serial No. 738,482
7 Claims. (Cl. 220—94)

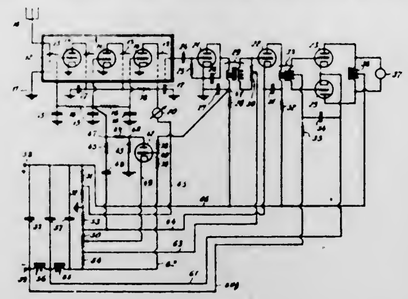


1. As an article of manufacture, a container having an open top and a perforation in the bottom and a handle extending across the top and provided with a single central means extending through said perforation for holding the handle in place on the top of the container.

2,001,948
METAL TREATING APPARATUS
Raymond J. Wean and Louis D. Peik, Warren, Ohio, assignors to The Wean Engineering Company, Inc., Warren, Ohio, a corporation of Ohio
Application June 1, 1934, Serial No. 728,482
14 Claims. (Cl. 51—9)

1. Metal cleaning apparatus comprising a housing adapted to be traversed by the metal to be cleaned, abrasive throwing wheels disposed on opposite sides of the path of the metal through said housing, at least one of said wheels being supported in vertically adjustable bearings, and supports for said bearings having a plurality of bolt holes opposite which the bearings may be selectively positioned and secured.

2,001,949
ADJUSTABLE CURVE RULER
William S. Weston, Douglaston, N. Y.
Application May 12, 1934, Serial No. 725,285
2 Claims. (Cl. 33—177)

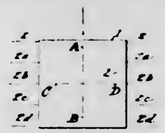


1. An adjustable curve ruler for drawing arcs of circles comprising a flexible arc member of constant length, end members rigidly attached to the ends of the arc member, a set of six bars pivotally connected together and to the end members, each end member together with three of said bars forming through the pivotal connections a parallelogram, and means in combination with said parallelograms for controlling the relative angular movements at said pivotal connections whereby the said end members are held at the correct angle and the correct distance apart with the flexible arc member curved to an arc of a circle.

2,001,950
AUTOMATIC VOLUME CONTROL
Harold A. Wheeler, Great Neck, N. Y., assignor to Hazeltine Corporation
Application August 14, 1931, Serial No. 556,979
19 Claims. (Cl. 250—20)

1. A fluctuation compensating network comprising a source of direct voltage having undesired fluctuations, two resistances R1 and R2 connected respectively in series from positive to negative terminals of said source, a capacity C1 in parallel with resistance R1, a point connected through a capacity C2 to the junction of said resistors and through a capacity C3 in series with a resistance R3 to said negative terminal, and a

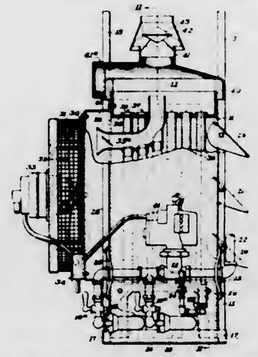
vacuum tube having an amplifying factor Mu, a plate connected to said positive terminal, a grid connected to said point, and a cathode connected to said junction, said elements being related sub-



stantially in accordance with the following equations:

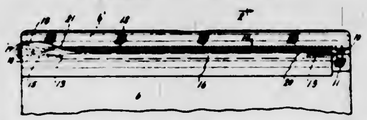
$$R1(C2+C3)=MuR2C3$$
$$R1C1(C2+C3)=(R2+R3)C2C3$$

2,001,951
PHOTOGRAPHIC PRINTING EMULSION AND ITS PRODUCTION
William Ambler Berry, Knutsford, England, assignor to Ilford Limited, Ilford, England, a British company
No Drawing. Application March 15, 1934, Serial No. 715,779. In Great Britain March 22, 1933
8 Claims. (Cl. 95—6)



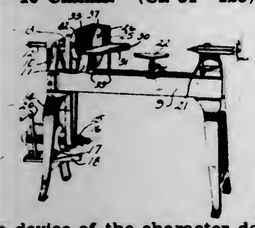
1. A self-toning photographic development emulsion comprising mainly silver chloride but no soluble silver salt as the light sensitive ingredient and a gold salt and a lead salt as self-toning ingredients.

2,001,952
LENSES AND THEIR COMBINATION AND ARRANGEMENT IN VARIOUS INSTRUMENTS AND APPARATUS
Henry James Birchall, Shirley, England
Application January 27, 1934, Serial No. 708,582
In Great Britain December 14, 1932
2 Claims. (Cl. 88—54)



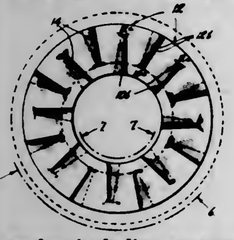
1. A pair of lenses each having a surface which in one of two directions at right-angles, varies in progressive curvature to the extent of a number of diopters of difference between two points along said surface, and also which in the other direction constantly curves in progressive radii extending along the first direction between said two points combined for co-operation and adjustment in an instrument with their plane surfaces adjacent and their principal medial lines parallel and coincident, but also with the greater curvature end of one lens adjacent the lesser curvature end of the other lens, such pair of lens being collectively adjustable in a direction parallel to their principal medial lines.

2,001,953
HEATING APPARATUS
Norman L. Blackmore, Wilkinsburg, Pa., assignor to Automatic Gas-Steam Radiator Company, Pittsburgh, Pa., a corporation of Pennsylvania
Application December 3, 1930, Serial No. 499,725
1 Claim. (Cl. 126—110)



A unit heater of the character described, comprising a combustion chamber, fuel burning means therein, an exhaust chamber spaced from the said combustion chamber, a plurality of heat transfer tubes communicating with and extending between said combustion chamber and said exhaust chamber, means for circulating fluid over the outer surfaces of said tubes and a conduit communicating with said exhaust chamber for causing a portion of said circulating fluid to supplement the natural draft from the combustion chamber to the exhaust chamber, said conduit communicating with at least one of said heat transfer tubes outside of said exhaust chamber.

2,001,954
FLEXIBLE RECEPTACLE
Warner R. Buxton, Longmeadow, Mass.
Application July 23, 1934, Serial No. 736,447
6 Claims. (Cl. 150—38)

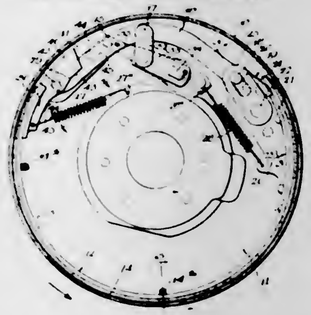


1. A flexible receptacle for articles of a thin sheet-like nature, comprising, walls forming between them a compartment for said articles and joined together except along certain adjacent edges, the space between such edges affording an entrance slot for said compartment, rows of fastener fingers one along each side edge of said slot, a slidable member cooperating with said fingers and movable along the slot to cause said rows of fingers to engage or disengage, and a pusher strip of relatively stiff and resilient flexible material secured to the inner face of one of said walls and extending along one edge of said slot substantially from end to end thereof and extending part way across said slot and in position to be engaged by said slide and moved away from the adjacent row of fastener elements, whereby said strip will be progressively flexed by and in advance of the slide as it is moved to close said slot and whereby such movement of the strip will push any articles which project into the path of the slide back into said compartment.

2,001,955
COMBINATION SANDER AND JOINTER
Ole Evinrude, Milwaukee, Wis., assignor to Outboard Motors Corporation, Milwaukee, Wis., a corporation of Michigan.
Original application February 27, 1933, Serial No. 658,762. Divided and this application July 13, 1934, Serial No. 734,919
10 Claims. (Cl. 51—128)

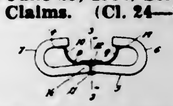
10. In a device of the character described, the combination with a substantially horizontal shaft and a disk mounted thereon for rotation in a vertical plane, said disk having an abrasive face, of a work supporting table disposed adjacent the face of the disk, and a fence recessed to receive the disk and having surfaces limiting the engagement with said disk of work on said table, said fence being mounted for bodily removal from the path of such work.

2,001,956
LOCK WASHER AND METHOD OF MAKING SAME
Frank W. England, Chicago, Ill., assignor to Illinois Tool Works, Chicago, Ill., a corporation of Illinois
Application November 24, 1933, Serial No. 699,534
11 Claims. (Cl. 10—86)



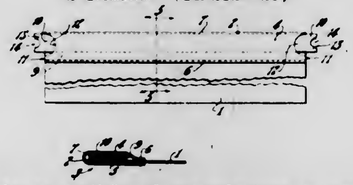
1. A lock washer including an annular body of flat spring stock provided with a plurality of inner and outer marginal prongs, each prong having a marginal section overlapping the marginal section of an adjacent prong, whereby to present a plurality of inner and outer overlapping prong sections having work engaging edges positioned on opposite sides of a median plane of the washer, each prong being substantially uniform in thickness.

2,001,957
PUMP
Walter Ferris, John P. Ferris, George H. Fobian, and Kiek K. Benedek, Milwaukee, Wis., assignors to The Oilgear Company, Milwaukee, Wis., a corporation of Wisconsin
Application March 13, 1929, Serial No. 346,704
7 Claims. (Cl. 103—161)



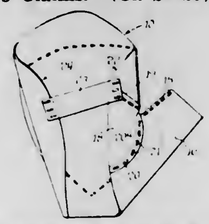
5. In a hydraulic pump or motor the combination of a pintle, liquid impelling means rotatable on said pintle and imposing a lateral thrust thereon, liquid conducting passages in said pintle, ports in said pintle for effecting communication between said passages and said impelling means, a pair of tapered grooves encircling said pintle at opposite sides of said ports and communicating with one of said passages, and a second pair of reversely tapered grooves encircling said pintle at opposite sides of said ports and communicating with the other of said passages.

2,001,958
BRAKE
Earl G. Gunn, Racine, Wis., assignor, by mesne assignments, to Bendix Products Corporation, South Bend, Ind., a corporation of Indiana
Application June 14, 1929, Serial No. 370,802
14 Claims. (Cl. 188—78)



1. In a brake, a drum, an internal expanding brake member, applying means for said brake member, a fixed support disposed within the span of said brake member, and a swinging link extending from said support to the adjacent end of said brake member, and arranged substantially perpendicular to the drum radius extending through one end of the link, whereby the braking torque is transmitted to the anchor through said link without any substantial component of force tending to swing said link angularly.

2,001,959
HOOK
George W. Hall, Moodus, and Chauncey C. Barton, Wethersfield, Conn.
Application June 29, 1934, Serial No. 733,002
7 Claims. (Cl. 24—236)

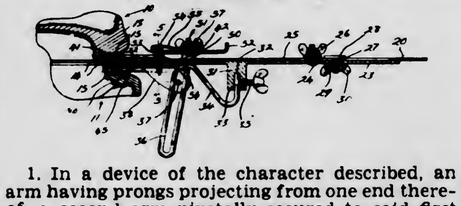


2. In combination with a hook of the character described comprising a shank portion; a longitudinally extending retaining member comprising a spring secured on said shank portion and having its end extending substantially perpendicularly towards and near the end of said hook, the free end of said spring being formed to provide a transverse flared passage between the same and the end of said hook whereby, upon movement of a member thru said passage, contact between said member and said free end will cause movement of said spring in a direction away from the end of said hook and towards said shank portion.

2,001,960
TRANSFER SHEET
Edward Hano, Holyoke, Mass.
Application November 14, 1934, Serial No. 752,930
2 Claims. (Cl. 282—29)

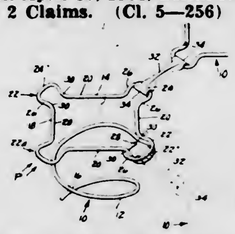
1. As an article of manufacture, a transfer sheet, a binding and reinforcing member of relatively thicker material than said transfer sheet loosely folded over an end of said sheet and having its edges secured together and to said transfer sheet to form a smooth rounded outer edge and an open-ended pocket between said sheet and one side of said binding and reinforcing member, a side of said binding and reinforcing member being provided with cut-outs at each end thereof, for the purpose described.

2,001,961
HAND PROTECTOR
Karl E. Jensen, Danville, Ill., assignor to Ervin F. Kemp, Washington, D. C.
Application May 26, 1934, Serial No. 727,659
5 Claims. (Cl. 2—20)



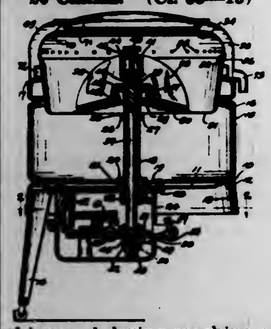
1. A hand protector comprising, in combination, a sheet of protecting material fashioned to provide a blank having a cut extending inwardly from one edge to separate the blank into hand and thumb sections, said thumb section being bent upon itself intermediate said cut and an edge of the blank paralleling said cut to bring said edge and the thumb section edge of the cut into registration, means for securing the registering edges together to form a thumb stall, a strap secured adjacent to the corner of the hand section formed by said cut and to an opposite edge portion of the hand section to provide folds adapted to extend around the wearer's index and little fingers, and an auxiliary piece secured to the cut edge of the hand section and to the marginal edge of the thumb section beyond said registering edges to close the gap therebetween, said piece having a tongue extending across the crotch between the thumb stall and said fold and secured near the palm side.

2,001,962
ORNAMENTAL MATERIAL AND METHOD OF MAKING THE SAME
Joseph W. Kantrow, Long Island City, N. Y.
Application June 30, 1934, Serial No. 733,339
7 Claims. (Cl. 41—34)



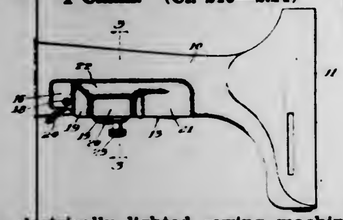
4. An ornamental fabric for use in the manufacture of shoes, handbags and the like, said fabric comprising a backing layer and a covering layer comprising a plurality of ornamental leather sections superposed on said backing layer with their edges in abutting relation, said sections being relatively small with respect to the area of the fabric and lines of flat overedge stitching passing across adjacent edge portions of said ornamental sections.

2,001,963
TRUE BITE ATTACHMENT
George J. Keller, Detroit, Mich.
Application October 10, 1932, Serial No. 637,154
3 Claims. (Cl. 32—19)



1. In a device of the character described, an arm having prongs projecting from one end thereof, a second arm pivotally secured to said first mentioned arm, a plate pivotally carried by said second arm for movement into parallelism with said first mentioned arm irrespective of the angular movement of said second mentioned arm with reference to said first mentioned arm, and prongs carried by said plate and projecting beyond the end thereof.

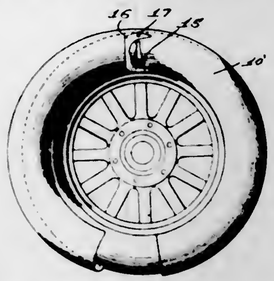
2,001,964
FURNITURE SPRING
Louis Kimbrig, Brooklyn, N. Y.
Application April 30, 1934, Serial No. 723,122
2 Claims. (Cl. 5—256)



1. In a device of the character described, a closed outermost or end convolution comprising a length of wire in which is formed a number of U-bends, the endmost of which is disposed coincidentally on top of and in overlying relation to the first U-bend, and means integral with said endmost bend extending underneath the first U-bend for securing said endmost bend to the first thereof in the above-described relation.

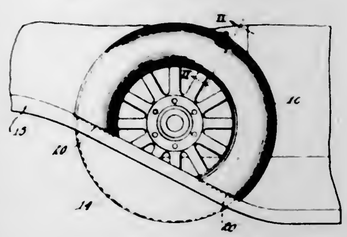
2,001,965
LAUNDRY MACHINE
James B. Kirby, West Richfield, Ohio, assignor, by mesne assignments, to The Apex Electrical Manufacturing Company, Cleveland, Ohio, a corporation of Ohio, as trustee
Application September 8, 1930, Serial No. 480,424
20 Claims. (Cl. 68—15)

1. A washing and drying machine comprising: a rotatable container and an agitator therein, means operable at different times to rotate and oscillate said agitator, said means operating through the bottom of said container, the top of said container being open and free from obstructions, and means for driving said container through connection with said agitator when the latter is rotated.



2,001,966
ELECTRICALLY LIGHTED SEWING MACHINE HEAD
Raymond F. List, Belvidere, Ill., assignor to National Sewing Machine Company, Belvidere, Ill., a corporation of Illinois
Application March 22, 1934, Serial No. 716,797
1 Claim. (Cl. 240—2.14)

An electrically lighted sewing machine head comprising an overhanging arm disposed horizontally between the conventional sewing head standard and the housing for needle operating mechanism, an elongated relatively shallow open bottom hood cast integrally with the arm wall, the longitudinal medium axis of the hood being substantially parallel with and closely adjacent the vertical plane of the outermost side surface of the arm, the bottom edges of the hood being in substantially the same horizontal plane as the lower surface of the arm, and an electric light socket and lamp bulb mounted between the side walls of the hood.



2,001,967
UNITARY TIRE COVER
George Albert Lyon, Allenhurst, N. J., assignor to Lyon Incorporated, Asbury Park, N. J., a corporation of Delaware
Application June 8, 1931, Serial No. 542,791
4 Claims. (Cl. 150—54)

1. A tire cover comprising a split ring including tire tread and side covering portions and in which a section thereof is pivotally movable with reference to the remainder of the cover to permit said cover to be applied to the tire, said pivotal movement being provided by so forming a part of the side covering portion of said ring between its ends as to increase the flexibility of the cover at said intermediate portion, said split ring being formed to extend about substantially more than one-

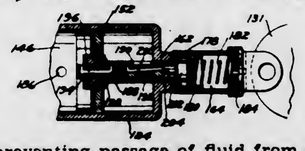
half of the outer periphery of the tire and said section comprising substantially one-half of the ring, the tread covering portion of the split ring being circumferentially continuous and extending laterally over the tread, the ends of the ring pivoting about an intermediate section of the tread covering portion by reason of the formation of said side portion.

2,001,968
SHOVE DOWN MOLDED TIRE COVER
George Albert Lyon, Allenhurst, N. J., assignor to Lyon, Incorporated, Asbury Park, N. J., a corporation of Delaware
Application December 2, 1931, Serial No. 578,424
3 Claims. (Cl. 150—54)

1. In combination with an automobile fenderwell carrying a spare tire, a cover for the tire comprising a member made of non-metallic flexible form retaining material such as rubber and being of an arcuate form corresponding with that of a tire, and of a circumferential extent in excess of 180° and substantially less than 360°, said member comprising a side portion and a rim portion for covering portions of a side wall and the tread of the tire, the free margin of the rim portion extending radially inward of the tire tread and being flexible whereby the same may be flexed outwardly to clear the tread and permit ready application and removal of the cover with a substantially transverse movement of the cover in each case, the ends of said member terminating at the mouth of the well, the rim portion being flexible and having a normal diameter which is less than the diameter of the tire at its tread, whereby said member holds itself on the tire when in proper tire protecting position.

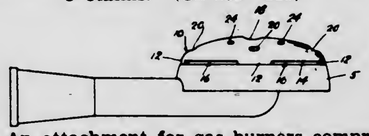
2,001,969
ONE PIECE ARCUATE TIRE COVER
George Albert Lyon, Allenhurst, N. J., assignor to Lyon Incorporated, Asbury Park, N. J., a corporation of Delaware
Application January 2, 1932, Serial No. 584,557
11 Claims. (Cl. 150—54)

1. In combination with an automobile fender well carrying a spare tire, a cover for the tire comprising a single piece of sheet metal of arcuate form corresponding with that of a tire, and of a circumferential extent in excess of 180° and substantially less than 360°, said piece comprising a side portion and a rim portion for covering portions of a side wall and the tread of the tire, the free margin of the rim portion extending radially inward of the tire tread and being resilient whereby the same may be flexed outwardly to clear the tread and permit ready application and removal of the cover with a substantially transverse movement of the cover in each case, the ends of said piece terminating at the mouth of the well, the rim portion being resilient and having a normal diameter which is less than the diameter of the tire at its tread, whereby said piece holds itself firmly on the tire when in proper tire protecting position.



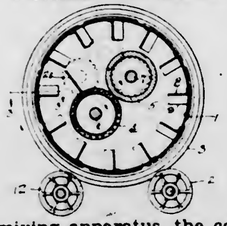
2,001,970
SOUND-ABSORBING UNIT AND METHOD OF MAKING THE SAME
Jacob Mazer, Stonehurst, Upper Darby Township, Delaware County, Pa.
Application October 25, 1930, Serial No. 491,151
6 Claims. (Cl. 154—28)

2. The method of forming sound-absorbing units which comprises making numerous slits in a block of material perpendicular to the plane thereof to form strands, and fluffing the outer ends of the strands thus formed to produce an exposed surface that has the appearance of being unperforated.



2,001,971
BRAKE
Montgomery W. McConkey, South Bend, Ind., assignor to Bendix Aviation Corporation, South Bend, Ind., a corporation of Delaware
Application April 27, 1932, Serial No. 607,879
4 Claims. (Cl. 188—152)

2. In a fluid braking system; a cylinder; a piston in said cylinder, a tube secured to said piston and connected at times with the interior of said cylinder, a relief chamber associated with the outer end of said tube, and means for at

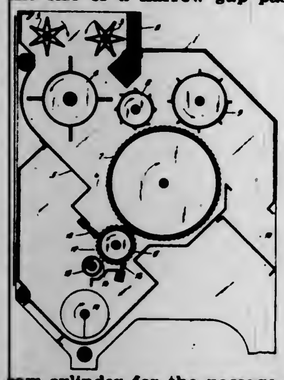


times preventing passage of fluid from said cylinder through said tube into said relief chamber.

2,001,972
GAS BURNER ATTACHMENT
Frank H. McFall, Alliance, Ohio, assignor of one-half to Alvah L. Baker, Alliance, Ohio
Application May 12, 1934, Serial No. 725,363
3 Claims. (Cl. 158—113)

1. An attachment for gas burners comprising a substantially inverted saucer shaped member having legs depending from its periphery and having orifices therein, and baffles depending from its under surface, each baffle having parts connected to a leg to form an enclosure, one of certain of said orifices being within each enclosure.

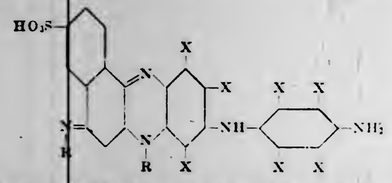
2,001,973
APPARATUS FOR BLENDING SAND AND LIKE MATERIALS
Herbert L. McKinnon and Mahlon E. First, Cleveland, Ohio, assignors to C. O. Bartlett & Snow Company, Cleveland, Ohio, a corporation of Ohio
Application December 5, 1931, Serial No. 579,250
8 Claims. (Cl. 259—84)



1. In a mixing apparatus, the combination of means having parallel axes and coacting continuous blending surfaces traveling at different speeds, one of said means bearing by gravity against the other.

2,001,974
COTTON CLEANING AND RECLAIMING MACHINE
John E. Mitchell, Dallas, Tex.
Application May 19, 1933, Serial No. 671,798
10 Claims. (Cl. 19—37)

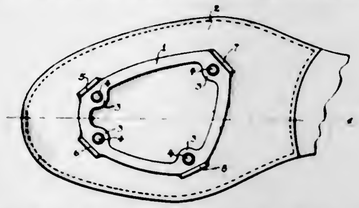
1. In a machine of the class described, in combination with a main saw cylinder, a reclaiming saw cylinder positioned to receive hulls and cotton escaping past the main saw cylinder, a smooth roller of less diameter than the reclaiming saw cylinder and rotating, as to its upper portion, in a direction away from said reclaiming saw cylinder, whereby it is adapted to engage foreign



matter and carry it away from the gap between said roller and the reclaiming saw, said roller defining the size of a narrow gap past the re-

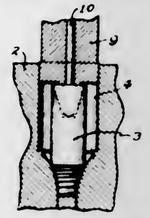
claiming saw cylinder for the passage of cotton engaged by the teeth of the reclaiming saws, and means for doffing cotton from said reclaiming saw cylinder.

2,001,975
DYESTUFFS OF THE NAPHTHOPHENAZINE SERIES
Theodor Nocken, deceased, late of Leverkusen-I. G.-Werk, Germany, by Elisabeth Nocken, Frankfort-on-the-Main, Germany, administratrix, and Wilhelm Neelmeier, Leverkusen-I. G.-Werk, Germany, assignors to General Aniline Works, Inc., New York, N. Y., a corporation of Delaware
No Drawing. Application January 23, 1933, Serial No. 653,176. In Germany February 3, 1932
5 Claims. (Cl. 260—29)



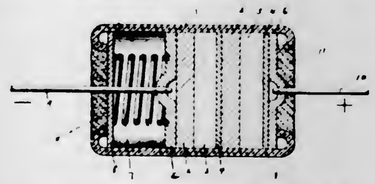
1. The naphthophenazine dyestuffs of the general formula

wherein one X stands for a sulphonic acid group and the other X's represent hydrogen atoms which may partially be replaced by alkyl groups, R standing for a radical of the benzene series, being in form of their alkali metal salts generally dark powders with a bronze lustre, soluble in water with a blue coloration, soluble in sulfuric acid with a green tint, dyeing wool from an acid bath generally intense greenish-blue shades.



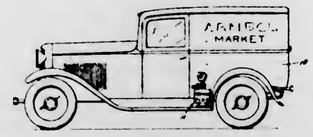
2,001,976
BASEBALL SHOE CLEAT
John T. Riddell, Evanston, Ill.
Application March 5, 1932, Serial No. 596,947
1 Claim. (Cl. 36—59)

A baseball cleat comprising a unitary ring-like body part having four spaced flat prongs integral thereon and extending at right angles therefrom, two of such prongs being disposed along the margin of the forward end of said body part in opposed angular relationship, one on each side of the center line of said body part, the plane of each of said prongs respectively extending backwardly and outwardly relative to the said center line, and two of such prongs being disposed one on each



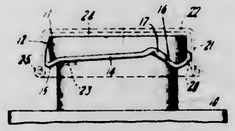
side of said center line along the margin of the rearward end of said body part with their planes converging rearwardly.

2,001,977
METHOD OF MAKING SHOE CLEATS OR SIMILAR ARTICLES
John T. Riddell, Chicago, Ill.
Application October 9, 1933, Serial No. 692,795
2 Claims. (Cl. 18—59)



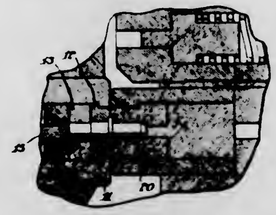
1. The method of making shoe cleats or similar articles, which consists in providing an axially tapered mold, forming a cylindrical roll of fabric impregnated with a resinous phenolic derivative and of substantially uniform diameter and of length greater than that of the mold and of quantity sufficient to fill the mold, seating the roll axially within the mold, pressing a metallic core axially into the roll and thereby projecting its central portion along the mold, applying heat and endwise pressure to the roll and core to force the core within the mold and to crush the roll and flow the phenolic material so as to completely fill the mold, and then allowing the phenolic material to set.

2,001,978
VOLTAIC COUPLE
Samuel Ruben, New Rochelle, N. Y.
Application August 31, 1933, Serial No. 687,632
6 Claims. (Cl. 136—83)



2. A voltaic couple comprising two electrodes in direct contact with each other, under pressure, one of said electrodes being formed from one of the electropositive metal elements and the other electrode being formed from dry, solid, chromium trioxide.

2,001,979
ADVERTISING DEVICE
John Francis Scanlon, Edgewood, R. I.
Application April 6, 1933, Serial No. 664,697
1 Claim. (Cl. 40—126)

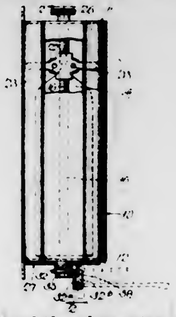


In combination, a vehicle having a body containing ownership indicia, and an advertising device mounted on said vehicle in spaced relation to the body and in visual juxtaposition to said ownership indicia, said advertising device illustrating a telephone and carrying a telephone indicia which corresponds to the ownership indicia.

2,001,980
CLOSURE
Isaac E. Sexton, Winchester, Mass.
Application October 7, 1931, Serial No. 567,391
3 Claims. (Cl. 220—40)

2. A metal container having a cylindrical wall with a depending skirt on the outside thereof designed to receive a skirted cap thereon with inwardly projecting lugs, said skirt having its entire lower edge curled, portions of said curled edge being shaped to form cam surfaces to be engaged by said lugs, other portions of said curled edge being flattened inwardly toward said wall.

2,001,981
METHOD OF COLD HEADING
Arthur T. Siviter, Detroit, Mich., assignor to Budd Wheel Company, Philadelphia, Pa., a corporation of Pennsylvania
Application January 22, 1931, Serial No. 510,411
10 Claims. (Cl. 10—27)

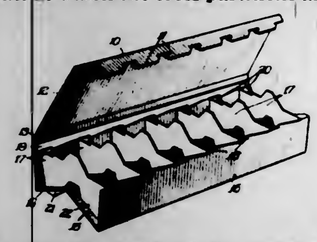


1. The method of cold heading a metal blank in successive steps which comprises upsetting plural portions of said blank within a female die in such a manner that said upset portions flare away from the mouth of the respective parts of said die and become jambed therein, and performing successive cold heading operations by the coaction of successive punches with said female die and extruding said upset blank outwardly of said die through the mouth thereof.

2,001,982
COMB ATTACHMENT FOR CARPET SWEEPERS
Earle R. Smith, Alhambra, Calif., assignor, by mesne assignments, to Earl F. Callan
Application May 24, 1933, Serial No. 672,606
7 Claims. (Cl. 15—48)

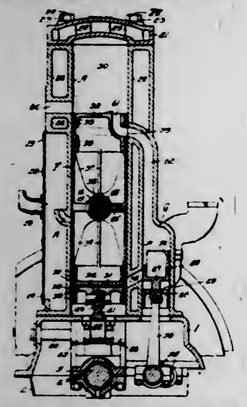
1. A carpet sweeper having a brush rotatable in either direction; a pair of combs; means for mounting said combs at opposite sides of said brush so that each comb is movable to occupy either a stripping or a non-stripping position with relation to the brush, and when in stripping position to be moved to non-stripping position by the bristles of said brush when the latter is rotated in one of its two directions; and a connection between the combs for transmitting the motion of that comb being moved to non-stripping position by the brush, to the other comb so as to simultaneously move the latter to stripping position.

2,001,983
PASTE DISPENSING DEVICE
Sam Spiros, Chicago, Ill.
Application February 20, 1933, Serial No. 657,525
5 Claims. (Cl. 221—60)



1. A dispenser of the character described, comprising a closed casing having a top and bottom wall and provided with an opening in the bottom wall, a cover having an arcuate slot opening therein to receive the neck end of a paste tube and mounted for swinging movement with respect to the bottom wall, a vertically extending threaded shaft journaled in the top and bottom walls, a yoke in threaded engagement with said threaded shaft, rollers, horizontally journaled in said yoke and geared to said threaded shaft, a cap member pivotally carried on the threaded shaft and closing the neck end of the paste tube, and means coacting with the cap member and said threaded shaft for causing a step by step downward movement of the yoke.

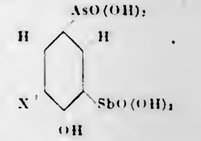
2,001,984
CARTON
Raymond Stone, New York, N. Y., assignor to Self-Locking Carton Co., Chicago, Ill., a corporation of Illinois
Application May 6, 1933, Serial No. 669,652
8 Claims. (Cl. 229—29)



1. A cellular carton composed of a blank cut, scored and folded to form front and rear walls,

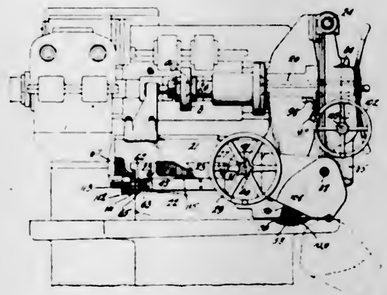
a cushion bottom of substantially V-shape, and cross partitions hinged to the front and rear walls, the height of one of the vertical walls below the point at which the cross partitions are hinged

thereto plus the width of the cross partitions being equal to the height of the other of said walls below the point at which said cross partitions are hinged thereto plus the width of said bottom section.



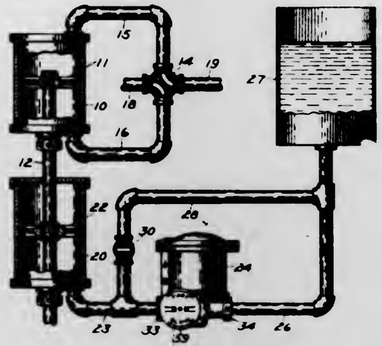
2,001,985
TWO STROKE CYCLE INTERNAL COMBUSTION ENGINE
George L. Strebler, St. Louis, Mo.
Application August 4, 1931, Serial No. 555,036
21 Claims. (Cl. 123—74)

4. In an intake manifold for internal combustion engines of the two cycle type, a cylinder, a double headed piston for reciprocatory movement in the cylinder and forming an initial fresh charge compression chamber at one end and a combustion chamber at the opposite end thereof, an inlet manifold member having a fresh charge passage, a piston valve for reciprocatory movement in the manifold passage, said valve having an annular groove providing a fresh charge passage communication from a source of fresh charge supply to an initial compression chamber, the upper end of said valve being tubular and having a cutaway wall portion to provide a compressed charge passage communication from the compression chamber to the intake manifold above the piston valve to be boosted by the piston valve into the combustion chamber of the engine wherein it is recompressed and then fired at the end of the upstroke of the piston of the engine and from which combustion chamber the burnt gases are discharged at the instroke of the piston approximately simultaneously with the boosting of an initially compressed fresh charge from the manifold.



2,001,986
BISMUTHO-BENZENE-ARSONIC-STIBONIC ACID COMPOUNDS AND PROCESS OF MAKING THEM
Karl Streitwolf, Frankfort-on-the-Main, Alfred Fehrle, Bad Soden on Taunus, and Walter Herrmann, Paul Fritzsche, and Robert Schnitzer, Frankfort-on-the-Main, Germany, assignors to Winthrop Chemical Company, Inc., New York, N. Y., a corporation of New York
No Drawing. Application February 6, 1931, Serial No. 514,065. In Germany February 15, 1930
16 Claims. (Cl. 260—14)

1. The process which comprises causing a solution of a benzene arsonic acid-stibonic acid of the general formula:



wherein X stands for H or $NHCOCH_3$, to act upon a solution of an inorganic bismuth salt in the presence of an alkali metal hydroxide.

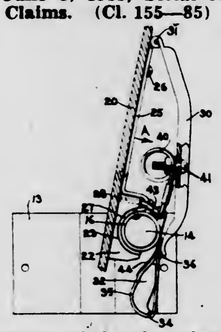
2,001,987
FEED MECHANISM FOR METAL CUTTING MACHINES
William E. Sykes, Buffalo, N. Y., assignor to Farrel-Birmingham Company, Inc., Buffalo, N. Y., a corporation of Connecticut
Application July 22, 1932, Serial No. 623,989
27 Claims. (Cl. 90—9)

3. In a gear generating machine, a support for a gear blank, a rotary toothed cutter which cuts the blank by relative movement of the blank and cutter crosswise of the peripheral face of the blank, means for rotating the gear blank at the same peripheral speed as the cutter, and feed mechanism for producing relative feed movements between the gear blank and cutter, said mechanism comprising a single driven actuating device, a feed element which is engaged by said actuating device and moved thereby step by step to successive advance positions, means for effecting relative adjustments between said actuating device and feed element to automatically produce different total advance movements of the feed element and to divide the total movement into variable successive step component movements and mechanism which automatically separates the gear blank and the cutter and stops the machine after the completion of the advance movements of the feed element.

2,001,988
CONTROL MECHANISM
Paul C. Temple, Decatur, Ill., assignor to A. W. Cash Company, Decatur, Ill., a corporation of Delaware
Original application May 14, 1930, Serial No. 452,434. Divided and this application September 26, 1932, Serial No. 634,873
2 Claims. (Cl. 121—38)

1. The combination of a motor having a reciprocable element, means to apply fluid under pressure to the element to move the same in each direction, a cylinder, a piston slidable in the cylinder, means connecting the piston with the reciprocable element, the cylinder serving to confine a body of liquid which resists movement of the piston in one direction, a reservoir for liquid located at a higher elevation than said cylinder, a conduit connecting the cylinder with the reservoir, a valve in the conduit, means providing a restriction in the conduit to create a pressure differential which is a function of the rate of flow in the conduit, means responsive to changes in said pressure differential and arranged to actuate the valve and maintain said pressure differential substantially constant, a by-pass conduit around the valve, and a valve in the by-pass conduit.

2,001,989
APPARATUS AND METHOD OF TRANSPORTING LIVE FISHES
Friedrich Theuerkauf, Nowawes/Potsdam, Germany
Application February 25, 1932, Serial No. 595,211
In Germany February 26, 1931
2 Claims. (Cl. 119—5)



1. In devices for the transportation of live fishes in water and an enzym therein, an immersible vessel shaped to assume an inclined position and filled with watery hydrogenperoxid and a catalyzator, and a nozzle near one end of said vessel permitting the discharge of the watery hydrogenperoxid to form water and oxygen in small quantities to slowly charge the water therewith.

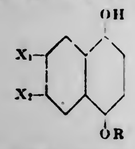
2,001,990
ATTACHMENT PLUG RECEPTACLE
William C. Tregoning, Wauwatosa, Wis., assignor to Cutler-Hammer, Inc., Milwaukee, Wis., a corporation of Delaware
Application September 28, 1931, Serial No. 565,538
12 Claims. (Cl. 173—330)

1. The combination with a molded insulating body recessed from its lower face to provide contact chambers and having T-shaped slots penetrating the upper face of said body and communicating with said chambers, of a pair of one-piece sheet metal contact and wiring terminal members insertable within said chambers from the lower face of said body, with the terminal portions thereof exposed at opposite sides of said body, the contact portions of said members each comprising a single lug, said lugs having flared upper ends adapted to underlie the upper surface of said body, and separately formed resilient wire elements interposed between the interior walls of said body and the respective members to yieldably bias the contact lugs on the latter across the adjacent parallel head portions of said T-slots, whereby said single lugs are adapted for cooperation with plug caps having the jack blades thereof arranged in parallel or in tandem relation.

2,001,991
SELF-CLOSING DETACHABLE THEATER SEAT
Milford T. Vandervoort, Grand Rapids, Mich., assignor to Ernest A. Wedemeier, Grand Rapids, Mich.
Application June 5, 1933, Serial No. 674,321
5 Claims. (Cl. 155—85)

1. A construction of the class described, comprising, a standard having a journal extending therefrom, a seat, bearing means fastened to the underside of said seat, said bearing means having a recess therein, said recess receiving the said journal, an arm pivotally attached at one end to the said seat and extending downwardly at an angle thereto, a stop member located on the standard, the free end of the said arm abutting against the stop member when the seat is in substantially horizontal position to prevent downward movement of the said seat, spring means mounted upon the seat and tending to pull the free end of the arm toward the said journal, and cam means fixed to an element of said standards and engaging the free end of said arm for guiding the free end of the said arm whereby the seat is moved to substantially vertical position due to the action of the said spring means.

2,001,992



DYEING ANIMAL FIBERS

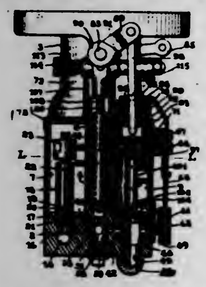
Heinrich Wagner, Hans Krzikalla, and Alfred Kirsch, Mannheim, Germany, assignors to General Aniline Works, Inc., New York, N. Y., a corporation of Delaware

No Drawing. Application July 19, 1933, Serial No. 681,216. In Germany July 26, 1932

10 Claims. (Cl. 8—5)

1. The process of dyeing animal fibers, which comprises treating the said fibers with a solution of a compound having the general structure

wherein R is an alkyl radicle, X_1 and X_2 are hydrogen atoms or members of a benzene ring, in the presence of an oxidizing agent.



2,001,993

CARBURETOR

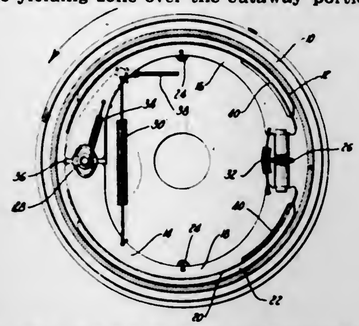
Walter H. Weber, Detroit, Mich., assignor to Detroit Lubricator Company, Detroit, Mich., a corporation of Michigan

Application April 6, 1929, Serial No. 352,968

31 Claims. (Cl. 261—34)

1. A carburetor of the character described, comprising a casing having a mixing chamber, an air inlet to said chamber, a mixture outlet from said chamber, a throttle controlling discharge from said outlet, a U-shaped conduit having one of the legs thereof operable to discharge fuel into said chamber, means to supply fuel to said one leg, the other leg of said conduit being open to the atmosphere, a normally open fuel jet, opening into said conduit, means to supply fuel to said jet, a valve controlling said jet, and means operable simultaneously with movement of said throttle to move said valve toward closed position to control the discharge of fuel into said chamber as said throttle is moved toward open position.

2,001,994



BRAKE

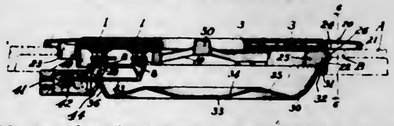
Franklin H. Wells, South Bend, Ind., assignor to Bendix Brake Company, South Bend, Ind., a corporation of Illinois

Application July 23, 1931, Serial No. 552,694

4 Claims. (Cl. 188—78)

1. A brake shoe comprising a web having a portion cut away from its outer periphery adjacent one end of the shoe, and a rim assembled on the web and engaging said web throughout most of the length of the shoe and having a flexible yielding zone over the cutaway portion, said

rim being directly engaged and supported by the web on both sides of the yielding zone.



2,001,995

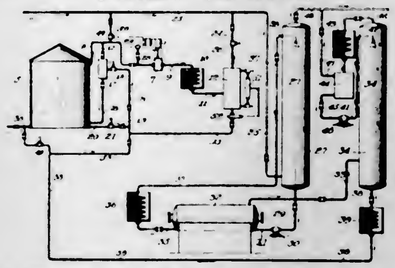
ELECTRIC RESISTANCE HEATING ELEMENT

Edwin L. Wiegand, Pittsburgh, Pa.

Application January 8, 1932, Serial No. 585,494

35 Claims. (Cl. 219—37)

10. An electrical device, comprising: an electric heating unit; supporting means, adapted to span a stove opening and be supported from the adjacent portion of the stove top, and to support said unit in alinement with said opening and of such size as to overlap said top a substantial distance, thereby to cooperate with openings of different sizes; and centering means, carried by said supporting means, engageable with the edge of said opening to hold said supporting means against lateral movement relative to said top, and adjustable, to hold said supporting means thus, in openings of different sizes.



2,001,996

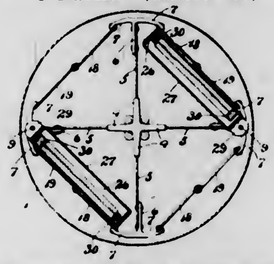
STORAGE OF VOLATILE HYDROCARBONS, PARTICULARLY BUTANES

Walter G. Whitman, Whiting, Ind., assignor to Standard Oil Company, Chicago, Ill., a corporation of Indiana

Application November 23, 1931, Serial No. 576,712

9 Claims. (Cl. 196—8)

1. The method of storing a body of volatile, normally gaseous hydrocarbons at substantially atmospheric pressure which comprises maintaining in liquid form by refrigeration a body of such volatile hydrocarbons, withdrawing portions of said hydrocarbons which become volatilized during storage and compressing them, cooling and liquefying the compressed hydrocarbons, refrigerating the liquefied hydrocarbons to substantially the temperature prevailing in said body of hydrocarbons by evaporation of a portion thereof, withdrawing the evaporated portion, and thereafter returning the said refrigerated liquid to said liquid body.



2,001,997

HONEY EXTRACTOR CONSTRUCTION

Albert G. Woodman, Grand Rapids, Mich.

Application April 3, 1933, Serial No. 664,090

5 Claims. (Cl. 210—65)

3. In a device of the class described, a holder comprising an upwardly extending U-shaped frame having a cover of foraminous material extending around the outer side of the arms of the U-shaped frame and leaving the top uncovered and terminating short of the bottom of the U-shaped member, said holder adapted to receive a frame of comb honey, the members of the frame of honey being free to extend outwardly at either end of the foraminous cover for the purpose described.

2,001,998

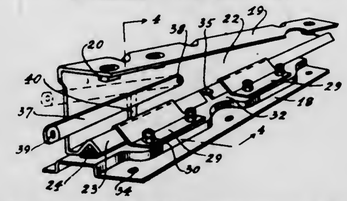
METHOD OF FORMING HIGH PRESSURE TANKS

Blasius Bart, East Orange, N. J.

Application February 2, 1931, Serial No. 512,990

2 Claims. (Cl. 204—6)

1. In the art of forming hollow metal articles lined with nickel by electrolytic deposition, the method which consists in assembling parts of a mold having smooth deposit receiving, exposed surfaces and with the parts in abutting relation forming joints, depositing a thin layer of copper on the mold, subjecting the mold thus prepared to the action of an electrolytic bath containing nickel, at a temperature not materially greater than 140° F. and not materially lower than 110° F. with a current density of approximately 25–30 amperes per square foot and until about twenty-five thousandths of an inch of nickel has been deposited to form the lining of the completed article as a one-piece layer of nickel on said copper coated smooth receiving surface of the mold, soldering any exposed joints between the parts of the mold to provide with the initial nickel layer a continuous, smooth, unbroken surface to receive the succeeding deposition and electrolytically depositing an additional layer of metal on the nickel lining and subjecting the mold with its thin layer of copper to the dissolving action of a reagent incapable of dissolving nickel or copper.



2,001,999

SEAT ADJUSTER

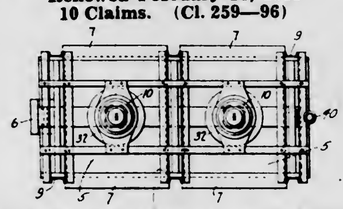
Stanley K. Bishop, Binghamton, N. Y., assignor to The Brewer-Titchener Corporation, Cortland, N. Y., a corporation of New York

Application November 26, 1932, Serial No. 644,415

5 Claims. (Cl. 155—14)

1. An adjustable seat comprising a pair of spacedly mounted sole plate members each provided with an upturned face having a race slot sunk therein and which slots are respectively arranged in parallel relation, a rolling medium floatingly disposed in each such slot, complementary carrier members each provided with toe flange means that are respectively mounted to ride upon one of the aforesaid rolling media, a seat base mounted to bridge said carriers, a demountable keeper plate superimposed to slidably retain one of said toe flanges upon its underlying rolling medium and which plate is extended laterally into overlapping relation with its contiguous upturned sole plate face, and screw means mounted in an axially rectangular relation to the last named face serving to clamp the keeper plate in the direction of said face.

2,002,000



MIXING APPARATUS

Ernest A. Colburn, Jr., Congress, Ariz., assignor to Denver Patent Company, Denver, Colo.

Application March 26, 1927, Serial No. 178,624

Renewed February 11, 1935

10 Claims. (Cl. 259—96)

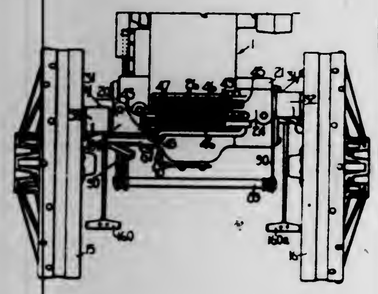
1. In flotation apparatus, a vessel adapted to be filled with liquid to a certain point, an agitating and suction element in the vessel below that point, a conduit for feeding material to the element, and having its mouth outside the vessel, the conduit being adjustable for placing its mouth inside the vessel for the removal of settled matter and means to admit air to the material.

2,002,001

CLOTHES HANGER

Earl C. Beard, Mishawaka, Ind., assignor of one-half to Anna M. Beard, Mishawaka, Ind.

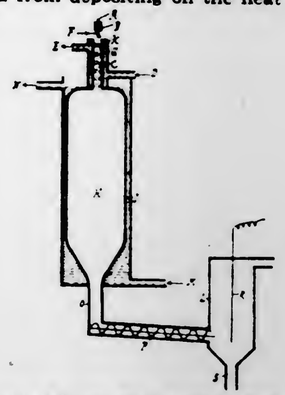
Application March 14, 1934, Serial No. 715,398



7 Claims. (Cl. 24—137)

1. A clothes hanger comprising, spaced flat metal spring portions, a rubber body covering said

spring portions, means connecting said spring portions exteriorly of said rubber body, and handles connected with said spring portions extending outwardly from said rubber body, said rubber body being slotted intermediate said spring portions to provide jaws to receive an article to be supported thereby.

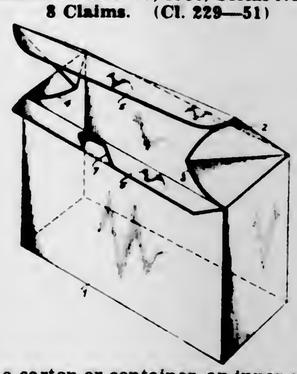


2,002,002
TRACTOR
Theophilus Brown and Linwood A. Murray, Moline, Ill., assignors to Deere & Company, Moline, Ill., a corporation of Illinois
Application November 20, 1931, Serial No. 576,298
23 Claims. (Cl. 180—1)

1. In a tractor having a power lift including an oscillatory member, the combination of a laterally shiftable supporting wheel, reversible ratchet means for shifting said wheel in either direction at will, and means connecting said ratchet means and said oscillatory member for transmitting the movements of said member to said ratchet means to actuate the latter.

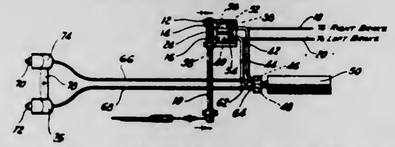
2,002,003
PRODUCTION OF ACETYLENE AND CARBON BLACK
Otto Eisenhut, Heidelberg, and Heinrich Schilling and Paul Baumann, Ludwigshafen-on-the-Rhine, Germany, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany
Application September 19, 1931, Serial No. 563,784
In Germany September 20, 1930
8 Claims. (Cl. 204—31)

1. In the conversion of a vaporized hydrocarbon into acetylene and carbon black by treatment in the electric arc the step which comprises passing the mixture of gas and carbon black issuing from the arc space in a whirling motion directly into a large cooled free space, whereby the carbon black is maintained in suspension in said gas and prevented from depositing on the heat conducting surfaces defining said cooled space and then separating the carbon black from the gas.



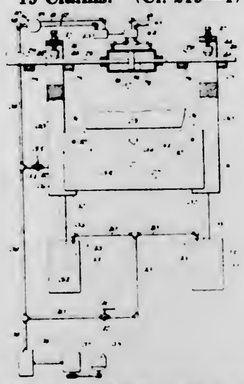
2,002,004
PROCESS FOR TREATING OIL
Earle W. Gard, Palos Verdes Estates, Calif., assignor to Union Oil Company of California, Los Angeles, Calif., a corporation of California
No Drawing. Application August 7, 1933, Serial No. 684,123
18 Claims. (Cl. 196—13)

1. A process for the separation of asphalt from an asphalt containing oil comprising commingling said oil with an asphalt precipitating solvent and separating a portion of said asphalt, distilling said partially deasphaltized oil and producing an oil fraction containing the remaining asphalt and separating the asphalt from said oil fraction containing the remaining asphalt with an asphalt precipitating solvent.



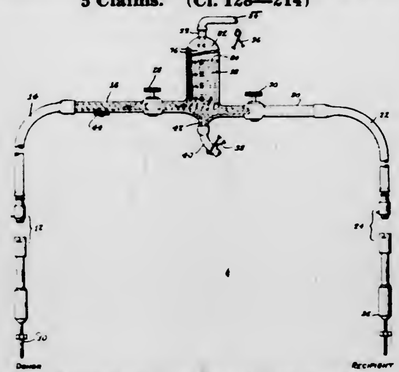
7. A plastic material produced from asphaltic oil comprising the plastic fractions recovered from the oil after a portion of the asphalt has been removed from said asphaltic oil with a solvent.

2,002,005
CARTON OR CONTAINER
Stella A. Gottlieb, New York, N. Y.
Application October 17, 1933, Serial No. 693,911
8 Claims. (Cl. 229—51)



1. In a carton or container, an inner cover having side webs or folding partitions on the sides thereof; a lip on the front of said cover that rests when closed in a position parallel to the front wall of said carton; a supplementary cover passing over the inner cover aforesaid; said supplementary cover consisting of two integral sections one of which is glued or pasted to the top of the inner cover for the purpose of sealing said carton; a perforated or scored line impressed across said supplementary cover; said perforated line forming a flap contour at the approximate center of said supplementary cover; and a slit in the inside cover into which the sealing flap formed by the slitting of the perforated line is fitted.

2,002,006
BRAKE
Percy Edgar Hall, Birmingham, England, assignor to Bendix Aviation Corporation, South Bend, Ind., a corporation of Delaware
Application September 3, 1932, Serial No. 631,686
In Great Britain September 4, 1931
3 Claims. (Cl. 244—2)

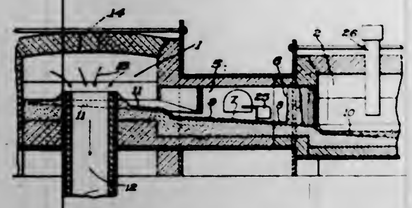


1. A control mechanism for airplanes comprising a rudder bar, a compressed air reservoir having a pair of valves, members connecting the respective ends of the rudder bar to the respective valves for actuation from the rudder bar, operating cylinders connected to the reservoir through the valves, a rock shaft, levers pivoted on the rock shaft and connected to the pistons of the operating cylinders, a pair of brakes, tension members connecting the levers to the brakes, and mechanical means for rocking the shaft to actuate the tension members to apply the brakes simultaneously.

2,002,007
SHEET FLASH WELDER
Arthur F. Hanson, Philadelphia, Pa., assignor to Edward G. Budd Manufacturing Company, Philadelphia, Pa., a corporation of Pennsylvania
Application May 3, 1932, Serial No. 608,880
19 Claims. (Cl. 219—4)

6. In a flash welding machine, the combination of relatively movable greatly elongated dies, a master wedge shaped cam to control the die movement and arranged for motion transversely to said relative die motion, and means adapted to co-act with the cam and transfer the movement thereof to the die.

2,002,008
APPARATUS FOR BLOOD TRANSFUSION
George S. Harris, Jr., Boston, Mass., assignor to Benjamin Howard Benson, Brookline, Mass.
Application May 25, 1933, Serial No. 672,740
5 Claims. (Cl. 128—214)

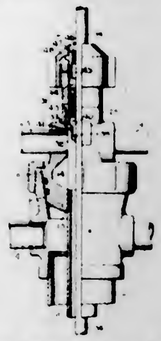


1. In apparatus for blood transfusion, the combination of a tube having terminals adapted for connection to the blood systems of donor and recipient, said tube affording a continuous flow passage for blood from donor to recipient; combined with a chamber, connected with the passage and rising above that part of the passage with which it is connected, and constituting an air trap; there being means for the temporary closing of the passage beyond the place of its connection to the chamber; the top and bottom of the chamber being adapted for connection of tubes additional to the first mentioned tube.

2,002,009
CONVEYER SYSTEM
Simeon T. Hart and Willard A. Marcy, Syracuse, N. Y., assignors to The Lamson Company, Syracuse, N. Y., a corporation of Massachusetts
Application December 30, 1930, Serial No. 505,576
22 Claims. (Cl. 198—20)

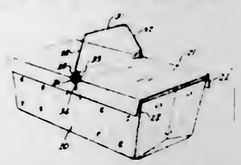
20. A vertical conveyer system having a well in which a car is adapted to travel upwardly in one path and downwardly in another path, unloading mechanism carried by the car and stations adjacent both the upward and downward paths of the car, each station including means for loading the car, and means for actuating the unloading mechanism carried by the car whereby the car receives loads at one station and delivers them to other stations on its upward travel and similarly on its downward travel.

2,002,010
METHOD OF AND APPARATUS FOR TREATING METALS
Glenn E. Hilliard, Brackenridge, Pa.
Application February 17, 1931, Serial No. 516,349
Renewed October 11, 1934
18 Claims. (Cl. 75—22.5)



1. The method of melting steel scrap, which comprises maintaining a flow of intimately mixed steel scrap and fine carbon to a melting furnace, to form a gaseous envelope around the stream of scrap, and simultaneously maintaining an independent flow of comparatively coarser carbon which is made to mingle with the mixture and form an accumulation on the hearth of said furnace, consisting of a scrap-carbon conglomerate, thereby causing the melting scrap of said conglomerate to become alloyed with carbon.

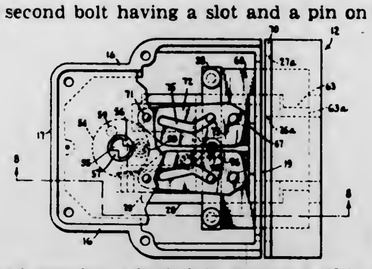
2,002,011
WEB ROLL CONTROLLING MECHANISM
Albert J. Horton, White Plains, N. Y., assignor to R. Hoe & Co., Inc., New York, N. Y., a corporation of New York; Irving Trust Company, permanent trustee
Application October 3, 1930, Serial No. 486,090
11 Claims. (Cl. 242—75)



2. In a web roll controlling device for a printing machine, a support arranged to move rolls successively into running position, an endless belt supported to bear against the periphery of a web roll in running position and arranged to be driven by said roll, a controlling mechanism acting in response to variation in the pull of the running web, and a friction brake mechanically connected to said controlling mechanism and adapted to impede the motion of said belt to control the tension of the web and quickly check the rotation of the running roll when the machine is decelerated rapidly.

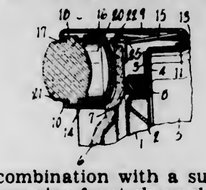
2,002,012
STUFFING BOX FOR POLISH RODS
James H. Howard, Houston, Tex., assignor to J. H. McEvoy & Company, a corporation
Application May 26, 1931, Serial No. 540,093
3 Claims. (Cl. 286—17)

1. In a tubing hanger and flow line cross, a polish rod stuffing box including a housing, a lower oil gland therein, means in said gland whereby the pumped oil will fill said gland, packing above said gland, and an upper oil gland with means therein to retain a supply of lubricant.



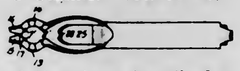
2,002,013
HANDLE CONSTRUCTION FOR BASKETS
Herbert M. Kieckhefer, Riverton, N. J., and Webster R. Dock, Milwaukee, Wis., assignors to Kieckhefer Container Company, Milwaukee, Wis., a corporation of Maine
Application December 8, 1933, Serial No. 701,436
9 Claims. (Cl. 229—52)

1. A receptacle comprising a body portion, handle-receiving ears secured to opposite sides of said body and having three-cornered loop portions projecting above the upper edges of said sides, and a handle having downwardly extending legs provided with oppositely disposed inwardly looped portions engageable from the outside between the uppermost corners of the loops of the ears and the upper edges of the receptacle to maintain the handle in upright position and being engageable between the other two corners of the loops of the ears to maintain the handle in a lowered position.



2,002,014
LOCK
Charles Kemp and Irving Kemp, New York, N. Y.
Application April 5, 1933, Serial No. 664,474
5 Claims. (Cl. 70—74)

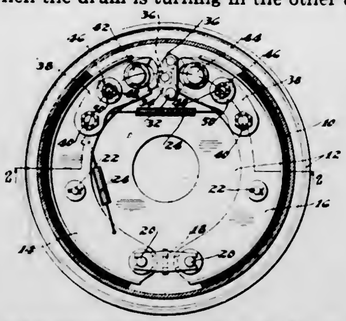
5. A lock comprising a casing, a bolt slidably mounted therein, a second bolt slidably mounted on said first bolt for movement in a direction transverse to the movement of said first bolt, means for reciprocating said first bolt, a member pivoted with respect to said casing and having a pin and slot connection with said first bolt, said second bolt having a slot and a pin on said



pivoted member adapted to engage within said slot and movable out of said slot.

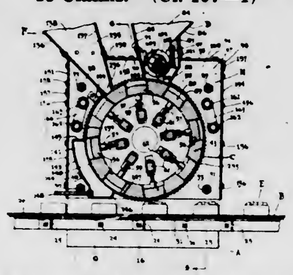
2,002,015
REFLECTOR
Johannes Kosten and John J. Verwys, Grand Rapids, Mich.
Application June 19, 1933, Serial No. 676,444
21 Claims. (Cl. 88—81)

21. The combination with a support having a rearwardly opening front channel and a forwardly opening rear channel, the latter being relatively narrow compared to the former, the web of said front channel having a series of spaced openings therein, of reflector units seated in said front channel to project forwardly through the web openings thereof, and loop-like spring means seated in said rear channel and engaging said reflector units to hold the same in place.



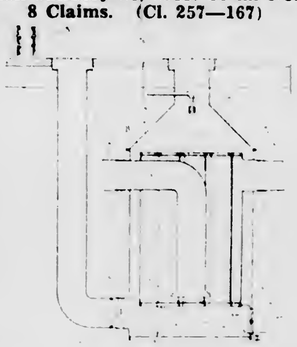
2,002,016
TOOL FOR INSERTING VALVE LOCK WASHERS OR KEEPERS
Smith Kyser, Philadelphia, Pa., assignor to Aircraft Specialties, Inc., a corporation of Delaware
Application May 4, 1932, Serial No. 609,129
5 Claims. (Cl. 81—3)

1. A tool of the class described comprising a body portion, a bar slidably mounted on said body portion, a pair of spring arms integrally formed with said body portion and projecting therefrom, and being adapted to grip the two complementary portions of a split valve washer between them and said bar being adapted to extend between the two complementary portions to maintain them in separated relation until the washers are snapped on to a valve stem, said bar being provided with a vertical pin and said body portion being provided with a spring tongue adapted to cooperate with said vertical pin to limit the rearward movement of the bar.



2,002,017
BRAKE
Ludger E. La Brie, South Bend, Ind., assignor to Bendix Brake Company, South Bend, Ind., a corporation of Illinois
Application March 21, 1931, Serial No. 524,253
13 Claims. (Cl. 188—78)

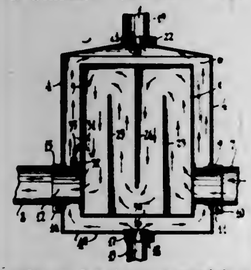
1. A brake comprising a rotatable drum and friction means anchoring at one end when the drum is turning in one direction and at the other end when the drum is turning in the other direc-



tion, and having at its opposite ends frictionally-pivoted anchor links.

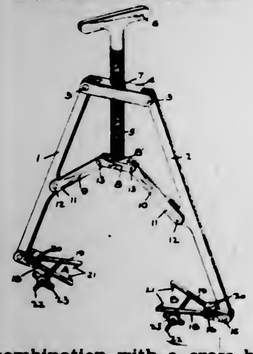
2,002,018
METHOD OF AND APPARATUS FOR APPLYING NUTS TO CANDY BARS
Frank A. Martoccio, Minneapolis, Minn.
Application January 7, 1932, Serial No. 585,191
15 Claims. (Cl. 107—1)

2. The method of applying nuts to candy bars which consists in arranging the nuts in predetermined formation, in applying the coating to the arranged nuts and in transferring the coated nuts substantially in arranged formation to the candy bars and causing the formed nuts to adhere to the candy bars in such position.



2,002,019
AIR CONDITIONING APPARATUS
George B. Marzolf, St. Paul, Minn., assignor to Farwell Ozmun Kirk & Co., St. Paul, Minn., a corporation of Minnesota
Application January 14, 1933, Serial No. 651,661
8 Claims. (Cl. 257—167)

6. In an apparatus of the character described, a casing having an opening at the lower portion

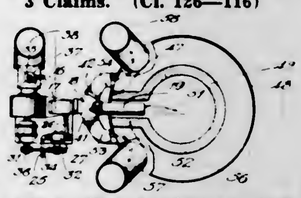


thereof for the ingress thereto of air to be conditioned and having an opening at the upper portion thereof for the egress of conditioned air, a drum within the casing spaced from the sides thereof, means for directing water into contact with the drum, an ingress conduit for admitting hot gases into the drum at the upper portion thereof, and a conduit for the egress of gases from the drum, said conduit extending upwardly from the lower portion of said drum and being subjected to the heat within the drum at its upper portion.

2,002,020
HEAT RETARDER
Marinus J. C. Nyborg, Columbia Heights, Minn., assignor of two-fifths to F. H. Hosmer, Minneapolis, Minn.
Application December 3, 1934, Serial No. 755,775
2 Claims. (Cl. 257—168)

2. An auxiliary heater comprising inner and outer shells spaced to afford an air chamber, said outer shell having air intake and outlet pipes and said inner shell having smoke pipe connections leading thereto and therefrom through the walls of said outer shell, said inner shell having overlapping baffles for causing the products of combustion to take a tortuous course therethrough, in which said structure, the inner shell is provided with an opening normally closed by damper combined with a thermostat arranged to move said damper to an open position when the air in the air chamber is heated beyond a predetermined temperature.

2,002,021
SURGICAL FRACTURE EXTENSION APPLIANCE
Howard Rouse, Lewiston, Idaho
Application February 27, 1934, Serial No. 713,091
4 Claims. (Cl. 128—83)



1. The combination with a cross head and a screw therein, a pair of arms pivoted to the cross head, a spreader-head in which the screw is journaled, and links pivotally connecting said spreader-head with the arms, of a pair of bracket-heads pivoted on the arms, and a pair of clamps swiveled in said bracket heads.

2,002,022
DIRECTION SIGNAL
Seely McCord Terwilliger and William Tell Sevener, Los Angeles, Calif., assignors of one-fourth to Clarence B. Foster, Glendale, Calif.
Application August 1, 1928, Serial No. 296,741
8 Claims. (Cl. 177—337)

2. In a direction signal adapted for installation on a vehicle having a brake system, the combination of: a pivoted signal arm movable outwardly from a neutral position to a stop signaling position and to different direction signaling positions beyond said stop signaling position; a first operating means for selectively moving said signal arm to said signaling positions; and a second operating means positioned to engage said signal arm and operable by the brake system to propel said signal arm from neutral position to said stop signaling position when the brakes are applied.

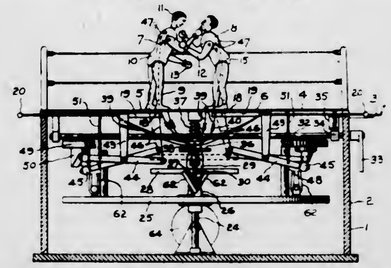
2,002,023
AIR CONDITIONING DEVICE
Adolph Thousand, Cedar Rapids, Iowa
Application July 28, 1933, Serial No. 682,622
3 Claims. (Cl. 126—116)

1. In an air conditioning device including a hot air furnace having a jacket, a conventional fluid fuel burner including a blower and a fuel pump for furnishing atomized fuel and air to the fire box of the furnace and driving means for driving the blower and fuel pump, a humidifying device for humidifying the air passing through the blower, means for controlling the admission of water to the humidifying device, means for disconnecting the fuel pump from the driving means of the fluid fuel burner, and conduits for directing air from the blower selectively into the combustion chamber and hot air jacket of the furnace.

2,002,024
SYRINGE
Frank L. Wood, Lynden, Wash.
Application February 5, 1932, Serial No. 591,070
1 Claim. (Cl. 128—215)

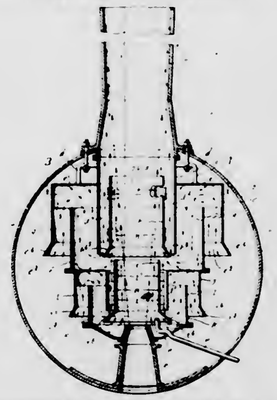
A syringe comprising a barrel having a nozzle end and a plunger end, a ledge projecting outwardly from the plunger end, a plunger having an annular boss at the outer portion thereof and means for supporting and maintaining the inner

end of the plunger out of contact with the nozzle end of the barrel in the normal lower most position of the plunger in the barrel when the barrel is empty, said means comprising a clip of resilient material having a barrel embracing portion seated beneath the ledge, an integral resilient extension engaging the upper portion of the ledge and comprising a resilient finger extending upwardly from the ledge and having a terminal cam face, the length of the plunger from its fluid-ejecting end to the under side of the boss being



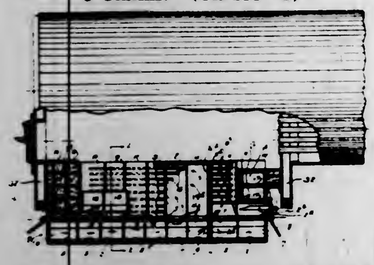
less than that of the inner extent of the barrel plus the height of the terminal cam face of the finger above the upper edge of the ledge whereby a surface of said cam face will be engaged by the boss on the plunger at the moment when the plunger is in a position close to but still out of contact with the inner face of the nozzle end of the barrel, said boss thereupon, on application of further pressure applied to the plunger, flexing the finger and thereby enabling the plunger to be moved to a position where it makes contact with the inner face of the nozzle-end of the barrel.

2,002,025
VEHICLE DOOR CONTROL
Charles A. Breit, Houston, Tex.
Application April 24, 1933, Serial No. 667,580
8 Claims. (Cl. 303—6.1)



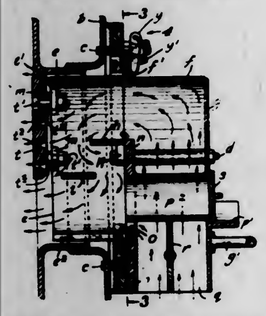
1. A vehicle door mounted to open and close, means for automatically closing the door, means movable to active position to lock the door in closed position and movable to inactive position to release the door to permit the door to be manually opened, means under the control of the operator of the vehicle and effective, when manipulated, to move said locking means to said inactive position and brake controlling means arranged to be controlled by the operator-controlled means and effective to admit a continuous pressure of fluid to the vehicle brake mechanism to maintain the vehicle brakes set while the door is unlocked.

2,002,026
FIGHTING TOY
Albert Deans Fairgrieve, Vancouver, British Columbia, Canada
Application October 2, 1933, Serial No. 691,779
21 Claims. (Cl. 46—40)



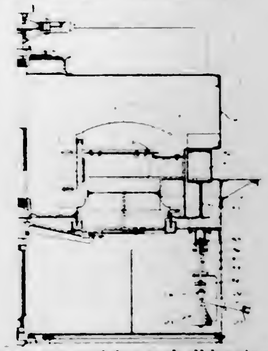
1. A fighting toy comprising a platform supporting a pair of boxers each having arms, legs and body, means for swinging the arms, and means operable by players for imparting movement to both legs of each boxer causing them to converge or diverge.

2,002,027
ENGINE SPARK EXTINGUISHER
Carl F. Gerlinger, Dallas, Oreg.
Application March 27, 1933, Serial No. 662,958
7 Claims. (Cl. 110—122)



1. In combination with the stack and the exhaust nozzle of the smoke box of a locomotive engine, a spark reducing and extinguishing means comprising an extension of the lower end of the stack within the smoke box, an upper-header encompassing said stack extension, comprising a ceiling, an outer wall, a partition within said header arranged to constitute a reversing passageway connecting the smoke box with said stack extension, a lower-header coaxial with, but of lesser diameter than said upper-header, said lower header comprising an outer wall, an inner wall, a ceiling, and an inner partition arranged to constitute a reversing passageway connecting the smoke box with said stack extension, the ceiling of the lower header being connected to the lower end of the partition of said upper header and constituting the bottom of the inner end of said reversing passageway of the upper-header, a bottom closure for the space between the exhaust nozzle in the smoke box and said inner partition of the lower header.

2,002,028
FIRE BOX OF OIL BURNING LOCOMOTIVES
Carl F. Gerlinger, Dallas, Oreg.
Application July 3, 1933, Serial No. 678,772
6 Claims. (Cl. 158—3)



1. In an oil burning locomotive provided with a fire box, an oil burner located at the front of said fire box, and a flash wall located at the rear of said fire box, a fire box composed of interfitting hollow units, providing air heating passageways discharging into the fire box, certain of said hollow units having closed ends whereby the air passageways are separated into front and rear sections permitting the preheated air to enter the fire box at both the front and the rear ends simultaneously, the air passageways of the front sections having their outlets at the front of the fire box and the air passageways of the rear sections having their outlets close to the flash wall at the rear of the fire box.

2,002,029
DOOR FOR FIRE BOXES OF OIL BURNING LOCOMOTIVES
Carl F. Gerlinger, Dallas, Oreg.
Application June 23, 1934, Serial No. 732,111
6 Claims. (Cl. 110—175)

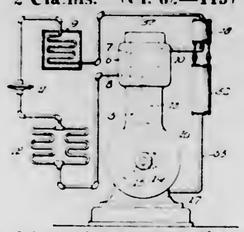
1. In combination with a locomotive firebox, a chambered door, comprising an anterior chamber provided with a damper controlled air inlet at the bottom, and an interior preheating chamber, a transverse slotted wall between such chambers, said wall being spaced from the top of said chambers and constructed to block communication between said chambers except at their upper portions and thru said slot, and a transverse perforated wall having the lower edge thereof spaced from the bottom of said preheating chamber and being located between the upper portion of said preheating chamber and the firebox, and horizontal staggered baffles in said preheating chamber, located between the top of said transverse slotted wall and the bottom of said transverse, perforated wall, whereby to retard and divide into courses the air passing into the firebox from the upper portion of the preheating chamber under the last mentioned wall, whereby to effect preheating of the air before entering the firebox.

2,002,030
FURNACE
Walter Grothe, Alameda, Calif., assignor to Caterpillar Tractor Co., San Leandro, Calif., a corporation of California
Original application July 9, 1928, Serial No. 291,322. Divided and this application May 4, 1931, Serial No. 534,905
4 Claims. (Cl. 263—10)

1. A furnace comprising a shell having an opening therein and insulation projecting outwardly above said opening, a door vertically slidable across said opening and adapted to close the opening when the door is in an upper position with the top thereof adjacent said insulation, and means for moving said door from said upper position to a lower position, said top of the door being adapted to register with the bottom bounding said opening when the door is in the lower position.

2,002,031
THERMOSTAT
John M. Johnson, Kansas City, Mo.
Application December 7, 1933, Serial No. 701,312
8 Claims. (Cl. 200—142)

1. A thermostat comprising in combination a body member, a pair of conducting members carried thereby, means for connecting a pair of conductors to said conducting members, a second body member, a second pair of conducting members carried thereby, means for connecting a second pair of conductors to said second conducting members, fusible alloy holding the respective first and second conducting members together and means for placing said alloy under tension.



2,002,032
INKING MECHANISM FOR PRINTING PRESSES
Abel Kluge and Eneval Kluge, St. Paul, Minn., assignors to Brandtjen and Kluge, Inc., St. Paul, Minn., a corporation of Minnesota
Application March 22, 1933, Serial No. 662,097
14 Claims. (Cl. 101—348)

1. In mechanism of the character described, saddle construction including a saddle block having spaced bearings for a pair of composition inking rollers and a mounting on said block for a vibrator roller, said mounting comprising a pair of bearing members individually slidably adjustable on said block, each member having

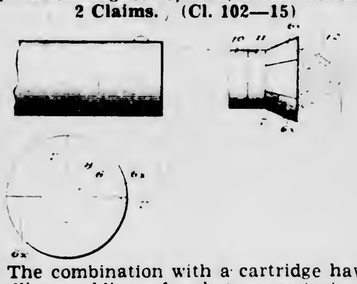
an inclined seat portion complementing that of the other, said seat portions forming a V-rest for the vibrator shaft, the adjustment of said members enabling said mounting to support the vibrator roller in contact with both of the composition rollers.

2,002,033
REFRIGERATING SYSTEM
Julius F. Kopsa, Chicago, Ill.
Application September 22, 1932, Serial No. 634,278
2 Claims. (Cl. 62—115)

1. In a refrigerating system, the combination with a motor-operated compressor for compressing the refrigerant for the system and an evaporating coil connected by a pipe line to receive compressed refrigerant from the compressor, of a separator device adapted to remove foreign liquid from the refrigerant prior to passage of the refrigerant to the coil and comprising a shell connected to the pipe line so that the refrigerant passes therethrough, a blade-equipped element mounted in the shell for rotation in response to flow of the refrigerant through said shell and operative during rotation to separate all foreign liquid from the refrigerant by flinging it outwardly, and means for catching the liquid flung outwardly by the blade-equipped element.

2,002,034
ELECTRICAL OUTLET AND CONNECTER FOR RAILWAY TRACKS
Glenn A. Laser, Mansfield, Ohio
Application September 7, 1934, Serial No. 743,132
1 Claim. (Cl. 247—1)

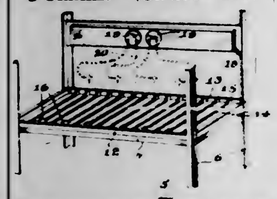
A combined outlet and connecter comprising a conduit containing a cable having oppositely disposed slits in one end thereof, a pair of semi-circular shaped contact blocks partially disposed in the slit end of said conduit, a band around the slit end thereof for securing said blocks in position, each of said contact blocks being provided with oppositely disposed semi-circular shaped bores therein for the reception of a cable, insulating members between the cable and the blocks comprising a longitudinally extending central portion semi-circular in transverse cross section having laterally extending integral side portions for disposition between the inner faces of the block, oppositely disposed bores in the sides of each of said blocks, and contact pins lon-



gitudinally disposed in said blocks extending from the upper faces thereof and having a portion terminating in the bores.

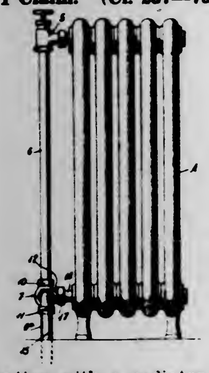
2,002,035
PACK OF PHOTOGRAPHIC PLATES
Bernhard Liebeskind, Berlin-Zehlendorf, Germany, assignor to Agfa Ansco Corporation, Binghamton, N. Y., a corporation of New York
Application March 19, 1931, Serial No. 523,857
In Germany April 2, 1930
10 Claims. (Cl. 206—62)

1. A pack comprising a pile of pairs of photographic plates, each pair being separately wrapped in a paper strip covering the pair of plates on four sides, the emulsion layers of each pair of plates facing each other and being separated at least at one narrow side by a part of said wrapping paper strip, said pile being wrapped in a paper strip closely embracing it at the upper and lower sides and at the two sides not covered by the separate wrappings of the pairs of plates.



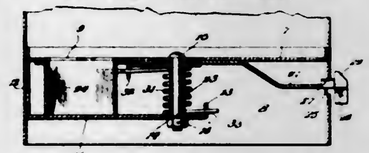
2,002,036
SHOT CONCENTRATOR
Ephraim McGavock, Max Meadows, Va.
Application August 11, 1933, Serial No. 684,731
2 Claims. (Cl. 102—15)

1. The combination with a cartridge having a propelling wadding, of a shot concentrator com-



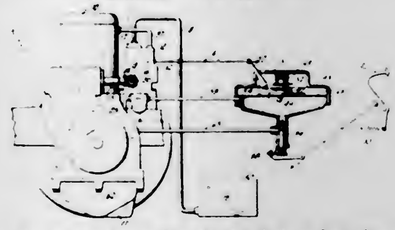
prising a cup-shaped member of thin tough flexible material, said cup-shaped member having a substantially circular disk portion, and integral segments radiating therefrom adapted to be folded together to form the entire side walls of the cup, a portion of a charge of shot disposed normally within the cup, another portion being disposed outside of the cup within the cartridge, and a wadding for retaining the shot, said wadding being spaced from the cup.

2,002,037
SUPPORT FOR ELECTRIC BATTERIES UNDERGOING CHARGING
Charles J. McKenna, Newark, N. J., assignor to Atlas Supply Company, Newark, N. J., a corporation of Delaware
Application April 29, 1932, Serial No. 608,338
3 Claims. (Cl. 136—173)



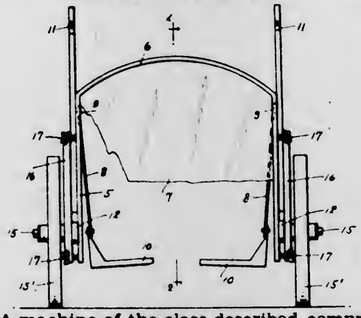
1. In a battery charging rack, a shallow battery supporting tray having a plane under surface formed of a material which is not affected by storage battery electrolyte, said tray having a low upstanding annular wall and battery supporting projections extending upwardly from the bottom of the tray and positioned within the boundary formed by the wall, said projections forming parallel ridges connecting opposite sides of the wall, and battery stop lugs projecting toward one another from opposite sides of the wall.

2,002,038
RADIATOR FITTING
Frank P. McKeon, Branford, Conn.
Application March 7, 1933, Serial No. 659,960
1 Claim. (Cl. 237—73)



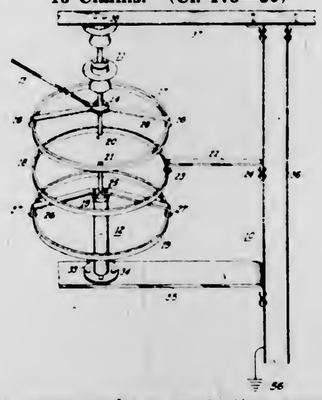
In combination with a radiator having duplicate end sections, each provided with an upper inlet and a lower outlet opening, of a reversible fitting adapted to be secured to the lower outlet opening of either end section of said radiator, said fitting being formed with a vertical passageway having top and bottom pipe connections establishing communication with the upper inlet portion of the radiator, and an elbow cast integrally with said fitting and having an entirely separate and continuous passageway therein disposed in a plane transverse to said first passageway and having a pipe connection establishing communication with the lower outlet end of the radiator, said latter pipe connection extending laterally of the radiator in the same direction when said fitting and pipe connection is secured to the opposite ends of said radiator.

2,002,039
CONDIMENT MEASURING AND DISPENSING DEVICE
Harold L. McPhee, Chicago, Ill.
Application April 23, 1934, Serial No. 721,996
4 Claims. (Cl. 221—109)



1. A dispensing device including a receptacle having a discharge opening in the bottom thereof, a reciprocating valve disposed beneath the bottom of the receptacle and provided with a plurality of measuring pockets, a stationary plate forming a closure for the lower ends of said pockets, a pivot bolt extending through the bottom of the receptacle and through the valve and the stationary plate, a spacing sleeve fitted about the bolt, a spring coiled around the spacing sleeve and having one end thereof connected with the stationary plate and the other with the valve, an operating handle extending laterally from the valve and projecting through a slot in the receptacle, and means carried by the handle and coacting with one wall of the slot for holding the operating handle in different positions of adjustment.

2,002,040
FUEL FEED CONTROL
Frank C. Mock, Montclair, N. J., assignor, by mesne assignments, to Eclipse Aviation Corporation, East Orange, N. J., a corporation of New Jersey
Application November 28, 1931, Serial No. 577,821
2 Claims. (Cl. 264—14)

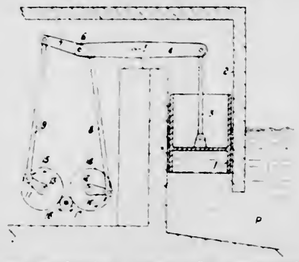


1. In a governor for an engine, a housing enclosing a chamber, a diaphragm forming a chamber wall, means for supplying fluid pressure to the chamber, a cap member secured to the housing above the chamber having an atmospheric opening, a member having spaced flanges contacting the diaphragm, a spring coacting between the cap member and the collar to press the same against the diaphragm, and a bell crank having arms inclined to each other at an angle other than a right angle, said bell crank being pivotally mounted interiorly of the cap member and having one arm arranged between the flanges and the other arm extending through said opening and adapted to be connected to an engine control, one of said arms being parallel to the face of the diaphragm.

2,002,041
FLEA BEETLE CATCHER
Nils T. A. Nilsson, Elma, Wash.
Application July 17, 1934, Serial No. 735,695
2 Claims. (Cl. 43—133)

1. A machine of the class described comprising a pair of upright side plates, a hood connecting the upper edges of the plates, a pair of spring arms fixed to each plate on the inner face thereof and diverging downwardly therefrom, oil pans mounted on the lower ends of the arms, and wheel means for supporting the plates.

2,002,042
EXCESS-VOLTAGE PROTECTIVE STRUCTURE
Ralph R. Pittman, Pine Bluff, Ark.
Application January 11, 1934, Serial No. 706,170
13 Claims. (Cl. 175—30)



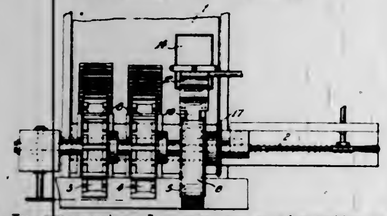
1. An excess-voltage protective arrangement adapted to be interposed between a conductor and ground, comprising a pair of conducting members rigidly supported in spaced-apart relation, one of said members being electrically connected to said conductor and the other of said members being electrically connected to ground, said pair of members forming a gap adapted to definitely limit the potential difference between conductor and ground, and means for preventing flashover between said members, said means including a plurality of normally insulated conducting electrodes supported in spaced relation to provide a plurality of spark gaps in series relation between said conductor and ground and capacity means including said conducting members associated with said electrodes for causing cascade flashover of said spark gaps.

3. In an excess-voltage protective structure subject to a voltage from a conductor to ground, insulating means supporting a plurality of normally insulated conducting electrodes to provide a first spark gap and a second spark gap in series relation from conductor to ground, a hollow insulator housing said second spark gap, and flux control means combined with said electrodes for simultaneously reducing the time lag of flashover of said gaps and impressing prior to breakdown of said gaps substantially all of said voltage on said first spark gap.

13. An arc extinguishing device comprising a first hollow insulator, a second hollow insulator contained by said first hollow insulator, normally insulated conducting electrodes associated with said second hollow insulator, said electrodes being so related that the weakest electrical path therebetween is in a space between the inner surface of said first hollow insulator and the outer surface of said second hollow insulator, and means including integral portions of said electrodes disposed respectively on the inner and outer surfaces of said second insulator for increasing the electrical capacity of the device.

2,002,043
MEANS FOR PRODUCING ARTIFICIAL WAVES
Owen Alfred Price, Kilmarnock, Scotland
Application January 30, 1935, Serial No. 4,013
In Great Britain November 16, 1933
8 Claims. (Cl. 272—26)

1. Wave-producing means for swimming pools and the like, comprising, in combination, a plurality of displacers, means for imparting to said displacers reciprocating movements in phase, the relation of the amplitudes of reciprocating movements of said displacers being varied during their reciprocation without varying the phase relation of said movements.

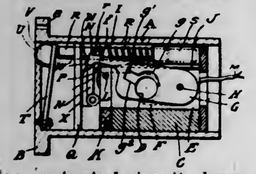


2,002,044
STRUCTURAL ELEMENT
Otto Rothenstein, Chicago, Ill.
Application January 16, 1930, Serial No. 421,189
2 Claims. (Cl. 189—37)

1. A structural element of rectangular form, consisting of two channel-like members facing

each other, and joined by welding along the meeting edges of the respective flanges, each member being severed longitudinally in a zigzag line along its web and the apices of the severed parts being connected by welding.

2,002,045
CIGARETTE MAKING MACHINERY
Felix Frederic Ruau, Deptford, London, England
Application June 12, 1934, Serial No. 730,326
In Great Britain June 21, 1933
11 Claims. (Cl. 131—39)

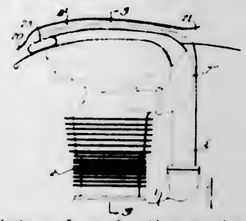


1. In apparatus for use on a cigarette making machine in which the cigarettes issue in axial alignment from a cut-off device on the machine, the combination with deflector elements for delivering the axially moving cigarettes laterally, of a weighing device, a scale pan for the weighing device, and an element movable in timed relationship with said deflecting elements to move an axially moving cigarette laterally into the scale pan.

2,002,046
POLYCYCLE PROPULSION MEANS
Albert J. Scholtes, Baltimore, Md.
Application July 13, 1934, Serial No. 735,035
11 Claims. (Cl. 208—37)

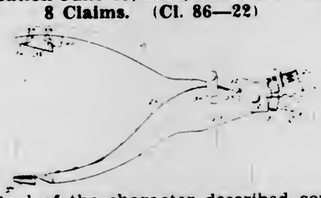
1. In a propelled vehicle, a body portion having a traction element, operating means, and connecting means operable to connect the operating means to the traction element upon a predetermined movement of the operating means and to release the operating means upon a different predetermined movement thereof.

2,002,047
LOCK SWITCH
John Delmore Taylor, Glasgow, Scotland
Application July 15, 1933, Serial No. 680,618
In Great Britain June 9, 1932
2 Claims. (Cl. 200—55)



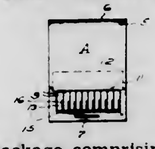
1. In a door actuated circuit closer comprising a casing, a lever loosely connected to said casing and having a lug to move therewith, a frame secured within said casing, a spring pressed bolt slidable in said frame to normally force said lug outwardly from said casing, a forked lever pivotally mounted in said frame to straddle said bolt and to permit movement either of the bolt or the lever and the bolt, a contact lever pivotally mounted to swing in said frame, a contact bar secured in the frame in spaced relation to the contact lever and positioned to permit the same to register, the said forked lever engaging said spring pressed bolt and having a shouldered portion movable therewith into and out of engagement with the contact lever, a control lever pivotally mounted to swing upwardly and downwardly in said frame, and spring means to hold said lever in either position, the said control lever having a clawed end portion to engage said shouldered portion of the forked lever in downward position, and to release the same in upward position to permit the contact bar and lever to register upon the opening of the door, the said frame and casing provided with a keyhole to insert and operate a key whereby the desired position of the control lever is attained.

2,002,048
EXTENSIBLE TEMPORARY BRIDGE
Cecil A. Thomas, Lawrenceville, Va.
Application October 15, 1932, Serial No. 637,998
7 Claims. (Cl. 32—5)



7. An adjustable removable bridge frame comprising complementary Y-shaped members adapted to be arranged with their bifurcated ends oppositely directed and in embracing relation to teeth at the ends of the gap to be filled, the shanks of said Y-shaped members slidably overlapping, said shanks being provided with a pin and slot connection for effecting length adjustment of said shanks.

2,002,049
INTERNAL COMBUSTION ENGINE
Charles Raymond Waseige, Rueil, France, assignor to Eclipse Aviation Corporation, East Orange, N. J., a corporation of New Jersey
Application February 6, 1931, Serial No. 513,971
9 Claims. (Cl. 123—55)



1. In an internal combustion engine of the radial type employing a supercharger for compressing the combustion supporting fluid and having a surrounding cowl for directing air toward the engine, the combination with said supercharger of a plurality of generally radially extending intake conduits leading from said supercharger to the combustion chambers of said engine, said cowl including an air conduit surrounding said first named conduits and open at one end for the entrance of atmospheric air and at the other end for the discharge thereof, and means associated with said last named conduit for increasing the velocity of the atmospheric air flowing through said conduit.

2,002,050
MINER'S FUSE CUTTER
Hallis Baker, Golden, Idaho, assignor to John F. Vanderpool and William H. Baker, Golden, Idaho
Application June 19, 1934, Serial No. 731,356
8 Claims. (Cl. 86—22)

1. A tool of the character described comprising a pair of pivotally connected levers disposed in crossed relation to each other, jaws formed on the respective levers, another jaw arranged between the jaws on said levers and supported by the pivot connecting said levers, one of the jaws on the levers and the said other jaw having companion spaced parallel grooves transversely thereof, and cutting blades on one lever jaw and operating crosswise of the grooves and longitudinally of a pair of opposed grooves and centrally of the same.

2,002,051
MATCH PACKAGE
Edward F. Boutillon, Woodside, N. Y.
Application August 9, 1934, Serial No. 739,165
5 Claims. (Cl. 206—29)

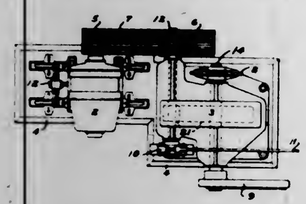
1. A match package comprising a cover bent to bowed formation, means for binding the free ends of the cover together, a group of paper matches comprising a portion bound to the cover and stems attached to said portion by weakened members, said stems comprising finger-grasp portions adjacent to said weakened members, and said cover having a side opening through which said finger-grasp portions may be projected and through which the matches may be withdrawn, and said cover being provided with friction surfaces upon its inner face, adapted to be engaged by the heads of the matches to ignite the same as the matches are being pulled through said side openings.

2,002,052
BUSK FASTENING MEANS FOR CORSETS AND SIMILAR GARMENTS
John Edward Broome, Market Harborough, Leicester, England, assignor to Ormond James Taylor, Dundee, Scotland
Application September 18, 1934, Serial No. 744,590
In Great Britain October 6, 1933
2 Claims. (Cl. 2—257)

1. A corset having a pair of marginal busks, studs projecting inwardly from one busk, cooperative slotted tabs projecting laterally from the other busk of the pair, a tab projecting laterally from said other busk and so arranged, when the garment is fastened, as to project over the face of the said first-mentioned busk, and an internal flap secured to the corset behind said

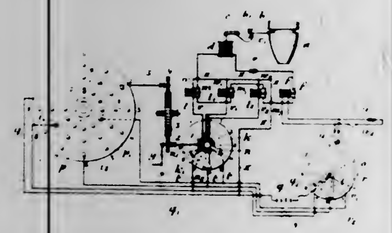
second mentioned busk and so arranged as to be within or behind the inwardly projecting studs when the garment is fastened, said flap thus serving to protect the wearer from discomfort from said studs.

2,002,053
CORN PRODUCT AND METHOD OF MAKING THE SAME
Charles Elmer Doolin, San Antonio, Tex.
No Drawing. Application August 24, 1934, Serial No. 741,335
2 Claims. (Cl. 99—11)



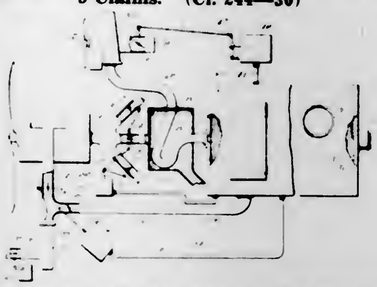
1. A method of making a product of the character described comprising taking shelled corn, grinding the shelled corn while adding water thereto thereby forming a dough, then extruding and cutting the undried dough into strips or chips, and dropping the chips or strips into hot oil so as to fry the same to a crisp condition.

2,002,054
ORCHARD HEATER
Lester L. English, Spring Hill, Ala., assignor to Alabama Polytechnic Institute, Auburn, Ala.
Application February 17, 1934, Serial No. 711,799
9 Claims. (Cl. 126—59.5)



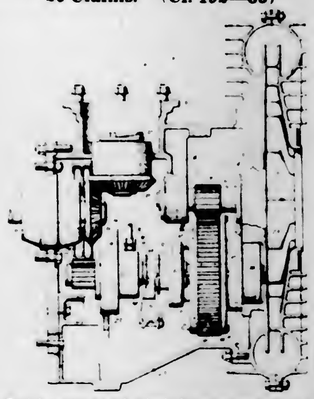
1. An orchard heater comprising means forming a combustion chamber open at the top, having an opening in its front, and having an imperforate bottom sloping upward from the lower portion of the opening in the front, said opening serving as the draft inlet for the combustion chamber, and means for tiltably mounting said combustion chamber for directing the radiant heat beam emanating from said open front in any desired direction and fuel retaining grate means across said opening providing for radiation of heat therefrom.

2,002,055
POWER TRANSMITTING MECHANISM
Walter Geist, Milwaukee, Wis., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a corporation of Delaware
Application March 19, 1930, Serial No. 453,440
10 Claims. (Cl. 74—389)



1. In combination, a speed-reducing mechanism, comprising substantially parallel driving and driven shafts, cooperative power transmitting elements carried by intermediate portions of said shafts, a housing for said cooperative power elements, the bearings for said driven shaft being carried by said housing, a crank carried by an end portion of said driven shaft extending from said housing and movable past the corresponding end of said driving shaft, a source of mechanical power, a driving connection between said power source and said driving shaft comprising a rotary element carried by a portion of said driving shaft extending beyond said housing at the end opposite to said crank and disposed at a point axially outside of the corresponding end of said driven shaft, the end of said driven shaft and a power take-off device carried by an end portion of said driven shaft opposite to that carrying said crank being disposed outside of said housing.

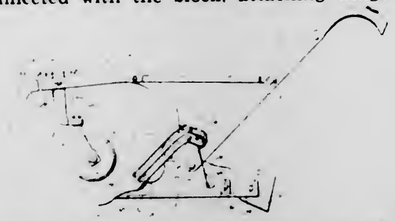
2,002,056
AUTOMATIC FUZE SETTING APPARATUS
Anton Gietmann, Dusseldorf, Germany, assignor to Rheinische Metallwaaren- und Maschinenfabrik, Dusseldorf-Derendorf, Germany, a corporation of Germany
Application January 5, 1934, Serial No. 705,443
In Germany June 26, 1931
9 Claims. (Cl. 86—23)



3. An automatic fuze setting apparatus for projectiles comprising a lock adapted to engage and retain the projectile in the apparatus while the fuze is being set, a device for operating the lock, a fire order transmitting system, a system for signalling fuze setting sequences comprising a receiver and a transmitter, and means rendered effective to operate the lock to release the projectile only on transmission of a fire order when the received signals agree with the transmitted signals.

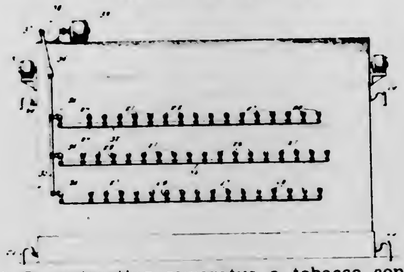
2,002,057
AIRCRAFT
David Gregg, Caldwell, N. J., assignor to Bendix Research Corporation, East Orange, N. J., a corporation of Indiana
Application May 19, 1931, Serial No. 538,567
5 Claims. (Cl. 244—30)

1. In an aircraft having a propelling engine and an engine supercharger, a closed personnel-compartment, and means controlled by compartment-pressure for diverting supercharger-air to the compartment to maintain a substantial air-pressure therein, said means comprising a branch air conduit leading from the main supercharger discharge conduit to the compartment, and interconnected valves in the conduits.



2,002,058
FLUID CLUTCH
David Gregg, Caldwell, N. J., assignor, by mesne assignments, to Eclipse Aviation Corporation, East Orange, N. J., a corporation of New Jersey
Application January 30, 1932, Serial No. 589,909
26 Claims. (Cl. 192—85)

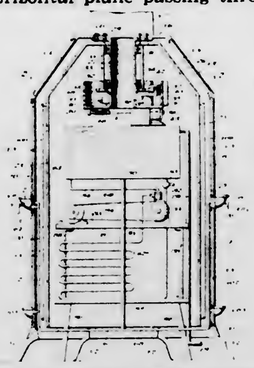
1. A fluid actuated clutch comprising a driving member, a driven member, pressure actuated means including an expansible fluid chamber for engaging the clutch, means forming an opening in the periphery of the chamber for releasing the clutch, and inertia operated means for controlling the opening.



2,002,059
PLOW
Robert L. Gurley, Oakfield, Tenn., assignor of one-half to Charlie M. Dees, Oakfield, Tenn.
Application February 13, 1934, Serial No. 711,041
3 Claims. (Cl. 97—123)

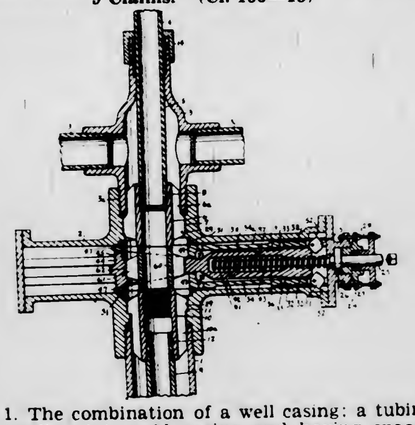
1. A plow comprising a block having a slotted extension at the rear thereof and provided in its lower face with a longitudinal seat and a groove rising from the seat, a runner plate fitted in the seat, said plate having a rib fitting into the groove and adjacent its rear end having upwardly extending slotted ears fitting against side faces of the block, a fastener passing through the block and slots of the ears to secure the runner and permit vertical adjustment thereof, a plow beam connected with the block, attaching wings ex-

tending laterally from the front end of the block, a plow point secured to the attaching wings, spaced fingers extending rearwardly from the attaching wings and defining intermediate air passages, a cutter blade fitted in the slot of the extension and extending rearwardly from the block, and a fastening device extending through the extension and cutter blade for holding the blade in a vertically adjusted position.



2,002,060
TREATMENT OF TOBACCO AND SIMILAR MATERIALS
Gordon D. Harris, Sound Beach, Conn., assignor to The Industrial Dryer Corporation, Stamford, Conn., a corporation of Connecticut
Application November 2, 1929, Serial No. 404,388
3 Claims. (Cl. 131—55)

1. In a treating apparatus a tobacco conditioning chamber a plurality of tobacco-carrying sticks rockably mounted in the walls thereof, means for agitating said sticks to agitate the tobacco carried thereby and means adjacent the tobacco-conditioning chamber for conditioning a gas and means for circulating the gas through the conditioning chamber and the chamber containing tobacco.

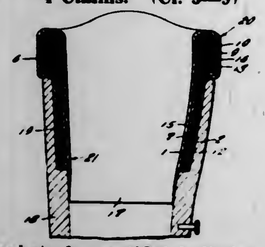


2,002,061
COMBINED REFRIGERATING AND ADVERTISING DISPLAY DEVICE
Samuel G. House and Alfred B. Small, Miami, Fla.
Application September 20, 1933, Serial No. 690,264
9 Claims. (Cl. 40—33)

1. A combined refrigerating and advertising display device comprising a housing formed of a framework and transparent panels, a cylinder within the housing, spaced from the inner walls of said housing and extending substantially the full length of said housing, means for supporting the cylinder, said cylinder having sections of advertising matter thereon appearing through the panels, means for rotating the cylinder step by step for causing each section of the advertising matter to appear at all of the panels disposed in the same horizontal plane passing through said

section, and a refrigerating unit for cooling water from a hydrant and enclosed in a protective manner by said cylinder and housing.

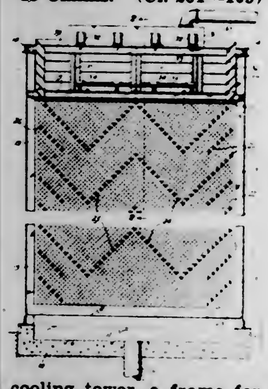
2,002,062
WELL PRODUCTION APPARATUS
James H. Howard, Houston, Tex., assignor to J. H. McEvoy & Company, Houston, Tex., a corporation of Texas
Application January 23, 1932, Serial No. 588,254
9 Claims. (Cl. 166—15)



1. The combination of a well casing; a tubing extending into said casing and having spaced upper and lower sections; a valve on said casing; a housing above said valve, about said upper tubing section, and having an outlet; and an anchor to hold said lower tubing section beneath said valve, said anchor having a fluid passageway therethrough; said valve being movable transversely of said casing to close said casing, and to open said casing and connect said tubing sections.

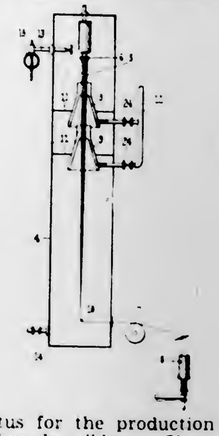
2,002,063
MANUFACTURE OF FIBROIN SOLUTIONS
Wilhelm Irion and Herbert Mahn, Dessau-in-Anhalt, Germany, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany
No Drawing. Application February 2, 1932, Serial No. 590,507. In Germany February 2, 1931
7 Claims. (Cl. 134—1)

1. In the manufacture of aqueous fibroin solutions the steps which comprise adding to the di-



lute fibroin solution a compound having the capacity of reducing the surface tension of this solution and subjecting the mixture to a concentrating operation.

2,002,064
SOCKET FOR ARTIFICIAL LIMBS
Thomas Kohl, Wilkes-Barre, Pa.
Application June 15, 1934, Serial No. 730,803
4 Claims. (Cl. 3—9)

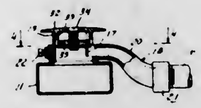


1. A socket for artificial limbs comprising inner and outer layers of rubber having their upper and lower portions secured together, the secured upper portions of the rubber layers being folded upon themselves and secured to the outer layer, an inner layer of leather secured to the inner rubber layer and having its upper portion folded downwardly over the rubber fold and secured thereto, an outer layer of leather secured to the outer rubber layer and having its upper portion extending over the downwardly folded portion of the inner leather layer and secured thereto, and a lining of comparatively soft leather secured to the inner leather layer and having its upper portion folded downwardly over the upper portion of the outer leather layer and secured thereto.

2,002,065
COOLING TOWER
Stanley Walter Kryszewski, Carteret, and Ernest Linwood Cahoon, Westfield, N. J., assignors to Foster Wheeler Corporation, New York, N. Y., a corporation of New York
Application May 20, 1931, Serial No. 538,746
19 Claims. (Cl. 261—109)

1. In a cooling tower, a frame for the tower, wire mesh members supported by said frame, splash pieces and louver pieces supported by said wire mesh members, additional wire mesh members extending at right angles to said first mentioned wire mesh members and supported by the frame and louver pieces supported by said last mentioned wire mesh members.

2,002,066
PRODUCTION OF ARTIFICIAL FILAMENTS, THREADS, RIBBONS, FILMS, AND SIMILAR MATERIALS
William Ivan Taylor, Spondon, near Derby, England, assignor to Celanese Corporation of America, a corporation of Delaware
Application February 4, 1932, Serial No. 590,828
In Great Britain March 27, 1931
9 Claims. (Cl. 18—8)



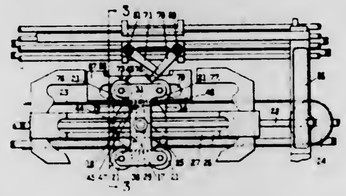
5. Apparatus for the production of artificial filaments, threads, ribbons, films and similar products, comprising a spinning cell, a spinning jet in the cell, and means at a point spaced apart from said spinning jet for applying a gaseous stream to the extruded products in such a manner and at such a speed as to exert a drag opposing the travel of the products sufficient to stretch the products.

2,002,067
COLD VULCANIZATION OF RUBBER
Douglas Frank Twiss, Wylde Green, Albert Edward Toney Neale, Ward End, and John Alexander Wilson, Erdington, England, assignors to Dunlop Tire & Rubber Corporation, Buffalo, N. Y., a corporation of New York
No Drawing. Application December 13, 1933, Serial No. 702,198. In Great Britain December 22, 1932
4 Claims. (Cl. 18—53)

1. A method of cold vulcanizing rubber compositions which comprises treating the rubber composition with a relatively small quantity of sulphur chloride in the presence of a member of the group of nitrogen containing hydrocarbon compounds consisting of the following compounds-diphenyl guanidine polysulfide, thiourea, thiocarbanilide, mercaptobenzothiazole, piperidyl pentamethylene dithiocarbamate, sodium pentamethylene dithiocarbamate, zinc diethyl dithiocarbamate, tetramethyl thiuram monosulfide, tetramethyl thiuram disulfide.

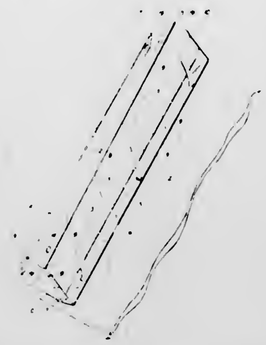
2,002,068
UNDER FLOOR DUCT SYSTEM
Hervey S. Walker, Ardmore, Pa.
Application January 4, 1934, Serial No. 705,212
5 Claims. (Cl. 247—28)

4. In an underfloor duct system, a duct embedded in the floor below the floor surface and having an outlet in the top wall thereof extending upward to the floor surface, and a hollow fitting within the floor and connected to said outlet between the top of the duct and the floor surface



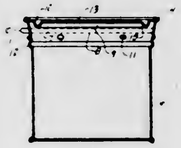
and communicating with the interior of the outlet, said fitting being formed for connection of a tubular member thereto.

2,002,069
SOLVENT FOR ACETYL CELLULOSE
James F. Walsh, East Orange, and Amerigo F. Caprio, Newark, N. J., assignors to Celluloid Corporation, a corporation of New Jersey
No Drawing. Application July 13, 1928, Serial No. 292,588
2 Claims. (Cl. 106—40)



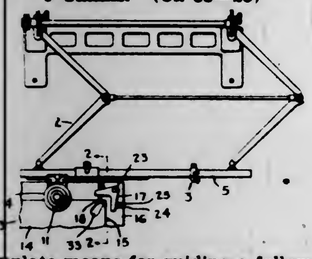
1. Process for the manufacture of plastic material, which comprises forming a stiff mass of a composition comprising cellulose acetate and an alkyl ester of alpha-oxy-iso-butyric acid, the said alkyl ester of alpha-oxy-iso-butyric acid being present in an amount equal to 20% based upon the weight of the cellulose acetate whereby the rolling characteristics of the mass are improved, and then drying and hardening the mass by rolling the same with the aid of heat.

2,002,070
KNITTING MACHINE
Sidney Arthur Welch, Albert Fairholme Guyler, William Henry Boaler, and John Thomas Ashby, Spondon, near Derby, England, assignors to Celanese Corporation of America, a corporation of Delaware
Application December 12, 1931, Serial No. 580,596
In Great Britain January 26, 1931
5 Claims. (Cl. 66—126)



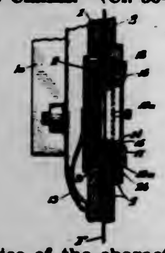
1. Flat knitting machine comprising sliding means for effecting a knitting traverse, sliding means for carrying a yarn guide, a pair of links pivotally mounted on said yarn guide carrying means, said links being adapted to swing in a plane parallel to the direction of traversing, a pair of ramps on said traversing means adapted to engage in turn with the ends of said links to traverse the yarn guide in lead of the knitting traverse, and a stop at each end of the knitting traverse adapted to engage the end of the driving link to prevent further traversing motion thereof and to cause the link to swing so that the said end rides up the ramp and becomes disengaged therefrom, whereby the other link may engage with the other ramp after the yarn guide has been at rest long enough to reverse its lead over the knitting traverse preparatory to traversing in the opposite direction.

2,002,071
LOOSE LEAF BINDER
Nelson S. Welk, Athens, Ohio, assignor to The McBee Company, Athens, Ohio, a corporation of Ohio
Application June 16, 1933, Serial No. 676,052
6 Claims. (Cl. 129—8)



3. In a binder for loose leaves, a cover, a metal back L shaped in cross section secured to said cover, there being an aperture adjacent each end of the shorter portion of said L, a hinge on one edge of said back, a bar hinged thereto, a plurality of impaling pins fixedly secured to said bar, there being perforations in said bar intermediate said pins, a detachable bar having perforations therein which register with said pins, pins on said detachable bar which register with the perforations in the hinged bar, a lock on each end of said detachable bar adapted to enter the respective apertures in the shorter portion of said L.

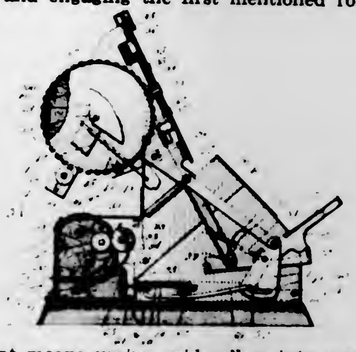
2,002,072
CAN
John M. Abrams, New York, N. Y.
Application October 22, 1932, Serial No. 639,010
14 Claims. (Cl. 220—54)



1. A can comprising a body portion having score lines beneath the top in its sidewall defining a rip strip, a top end having an annular wall extending in an up and down direction, and a row of spaced protuberances upon the sidewall located below the score lines, the outer face of said annular wall being set back from the outer edge of the top end to be substantially on line with the back of said protuberances, said sidewall flaring outwardly from the lower to the upper score line so that the portion of the sidewall remaining on the top end after the rip strip is removed is of suitable diameter to engage frictionally for reclosure the outside of said protuberances, said annular wall being of sufficient depth to reach the protuberances when the can is reclosed.

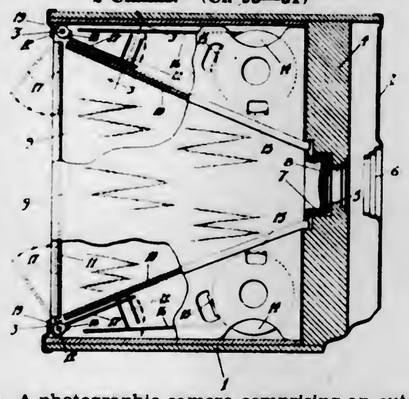
2,002,073
TEMPLATE
James L. Anderson, Chester, N. J., assignor to Air Reduction Company, Incorporated, New York, N. Y., a corporation of New York
Application August 13, 1932, Serial No. 628,662
9 Claims. (Cl. 33—25)

1. Template means for guiding a follower having upper and lower magnet rollers driven in opposite directions, said means having, in addition to a template of magnetic material to cooperate with one of the rollers, an internal template device, also of magnetic material, to cooperate with the other roller to effect a desired change in direction, and means for supporting said internal template device so that it can be shifted slightly by the magnetic attraction between the rollers and the guiding portions, to insure transfer of the control of the follower from one template element to the other without jog or stoppage.



2,002,074
FILM GUIDING MECHANISM
Joseph D. Basseen, Brooklyn, N. Y.
Application January 14, 1931, Serial No. 508,583
8 Claims. (Cl. 88—17)

1. In a device of the character described, the combination with an objective lens, of passage-forming mechanism for guiding a film along a path intersecting a light beam traversing said objective lens, and means carried by said mechanism for obliquely relating said film to the optical axis of said objective lens, said means being movable with respect to said mechanism and co-acting directly with said film.



2,002,075
TYPEWRITING MACHINE
Samuel I. Berger, Newark, N. J.
Application September 14, 1932, Serial No. 633,105
4 Claims. (Cl. 197—47)

3. In a typewriting machine, a wheel having type arranged about its periphery, a plate rotatably mounted at right angles to the plate of the wheel and having symbols arranged thereon corresponding to the symbols of type on the wheel, gear means connecting the wheel and plate so that a movement of the plate will be transmitted to the wheel, a carriage, an arcuate strip mounted on the carriage and having spaced apertures therein, bearings on one side of said member, a shaft journalled in said bearings, rollers fixed to the shaft and projecting partially through the apertures, a second shaft supported on the other side of the strip, rollers mounted on the second shaft and engaging the first mentioned rollers,

resilient means urging said rollers into engagement, a platen mounted on the carriage and positioned in a plane at right angles to the plane of the wheel, and means to move the type wheel into contact with the platen.

2,002,076
PHOTOGRAPHIC CAMERA
Carl Bornmann and Bruno C. Rochri, Binghamton, N. Y., assignors to Agfa Ansco Corporation, Binghamton, N. Y., a corporation of New York
Application January 18, 1934, Serial No. 707,145
2 Claims. (Cl. 95—31)

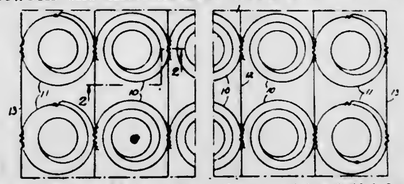
1. A photographic camera comprising an outer casing and an inner casing, means between said casings for journaling film spools, one side of said inner casing being open and comprising the exposure area past which a film may be moved from one spool to the other, and flaps pivoted adjacent said open side and selectively adjustable to a position partially closing said opening and to a position between said casings and wholly outside said exposure area.

2,002,077
MAGNETIC PUZZLE
Thomas H. Darling and William Maccabee, Rockville Centre, N. Y.
Application March 24, 1933, Serial No. 662,514
4 Claims. (Cl. 273—157)

4. In a puzzle device employing a game plate magnetized throughout the entire area thereof, a plurality of interfitting game pieces of irregular contour adapted to be assembled and retained on said plate in the production of a predetermined picture, each of said pieces comprising magnetically influenced material, and a facing of non-magnetic material.

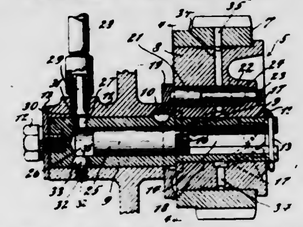
2,002,078
TEXTILE APPARATUS
William Alexander Dickie and Ernest Leslie Greenwood, Spondon, near Derby, England, assignors to Celanese Corporation of America, a corporation of Delaware
Application August 30, 1932, Serial No. 631,058
In Great Britain September 24, 1931
4 Claims. (Cl. 242—157)

1. Yarn guide in which the surface of the guide over which the yarn is to pass has very fine scores or furrows in a direction transverse to the direction of movement of the yarn over such surface.



2,002,079
CARD CLOTHING FOR TEXTILE MACHINERY
William Alexander Dickie, Spondon, near Derby, England, assignor to Celanese Corporation of America, a corporation of Delaware
Application September 24, 1932, Serial No. 634,731
In Great Britain October 1, 1931
9 Claims. (Cl. 19—114)

1. Card clothing comprising metallic bristles mounted in a non-rigid support containing filamentary material and a substance selected from the group of esters, ethers and ether-esters of polyhydroxy compounds whereby the product is resistant to the destructive action of steam.



2,002,080
METHOD OF AND MEANS FOR FASTENING SPRINGS TOGETHER
Charles Dietrich, Cleveland, Ohio, assignor to The Owen Silent Spring Company, Inc., Bridgeport, Conn., a corporation of Connecticut
Application August 13, 1932, Serial No. 628,635
7 Claims. (Cl. 140—3)

1. A tie for connecting coil springs, comprising a pair of outer open hooks in which a wire section of one of the springs may be seated, and an opposed intermediate open hook in which a wire section of the other of the springs may be seated, the hooks being integrally connected and relatively spaced to hold the two wire sections in snug tangential engagement and the spacing between the intermediate hook and each outer

hook being greater than the combined thickness of the two wire sections.

2,002,081
HYDRAULIC SLACK TAKE-UP DEVICE
Richard F. Dow, Hartford, Conn., assignor to The Whitney Mfg. Co., Hartford, Conn., a corporation of Connecticut
Application May 6, 1932, Serial No. 609,600
8 Claims. (Cl. 74—242.11)

1. A slack take-up device comprising an idler adapted to engage a chain, a bearing on which said idler is rotatably mounted, a pivot supporting said bearing and disposed eccentrically to its axis, a pin movable lengthwise of said pivot, a connection between said pin and bearing adapted to cause rotation of said bearing by said lengthwise movement of the pin, a piston operatively connected to said pin, a cylinder within which said piston is movably received, means to supply liquid under pressure to said cylinder to move said piston in one direction, and means to prevent backward flow of said liquid from said cylinder, thereby preventing movement of said piston in the opposite direction.

2,002,082
ULTRA-VIOLET LIGHT TRANSPARENT GLASS AND METHOD OF MAKING THE SAME
Camille Dreyfus, New York, N. Y.
No Drawing. Application February 18, 1928, Serial No. 255,508
8 Claims. (Cl. 49—81)

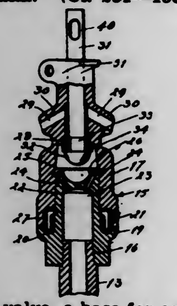
1. Method of making laminated glass that is at least partially pervious to ultra-violet light comprising interposing a layer of finely divided powder of a plastic composition containing a derivative of cellulose between sheets of glass of high quartz content and pressing at elevated temperatures to cause the powder to coalesce.

2,002,083
TREATMENT OF FABRICS
Henry Dreyfus, London, England
Application July 23, 1930, Serial No. 470,232
In Great Britain August 2, 1929
12 Claims. (Cl. 41—41)

12. Process for the production of effects upon fabrics which consists in subjecting mixed mate-

rials containing fibres comprising cellulose acetate at least in selected areas to the action of a reagent which will saponify the cellulose acetate,

then treating the materials in a hot bath containing ferric chloride until the cellulosic fibres are rendered removable by the action of said bath and mechanically removing the same.



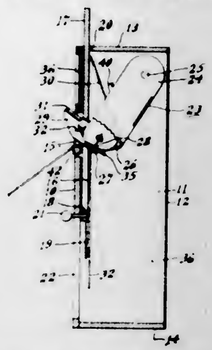
2,002,084
MANUFACTURE OF ALIPHATIC ANHYDRIDES
Henry Dreyfus, London, England
No Drawing. Application October 28, 1932, Serial No. 640,903. In Great Britain December 31, 1931
14 Claims. (Cl. 260—123)

1. Process for the manufacture of aliphatic anhydrides, which comprises thermally decomposing aliphatic acids in the presence of a catalyst comprising a phosphoric acid in combination with a plurality of metals at least one of which is at least as electronegative as barium and another of which is at least as electropositive as magnesium.

2,002,085
MANUFACTURE OF ALIPHATIC ANHYDRIDES
Henry Dreyfus, London, England
No Drawing. Application February 8, 1933, Serial No. 655,775. In Great Britain February 22, 1932
13 Claims. (Cl. 260—123)

1. Process for the manufacture of the anhydride of a lower fatty acid which comprises subjecting the lower fatty acid to thermal decomposition in presence of a metal oxy-salt selected from the group which consists of molybdates and vanadates.

2,002,086
AUTOMATIC BALL COCK VALVE
Wladyslaw Dylewski, Camden, N. J.
Application July 29, 1932, Serial No. 625,599
1 Claim. (Cl. 251—156)



In a ball cock valve, a base for connection to a water supply pipe, a central extension formed integral with said base and providing a chamber open at its lower end to receive the supply of water, said chamber being practically closed at its upper end by the top wall of said extension, said top wall having holes passing therethrough in divergent directions at the perimeter thereof, a rest formed in said top wall, a body having a passageway through it and mounted directly on the extension, a valve seat in said body in opposed spaced relation to the rest, and a valve within said body for coaction with said seat and rest without interfering with the passage of water through the holes.

2,002,087
SHOE HEEL
Jack F. Esterson, Baltimore, Md.
Application July 17, 1931, Serial No. 551,459
2 Claims. (Cl. 36—36)

1. A heel for footwear comprising a main body portion and a detachable portion having a depression therein, a plate permanently secured to each of said portions, said plates occupying relatively small portions of the surface of said portions, one of said plates having side flanges adapted to engage the respective side edges of the other plate, said other plate having end flanges adapted to engage the respective end edges of the said first mentioned plate, the plate on the detachable portion being mounted in said depression and said depression being equal to the combined thicknesses of said plates.

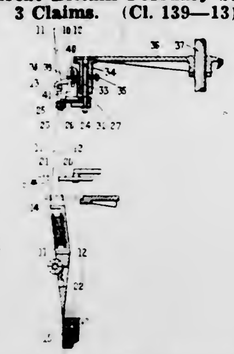
2,002,088
TOWEL CABINET
Edward T. Halls, Montgomery, Ala.
Refiled for abandoned application Serial No. 448,109, April 28, 1930. This application June 19, 1934, Serial No. 731,309
8 Claims. (Cl. 312—37)

1. In a towel cabinet, a substantially entirely enclosed compartment for towels having access means thereto, and a swinging support for a plurality of towels secured together in a pack and reciprocable toward said access means to position a towel at the access means upon each reciprocation of the support, and from the access means to prevent access to the towels.

3. In a towel cabinet having a front door, means to support a pack of towels therein free to be moved toward said door, and means responsive to

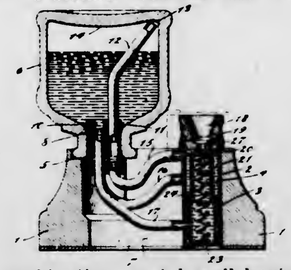
the opening of the door and actuated thereby to move the towels forwardly and to present the foremost clean towel at the door opening.

2,002,089
VALVE ORGANIZATION FOR GAS RANGES
Edward E. Hodgkin, William W. Wodell, and Henry Lange, Quincy, Ill., assignors to Quincy Stove Manufacturing Co., Quincy, Ill.
Application July 18, 1932, Serial No. 623,162
2 Claims. (Cl. 277—19)



1. In a gas range having a control valve housing defining a gas receiving chamber, a partition wall, and a plurality of integral gas distributing channels, and the partition wall provided with a plurality of concentrically disposed gas releasing holes arranged in predetermined spaced relation; a gas control valve organization comprising a plurality of pivoted valve disks pivotally secured to said partition wall adjacent corresponding holes therein and each of said disks provided with a gas releasing aperture pivotally movable selectively into coregistry with said adjacent corresponding gas releasing hole respectively in the partition wall of said housing, a peripheral recess in each of said disks for rotatably receiving the end of a control pin adapted to actuate the disks, respectively, a control shaft for the support of the pin and a hand dial supported thereby, a disengaging spring for automatically releasing said control shaft when pressure is released therefrom and an individual spring for each of said valve disk members holding said members flatly against the adjacent surface of said partition wall.

2,002,090
MAKING PARALLAX PANORAMAGRAMS
Herbert E. Ives, Montclair, N. J., assignor to The Perser Corporation, New York, N. Y., a corporation of New York
Application December 20, 1930, Serial No. 503,731
12 Claims. (Cl. 88—16.6)

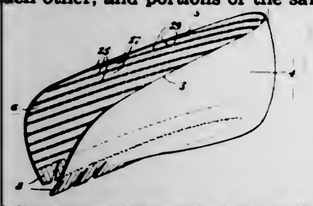


1. The method of producing parallax panoramagrams comprising the following steps; exposing in a moving picture camera a sensitized surface and at the same time causing relative lateral movement between the moving picture camera and the object being photographed, projecting from a moving picture projector the pictures thus made onto an unexposed emulsion coated ridged sheet, and at the same time causing relative lateral movement between the projector and said ridged sheet.

2,002,091
GUIDING OR SPACING OF YARNS IN WARP FORM
Joanny Jabouley, London, England, assignor, by mesne assignments, to Celanese Corporation of America, a corporation of Delaware
Application February 8, 1933, Serial No. 655,697
In Great Britain February 20, 1932
3 Claims. (Cl. 139—13)

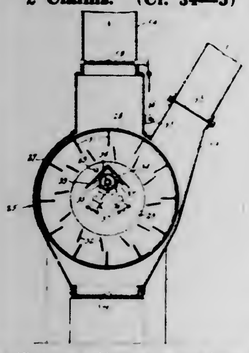
1. In a circular loom, warp spacing means comprising a coil spring extending round the loom, so arranged that the coils are spaced apart at a distance appropriate to the density of the threads in the warp, a supporting rod extending round the loom concentric with said spring, means connecting the spring to said supporting rod, and supporting means adapted to nip into the space between said rod and said spring to hold said spring in position in the loom.

2,002,092
INKWELL
Louis H. Juster, St. Lambert, Quebec, Canada, assignor to L. E. Waterman Company, New York, N. Y., a corporation of New York
Application August 9, 1934, Serial No. 739,063
9 Claims. (Cl. 120—59)



1. In combination, an ink well having a vertically extending chamber, a plurality of tubes communicating with said chamber at vertically spaced apart points, an ink reservoir normally having an air space adjacent the top thereof, all of said tubes communicating with said reservoir and the uppermost one of said tubes communicating only with said air space therein, and a valve vertically movable in said chamber and adapted in its lowermost position to uncover one of the other tubes.

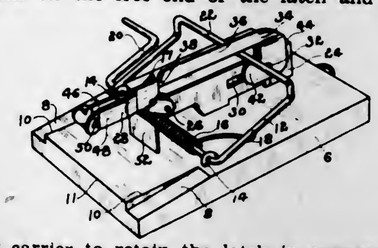
2,002,093
SHOE COUNTER
Arthur C. Engel, Haverhill, Mass.
Application March 16, 1935, Serial No. 11,464
8 Claims. (Cl. 36—68)



1. A counter of deformed sheet material of U-shape for use in a shoe and having a back and

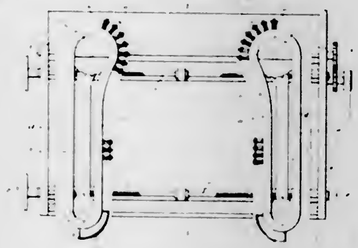
two oppositely disposed sides, the sheet material being of a nature that has a tendency to become restored toward its undeformed condition, the counter having both its said sides exteriorly convexedly curved so that their upper edges extend toward each other, and portions of the said sides

substantially removed from the said back of the counter being of less rigidity in regions spaced between the upper and lower edges of the said sides than in the regions between the spaced regions to facilitate their holding the said sides deformed, curved shape.



2,002,094
APPARATUS FOR ROASTING COFFEE
Leland S. Maede, Brooklyn, N. Y.
Original application November 25, 1930, Serial No. 498,064. Divided and this application November 7, 1932, Serial No. 641,622
2 Claims. (Cl. 34—5)

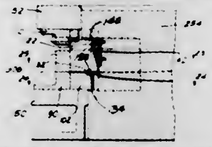
1. In a coffee roasting apparatus, the combination of a housing, a rotatable cylinder within said housing, a plurality of downwardly directed burners positioned within said cylinder, a fuel supply conduit leading to said burners, a valve in said fuel supply conduit, a port in said housing adjacent a longitudinal side of said cylinder, a conduit leading into said port, suction means operably connected to said conduit, a valve in said conduit, and means for operating both the fuel supply valve and suction conduit valve simultaneously whereby said fuel supply valve is closed and said suction valve is opened to rapidly pass a current of air directly through the walls of said cylinder.



2,002,095
ANIMAL TRAP
William R. McCabe, Seattle, Wash., assignor to Ora A. McCabe, Seattle, Wash.
Application March 9, 1934, Serial No. 714,858
7 Claims. (Cl. 43—81)

1. The combination in a trap with a base, a support on the base having a slot therein, an L-shaped latch located over the support, and a pivotal support for the latch having a slidable bearing in the slot, of a spring-operated bail hinged on the base and retained between the latch and the support, a bait-carrier pivoted on the base below the free end of the latch, and co-acting means on the free end of the latch and said

bait-carrier to retain the latch in engagement with the bait-carrier, whereby the latch may be moved to set the trap.

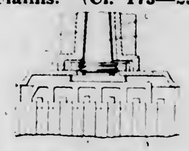


2,002,096
FABRIC EXPANDER FOR TEXTILE INDUSTRY
John J. McCann, Jr., Lowell, Mass.
Application January 28, 1932, Serial No. 589,521
3 Claims. (Cl. 26—61)

1. In a tentering device, a pair of endless conveyors having two sides thereof in opposed and relatively spaced relation and in substantially the same plane along a path therebetween, a plurality of elements carried by the conveyors for gripping the edges of a strip of fabric located in said path, means for driving the conveyors to move said opposed sides thereof from the fabric entering end to the exit end of the path, and means supporting and guiding the conveyors in ways causing the said two sides thereof to approach each other at said fabric entering end of the path and to diverge outwardly therefrom in curvilinear lines toward the exit end of the path, the said fabric gripping elements of each conveyor being in outwardly diverging relation to each other when at said curvilinear portion of the path and coming into closer relation as they leave such portion of the path whereby fabric gripped by the opposed elements is stretched widthwise by the said opposed sides of the conveyors at said outwardly diverging portion thereof and permitted by said approaching movement of the elements to reduce in length a proportional amount.

2,002,097
METHOD AND APPARATUS FOR MAKING SHEET METAL ARTICLES
Peter Peterson, Toledo, Ohio, assignor to The City Auto Stamping Company, Toledo, Ohio, a corporation of Ohio
Application December 21, 1931, Serial No. 582,397
31 Claims. (Cl. 113—46)

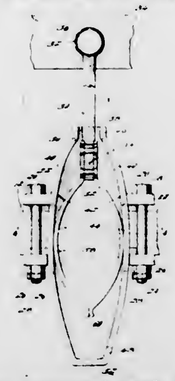
1. In a machine for forming sheet metal, the combination of a device for forming sheet metal, with a pair of clamping members surrounding a portion of said forming device for clamping a portion of the periphery of the blank, a second pair of clamping members, said second pair of clamping members being movably mounted, said second pair of clamping members gripping another portion of the periphery of the blank, and driving means responsive to the movement of the forming device for actuating said second pair of clamping members during the forming operation so as to cause said second clamping members to have a movement relative to said forming device.



5. The method of making an article from a sheet metal blank, including holding a portion of the periphery of the blank, forming the blank thus held and shifting another portion of the periphery of the sheet metal during the forming operation so as to form an article having a smooth surface.

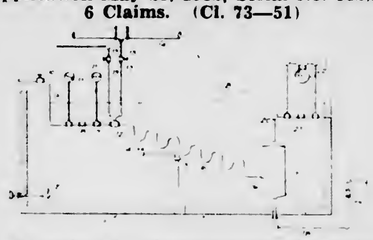
2,002,098
EYE SHIELD
William K. Price, Yakima, Wash.
Application December 21, 1933, Serial No. 703,332
5 Claims. (Cl. 2—12)

1. Eye shield structure comprising a frame having vision openings, a strip-like shield device disposed forwardly of each opening, with its ends secured to the frame, and its mid-portion spaced forwardly of the frame, to permit sidewise vision between said portion and the frame, the shield device being bent through approximately 180°, and being disposed to one side of the axial line of vision.



2,002,099
BATTERY TERMINAL
Edward Schilke, Middletown, Conn.
Application February 25, 1932, Serial No. 595,094
2 Claims. (Cl. 173—259)

1. In combination with a battery cell including a post projecting from within the cell to the top thereof, a bushing surrounding said post and having an enlarged base with a chamber therein, said base being seated snugly against the top of the cell and the bushing when finally secured in place having a lengthwise passage communicating with said chamber and extending the full length of the bushing and out at the top thereof for free and unobstructed outflow of fumes from between said post and bushing.



2,002,100
SHOCK ABSORBER
Sheffield Smith, North Providence, R. I.
Application June 27, 1932, Serial No. 619,408
2 Claims. (Cl. 267—9)

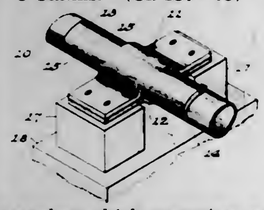
2. In a shock absorber, a casing adapted to be mounted on a vehicle supporting part having end walls having the inner surfaces thereof vertically concaved to form an elliptical concavity in said casing, a plunger having an upper end adapted to be attached to a vehicle part movable relative to said vehicle supporting part extending through the top wall of said casing and having two oppositely disposed hemi-elliptical spring leaves secured to each side of the lower end there-

of concave side outermost, each having an outwardly bent lower end and having the lower end of the elliptical portion thereof contacting the opposite hemi-elliptical spring portion to form a complete elliptical spring of slightly greater width than the distance between the elliptical casing end walls, reciprocatable within said casing against said oppositely disposed elliptical casing end walls.

2,002,101
METHOD AND APPARATUS FOR CONTINUOUSLY DETERMINING VAPOR PRESSURE
Edgar P. Valby and Marion L. Arnold, Long Beach, Calif.
Application May 23, 1932, Serial No. 612,980
6 Claims. (Cl. 73—51)

1. A method for the continuous determination of the vapor pressure of a liquid which comprises: passing a substantially constant stream of gas at a predetermined temperature through an orifice; measuring the pressure differential of the gas as it passes through the orifice; introducing a stream of said liquid into said stream of gas; bringing the gas and the vapor of said liquid to equilibrium at said predetermined temperature; separating the liquid from the mixture of gas and vapor; passing the gas and vapor mixture through said orifice to measure the pressure differential thereof as an index of the change of density and volume; and determining the vapor pressure from a comparison of the initial and final pressure readings.

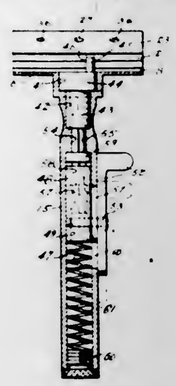
4. An apparatus for obtaining vapor pressure measurements embodying: an equilibrium chamber; means for delivering a substantially constant stream of gas into said equilibrium cham-



ber; means at the inlet of said equilibrium chamber for admitting a liquid whose vapor pressure is to be measured; a separating chamber at the outlet of said equilibrium chamber for separating the liquid from the gas and vapor mixture; a gas and vapor outlet from said separating chamber; an orifice in said gas and vapor outlet; and means for measuring a pressure differential across said orifice.

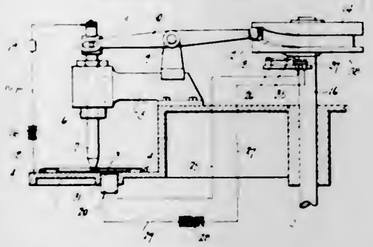
2,002,102
APPLE BOX
William M. Veaux, Seattle, Wash.
Application October 12, 1931, Serial No. 568,358
5 Claims. (Cl. 217—36)

5. An article of manufacture comprising an apple box of the character described having a thin bulging removable top, and a pair of spacing cleats secured to the ends of one side only of the box and at right angles to the bulging top.



2,002,103
PIPE ANCHOR
Russell C. Wheeler, Hammond, Ind., assignor to Standard Oil Company, Chicago, Ill., a corporation of Indiana
Application June 30, 1932, Serial No. 620,113
3 Claims. (Cl. 137—75)

1. A pipe anchor which comprises a body portion, means for securing said body portion to a support, a tongue extending longitudinally of the pipe to be anchored and adapted for welding along its longitudinally extending edges to the pipe to be anchored, and an offset portion between said tongue and said body portion.

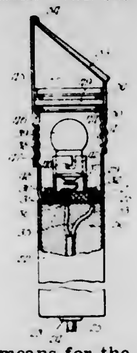


2,002,104
SAFETY RAZOR
Jean R. Yotts, Los Angeles, Calif.
Application July 21, 1934, Serial No. 736,354
2 Claims. (Cl. 30—12)

1. In a safety razor, the combination of a hollow handle having a removable closure for the lower end thereof and a transversely extending head on the upper end thereof and longitudinally extending guideways in the upper face of said head, a blade carrying block slidably mounted in said guideways and having blade securing means, and means mounted within said handle for manually causing said blade carrying block to slide in said guideways, said means comprising a disc rotatably mounted in the upper end of said handle, an eccentrically mounted pin projecting from the upper face of said disc, a transverse slot in said blade carrying block into which said pin projects, a rectangular stem rigidly secured at its upper end to said disc and extending axially therefrom concentrically of the handle, the lower portion of said stem being twisted axially to form a spiral, a sleeve slidably but non-rotatably mounted in said handle having a passage therethrough, said passage being of a configuration to coincide with the configuration of said stem

whereby relative lengthwise movement of said sleeve and stem will cause said stem to rotate, a finger piece slidably mounted against the outer wall of said handle and connected to said sleeve for moving said sleeve lengthwise of the handle, and a coil spring mounted in said handle between the bottom end of said sleeve and the lower end of said handle adapted to maintain said sleeve in its uppermost position.

2,002,105
KEY ATTACHING MECHANISM
George A. Bardet and George V. Bardet, Berkeley, Calif., assignors to M. J. B. Company, a corporation of Delaware
Application March 27, 1933, Serial No. 663,026
1 Claim. (Cl. 219—12)



A key attaching mechanism comprising a support for a can end having a solder bearing key loosely located thereon, an electric contact, means for moving the contact from a raised position to a lowered position for momentarily contacting and closing an electric circuit through the key to fuse the solder for attaching the key to the can end and for exerting pressure against the key to press it tightly against the can end, and a magnet disposed below the support and adapted to be energized to draw the key against the can end and the end against the support to hold the end and key from movement during the solder setting period after the contact is lifted.

2,002,106
PROCESS FOR TREATING VEGETABLE FIBERS
Albert Bodmer and Ernst Weiss, Wattwil, Switzerland, assignors to Heberlein Patent Corporation, New York, N. Y., a corporation of New York
No Drawing. Application August 10, 1932, Serial No. 628,184. In Germany March 17, 1932
8 Claims. (Cl. 8—20)

1. A method of producing permanent finish effects on vegetable cellulose material which comprises preparing a bath containing cuprammonium and a free alkali metal hydroxide in which the percentage of free alkali does not exceed 1.5% of the weight of the solution, swelling the vegetable cellulose material by subjecting it to the bath and subjecting the so-treated material to an agent for interrupting the swelling action of said solution.

2,002,107
ILLUMINATED HOSE NOZZLE
Clyde E. Bourret, Morrisonville, Wis., assignor of one-half to Roman A. Heilman, Madison, Wis.
Application March 29, 1930, Serial No. 717,942
14 Claims. (Cl. 240—2)

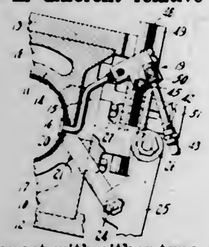
1. Illumination means for the nozzle of a discharge hose for a fluid fuel dispensing unit comprising a first housing, a light socket secured therein, a bulb member mounted in said socket, electrical conductors connected to said socket, sealing means in said housing preventing entrance of moisture and vapors along said conductors, a second housing secured in sealing engagement over said first housing and having lens means sealed therein, and a weighted closure member pivoted to said second housing and having a light reflecting surface, said closure member being freely swingable out of closing position upon tilting of said nozzle to direct light rays along said nozzle.

2,002,108
EXERCISING DEVICE
Hal G. Child, Oswego, Oreg.
Application December 24, 1931, Serial No. 582,904
2 Claims. (Cl. 273—77)

1. A club for use in restricted space for training golfers to "groove" or render automatic the swing of their clubs, comprising a handle, a shaft, a head, and means for varying the weight of the head, the overall length of the device being less than 34 inches, and the total weight of the device without the means being greater than 18 ounces, said handle and shaft being relatively movable so as to alter the overall length to chosen figures below 34 inches when the means is varied to increase the weight whereby to im-

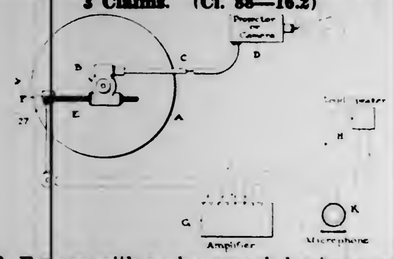
part to the user the "feel" of a usual club, the handle of which is too long to use for practice in said restricted space.

2,002,109
PHOTOGRAPHIC SHUTTER
George L. Coursen, East Orange, N. J., assignor of one-half to H. Theodore Sorg, Newark, N. J.
Application March 16, 1934, Serial No. 715,850
6 Claims. (Cl. 95—63)



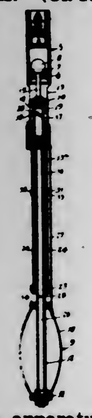
1. In a photographic shutter, a supporting means having an aperture, shutter leaf sets arranged around and cooperative with said aperture, means for actuating said leaf sets, each leaf set comprising a pair of superimposed leaves independently pivoted upon a common fulcrum means, and driving pin and cam slot connections between the actuating means and the leaves of each set adapted to produce simultaneous differential movement phases of said leaves whereby the sets operate with an accelerated opening movement, a relatively retarded aperture exposing movement and a final accelerated closing movement.

2,002,110
VULCANIZING MOLD FOR INNER TUBES AND THE LIKE
Peter De Mattia, Passaic, N. J., assignor to National Rubber Machinery Company, Akron, Ohio, a corporation of Ohio
Original application August 29, 1928, Serial No. 302,711. Divided and this application April 4, 1934, Serial No. 718,925
6 Claims. (Cl. 18—43)



6. In combination with an annular mold for vulcanizing inner tubes and the like, said mold having an apertured wall for the reception of a straight valve stem or a bent valve stem, as desired, a clamping member for holding the valve stem in place in said apertured wall and to complete the mold cavity, a pressure fluid supply pipe coupling supported in a fixed position with ref-

erence to the mold, and means for setting the pipe coupling in different relative positions to

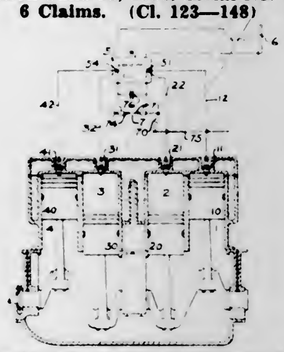


adapt it to connect with either type of valve stem as required.

2,002,111
SYSTEM FOR SYNCHRONIZING SOUND WITH MOTION PICTURES
Edmund H. Hansen, Los Angeles, Calif.
Application August 25, 1933, Serial No. 686,794
3 Claims. (Cl. 88—16.2)

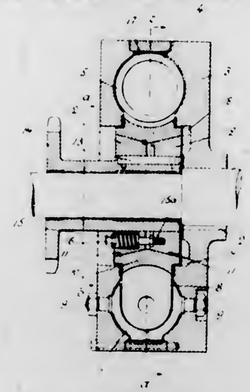
3. For use with a phonograph having a rotatable record centering pin, a unitary device adapted to be detachably mounted upon said pin, said device having members actuated by said pin for synchronously driving a motion picture camera and controlling the travel of the sound head of the phonograph.

2,002,112
DUMPING APPARATUS FOR OIL WELLS
Leonard E. Harrington, Long Beach, Calif., assignor to Perkins Cementing, Inc., Los Angeles, Calif., a corporation of California
Application June 13, 1934, Serial No. 730,400
10 Claims. (Cl. 166—19)



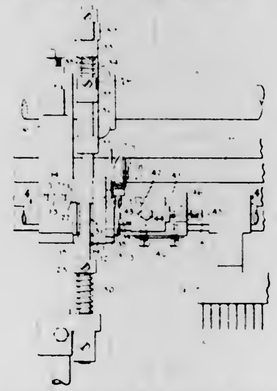
1. In a dumping apparatus for use in deep wells, the combination of a holder for the material to be dumped having a bottom opening, a valve seating on said bottom opening from above, a friction device located below the holder, with a lost-motion connection between the same and the holder, movable means carried on the holder for effecting the opening of the valve, and means for operating said last-named movable means by an upward movement of the holder relative to the friction device.

2,002,113
GARBAGE DISPOSAL RECEPTACLE
Roland E. Hunt, Cincinnati, Ohio
Application January 23, 1933, Serial No. 652,988
8 Claims. (Cl. 4—290)



8. A garbage receptacle to be discarded with the contents, comprising a paper bottom and wall unit having its walls provided with a cover retaining rim of continuous extent around their tops, with portions of its extent therearound substantially straight, and a paper cover to fit inside said rim, with arcuate edges to distend said substantially straight rim portions when fitted inside said rim, said cover having its complete contour of such shape relative to the shape of extent of said rim around said tops of the walls, that intimate contact of its edges with all portions of the inner side of the rim is effected under the pressure due to the resistance of said distended rim portions to said arcuate edges of the cover.

2,002,114
IGNITION SYSTEM
Ralph S. June, Seattle, Wash., assignor of one-half to George A. Anderson, Seattle, Wash.
Application June 25, 1934, Serial No. 732,288
6 Claims. (Cl. 123—148)

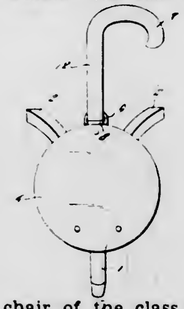


1. In combination with a multi-cylinder engine and pistons reciprocable in the several cylinders, an ignition system therefor comprising a high tension current source, a one-electrode spark plug disposed in each cylinder to fire across to the piston therein substantially at top center of such piston, and leads from opposite terminals of said source to the spark plugs in those cylinders the pistons whereof are simultaneously at top center, but a half cycle opposite in phase, whereby the time of firing is controlled entirely by the approach of such pistons to their corresponding spark plugs.

2,002,115
RESILIENT COUPLING
Viggo Axel Kjær, Copenhagen, Denmark
Application July 10, 1931, Serial No. 549,996
In Denmark July 26, 1930
10 Claims. (Cl. 64—100)

1. In a resilient coupling for connecting two shafts, a casing 3 keyed to one shaft 1, coacting thrust members 7 and 8, said casing 3 having attached thereto a part 7 of said thrust members, a coil spring 5 in the casing with one end acting against said part 7 of the thrust members and with its other end against the other part 8 of the thrust members, said other part 8 being attached to a clutch part 10 having conical clutch surfaces 11 coacting with corresponding surfaces on another clutch part 12 connected to the second shaft, said two coupling parts 10 and 12 constituting together a frictional coupling.

2,002,116
KNITTING MACHINERY
Fritz Lambach, Weehawken, N. J., assignor to Robert Reiner, Inc., Weehawken, N. J., a corporation of New Jersey
Application December 28, 1931, Serial No. 583,581
5 Claims. (Cl. 66—96)



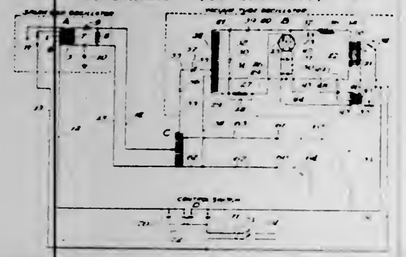
1. A flat full-fashioned knitting machine having, in combination with a series of needles, a cam shaft for the machine, a picot rod, picot bars supported thereon, a supporting frame for the picot rod arranged to swing about a fixed pivot to impart substantially vertical movements to said picot bars to cooperate with the needles, and a pattern mechanism for shifting said picot bars with relation to the needle series comprising a picot rod shifting cam supported on said frame for rotation to effect endwise movement of said picot rod, a ratchet secured to turn with said cam, a pawl mechanism supported on said frame for rotating the ratchet, a cam on the cam shaft, a cam follower, and an operating connection between said pawl mechanism and said cam follower rendered operative by the correlated vertical movements of the frame and of the follower toward and away from each other during a loop transfer operation to impart resetting and indexing movements to said pawl mechanism and ratchet.

2,002,117
ARTIFICIAL BAIT
James E. Lavitt, Everett, Wash., assignor to J. Bruce Watson, Everett, Wash.
Application August 7, 1934, Serial No. 738,853
3 Claims. (Cl. 43—45)

1. An artificial bait of the class described comprising an outer spoon having an opening therein, bearings on the outer spoon extending transversely into the opening, an inner spoon rotatably mounted in the opening, trunnions on the inner spoon journaled in the bearings, and means for rotating the outer and inner spoons as the bait is drawn through the water.

2,002,118
CHAIR
Albin Johnson, Belding, Mich.
Application August 1, 1934, Serial No. 737,980
1 Claim. (Cl. 155—143)

A folding chair of the class described comprising a straight leg, a pair of oppositely bowed legs pivotally mounted at an intermediate point on opposite sides of the first named leg, a circular seat, a substantially U-shaped bracket having the bight portion thereof anchored beneath the forward section of the circular seat, the second named legs being pivotally connected at their upper ends to the depending legs of the bracket, the first named leg extending above the seat and terminating at its upper end in a handle, a loop pivotally mounted on the rear of the seat and slidably encircling the upper portion of the first named straight leg, a stop on said first named leg engageable with the loop for supporting the seat in a substantially horizontal position when the chair is unfolded, and a spring clip mounted on the bracket intermediate the



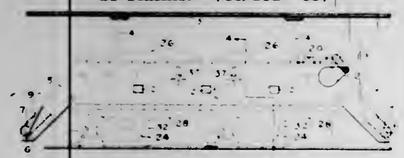
legs thereof and engageable with the first named leg for releasably securing the chair in folded position.

2,002,119

ELECTROSURGICAL APPARATUS

Rolland H. Maxson, Milton, Wis., assignor to The Burdick Corporation, Milton, Wis., a corporation of Delaware

Application April 15, 1933, Serial No. 666,297
15 Claims. (Cl. 174—177)



7. An electro-surgical apparatus comprising a vacuum tube oscillator, a spark gap oscillator, each said oscillator having an output circuit, said output circuits including a common applicator branch electrically connected with respect to each oscillator in parallel with the other oscillator.

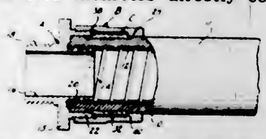
2,002,120

METHOD OF AND APPARATUS FOR CONDITIONING CIGAR WRAPPER LEAF TOBACCO

Charles G. Maxwell, Louisville, Ky., assignor, by mesne assignments, to The American Tobacco Company, a corporation of New Jersey

Application January 27, 1931, Serial No. 511,631
15 Claims. (Cl. 131—55)

1. The herein-described continuous method of conditioning tobacco leaf wrappers to render them soft and pliant, which consists in continuously passing a succession of suspended hands of leaves into, through and out of a chamber slowly and in direct contact with a current of warm humid air moving thru the chamber, the said air having a moisture content of approximately 96 per cent and in so regulating the conditions of operation that the moving tobacco will be maintained in the presence of the humid atmosphere until it absorbs naturally all the moisture it can assimilate by absorption in such an atmosphere, the temperature of the said atmosphere being such as to substantially retard the formation of water globules such as would tend to spot the leaves.



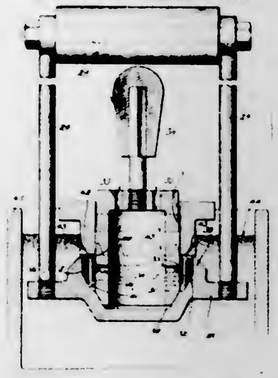
2,002,121

HOSE COUPLING

Carlos L. McMaster, Cleveland Heights, Ohio

Application November 25, 1933, Serial No. 699,723
4 Claims. (Cl. 29—148.5)

1. In the method of making a hose coupling having a coupling member and a hose gripping member, the step of making said members in one piece with said members directly connected to



each other end to end, and the subsequent step of separating said members.

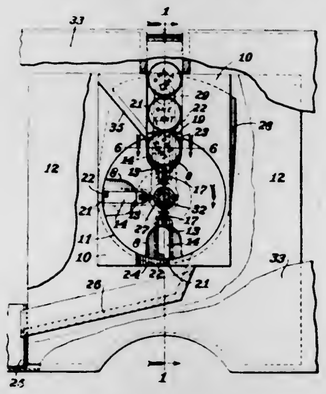
2,002,122

METHOD OF FORMING METAL FORTIFIED PACKER GASKETS

James R. McWane, Birmingham, Ala.; A. T. McWane, William McWane and Jelks H. Cabaniss, executors of said James R. McWane, deceased, assignors to McWane Cast Iron Pipe Co., Birmingham, Ala.

Application May 25, 1933, Serial No. 672,886
2 Claims. (Cl. 22—202)

2. The method of forming a pipe joint gasket having soft metal ends and an intermediate body of compressible sealing material which consists in forming an annulus of the compressible material with chambering in the annulus body thereof opening communication therethrough from end to end, confining the annulus with its axis disposed vertically in an annular cavity affording clearance above and below the annulus to the extent of the desired proportions of soft metal ends and defined by bottom and lateral confining walls one of which lateral walls terminates at a height for determining the extent of the above clearance, administering molten metal into said clearances and chambering to be allowed to thereafter harden and be removed from the confinement in the annular cavity as an integral gasket structure, and permitting said molten metal to overflow said upper clearance extent determining wall for fixing the length of the gasket without resort to trimming of excess metal.



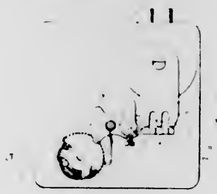
2,002,123

COIN CONTROLLED MECHANISM

John G. Miller, Baltimore, Md.

Application March 14, 1934, Serial No. 715,517
5 Claims. (Cl. 194—70)

1. In a coin controlled mechanism, a supporting frame, a member rotatably mounted in the frame and having a coin receiving recess opening radially and an undercut guideway opening into the recess, said guideway extending radially of the rotatable member and opening across the center of the coin recess to the periphery of the rotatable member, means for rotating said member, a locking element having reciprocatory motion within the guideway and being retained therein by the undercut formation of the guideway, said locking element having a lug projecting into the coin recess and providing a coin seat on which a coin may rest, said locking element being



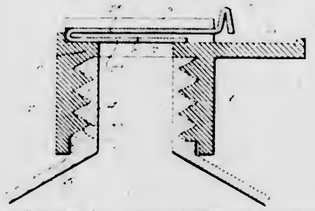
movable outwardly from the rotatable member into locking engagement with the frame, means for urging said element outwardly relative to the rotatable member and said frame providing a presser surface against which a coin carried on said coin seat may ride as the member is rotated to force the coin and thereby the locking element inwardly to disengage the locking element from the frame.

2,002,124

ELECTRIC DRIVING DEVICE

Otto Neuenschwander, Kilchberg, Switzerland

Application August 14, 1933, Serial No. 685,143
In Switzerland August 27, 1932
1 Claim. (Cl. 172—126)



An electric driving apparatus of the class described, comprising an electro-magnet having oppositely disposed pole pieces forming oppositely disposed widened portions arranged in a common plane and having slots extending to and open at their opposing ends, and an armature arranged for movement across the common plane of the pole pieces toward and from the intermediate portion of the electro-magnet in a path substantially at right angles to said common plane and having extensions at its opposite sides adapted to enter the slots of the pole pieces when the armature and pole pieces are in substantially the same plane and thereby reduce the electro-magnetic pulling force of the apparatus to approximately zero when the armature is in such position.

2,002,125

CONTAINER CLOSURE

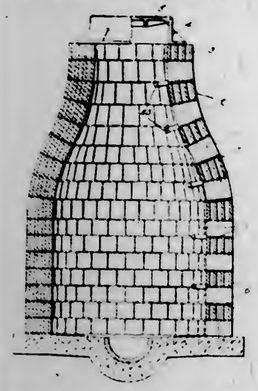
Paul Norris, Ardmore, Pa., assignor of forty-five one hundredths to Ralph McKittrick, Villanova, Pa.

Application November 10, 1933, Serial No. 697,490
2 Claims. (Cl. 221—60)

1. A closure for containers comprising an integral sleeve element adapted to be threaded on to the discharge neck of a container, said sleeve including a top portion provided with an opening therein aligned with the discharge port of the container, side walls extending from opposite sides of said top portion, flanges extending inwardly from said side walls in spaced relation with respect to the top portion to form parallel undercut grooves, a projection extending laterally of said sleeve beyond the ends of said side walls in the plane of the top portion, a resilient closure element slidable on said top portion in the grooves formed by the flanges, said flanges engaging the upper surface of said resilient closure element and compressing the same firmly against the top portion, and means at the extremity of said projection to prevent displacement of said closure from the sleeve element.

2,002,126

FRICTION DRIVE

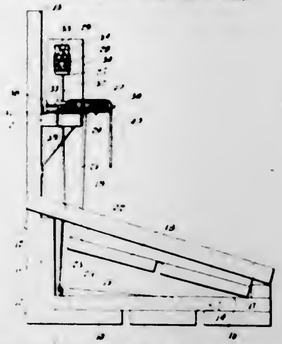


Otto Ohnesorge, Bochum, Germany

Original application April 8, 1929, Serial No. 353,626. Divided and this application July 2, 1934, Serial No. 733,401. In Germany June 8, 1928
12 Claims. (Cl. 74—224)

8. Friction drive for ropes, chains and similar pulling means, consisting of a drum, an endless band of chain links laid around said drum in several convolutions, said chain links having a groove at their circumference for receiving the pulling means, so that it also surrounds the drum in more than one convolution, and shifting elements by which the chain windings are gradually shifted for the width of the chain during each revolution, said shifting elements being mounted in the drum, and control elements by which the operation of the shifting elements is effected, said control elements being fixedly arranged near the shaft of the drum.

2,002,127
MANHOLE AND CISTERN CONSTRUCTION
Nathaniel Paul O'Neal, Hope, Ark.
Application August 13, 1934, Serial No. 739,701
3 Claims. (Cl. 72—9)

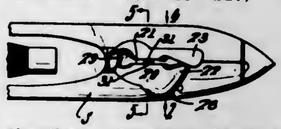


1. In a manhole construction, a plurality of bricks arranged in courses, said bricks having parallel upper and lower surfaces and inclined side surfaces, the side surfaces of the bricks of the several courses being arranged adjacent to each other forming a circular lower portion, upper courses of bricks, the bricks of the last mentioned courses having their upper and lower surfaces and side surfaces converging towards one end thereof providing bricks having wide ends and narrow ends, certain of the courses of bricks being arranged whereby the narrow ends are disposed inwardly, and certain other courses being arranged with the wide ends of the bricks disposed inwardly, shaping the manhole.

2,002,128
DISPLAY RACK
Ray A. Reidenbaugh, Marion, Ohio
Application February 19, 1934, Serial No. 712,023
1 Claim. (Cl. 211—1)

A display rack comprising upwardly converging frames, means for pivotally connecting the upper ends of the frames, releasable means for holding the lower ends of the frames spread apart, triangular plates hung upon the pivotal connections of the frames with their side edges following the frames, and vertically spaced pockets on said plates.

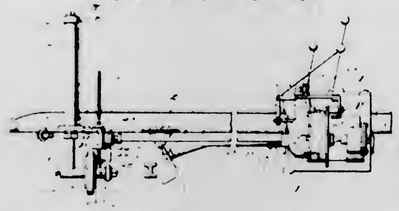
2,002,129
RODENT TRAP
Emil F. Schroeder, Weyauwega, Wis.
Application February 21, 1934, Serial No. 712,388
2 Claims. (Cl. 43—62)



1. A trap of the class described having a base, a standard rising therefrom, a shelf on said standard, a trigger lever, means pivoting said lever on said shelf, a trip member on the base, means flexibly connecting the trip member and trigger lever, a capturing member supported on the base and coacting with the trip member, link means extending from the capturing member having a hook engageable with said shelf in set position, a detent member for said trigger lever, a lever carrying said detent member, a contractile spring connected to the last mentioned lever and to actuate the same when the trigger lever is released, and means connected to the last mentioned lever engageable with said hook to release said link means when the trap is sprung.

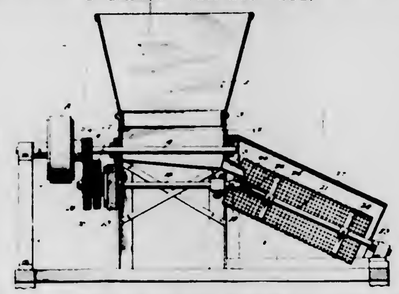
2,002,130
FLUORANTHENE DYESTUFF AND PROCESS OF MAKING SAME
Robert Sedlmayr and Erich Kruta, Aussig, Czechoslovakia
No Drawing. Application March 7, 1932, Serial No. 597,404. In England March 9, 1931
13 Claims. (Cl. 260—64)

1. An article of manufacture utilizable as a vat dyestuff essentially comprising a condensation product of fluoranthene with an anhydride of an aromatic ortho dicarboxylic acid.



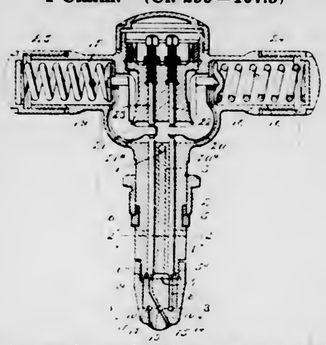
2,002,131
SHUTTLE EYE
Philip L. Spencer, Millbury, Mass., assignor to Watson-Williams Manufacturing Company, Millbury, Mass., a corporation of Massachusetts
Application May 27, 1933, Serial No. 673,164
5 Claims. (Cl. 139—217)

1. In a shuttle, a threading block having a longitudinal thread passage therein and having a recess extending upward from the bottom of said block in said passage and closed in part at its upper end, a pair of vertically disposed tension members, a tubular retainer for said tension members slidably insertable in said recess from below, and means to secure said tension members



in said retainer and said retainer in said recess, said retainer being formed of thin sheet metal and having elongated thread slots extending downward from the upper edges of opposed wall portions thereof.

2,002,132
PARKING OR DEPARKING MECHANISM
Homer H. Wolfe, Little Rock, Ark., assignor to Automobile Side-Drive Corporation, Little Rock, Ark., a corporation of Arkansas
Application November 19, 1932, Serial No. 643,494
6 Claims. (Cl. 180—1)



1. In combination with the chassis and front axle of a vehicle, a jacking member carried by the forward portion of the vehicle including a ground engaging dolly wheel, a drive member, driven means operatively engaged with the dolly wheel, means including a manually operated rock lever for connecting or disconnecting the drive member and the driven means, a rock arm carried by the lever, a holding clip pivotally supported by the chassis at a point above the front axle, said clip when in one position engaging beneath the axle to hold the chassis and axle against separating movement, an elongated rod in operative connection between an end portion of the rod and the clip, the opposite end portion of the rod being freely disposed through the rock arm of the lever, retaining members carried by the rod at opposite sides of the rock arm, a coil spring surrounding said rod and interposed between the rock arm and the retaining member on the rod in advance of said rock arm, the operation of the rock arm through the rod making the clip effective when the drive member and driven means are connected and to make said clip ineffective when the drive member and the driven means are disconnected.

2,002,133
APPARATUS FOR SEPARATING OATS FROM HULLS
Louis B. Baumhover, Carroll, Iowa
Application September 8, 1932, Serial No. 632,259
1 Claim. (Cl. 209—284)

An apparatus of the character described comprising a supporting frame, a hopper carried by said frame and having its bottom inclined downwardly and terminating in a discharge spout at one end, a downwardly inclined reticulated separating drum arranged at one side of and below the hopper to receive material discharged through said spout, a driving shaft rotatably mounted and extending through the lower portion of said hopper above said spout, a shaft disposed axially through said drum and carrying the drum, a horizontal shaft disposed below the hopper and having at one end a universal connection with the upper end of the shaft in the drum, and means disposed at the other side of the hopper for transmitting rotary motion from the driving shaft to said horizontal shaft.

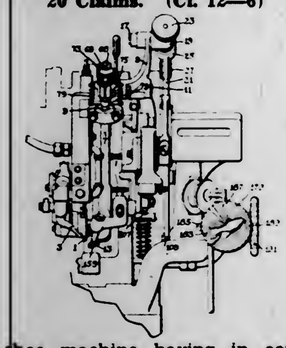
2,002,134
FUEL SPRAY INJECTION FOR INTERNAL COMBUSTION ENGINES
Alessandro Baj, Milan, Italy
Application December 8, 1932, Serial No. 646,225
In Italy December 9, 1931
1 Claim. (Cl. 299—107.5)

For internal combustion engines fuel spray injection apparatus of the kind comprising injection needle valves each normally closed by resilient or spring pressure but each adapted to be opened by increase of the liquid pressure of the fuel upon the valve and each delivering to the engine, by one or more spray orifices; said injection apparatus characterized by a plurality of such injection valves consisting of separate needle rods spaced apart from each other to slide independently along spaced-apart ways to operate with independent actions, all of such valve needles being subject at all times to the same fuel pressure, but having their resilient closing means constructed differently to allow successive independent opening of the several valves as the fluid-fuel pressure increases, and the several spaced-apart valve needles having separate stop means limiting the successive openings of each of the valve needles to a very short movement adequate for injection purposes when open and thereby affording independent instantaneous closing of the respective valves upon decrease of fuel pressure, and means for finely and independently adjusting the stop means for each of the valve needles to limit minutely and accurately the extent of opening of each of the valves.

2,002,135
ELECTRIC FISHING LURE
Raymond L. Barton, San Diego, Calif.
Application July 22, 1930, Serial No. 469,759½
20 Claims. (Cl. 43—44)

19. In an electric fishing lure having an electric lamp and a battery arranged therewithin, a

spring tending to normally keep the battery and lamp out of circuit conducting relation with each



other, and means to manually bob the lure whereby to close the circuit to the lamp against the opposition of said spring.

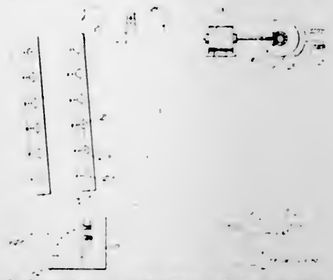
2,002,136

SHOE SEWING MACHINE

Arthur Bates and Frank Coleman Choice, Leicester, England, assignors to United Shoe Machinery Corporation, Paterson, N. J., a corporation of New Jersey

Application September 12, 1933, Serial No. 689,097
In Great Britain October 21, 1932
20 Claims. (Cl. 12—6)

1. A shoe machine having in combination, mechanism for progressively securing successive portions of a shoe upper and a sole together, an upper tensioning gripper acting in time with the securing mechanism to seize successive portions of the shoe upper preparatory to each securing operation and means driven by the securing mechanism to prevent the gripper from seizing the upper during a predetermined number of successive operations of the securing mechanism adjacent the heel end of shoe and to cause the gripper to be rendered operative along other portions of the shoe.



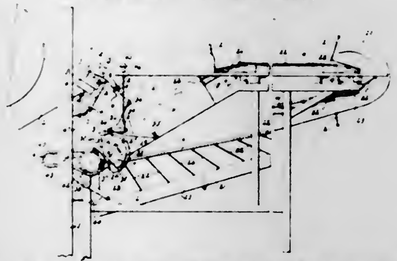
2,002,137

WARPING CREEL THREAD STOP

Alexander Bruenn, New York, N. Y.

Application February 2, 1933, Serial No. 654,939
4 Claims. (Cl. 28—51)

1. An automatic stopping mechanism for warping machines, comprising creel spools, a winding beam, separate electro-magnetic brakes for each spool and for the beam, a bridge supported on each thread being wound under tension from the creel spools onto the beam, a normally closed electric circuit, a normally open magnetizing circuit connected to the electro-magnetic brakes, short-circuiting terminals connected across the



closed circuit and disposed adjacent to the bridge, whereby, when a bridge is released by the breaking of a thread, the short-circuiting terminals are bridged, the normally closed electric circuit is opened and the magnetizing circuit is closed to apply the brakes to the spools and the beam.

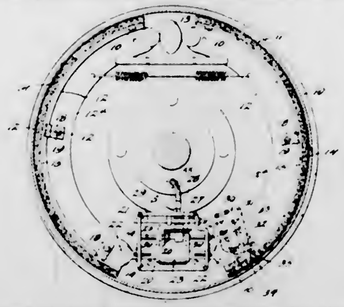
2,002,138

LOT OR BUNDLE ASSORTER FOR IRONING MACHINES

Forrest J. Couch, Rochester, N. Y., assignor to The American Laundry Machinery Company, Cincinnati, Ohio, a corporation of Ohio

Original application November 3, 1930, Serial No. 493,050. Divided and this application April 5, 1933, Serial No. 664,581
4 Claims. (Cl. 198—158)

1. A conveyor, comprising an endless belt having pivoted plate members thereon arranged to form a conveyor bottom for the upper lap of the belt but not for the return lap thereof, some of said pivoted plate members being angular in form to provide compartment forming partitions, and other of said plate members being solely bottom-forming members.



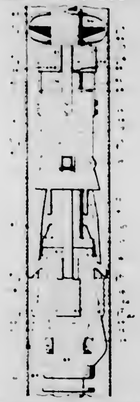
2,002,139

AUTOMATIC BRAKE ADJUSTING AND INDICATING MECHANISM

John B. Des Rosiers, Providence, R. I.

Application January 27, 1933, Serial No. 653,874
21 Claims. (Cl. 188—79.5)

1. In brake mechanism of the kind described, a brake drum, a brake shoe therein provided with a lining, means for moving the brake shoe toward the drum to apply the brakes, a control lever pivotally connected to said shoe and having one end arranged to engage the drum and cause gradual movement of the lever about its pivot as the brake shoe is moved against the drum and as the brake lining gradually wears away, and mechanism controlled by the movement of said lever about its pivot for gradually adjusting the brake



shoe toward the drum to compensate for the wear on the lining.

2,002,140

WELL EQUIPMENT

Stephen V. Dillon, Tulsa, Okla.

Application August 19, 1932, Serial No. 629,542
20 Claims. (Cl. 103—219)

2. An anchoring device for use in securing an elongated internal member to the surface of a bore, comprising a sleeve and a wedge block mounted on the internal member, said member being movable relatively to the sleeve and wedge block, slips carried by the sleeve and cooperating with the wedge block for interlocking the latter with the surface of said bore, and means interlocking the sleeve and wedge block to the internal member for preventing movement of the wedge block in either direction axially of said bore and for preventing the internal member from rotating a complete revolution relatively to said wedge block.

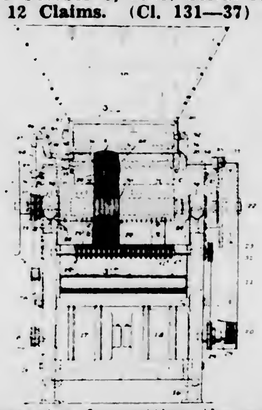
2,002,141

CLAMP

William C. Dumke, Chicago, Ill.

Application December 15, 1933, Serial No. 702,628
17 Claims. (Cl. 24—19)

1. A clamp comprising a band, a bearing at one end portion thereof, a screw directed through the bearing toward the other end portion, a shoe receiving the other end portion of the band, means to anchor such other end portion to the shoe, a nut opposite the shoe and receiving the screw, the bearing comprising a doubled formation of the affected end portion, an arched reinforcement fitted over the formation, the latter and the reinforcement being transversely perforated



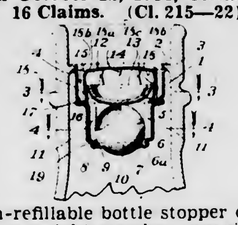
for the free passage of the screw shank, and foot portions extended outwardly from the reinforcement and longitudinally of the band.

2,002,142

CIGARETTE WRAPPER CUTTING MACHINE

Charles H. Gibson, Laurence E. Downs, and Christian J. Fuse, Richmond, Va., assignors to The American Tobacco Company, New York, N. Y., a corporation of New Jersey

Application October 6, 1933, Serial No. 692,542
12 Claims. (Cl. 131—37)

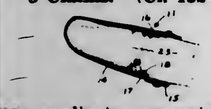


1. In apparatus for cutting the wrappers of cigarettes, a cutter, a rotary member having a guide to receive and advance cigarettes to said cutter, and means adjacent said guide to bend the cigarettes therein to cause the portions of the wrappers to be cut to be under tension when they reach the cutter.

2,002,143

NONREFILLABLE BOTTLE STOPPER

Joseph Harry Gruver, Catonsville, Md., and James H. Baldwin, New Milford, Conn., assignors to Container Fitments Inc., New York, N. Y., a corporation of Maryland



Application October 12, 1934, Serial No. 748,142
16 Claims. (Cl. 215—22)

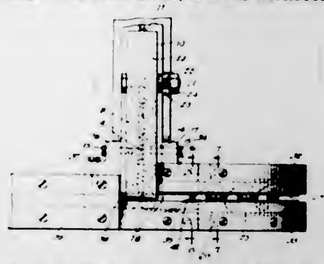
1. A non-refillable bottle stopper comprising a float valve, a weight member engaging the float, said weight member being adapted to pivot on its edge, and guide means flaring outwardly towards the mouth of the bottle and upon which the edge of the weight member bears, said out-

wardly flaring guide means insuring that the portion of the edge of said weight upon which it pivots shall tend to move further away from the float which is engaged by the weight than any other portion of the weight, when the bottle is in substantially horizontal position, thereby keeping the force of the weight against the float.

2,002,144
APPLICATOR
Wilma O. Heaton, Oakland, Calif.
Application March 8, 1934, Serial No. 714,550
8 Claims. (Cl. 132—1)

1. A rouge applicator comprising a finger cot of flexible and elastic material for mounting in stretched condition on the outer end portion of a person's finger; the cot wall being imperforate and smooth and relatively thin at its rounded end portion whereby the sense of touch of a finger tip therein is arranged to be operative therethrough with a minimized degree of interference therewith.

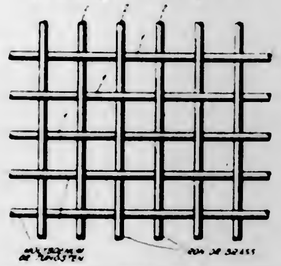
2,002,145
METHOD OF CLEARING THE CONTENTS OF FERMENTATION AND STORAGE CONTAINERS
Gottfried Jakob, Perlach, near Munich, Germany, assignor to Chemische Werke Marienfelde Aktiengesellschaft, Berlin-Marienfelde, Germany
No Drawing. Application April 19, 1932, Serial No. 606,285. In Germany April 23, 1930
1 Claim. (Cl. 210—1)



The method of clarifying liquids by binding matter which may be suspended in the liquid, or be precipitated from the liquid and thus become suspended therein, comprising comminuting wood whose specific gravity is so related to that of pitch that a particle of the wood, when coated with pitch, descends slowly in the liquid to be clarified, coating the particles with pitch, and throwing them into the liquid from above.

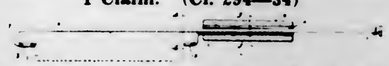
2,002,146
MEAT TREATING METHOD
Lloyd B. Jensen, Chicago, Ill., assignor to Industrial Patents Corporation, Chicago, Ill., a corporation of Delaware
No Drawing. Application January 13, 1933, Serial No. 651,627
11 Claims. (Cl. 99—11)

1. In the curing of meat the steps of adding to the meat a compound which is to be converted to a reducing agent by the action of certain enzymes present in said meat and subjecting the meat to the action of a color fixing curing agent.



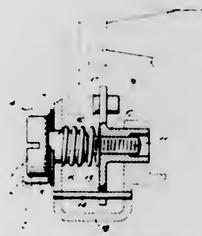
2,002,147
APPARATUS FOR ARRANGING AND FEEDING IRREGULAR SHAPED ARTICLES
Daniel L. Jordan, Bridgeport, Conn., assignor to Clark Metal Products, Inc., Bridgeport, Conn., a corporation of Connecticut
Application May 21, 1934, Serial No. 726,761
5 Claims. (Cl. 193—43)

1. A feeding apparatus for irregular shaped articles including a base and a non-centralized projection on said base, comprising a slideway having a slot in which said projection is adapted to move, a second slideway having a slot in which said projection is adapted to move, feed means between said slideways having a passage communicating with said slots, a feed member mov-



able in said passage, adapted to feed said articles to said second slideway, and camming means in relation to said passage adapted to contact the base of said articles as they are moved in said passage to turn said articles into a predetermined position.

2,002,148
METHOD OF MAKING GRID ELECTRODES
Leonard Klinkert, Eindhoven, Netherlands, assignor to Radio Corporation of America, a corporation of Delaware
Application March 19, 1934, Serial No. 716,367
In the Netherlands March 22, 1933
3 Claims. (Cl. 140—71)



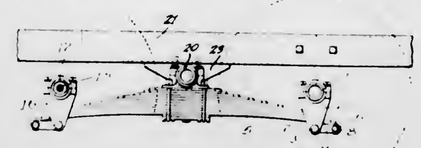
1. The method of making grid-like electrodes for thermionic tubes which consists in winding a series of substantially parallel suitably spaced grid wires about a plurality of vertical support rods, interweaving said grid wires with a plurality of wires arranged in parallel relation to the support rods in order to maintain the grid wires in fixed spaced relation during manufacture, and then removing said spacing wires by chemical means.

2,002,149
DISH OR PAN LIFTER
Herbert De L. Kneeland, Dundalk, Md.
Application May 28, 1934, Serial No. 728,022
1 Claim. (Cl. 294—34)

A dish lifter comprising a main flat shank bar having an end portion bent downwardly and inwardly and bifurcated to form a dish engaging jaw and having a plurality of rows of notches on its under side, a hollow handle mounted and slidable along said shank bar, a liner in the handle having a dish-engaging jaw depending therefrom to align opposite the first mentioned jaw, said liner being resiliently spaced from the shank bar adjacent the portion depending therefrom and having a plurality of points adapted to engage in the rows of notches and lock therein when the shank bar is weighted or depressed substantially as described.

2,002,150
SPEED REGULATOR
Iner J. Larson, Oaklyn, and John J. Hoehn, Camden, N. J., assignors to Radio Corporation of America, a corporation of Delaware
Application December 9, 1932, Serial No. 646,512
3 Claims. (Cl. 188—187)

1. Adjusting means for speed control apparatus comprising an adjusting knob, a spindle mounted upon said adjusting knob, a stop member loosely mounted upon said spindle and rotatable therewith, the adjacent faces of said knob and stop member having inter-engaging teeth and means for yieldably retaining said teeth in engagement.

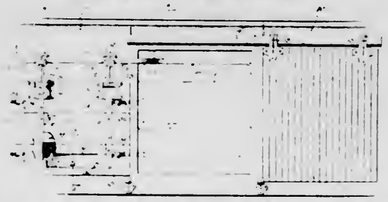


2,002,151
PHOTOGRAPHIC PRINTING APPARATUS AND METHOD FOR ENDLESS SOUND FILMS
John A. Maurer, Jr., New York, N. Y., assignor to Radio Corporation of America, a corporation of Delaware
Application February 19, 1932, Serial No. 593,970
5 Claims. (Cl. 95—75)

1. The method of making sound records in the form of an endless loop having a helical sound-track for film phonographs comprising printing a multiplicity of sequential positives upon a considerable length of film stock, developing the images, separating the individual prints and then joining the two ends of each print by a butt splice.

2,002,152
AXLE MOUNTING
Axel R. Le Moon, Chicago, Ill., assignor to Nelson-Le Moon Truck Company, Chicago, Ill., a corporation of Illinois
Application October 23, 1933, Serial No. 694,793
7 Claims. (Cl. 267—41)

1. In a vehicle, an axle having depending elements constructed to afford a rest or fulcrum for a load carrying spring, a frame structure, a spring extending from said frame structure over said

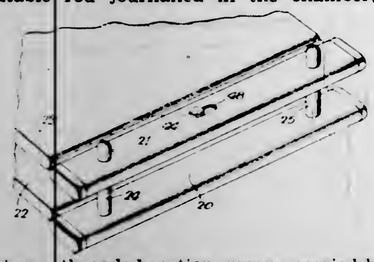


fulcrum, and a shackle connecting the end of the spring with said depending element.

2,002,153
ARTIFICIAL FILAMENT AND METHOD FOR ITS PRODUCTION
William Mendel, Beverly, N. J., assignor to Sylvania Industrial Corporation, Fredericksburg, Va., a corporation of Virginia
Application April 13, 1933, Serial No. 665,864
10 Claims. (Cl. 18—8)

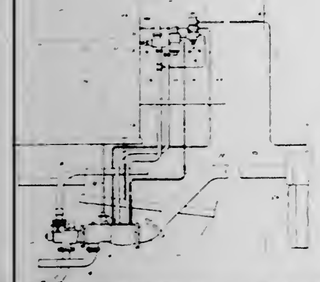
7. An improved spinneret for artificial filaments comprising a body portion provided with a relatively large central orifice and relatively narrow slot-shaped orifices extending radially from said central orifice, said slot-shaped orifice having lengths at least equal to the diameter of the central orifice.

2,002,154
GRAIN DOOR
Bowen B. Morse, Manitowoc, Wis.
Application January 18, 1934, Serial No. 707,079
6 Claims. (Cl. 20—23)



1. In a device of the class described, a body having an opening, a door for said opening, a track secured to the body having a portion extending through the door opening and portions arranged exteriorly and interiorly of the door opening, and means connecting the door with the track for sliding movement in a vertical and horizontal plane through the door opening and swinging movement in vertical planes toward and away from the inner faces of the walls of the opening for contact therewith.

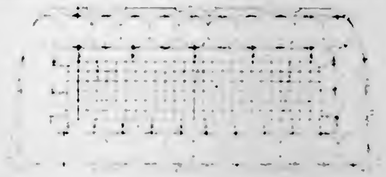
2,002,155
POST BINDER
George W. Newman, St. Louis, Mo., assignor to Loose Leaf Metals Company, a corporation of Missouri
Application March 30, 1934, Serial No. 718,112
5 Claims. (Cl. 129—12)



5. A binder, having a bar having sheet-holding posts arising therefrom, a chambered bar

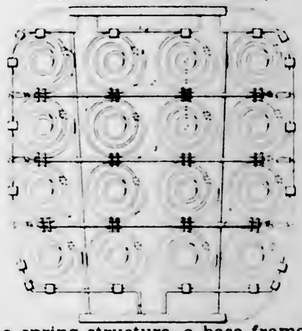
apertured to slide upon the posts, locking means within the chamber for engaging the posts, a rotatable rod journalled in the chamber, and

having a threaded section, means carried by the rod for controlling the locking means, a slidable nut engaging the threaded section, and manually actuated means for moving the nut.



2,002,156
EXHAUST STEAM INJECTOR
Emanuel Rawson, North Bergen, N. J., assignor to The Superheater Company, New York, N. Y.
Application March 7, 1934, Serial No. 714,384
19 Claims. (Cl. 103—265)

1. In a feed water system including an exhaust steam injector for supplying water to a steam generator which supplies steam to a steam consumer, said injector being of the type adapted to be operated by auxiliary live steam when exhaust steam from said consumer is not available, a control system for changing from exhaust steam to auxiliary live steam operation including a valve for controlling admission of auxiliary live steam to the injector, a connection providing a path for flow of pressure fluid from a source of relatively high pressure to a zone of relatively low pressure, means responsive to variations of pressure in said connection for controlling the position of said valve, valve means for controlling flow through said connection for varying the pressure therein, and means responsive to variations in the pressure of steam supplied to said consumer for operating said valve means.

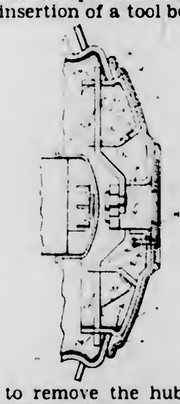


2,002,157
SPRING STRUCTURE
Clair S. Reed, Jackson, Mich., assignor to Reynolds Spring Company, Jackson, Mich., a corporation of Delaware
Application November 3, 1932, Serial No. 640,996
10 Claims. (Cl. 155—179)

1. In a spring construction, the combination with a flexible upper border frame of wire, of a marginal row of spring coils clipped to and spaced along the inside of said frame, a central supporting surface having sufficient rigidity to maintain substantially a preformed contour during ordinary use, said surface supporting the entire load placed upon the central portion of the construction during use and being suspended from

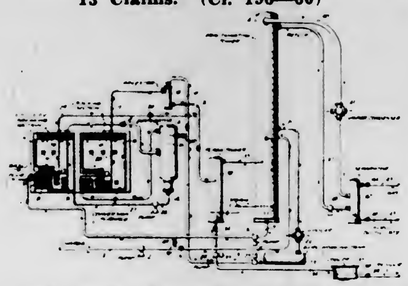
and in substantially the plane of the top portion of said coils, and resilient means for suspending said central surfaces, said means being spaced along the edges of said surface and being operatively connected to substantially all of said marginal row of coils, whereby the load supported by said surface is distributed uniformly along said upper frame.

2,002,158
SPRING STRUCTURE
Clair S. Reed, Jackson, Mich., assignor to Reynolds Spring Company, Jackson, Mich., a corporation of Delaware
Application November 2, 1933, Serial No. 696,348
3 Claims. (Cl. 155—179)



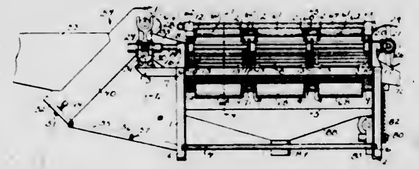
3. In a spring structure, a base frame, an upper frame, rows of springs arranged within and between said frames, strips of fabric of less height than the normal expansion of said springs arranged between adjacent rows of springs, wire members reinforcing the longitudinal edges of said strips of which at least the upper members are flexible, the upper members being terminated short of said upper frame, fastening means piercing said strips and embracing said members securing said strips to said springs to place the same under compression, said means fixedly engaging said strips and slidably embracing said members, and longitudinally extensible resilient members connecting the ends of the upper reinforcing members of said frame.

2,002,159
HUB CAP
Creighton W. Ryerson, Jackson, Mich., assignor to Ryerson & Haynes, Inc., Jackson, Mich., a corporation of Michigan
Application February 24, 1934, Serial No. 712,734
4 Claims. (Cl. 301—108)



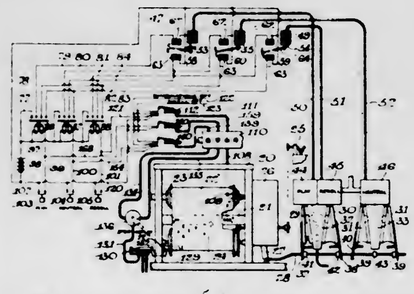
1. In a hub cap of the push-on type, a strong sheet metal body portion partially insertable into

the aperture of the wheel hub and having a face portion for shielding said aperture, a portion of said portion being slightly larger than said aperture to prevent complete insertion of said body into said aperture, a relatively weaker sheet metal face plate overlying said face portion and being attached thereto, the periphery of said plate overlapping said face portion to provide a flange to permit the insertion of a tool between the same



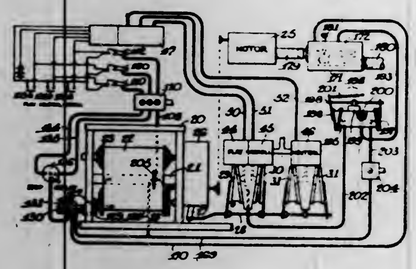
and the hub to remove the hub cap from said aperture, locking mechanism mounted in said body for locking the latter within said hub, the construction of said face plate and attachment with said body being characterized by the fact that attempted removal of the cap through force directed against said face plate while said cap is locked to said hub will only result in the removal or distortion of said plate.

2,002,160
PROCESS AND APPARATUS FOR CONVERTING HYDROCARBON OILS
John Wyckliffe Throckmorton, New York, N. Y., assignor to Gyro Process Company, Detroit, Mich., a corporation of Michigan
Application September 2, 1933, Serial No. 687,986
13 Claims. (Cl. 196—60)



1. The process of converting hydrocarbon oils comprising the steps of charging a mixture of relatively heavy oil and light oil to a primary heating zone and there heating it to a distillation temperature, separating by evaporation the vaporizable and unvaporizable materials in an evaporating zone, cracking the vapors in a secondary heating or cracking zone, and immediately thereafter reducing the temperature of the cracked vapors to below active vapor phase cracking temperature by quenching them with a cooler hydrocarbon, heating in an elongated confined stream the unvaporized oil recovered from the initial separating zone to temperatures sufficiently high to increase the percentage of vaporizable material therein in a tertiary heating or viscosity breaking zone, combining the quenched products discharged from the secondary vapor cracking stage and the bottoms discharged from the tertiary heating stage and flashing the mixture at reduced pressure in a flash zone, diverting the unvaporized oil from the system, subjecting the vapors separated in the flash zone to fractionation in a fractionating zone and condensing the vapors.

2,002,161
CHERRY STEMMER
William E. Urschel, Valparaiso, Ind.
Application March 18, 1932, Serial No. 599,765
10 Claims. (Cl. 146—55)



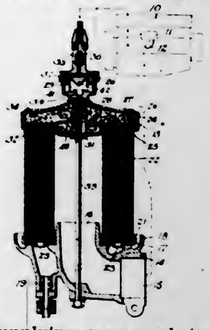
1. A stemming device comprising a drum of rollers between which the stems of fruit project, bearings at spaced intervals about said drum and engaging said rollers to cause them to rotate, and other rollers in juxtaposition to the first mentioned rollers and rotating at a lower speed than said first mentioned rollers, the space between the different rollers being such that the stems of fruit are engaged between said different rollers to assist in the severance of the stems.

2,002,162
MUSICAL INSTRUMENT CONTROLLING MEANS
Edmond Verlinden, Milwaukee, Wis.
Application May 13, 1933, Serial No. 670,821
7 Claims. (Cl. 84—123)

1. The combination of a tracker-box transmission, pneumatically operated devices for shifting said transmission to playing and rerolling positions, a control valve for each of said devices, a pair of electromagnets for each valve to move the valve to alternative positions, and electric circuit means for selectively energizing the electromagnets of one valve and for simultaneously energizing the opposed electromagnet of the other valve, said means including circuit-closing devices for the respective valves, each circuit-closing device having a circuit connection with one electromagnet of the respective valve and with the opposed electromagnet of the other valve.

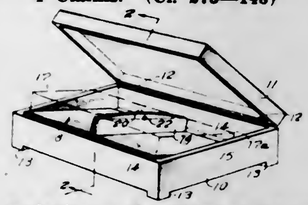
2,002,163
REBOLLING SPEED CONTROL FOR MUSICAL INSTRUMENTS
Edmond Verlinden, Milwaukee, Wis.
Application May 13, 1933, Serial No. 670,822
10 Claims. (Cl. 84—133)

1. In an automatic musical instrument using a music sheet, the combination of a pneumatic motor for effecting the travel of the music sheet, a throttle valve for said motor having a plurality of air openings through which the air flow divides, a valve member for at least one of said openings, and means controlled by the music sheet for actuating said valve member to vary the speed of the motor.



2,002,164
METHOD OF DEVELOPING ORNAMENTAL PLANTS FROM ORDINARY VEGETABLE PLANTS
Miyesaku Uyematsu, Montebello, Calif.
Application January 2, 1934, Serial No. 704,953
3 Claims. (Cl. 47—58)

1. The method of developing ornamental plants from a vegetable plant, which consists in dividing a stalk having a leaf bloom thereon, which stalk is cut from a live vegetable plant, into a plurality of sections one of which includes the bloom, then separately planting each section in moist soil or in water, including the step of treating the center portions only of the planted ends of the divisions of the stalk by applying pieces of material to said portions before the planting thereof.

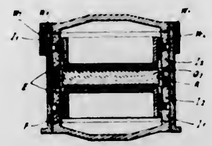


2,002,165
AIR CLEANER
Charles A. Winslow, Oakland, Calif.
Application July 8, 1933, Serial No. 679,593
12 Claims. (Cl. 123—198)

12. In combination, an internal combustion engine having a force feed lubricating system, an air filter for said engine, said filter comprising a filter element, an oil reservoir, means controlled by the operation of the engine for conducting liquid fuel from said system to said reservoir, and

means for supplying measured, isolated quantities of said oil from said reservoir to said filter.

2,002,166
PLAYING CARD CABINET
Julius Bandes and Joseph Bandes, Brooklyn, N. Y.
Application March 30, 1932, Serial No. 601,924
4 Claims. (Cl. 273—148)

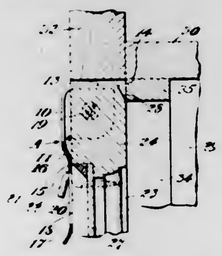


1. In a playing card cabinet of the character described, comprising a main bottom member and a lid therefor, the bottom member being arranged to hold a pair of stacked cards snugly in side by side relation, a removable tray including a partitioning member upon which said independent stacks are arranged to be disposed, said tray and partitioning member cooperating with the confining walls of said bottom member to hold said stacks segregated, said partitioning member of said tray being extended beyond the normal depth of a stack of playing cards to permit facile removal or positioning thereof bodily to a tilted position on one of the side walls of the bottom member, a cross member arranged to be disposed over said cards, and means formed on said partitioning member for removably holding said cross member over stacked decks of cards to either side of said partitioning member, said extended portion of said partition serving as engaging means for removal of the tray and mounting for said cross member.

2,002,167
QUARTZ CRYSTAL OSCILLATOR
Rudolf Bechmann, Berlin, Germany, assignor to Telefunken Gesellschaft für Drahtlose Telegraphie m. b. H., Berlin, Germany, a corporation of Germany
Application July 8, 1933, Serial No. 679,504
In Germany July 22, 1932
16 Claims. (Cl. 171—327)

10. A quartz oscillator comprising a housing completely enclosing a quartz crystal, a central holding ring secured within said housing, a quartz crystal interposed between an upper and lower

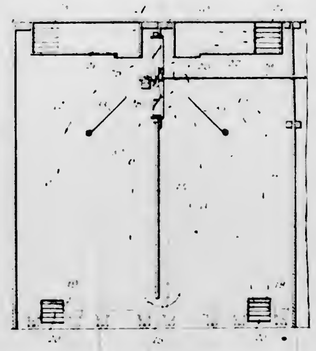
electrode, insulating rings spacing said crystal and said holding ring from said electrodes, means for flexibly securing said crystal within said housing,



said flexible securing means comprising a plurality of springs having pointed members touching the periphery of said crystal.

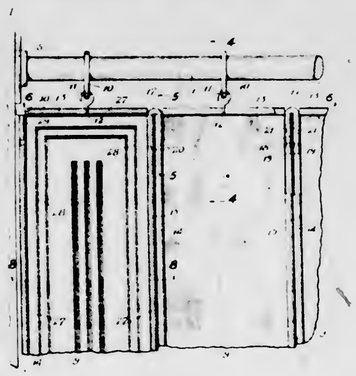
2,002,168
STABILIZING CARBON TETRACHLORIDE
Paul S. Brallier, Niagara Falls, N. Y., assignor to Niagara Smelting Corporation, Niagara Falls, N. Y., a corporation of New York
No Drawing. Application April 5, 1933, Serial No. 664,671
2 Claims. (Cl. 23—239)

2. Carbon tetrachloride containing ethyl acetate.



2,002,169
HANGER DEVICE FOR STORM WINDOWS
Peter Vanden Brande, Freeport, N. Y.
Application January 31, 1934, Serial No. 709,100
14 Claims. (Cl. 16—172)

10. An equipment device for storm windows and the like comprising a bell-crank lever forming a hanger member having an attaching portion by means of which it is adapted to be pivotally mounted upon a window frame with an outer bell-crank hanger arm extending downwardly and with an upper bell-crank arm extending within the window frame, and disconnectible connecting means between the lower end portion of said outer hanger arm and a storm window sash adapted for removably and replaceably supporting said sash on said hanger member.

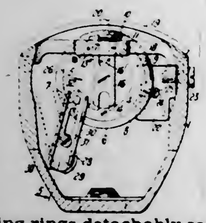


2,002,170
DRYING APPARATUS
Guido E. Barozzi, Woodcliff, N. J.
Application October 27, 1933, Serial No. 695,475
3 Claims. (Cl. 34—19)

1. A drying apparatus comprising a pair of chambers divided by a central wall having openings at opposite ends so that said chambers communicate with each other at each end, reversible means for producing a current of air mounted in one of said openings, means allowing admission of air but preventing expulsion of air from the chambers mounted in each chamber at the end adjacent said current producing means, other means allowing admission of air but preventing expulsion of air from the chambers mounted in

each chamber adjacent the other end, said chambers each having an opening allowing passage of air in either direction at the end of the chamber remote from said current producing means.

2,002,171
WINDOW CURTAIN
Thomas F. Byron, Cleveland, Ohio
Application February 26, 1934, Serial No. 712,926
20 Claims. (Cl. 156—16)



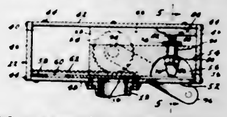
1. A hinge for relatively pivoted curtain panels comprising laterally-opposed tubular members, and a U-shaped bearing whose respective legs are disposed within said members with a turning fit.

2,002,172
LOCK-STITCH SEWING MACHINE
Herbert Corrall, Helensburgh, and James Heggie, Clydebank, Scotland, assignors to The Singer Manufacturing Company, Elizabeth, N. J., a corporation of New Jersey
Application August 25, 1933, Serial No. 686,666
In Great Britain September 12, 1932
10 Claims. (Cl. 112—181)

1. In rotary hook mechanism for lock-stitch sewing machines, a rotary hook and a bobbin-case journaled therein, said hook and bobbin-

case comprising body members and complementary bearing rings detachably secured each to a respective one of said body members.

2,002,173
CAN PUNCH
Bernard E. Dougherty, Seattle, Wash.
Application February 6, 1934, Serial No. 710,037
11 Claims. (Cl. 164—120)



1. A can punch comprising a rotatable member having a puncture point at the end thereof, and a bracket having a fulcrum thereon for the rotatable member, the bracket having a tooth for engaging the flange of a can to be punctured, the puncture point lying in advance of the tooth and fulcrum and the distance from the fulcrum to the tooth being great enough that the fulcrum will lie above the top of the flange of a can to be punctured when the tooth has engaged the flange, and the bracket being freely pivoted at the fulcrum so that the parts will assume such position upon application to a can, and thus the reaction of the member on the fulcrum acts to draw the tooth into engagement with the flange of a can being punctured.

2,002,174
COLORED RUBBER PRODUCT AND PROCESS OF PREPARING IT
Heinz Eichwede, Frankfort-on-the-Main-Hochst, Germany, assignor to General Aniline Works, Inc., New York, N. Y., a corporation of Delaware
No Drawing. Application December 21, 1933, Serial No. 703,488. In Germany December 23, 1932
6 Claims. (Cl. 18—50)

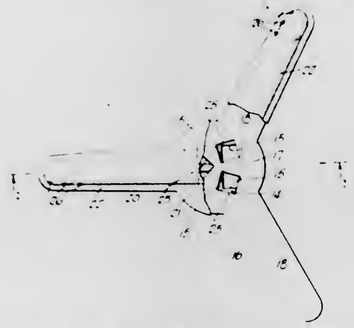
6. Colored rubber products containing a water-insoluble disazo-dyestuff derived from 3.3'-dichloro-4.4'-diamino-diphenyl and 1-phenyl-5-pyrazolone-3-carboxylic acid-ethyl-ester.

2,002,175
FLUID PRESSURE DISPENSING MACHINE
Jack I. Gantz, Los Angeles, Calif.
Application June 8, 1934, Serial No. 729,599
8 Claims. (Cl. 107—8)

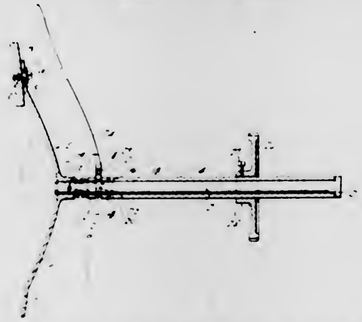
2. In a dispensing machine, a measuring device comprising a casing provided with a material inlet and with a material discharge opening, a measuring member provided with a material measuring cavity mounted in said casing to reciprocate for bringing said cavity alternately into alignment with said inlet opening and with said discharge opening, a cut-off device and means for simultaneously reciprocating said cut-off device and said measuring member in opposite directions whereby the cut-off device closes the inlet opening as said cavity moves from alignment therewith and uncovering the discharge opening as said cavity comes into registration therewith.

2,002,176
GYPSUM PLASTER AND METHOD OF MANUFACTURING SAME
Joseph G. Gustafson, Midland, Calif., assignor to United States Gypsum Company, Chicago, Ill., a corporation of Illinois
No Drawing. Application February 3, 1934, Serial No. 709,594
3 Claims. (Cl. 106—34)

1. The method of manufacturing calcined gypsum of high consistency, which comprises calcining a mass of ground raw gypsum mixed with 0.00048% to 0.096% of paraffin.



2,002,177
ELECTRIC PLUG AND SOCKET
Harold P. Hastings, Syracuse, N. Y., assignor to Crouse-Hinds Company, Syracuse, N. Y., a corporation of New York
Application June 7, 1930, Serial No. 459,657
9 Claims. (Cl. 173—328)

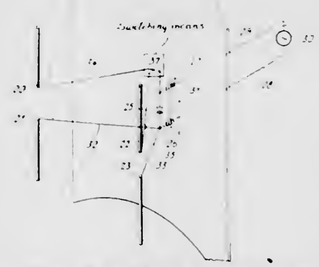


1. In an electric plug and socket, the combination of a socket member having terminals therein, and a plug member movable into and out of the socket and having terminals for coacting with the former terminals, a stop member for preventing the withdrawal of the plug member from the socket member when the terminals are separated, and before the plug and socket members are separated, the stop member being movable about its axis for releasing the plug member from the stop member to permit complete withdrawal of the plug member, and means for preventing turning of the plug member relative to the socket member during the insertion and withdrawal of the plug member and during the turning of the stop member.

2,002,178
SPRINKLER
Henry L. Henry, Piru, Calif., assignor of one-half to Floyd S. Warring, Piru, Calif.
Application January 16, 1933, Serial No. 652,069
1 Claim. (Cl. 299—18)

A sprinkler comprising a tubular body having a portion formed for connection with a water inlet pipe and having a circular enlarged portion providing an external annular shoulder, said circular enlarged portion being terminated by a transversely disposed wall, said wall having a series of substantially square apertures, a plate mounted for rotary movement on said wall and having a series of substantially square apertures so arranged with respect to said wall apertures that during rotation of the plate each of the plate apertures will overlap one of the wall apertures from a minimum to a maximum and then vice versa, a plurality of distributing arms carried by the plate, there being one thereof for each plate aperture, a hub rotatably fitted over said circular enlarged portion of said tubular body and attached to said plate, and means cooperating with said annular shoulder and with the hub for maintaining the parts in operating relationship.

2,002,179
TRACTOR ATTACHMENT FOR BROADCAST SEEDERS
Charles A. Hitchcock, Pana, Ill.
Application July 28, 1933, Serial No. 682,647
1 Claim. (Cl. 74—15)



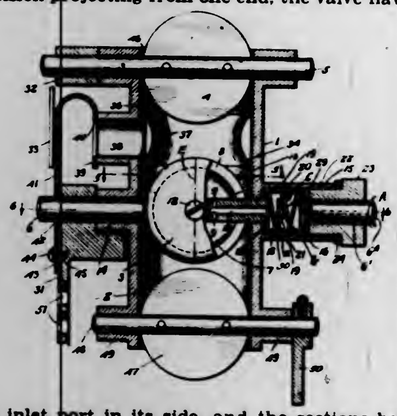
In a device of the kind described, a wheel spider including arms radially extended from a central hub and having means for adjustable attachment to the predetermined outer side of a tractor wheel having a hub, the arms being formed arcuately towards their hub so as to support that hub outwardly of and in axial alignment with the hub of the tractor wheel, a shaft rigidly and axially extended from the hub of the spider the same having a diametrically enlarged head at its outer end, a sleeve journaled freely on the shaft and having a rotative bearing at its outer end against the shaft head, the inner end of the sleeve being spaced somewhat from the spider hub and formed with clutch teeth therearound, a clutch collar slidably keyed on the inner end of the shaft between the sleeve and the spider hub the collar having teeth adapted to mesh with the teeth of the sleeve and having an annular race formed exteriorly thereof, an expansion coil spring on the inner end of the shaft between the clutch collar and spider hub for normally urging the clutch collar into engagement with the said sleeve, and a shifter fork engaged by the said race of the clutch collar as means for releasing the clutch from the sleeve.

2,002,180
CASE HARDENING COMPOSITION
Artemas F. Holden, New Haven, Conn.
No Drawing. Application December 15, 1932, Serial No. 647,413
4 Claims. (Cl. 148—15)

2. A case hardening composition comprising the fusion of nine parts sodium cyanide, six parts barium chloride, eight parts barium carbonate, two parts calcium fluoride, said parts being designated by weight.

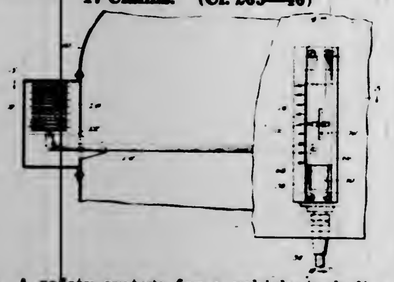
4. A fused salt bath for case hardening consisting of a mixture of alkali metal cyanide in an amount sufficient to impart case hardening characteristics to the bath, calcium fluoride, and a barium salt in an amount sufficient to render the bath fluid at relatively low temperatures.

2,002,181
TRANSMITTER
Waldemar Ilberg, Berlin, Germany, assignor to Telefunken Gesellschaft für Drahtlose Telegraphie m. b. H., Berlin, Germany, a corporation of Germany
Application July 7, 1931, Serial No. 549,193
In Germany October 29, 1930
3 Claims. (Cl. 250—11)



3. An ultra short wave transmitting system having, in combination, two antenna systems, a single reflector surrounding at least partially said systems for causing said systems to radiate in different directions, each of said antenna systems being located out of the focal line of said reflector, and means for alternately energizing said two systems.

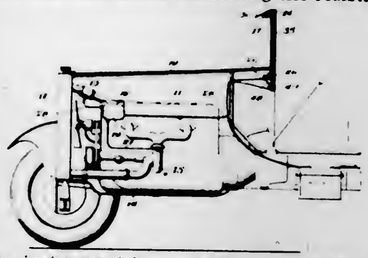
2,002,182
VALVE
Guy L. Kennedy, New York, N. Y., assignor to Ken-Crip Corporation, New York, N. Y., a corporation of New York
Original application January 5, 1925, Serial No. 687. Divided and this application August 13, 1925, Serial No. 49,964. Renewed February 17, 1933
5 Claims. (Cl. 251—102)



4. A rotary regulating valve, comprising separate sections, each section having an axial ex-

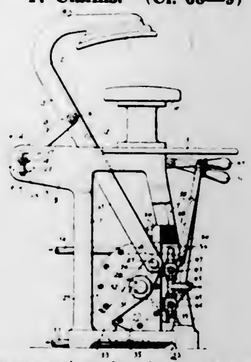
tension projecting from one end, the valve having

an inlet port in its side, and the sections being longitudinally adjustable.



2,002,183
COMBINATION THERMOMETER AND HYDROMETER
George H. Lecarpentier, Chicago, Ill., assignor, by direct and mesne assignments, to Albert G. McCaleb, Evanston, Ill.
Application February 6, 1930, Serial No. 426,210
17 Claims. (Cl. 265—46)

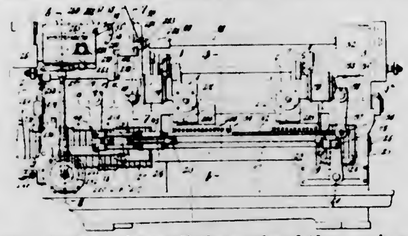
1. A safety system for a vehicle including an engine having a circulating cooling system, an auxiliary circulating system, a chamber in said system, a hydrometer in said chamber, a vertically slidable panel mounted in front of said hydrometer chamber, said panel having a reading aperture, a thermostatic unit mounted on the outside of the vehicle, and an operating lever for said panel actuated by said thermostatic unit.



2,002,184
ANTIFREEZE INDICATOR
George H. Lecarpentier, Chicago, Ill., assignor, by direct and mesne assignments, to Albert G. McCaleb, Evanston, Ill.
Application January 2, 1931, Serial No. 506,190
8 Claims. (Cl. 177—311)

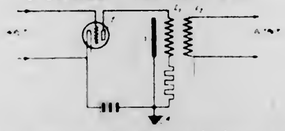
1. A freezing hazard indicator comprising, in combination, a hydrostat exposed to, and moving in response to variations in the specific gravity of, liquid in a circulating system, a thermostat exposed to, and moving in response to variations in, prevailing atmospheric temperature, a pair of independent circuit controlling resistances, operating means connecting the hydrostat with one of said resistances for varying the resistance in response to changes in specific gravity of the liquid, operating means connecting the thermostat with the other resistance for varying the resistance in response to changes in atmospheric temperature, an electrical indicating instrument, a source of current, and means including conductors connecting the source, instrument, and circuit controlling resistances in circuit, the conductors connecting the resistances

to the instrument in opposed circuit relationship as regards the control of the instrument by the hydrostatically controlled resistance and the thermostatically controlled resistance in response to increase of specific gravity and increase in temperature, respectively.



2,002,185
GARMENT OR IRONING PRESS
James Camrod Ledbetter, Jackson Heights, N. Y., assignor to The Prosperity Company, Inc., Syracuse, N. Y., a corporation of New York
Application June 26, 1930, Serial No. 463,850
17 Claims. (Cl. 68—9)

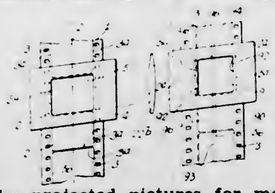
1. In a garment or ironing press, a frame and coacting press jaws thereon, operating means therefor including an upright one end of which is attached to one jaw, a crank having one end thereof attached to the other end of the upright, motor means connected with the crank, means disposed intermediate the upright ends and above the motor means and swingably mounting the upright in the frame for bodily shiftable motion therein to actuate the attached jaw vertically and laterally in relation to the other jaw, said crank including a balancing arm extending out from the motor means, and a counter weight carried on the outer end of the balancing arm beyond the crank to equalize the weight of the upright and the movable press jaw.



2,002,186
END FACING AND CENTERING MACHINE
John E. Lovely, Springfield, Vt., assignor to Jones & Lamson Machine Company, Springfield, Vt., a corporation of Vermont
Application March 24, 1933, Serial No. 662,482
14 Claims. (Cl. 29—27)

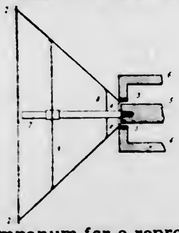
1. A machine for preparing work to be turned between centers, comprising a pair of spaced rotary end facing tools, a pair of oppositely disposed center drills in fixed transverse relation to said tools, a movable work carriage, means on said carriage to grip work, means for moving said carriage to pass work thereon between said

facing tools to face off the ends of the work and reduce it to a predetermined length and then to present the work between said drills, means for then actuating said drills to center drill the work, and mechanism for automatically actuating said means in timed relation.



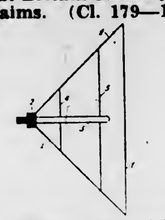
2,002,187
HIGH FREQUENCY COUPLING TRANSFORMER
Klaas Posthumus, Eindhoven, Netherlands, assignor to Radio Corporation of America, a corporation of Delaware
Application September 16, 1930, Serial No. 482,196
In the Netherlands October 25, 1929
6 Claims. (Cl. 178—44)

1. In an electrical transmission system, a source of high frequency energy, a load circuit, and a transformer coupling said source and load, a resistor in series with the primary winding of the transformer, said resistor having a value equal to the surge impedance of the primary winding regarded as a transmission line, and the secondary winding of the transformer being constructed to be resonant at a relatively small natural wave-length, said transformer thereby being adapted to transmit with relatively great current intensity all frequencies below a frequency at which said primary winding has an electrical length of one wave length, and a resistor having a valve equal to the surge impedance of the secondary winding connected in series with said secondary winding at each end thereof.



2,002,188
METHOD AND APPARATUS FOR FORMING SOUND MOTION PICTURE RECORDS
Oscar A. Ross, New York, N. Y.
Application August 17, 1929, Serial No. 386,663
6 Claims. (Cl. 88—24)

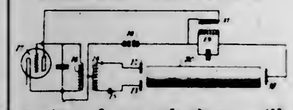
1. The method of printing sound picture films from printing picture films having the printing pictures substantially equally spaced between the perforations which involves, advancing a printing picture film and a perforated light sensitive sound picture film in printing relation, optically projecting pictures of the printing film as pictures of the same size at the light sensitive film as the films advance, off-setting the longitudinal axis of the projected pictures with respect to the axis of the light sensitive film whereby one longitudinal edge portion thereof overlap one row of the perforations of the film and also provides a sound track space between the printed pictures and the other row of perforations, masking off the overlapping por-



tion of the projected pictures for moving the margin of the printed pictures inwardly of the perforations, and utilizing the sound track space for recording records corresponding to sound thereonto.

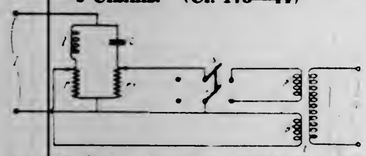
2,002,189
ACOUSTIC DEVICE
Henry Joseph Round, London, and Noël Meyer Rust, Chelmsford, England, assignors to Radio Corporation of America, a corporation of Delaware
Application April 17, 1928, Serial No. 270,683
In Great Britain April 22, 1927
16 Claims. (Cl. 179—115.5)

9. A cone tympanum for a reproducer comprising a cone, a support for the cone near the apex end thereof, and means for supporting the cone near the base from the inside of the cone.



2,002,190
ACOUSTIC DEVICE
Henry Joseph Round, London, England, assignor to Radio Corporation of America, a corporation of Delaware
Application December 31, 1928, Serial No. 329,467
In Great Britain January 7, 1928
9 Claims. (Cl. 179—115.5)

1. An acoustic device comprising a large area conical diaphragm, a plurality of spiders having substantially spiral arms for supporting said diaphragm.



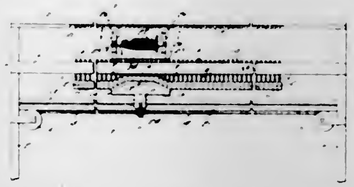
7. A spider member for supporting a diaphragm from a supporting structure comprising a flexible sheet metal member provided with an inner portion for engaging said supporting structure, an outer portion for engaging said diaphragm, and a plurality of arms interconnecting said portions.

2,002,191
OSCILLATION GENERATOR
Wilhelm Runge, Berlin, Germany, assignor to Telefunken Gesellschaft für Drahtlose Telegraphie m. b. H., Berlin, Germany, a corporation of Germany
Application October 28, 1929, Serial No. 402,962
In Germany November 2, 1928
5 Claims. (Cl. 250—36)

1. In a system for producing oscillations, an electron discharge device having input and output circuits, said device acting to amplify electrical oscillations applied to the input circuit thereof, a condenser arrangement comprising two capacities, one capacity being connected across said input circuit and the other capacity being inductively coupled across at least a portion of said output circuit, and a common vibratory body between the armatures of said two capacities, a constant source of potential across the armatures of said two capacities for creating an electric field across said armatures and through said vibratory body, said vibratory body being arranged when in a state of oscillation to produce a variation in potential across the armatures of that capacity which is connected across said input circuit for varying the potential of said input circuit, said variation in potential being amplified by said device to cause a variation in potential across said other capacity.

2,002,192
ELECTRICAL CIRCUIT ARRANGEMENT
Noël Meyer Rust, Chelmsford, England, assignor to Radio Corporation of America, a corporation of Delaware
Application December 18, 1931, Serial No. 581,930
In Great Britain December 24, 1930
9 Claims. (Cl. 178—44)

8. An equalizer circuit comprising a substantially constant impedance overall non-reactive network to which input voltages of different frequencies are applied, said network comprising a series branch including inductance and capacity in series, and a parallel branch including inductance and capacity in parallel, said branches being designed to be resonant at a frequency within a predetermined range of applied frequencies, and means for combining the resultant voltages set up in said branches.



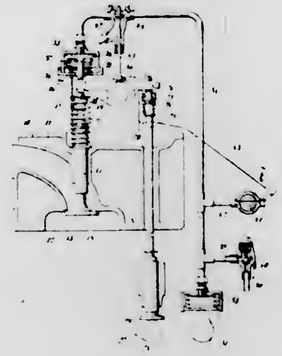
2,002,193
HIGH FREQUENCY NETWORK
Bernardus Dominicus Herbertus Tellegen, Eindhoven, Netherlands, assignor to Radio Corporation of America, a corporation of Delaware
Application October 28, 1931, Serial No. 571,510
In the Netherlands April 25, 1931
3 Claims. (Cl. 178—44)

1. A high frequency coupling network, adapted for coupling a preceding source of high frequency signal energy to a following high frequency load circuit, said network comprising a pair of resonant circuits each including a coil and a variable tuning condenser, one of said coils being magnetically coupled to the source and the other being magnetically coupled to said load circuit, said variable condensers being adapted for simultaneously and similarly tuning said resonant circuits to a desired signal frequency, and means, providing a purely capacitative coupling between

the resonant circuits which is independent of the tuning of the latter, comprising a fixed condenser, considerably larger than said variable condensers, connected in shunt with the coil and variable condenser in one of said resonant circuits, and a fixed condenser, considerably smaller than said variable condensers, connected between points of the same high frequency potential of the variable condenser, of the other resonant circuit, and the said shunt fixed condenser.

2,002,194
SHUTTLE MOTION FOR LOOMS
Journey F. Timberlake, Charlottesville, Va., assignor of twelve and one-fourth per cent to De Leon A. Prosser, Petersburg, Va., and twelve and one-fourth per cent to John H. Ryalls, twelve and one-fourth per cent to L. G. Wolff, and twelve and one-fourth per cent to R. Winston Dabney, all of Richmond, Va.
Application October 4, 1933, Serial No. 692,172
4 Claims. (Cl. 139—133)

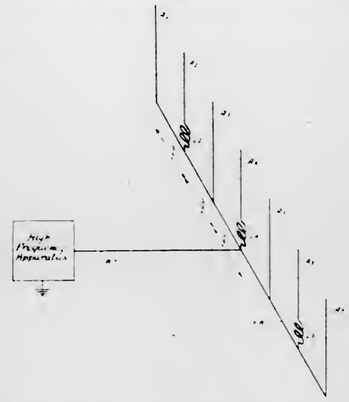
1. A shuttle motion for looms comprising spaced rails, a wheeled shuttle operable between the rails, pins mounted for vertical reciprocation on one of the rails and operatively engageable with certain of the wheels of the shuttle for actuating said shuttle, heads on one end of the pins engageable with the shuttle wheels, weights on the other ends of the pins for returning the said pins to inoperative position by gravity, and means for successively elevating the pins, said means including a track mounted beneath one of the rails, a cam slidable on the track and operatively engageable with the weights, said cam including a substantially channel-shaped face plate engageable with the weights, and means for actuating the cam.



2,002,195
SCARF PIN AND HOLDER
Charles L. Trout, New York, N. Y., assignor to Charles L. Trout as trustee
Application October 18, 1934, Serial No. 748,799
11 Claims. (Cl. 24—49)

10. A cravat holder comprising a pin adapted to be inserted in a cravat, a fastening member for engaging a portion of a garment and a flexible member connecting the head of the pin and the fastening member, said flexible member being in two portions adapted to pass around opposite

sides of a cravat and being connected to the fastening member at a single point thereof.

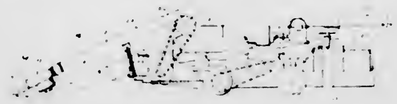


2,002,196
ENGINE BRAKE
Bernard Ucko, North Plainfield, N. J., assignor to International Motor Company, New York, N. Y., a corporation of Delaware
Application March 9, 1931, Serial No. 521,144
9 Claims. (Cl. 123—90)

1. In combination with an engine having an exhaust valve and a rocker arm for actuating the valve, means to vary the position of the rocker arm to render it ineffective to actuate the valve, a pump, a motor actuated by the pump, and means to cause the motor to open the exhaust valve.

2,002,197
DIRECTIONAL AERIAL SYSTEM
Norman Wells, Sheen, London, England, assignor to Radio Corporation of America, a corporation of Delaware
Application July 23, 1931, Serial No. 552,611
In Great Britain August 16, 1930
4 Claims. (Cl. 250—11)

2. An aerial system having, in combination a plurality of parallel vertical spaced aerials, a substantially horizontal feeder system individually connected to said aerials, a single transmission line connected to said feeder system, and reactance means inserted between said horizontal feeder system and alternate ones of said radiating wires whereby a desired phase relationship is ob-



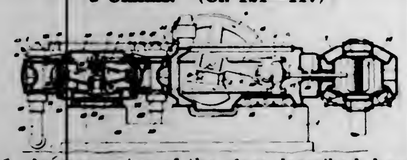
tained, by virtue of their spacing from one another and the value of said reactances.

2,002,198
SURFACE HARDENING METAL ARTICLES
William A. Wissler, Flushing, N. Y., assignor to Haynes Stellite Company, a corporation of Indiana
No Drawing. Application November 19, 1931, Serial No. 576,202
18 Claims. (Cl. 219—10)

1. Process of hard facing a metal article which comprises applying high temperature heat to a surface of said article to superficially fuse the same; melting the more readily fusible matrix portion of a composite welding rod having granular particles of wear-resistant material substantially uniformly distributed in and surface-alloyed to the more readily fusible matrix material; and depositing such molten material and the particles therein onto such superficially fused surface.

9. A composite welding rod comprising particles of wear-resistant material substantially uniformly distributed in and surface-alloyed to a more readily fusible matrix material.

2,002,199
LOADING MACHINE
Frank Cartlidge, Chicago, Ill., assignor to Goodman Manufacturing Company, Chicago, Ill., a corporation of Illinois
Application February 15, 1932, Serial No. 592,909
Renewed September 8, 1934
18 Claims. (Cl. 198—9)



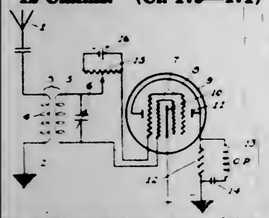
1. In a loading machine, gathering and loading mechanism therefor comprising an apron, a drum carried by said apron for rotation with respect thereto, and a gathering arm pivotally mounted for movement in a plane parallel to the plane of said apron about a fixed axis within the limits of said drum and eccentric of the axis of rotation of said drum.

2,002,200

ENGINE COMPRESSOR ASSEMBLY

Hewitt A. Gehres, Mount Vernon, Ohio, assignor to Cooper-Bessemer Corporation, Mount Vernon, Ohio, a corporation of Ohio

Application October 3, 1931, Serial No. 566,631
3 Claims. (Cl. 121—117)



1. An apparatus of the class described, having opposed engine cylinders, pistons for said cylinders, a crosshead interposed between said cylinders, means connecting said crosshead to reciprocate with said pistons, a second crosshead located beyond one of said cylinders, means connecting said crossheads to drive the second from the first, a connecting rod extending from said last mentioned crosshead toward said cylinders, a driven element connected to the end of the connecting rod which is so extended toward the cylinders, and a driven rod extending from said last mentioned crosshead in a direction opposed to said connecting rod.

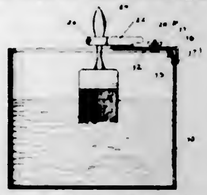
2,002,201

REGENERATIVE SYSTEM AND METHOD OF OPERATING THE SAME

John Allen Heany and Herbert St. Laurent, New Haven, Conn., assignors, by direct and mesne assignments, to Radio Research Laboratories Inc., a corporation of Delaware

Application August 25, 1931, Serial No. 559,214
12 Claims. (Cl. 179—171)

1. A regenerative system comprising cathanode, cathode grid and anode electrodes immersed in a conductive gaseous medium, input and output circuits for said electrodes, said input circuit comprising a conductive connection from the grid to the cathanode, and said output circuit comprising a conductive connection from the anode to the cathode whereby energy in the output circuit is fed back conductively through the gas filling to the input circuit, and means to provide a positive control for varying the amount of regeneration.



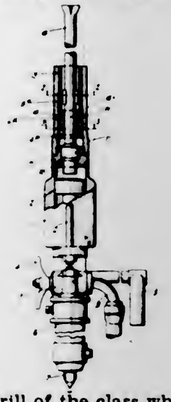
2,002,202

BRUSH HOLDER

John Hein, Ridgewood, N. Y.

Application October 16, 1933, Serial No. 693,788
2 Claims. (Cl. 248—49)

1. In a device of the class described, a brush-holder, comprising two clamping members adapted to engage the vertical wall of a receptacle, the lower one of said clamping members having a horizontal body portion made with two rectangular openings therein, and being at one end formed with an extension bent in a stair-way-like manner and adapted to engage the edge portion of said receptacle, the upper one of said clamping members having also a horizontal body portion, the latter terminating in a rectangular bent end portion adapted for co-operation with said lower member in securing said two members to the edge portion of a receptacle, said upper clamping member being at its forward end portion formed with an opening therein, and at its center portion with an oblong rectangular slot adapted to co-operate with one of the rectangular openings



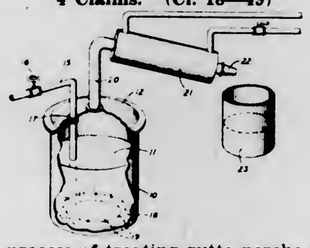
in the lower member, when said members are adjusted, relative to one another, screws mounted in the respective recesses for securing the clamping members together and to the container, co-operating fingers pivotally mounted on top of the upper clamping member and being formed at their forward end portions with curvatures adapted to receive the handle of a brush, a bolt for securing said fingers to the clamping members, and a spring for actuating said fingers during operation.

2,002,203

ROCK DRILL CHUCK

Charles A. Hultquist, Los Angeles, Calif., assignor to Independent Pneumatic Tool Company, Chicago, Ill., a corporation of Delaware

Application August 20, 1930, Serial No. 476,554
4 Claims. (Cl. 308—4)



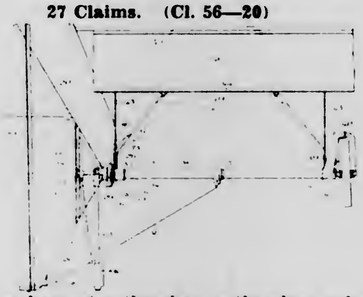
1. In a rock drill of the class wherein there is, a cylinder, an anvil block reciprocally mounted at one end thereof, the combination with said cylinder and anvil block of a cylindrical head extended from said end of the cylinder and secured relative thereto, said head having a tapered bore in substantial alignment with the longitudinal axis of said anvil block and diverging inwardly from its outer end toward the anvil block, and a pair of tapered sleeve members positioned end to end and in abutted relation in the tapered bore and both removable from the inner end of the head, the inner sleeve member being adapted to receive the inner end of a drill steel shank and forming a bearing therefor and the outer sleeve having a special bore and groove portion shaped and arranged to receive a key portion of the shank of the drill steel, the inner end of the inner sleeve having a beveled seat around the drill steel shank adapted to be engaged by the anvil block.

2,002,204

PROCESS OF TREATING GUTTA PERCHA

John H. Ingmanson, Rahway, N. J., and George S. Mueller, Richmond Hill, N. Y., assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York

Application September 29, 1933, Serial No. 691,510
4 Claims. (Cl. 18—49)



3. A process of treating gutta percha comprising cold leaching the resins from the gutta-hydrocarbon by petroleum naptha, heating the resinous naphtha solution to temperatures not substantially exceeding 100° C. to expel the naphtha, retaining the resulting resinous derivative at about room temperature until a desired amount of albane has precipitated out.

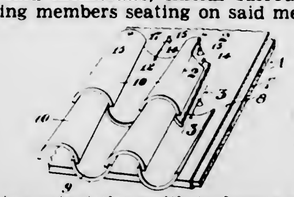
2,002,205

HARVESTER THRESHER

Edward A. Johnston, Chicago, Clemma R. Raney, Riverside, and Arnold E. W. Johnson, Chicago, Ill., assignors to International Harvester Company, Chicago, Ill., a corporation of New Jersey

Original application October 14, 1926, Serial No. 141,449. Divided and this application June 8, 1933, Serial No. 674,916. Renewed August 13, 1934
27 Claims. (Cl. 56—20)

1. In a harvester thresher, a thresher, a harvester connected thereto and normally extending laterally thereof, means adapting the harvester for folding backwardly in a horizontal plane alongside the thresher, and means for then elevating the harvester upwardly to a position above its cutting range.



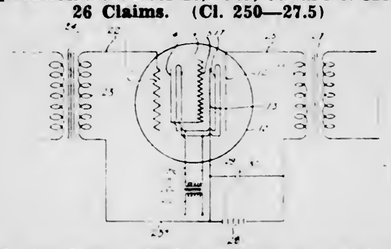
2,002,206

ROOFING TILE FASTENER

Thomas Richard Kobe, Los Angeles, Calif.

Application February 21, 1933, Serial No. 657,750
7 Claims. (Cl. 108—10)

1. In a roof construction including an inclined sub-structure, a water shedding membrane covering said sub-structure, and roofing tile overlying said membrane; fastening members penetrating said membrane and engaging said sub-structure having upper end portions protruding above said membrane, shields surrounding said fastening members seating on said membrane in



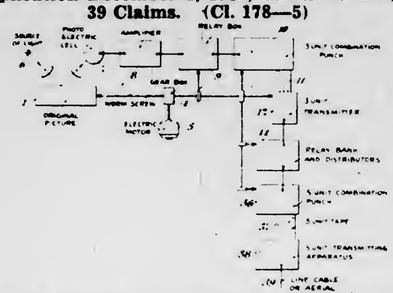
intimate contact therewith to form a water-tight seal around the point of penetration of said membrane by fastening members, means cooperating between said fastening members and shields for retaining the latter in place, and connections between said tile and the protruding upper end portions of said fastening members.

2,002,207

ELECTRON DEVICE

Fred. B. MacLaren, Clifton, N. J., assignor, by mesne assignments, to Revelation Patents Holding Company, a corporation of Delaware

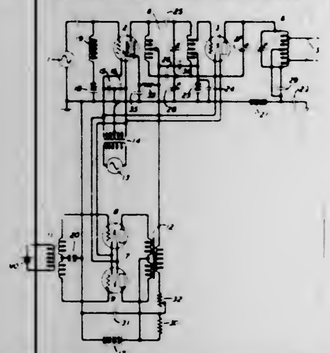
Application December 16, 1929, Serial No. 414,287
26 Claims. (Cl. 250—27.5)



17. An electron discharge device comprising an envelope containing a plurality of triode units, each unit consisting of an electron emission element, a grid element and a plate element, the grid element of one unit being connected to the electron emission element of another unit.

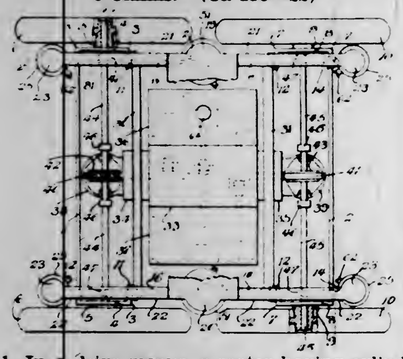
2,002,208

METHOD AND APPARATUS FOR TRANSMISSION OF PICTURES



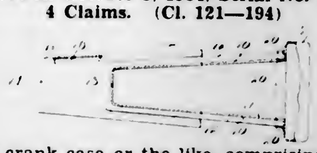
Maynard D. McFarlane, New York, N. Y.

Application December 1, 1931, Serial No. 578,281
39 Claims. (Cl. 178—5)



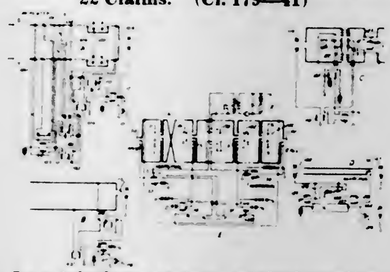
1. The method of transmitting a picture which comprises scanning the picture to obtain signals as to light and shade in one code, and rearranging and transmitting the same said signals as a part of a different code.

2,002,209
MODULATING SYSTEM
John G. Nordahl, Orange, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application April 4, 1933, Serial No. 664,292
10 Claims. (Cl. 179—171)



1. A modulating system comprising an electric discharge device, means for impressing a carrier wave upon said device, a transformer, means for impressing a signal wave upon the primary winding of said transformer, a source of direct current, a series circuit including said source of direct current and the secondary winding of said transformer connected between the anode and cathode of said device, and means included in said series circuit for simultaneously varying at different rates the direct current voltage from said source and the signal frequency voltage from said transformer impressed upon said device.

2,002,210
DRIVE AND SUSPENSION MEANS
Adolphe C. Peterson, Minneapolis, Minn.
Application May 1, 1929, Serial No. 359,679
Renewed October 17, 1934
6 Claims. (Cl. 180—22)



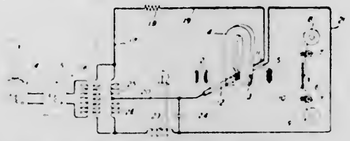
1. In a drive means, a motor having cylinders placed in a horizontal plane and having rigid suspension in a frame and having geared drive means at each end of the motor, a pair of wheels at each end of the frame yieldably mounted relative thereto, a pair of Cardan shafts at one end of the frame having driving connection between one pair of wheels and one geared drive means, and a pair of Cardan shafts at the other end of the frame having driving connection with the other pair of wheels.

2,002,211
MOTOR CRANK CASE OR THE LIKE
Franklin L. Torney, Quincy, Mass.
Application October 5, 1934, Serial No. 747,029
4 Claims. (Cl. 121—194)

1. A crank case or the like, comprising a casing having a base flange including side portions inclined relatively to each other, a closure having a complemental flange including tapering side portions, one of said flanges having a channel for receiving the other flange in sliding relation, packing material located in said channel, the closure being removably engageable with the casing by a sliding movement thereby to wedge the packing in said channel and seal the joint against oil leakage, and fastening means for holding the closure in sealing position.

2,002,212
TELEPHONE SYSTEM
John F. Toomey, New York, N. Y., and Walter E. Hogan, South Boston, Mass., assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application March 24, 1933, Serial No. 662,428
22 Claims. (Cl. 179—41)

1. In a telephone system, a telephone line circuit, a cord circuit adapted to be connected thereto, said cord circuit having its talking conductors reversed between its respective ends thereof, and means to connect a simplex circuit over said line circuit comprising a pair of simplex bridges, one of said bridges being connected across said line circuit, the other said bridge being connected between the tip talking conductor at one end of the cord circuit and the tip talking conductor at the opposite end of said cord circuit.

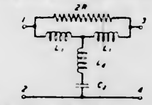


2,002,213
CUP DROPPING MACHINE
Charles F. Adams, New York, N. Y.
Application December 26, 1933, Serial No. 703,873
11 Claims. (Cl. 214—8.5)

1. In a machine the combination of a pair of side frames, a pair of vertical guides extending from the inner face of each of said frames, a rack bar slidably supported in each pair of guides, a main driving shaft journaled in the machine between said frames, a motor supported in the machine, connections between the motor and said driving shaft, a yoke having an elongated opening straddling said driving shaft, means to reciprocate the yoke during the rotations of said driving shaft, a slide block guided in the machine adjacent to its upper end, connecting means between said slide block and yoke, a bracket fastened to each of said rack bars, a segmental lever pivoted to one of said brackets, means at one end of segmental lever coacting with said slide block to swing said segmental lever with reciprocations of said slide

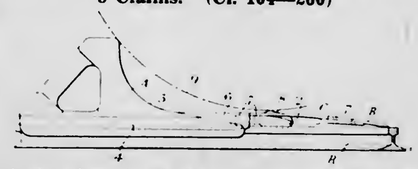
block, a tubular suction head shaft having its end portions journaled in said brackets, a spur gear fastened to said tubular shaft in mesh with the teeth of said segmental lever and suction heads fastened to said tubular shaft.

2,002,214
MODULATING SYSTEM
Walter J. Albersheim, New York, N. Y., assignor to Electrical Research Products, Inc., New York, N. Y., a corporation of Delaware
Application June 21, 1933, Serial No. 676,889
In Great Britain October 19, 1932
17 Claims. (Cl. 179—100.3)



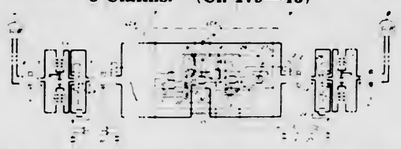
1. In a modulating system, means for projecting a beam of light to a receiving surface, means for producing relative movement between said beam and said surface, means for modulating said beam including a plurality of elements executing reversely symmetrical oscillations having a component of motion in the direction of said relative movement, a source of power for actuating all said elements, and means in the supply circuit of one of said elements to cause said element to oscillate out of phase with another of said elements.

2,002,215
FOLDING CONTAINER
Otto Blitz, Oakland, Calif.
Application June 28, 1933, Serial No. 677,986
14 Claims. (Cl. 229—1.5)



1. A folding container having side wings, said wings being adapted to fold backwardly to positions adjacent one side of the container and bend outwardly at their sides to provide a handle for the container.

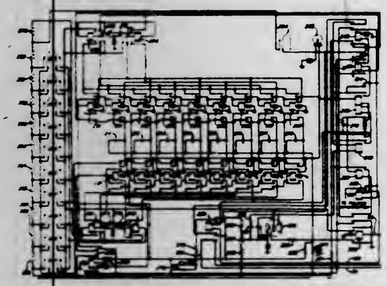
2,002,216
WAVE FILTER
Hendrik W. Bode, New York, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application June 7, 1933, Serial No. 674,619
7 Claims. (Cl. 178—44)



1. A wave filter network comprising three impedance branches disposed in series-shunt relation between a pair of input terminals and a pair of output terminals, said branch impedances consisting of reactance elements proportioned with respect to each other to provide a broad transmission band, and one of said branches including an inductance coil and a capacity adapted by their resonance characteristic to produce an attenuation peak at a frequency close to the edge of said transmission band, and a resistance included in a fourth branch of the network proportioned to compensate the resistance of said inductance coil at the frequency of the attenuation peak whereby the attenuation is made substantially infinite at the peak frequency.

2,002,217
RAILWAY TRACK SKATE
Herbert L. Bone, Swissvale, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a corporation of Pennsylvania
Application December 10, 1932, Serial No. 646,644
5 Claims. (Cl. 104—260)

1. A railway track skate comprising a body portion having a stub end, a spring steel tail having one end attached to the upper surface of the stub end of said body portion and its other end resting on the track rail, and a filler block attached to the under surface of said tail and normally spaced from the track rail for supporting the tail while a car wheel is rolling upwardly thereon.

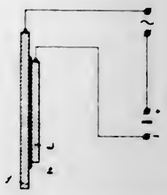


2,002,218
TIE TRUNK LINE
Langford J. Bowne, Howard Beach, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application August 22, 1934, Serial No. 740,889
5 Claims. (Cl. 179—43)

2. In a two-way ring-down trunk line having one conductor normally open at one end, means responsive to the establishment of a connection with the line at said one end for closing said open conductor, introducing a condenser in the other

line conductor and connecting a direct current bridge across the line on the switchboard side of said condenser and said point of closure, and discriminating means responsive to the application of ringing current at the distant end of the line for reopening said line conductor, shunting said condenser and removing said bridge and responsive to application of ringing current at the near end of the line for shunting said condenser and removing said bridge only.

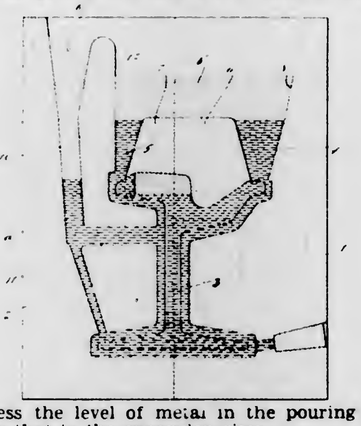
2,002,219
TELEPHONE SYSTEM
Thomas L. Dimond, Boonton, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application January 20, 1934, Serial No. 707,472
18 Claims. (Cl. 179—16)



1. In combination, two condensers, means for placing a variable initial charge on the first of said condensers, a circuit for the second condenser, and means for altering the charge on the first condenser by connecting said second condenser alternately in parallel with said first condenser and into said circuit.

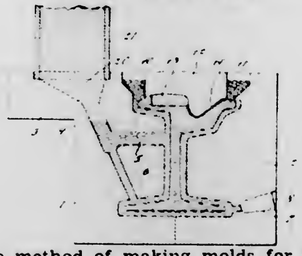
2,002,220
SWAGING MEANS
Harry A. Douglas, Bronson, Mich.
Application December 29, 1932, Serial No. 649,285
13 Claims. (Cl. 78—21)

1. In a mechanism of the class described, the combination of radially movable complementary jaws directed toward a common center and in a common plane; a fixed cylinder concentric with said center; slots in the cylinder slidingly receiving said jaws; a guide plate fixed to said cylinder and having portions spaced apart therefrom, said jaws sliding between said cylinder and guide plate; an aperture in said guide plate concentric with said center; an annular cam rotatable on said cylinder and having its inner periphery engageable with the outer ends of said jaws; cam surfaces on said periphery engageable with said outer ends to move the jaws inwardly upon rotation of the cam in one direction; a spring individual to each jaw for urging the jaw to outermost position upon rotation of the cam in the opposite direction; means for rotating the cam; a rotatable arm; a plunger articulated with said arm; a sleeve closed at one end and open at the other, said plunger passing slidingly through the closed end of the sleeve; a head on the plunger within said sleeve; a coil spring surrounding said plunger between said head and said closed end; a block threadedly received in said open end; a rod fixed to said block; a fixed spring barrel receiving said rod therethrough; another coil spring between said block and said spring barrel for urging the rod in one direction; and a treadle articulated with the rod for urging it in the opposite direction.



2,002,221
DRY RECTIFIER
Willem Christiaan van Geel and Hendrik Emmens, Eindhoven, Netherlands, assignors to N. V. Philips' Gloeilampenfabrieken, Eindhoven, Netherlands
Application May 1, 1931, Serial No. 534,358
In the Netherlands May 15, 1930
10 Claims. (Cl. 175—366)

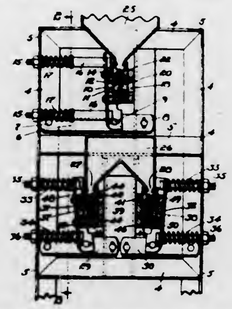
1. A dry rectifier comprising a cell consisting of two layers of substances having different electron emissivities, and a very thin non-conductive solid layer interposed between the first-mentioned layers, said solid layer being substantially cold and non-ionized during the operation of the rectifier, said intermediate layer being formed independently of the substance of the outside layers.



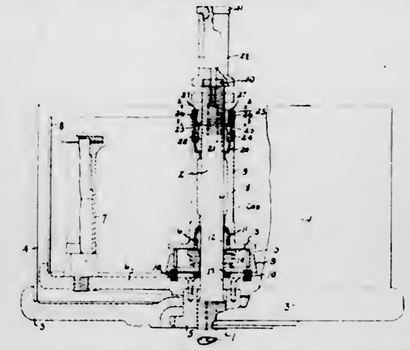
2,002,222
METHOD OF WELDING METAL PARTS
Francis Earle, Montclair, N. J., assignor to Metal & Thermit Corporation, Carteret, N. J., a corporation of New Jersey
Application February 11, 1933, Serial No. 656,231
2 Claims. (Cl. 22—206)

1. The method of welding metal parts, such as the ends of rails, by means of superheated steels produced by the alumino-thermic process, comprising assembling about the parts to be welded a mold having at least one expansion riser and a pouring gate with an outlet into the lower part of the mold cavity and an inlet substantially above the top of the riser, accurately gauging a charge of alumino-thermic material with respect to the mold cavity and riser to produce only enough molten steel to satisfactorily complete the weld desired, igniting the charge, pouring the resulting molten charge into the mold through the pouring gate, and confining in the pouring gate a sufficient static head of slag to

depress the level of metal in the pouring gate below that in the expansion riser.



2,002,223
METHOD OF WELDING RAIL JOINTS
Francis Earle, Montclair, N. J., assignor to Metal & Thermit Corporation, Carteret, N. J., a corporation of New Jersey
Application February 11, 1933, Serial No. 656,232
2 Claims. (Cl. 22—206)



1. The method of making molds for welding rails by superheated molten metal and with minimum interruption to rail traffic, which comprises separately forming complementary lower mold sections to a shape designed to enclose the rail ends and having an open top and cut-out end walls providing an open-ended passage above and lengthwise of the rails to provide clearance for the wheels of traffic thereover, assembling the sections about the ends of the rails, placing vent defining patterns in said open top adjacent the rail heads, compacting readily removable molding material into the open top and in contact with the tops of the rails, and removing said patterns thus completing the mold.

2,002,224
GRINDING MACHINE
David S. Eastwood, Los Angeles, Calif.
Application January 15, 1934, Serial No. 706,638
5 Claims. (Cl. 83—10)

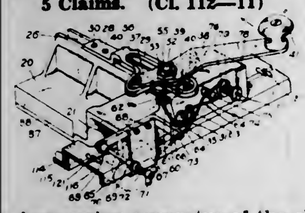
2. In a grinding machine, two jaw members horizontally disposed and having on their adjacent faces, spaced longitudinally thereof, tiers of teeth projecting from said adjacent faces, said teeth being in overlapping relationship to each other as said jaw members are brought together face to face, and means for reciprocating one of said jaw members longitudinally, whereby the teeth in the tiers on one jaw member move laterally back and forth between the teeth of the tiers of the other jaw member.

2,002,225
SERVING HEAD
Charles B. Fantone, Lyndhurst, and Reuben M. Jameson, Teaneck, N. J., assignors to Syncro Machine Company, Arlington, N. J., a corporation of New Jersey
Application July 10, 1934, Serial No. 734,454
17 Claims. (Cl. 117—42)

1. In a serving head as described, a rotatable shaft, a cop spindle rotatably mounted on the shaft and spring pressed means acting on the cop spindle in opposition to subject it to substantially constant resistance to rotation on the shaft as the cop decreases in weight and diameter.

2,002,226
TRIPLICATE MANIFOLDING BOOK
Albert R. Lawson, Hamilton, Ontario, Canada, assignor, by mesne assignments, to American Sales Book Company, Limited, Toronto, Ontario, Canada, a corporation of Canada
Application April 19, 1930, Serial No. 445,610
4 Claims. (Cl. 282—22)

1. A manifolding book comprising a plurality of manifolding units each comprising a sheet normally folded to provide two relatively superposed



record leaves, a carbon sheet folded parallel to the fold in the record sheet to provide two carbon leaves between said record leaves and having a clean, free margin underlying the free margin of the folded record sheet, and a third record sheet disposed between said carbon leaves, one of said record sheets being bound in the book and the other record sheet being detachable with the two carbon leaves, as a unit, from the book, independently of said bound sheet.

2,002,227

BAG-SEWING APPARATUS

Alexander McAlister, Darlinghurst, near Sydney, New South Wales, Australia

Application December 7, 1932, Serial No. 646,038
In Australia December 24, 1931
5 Claims. (Cl. 112—11)

1. In a bag-sewing apparatus of the character described, a needle, a looper, a needle-carrying block, a slotted cross-shaped member attached thereto, a one-way rotatable crank-like handle cooperating with said member to reciprocate said needle and block and positively to actuate said looper in operative relation with said needle, means for maintaining said needle stationary during the looping of twine thereabout, bag-mouth clamping means comprising a toothed rack, and means for operating said sewing apparatus step by step with respect to said rack.

2,002,228

CORNER CONSTRUCTION FOR FURNITURE OR THE LIKE

George R. Meyercord, Chicago, Ill., and Frank M. Curran, Grand Rapids, Mich., assignors, by mesne assignments, to Reconstruction Finance Corporation, a Federal corporation

Application August 31, 1933, Serial No. 687,546
2 Claims. (Cl. 144—309)

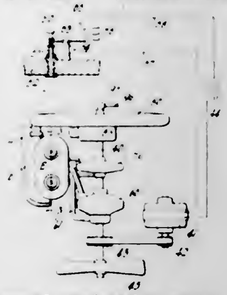
1. The method of producing a panel comprising two backing members arranged at an angle to each other and having a continuous facing member extending over both, which comprises constructing a flat panel composed of a facing sheet and backing members glued thereto and having their adjacent ends spaced apart and undercut to form between them a slot or gap narrower at the top than at some lower point, placing in the slot two strips shaped to fit the edge contours of the backing members, and bending the panel to close the gap and cause the strips to be pressed together and the panel faces at the sides and the bottom of the slot to be brought into intimate contact with the strips, sufficient adhesive material being applied between some or all of the faces that are caused to meet to hold the parts together.

2,002,229

PROCESS OF MANUFACTURING COMPOSITE METAL ARTICLES

Max R. Trembour, Beaver, and Harry Wilson, Jr., Washington, Pa., assignors, by direct and mesne assignments, to Jessop Steel Company Washington, Pa., a corporation of Pennsylvania

Application April 11, 1932, Serial No. 604,646
3 Claims. (Cl. 29—188)



1. The process of making bimetallic tool stock and the like having an edge of tool steel welded to and backed by a body of mild steel, comprising supporting an insert of tool steel symmetrically in an ingot mold of flat section with two of its opposed sides adjacent to but out of contact with the wide sides of the mold, casting mild steel around said insert to completely envelop it and form a composite ingot in which said insert sides are covered by a light section, and the other two faces of the insert with a heavy section, of mild steel, hot-rolling the ingot to weld said insert to said mild steel and to form a square billet, rolling further to convert said billet to a plate whose wide face is approximately twice that of the stock desired, the sides of the billet corresponding to said lightly covered insert sides becoming the wide faces of the plate, and cutting the plate longitudinally through the center of the insert.

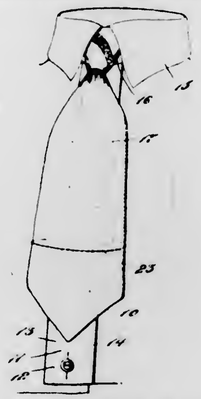
2,002,230

INTERNAL COMBUSTION MOTOR

Gilbert Wright, Granville Center, Mass., assignor of one-half to Holland N. Stevenson, Pelham, N. Y.

Application January 4, 1930, Serial No. 418,624
2 Claims. (Cl. 123—198)

1. An internal combustion motor having cylinder, piston, and valve mechanism, motive means operable at a speed independent of that of the motor, a pump for gaseous fuel actuated by said motive means, and a pump for cooling fluid actuated by said motive means.



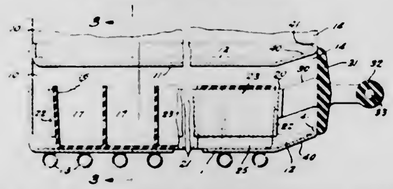
2,002,231

NECKTIE HOLDER

Lawrence E. Baer, Attleboro, Mass., assignor to The Baer & Wilde Company, a corporation of Massachusetts

Application April 24, 1934, Serial No. 722,076
6 Claims. (Cl. 2—115)

1. In combination, a shirt, a necktie holder having separate members attachable to the shirt at selected spaced points a desired distance apart, means flexibly connecting said members together



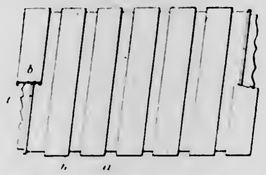
and together with the portion of the shirt between said spaced points encircling the tie.

2,002,232

REFRIGERATOR FREEZING TRAY

Ralph H. Chilton, Dayton, Ohio, assignor, by mesne assignments, to General Motors Corporation, Detroit, Mich., a corporation of Delaware

Application February 6, 1933, Serial No. 655,311
8 Claims. (Cl. 62—108.5)



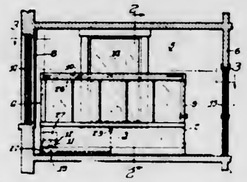
1. In a refrigerator, in combination, a series of portable freezing trays, a series of stationary superposed individual refrigerated compartments for said trays, said compartments each having a relatively shallow liquid retaining bottom wall and mercury retained thereupon so as to directly contact the bottom of said tray when it is in its freezing position thereon.

2,002,233

BAND ELEMENT FOR ORNAMENTAL AND USEFUL PURPOSES

Robert Einsele, Pforzheim, Germany, assignor to Gemex Company, Newark, N. J.

Application March 29, 1934, Serial No. 717,936
1 Claim. (Cl. 63—3)



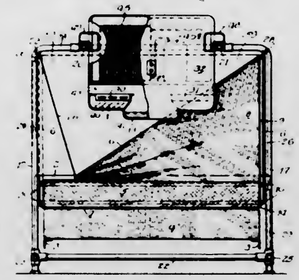
A band for ornamental and useful purposes, comprising in combination a band-shaped carrier composed of links, having overlapping and interlocking edges extending transversely to the longitudinal direction of the carrier, an ornamental element placed on said carrier and bent over ends on said links forming the longitudinal edges of the carrier, and firmly holding said ornamental element on said carrier.

2,002,234

AIR COOLING AND CIRCULATING DEVICE AND PROCESS

Willard L. Morrison, Lake Forest, Ill.

Application March 5, 1934, Serial No. 713,993
10 Claims. (Cl. 62—176)



6. The process of cooling and circulating air, which consists in isolating a portion of air in a defined area open at the top and confining the bottom portion of said air against downward and sidewise movement out of said defined area, cooling air and causing it to drop by gravity into the bottom of said defined area and to displace warmer air, and causing said warmer air to rise and pass out at the open top of said defined area.

2,002,235

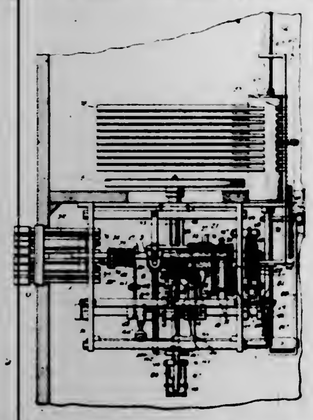
AIR COOLING AND CIRCULATING DEVICE

Willard L. Morrison, Lake Forest, Ill.

Application July 26, 1934, Serial No. 737,018
19 Claims. (Cl. 62—129)

1. An air cooling and circulating device comprising a receptacle, a cooling device suspended at the upper part of said receptacle, the receptacle being made of flexible material, with means for holding it in its operative position.

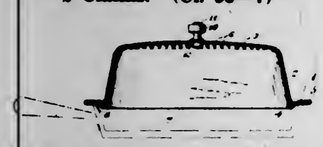
2,002,236



AUTOMATIC PHONOGRAPH

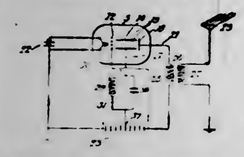
Russell I. Wilcox, Bellwood, Ill., assignor, by mesne assignments, to Rudolph Wurlitzer Manufacturing Company, North Tonawanda, N. Y., a corporation of New York

Application December 11, 1931, Serial No. 580,315
53 Claims. (Cl. 274—10)



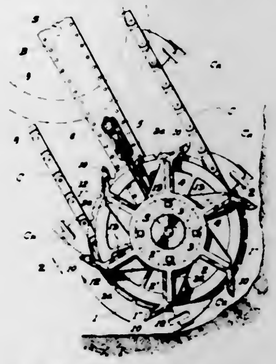
23. In an automatic phonograph, a plurality of selective record carriers, a turntable, means for controlling the selection of records in operative relation with the turntable comprising a

selector shaft, means for rotating said shaft, means governed by said shaft for actuating the record carriers to a selective position, means for stopping the rotation of said shaft at certain points corresponding to the records selected, a plurality of members disposed radially about the



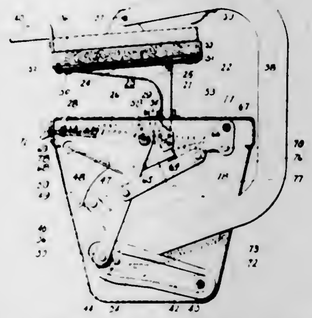
axis of the selector shaft and each movable to a position in the path of said means for stopping the rotation of said shaft, and automatically acting means for returning each of said members to normal position after it has engaged said means rotatable with said shaft.

2,002,237
FRYING PAN COVER
Esten U. Roland, Shiloh, Ohio
Application June 7, 1933, Serial No. 674,666
2 Claims. (Cl. 53—7)



2. A sheet metal cover for pans and the like comprising a perforated substantially flat dome portion, a frusto-conical side portion of substantial height joining the dome portion and supported on a generally horizontal flange portion, and comprising a downwardly extending bead on the flange portion intermediate the flange periphery and the frusto-conical side portion.

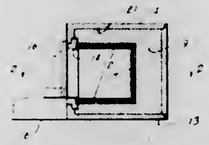
2,002,238
NEGATIVE RESISTANCE
Edward H. Yonkers, Jr., Chicago, Ill.
Application July 22, 1930, Serial No. 469,809
2 Claims. (Cl. 250—36)



2. In a device of the character described, in combination, a thermionic device comprising a highly evacuated envelop, an electron emitting cathode in said envelop, a grid adjacent to said cathode, and an anode in said envelop, a negative resistance element interposed between the grid and said anode and comprising a plurality of substantially parallel inter-connected spaced metal plates lying parallel to the electron stream from said cathode to said anode, and means for impressing positive potentials on said grid, anode and element with respect to said cathode such that the portion of the electron stream intercepted by said parallel plates varies inversely with the potential applied thereto over the working range of the device.

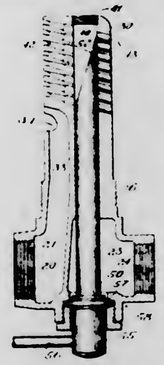
2,002,239
TRENCH EXCAVATOR
William A. Davis, Milwaukee, Wis.
Application October 6, 1932, Serial No. 636,451
4 Claims. (Cl. 37—87)

1. A trench digger having, a boom point shaft axially centering and rotative with bucket chain tumblers and reversible hub members, reversible digging spiders attached to said members, and means arranged by the attaching together of member and spider elements whereby the latter are rotatable in planes beyond the length of said shaft.



2,002,240
IRONING PRESS
William M. Emery, Lansdowne, Pa.
Application June 21, 1934, Serial No. 731,616
23 Claims. (Cl. 68—9)

2. In a press, the combination of a substantially stationary pressing element and a pressing element mounted for movement from a position

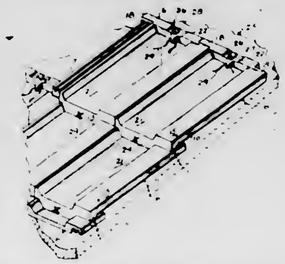


separated from the other to a position contacting with the other under pressure, mounting means for both elements slightly resilient under said pressure, means to store forces to effectuate substantially the entire movement of the movable element and to effect pressure therebetween, means to conserve the potential energy stored incidental to the flexure of the resilient parts under pressure by restoring it in said means to store forces to effectuate the movement, a control to release the forces stored to effectuate the movement and means to apply forces to separate the elements and also to store forces later to effectuate the described movement of the movable element.

2,002,241
ELECTRIC FURNACE MUFFLE CONSTRUCTION
Thomas H. Forde, San Francisco, Calif., assignor to Diascope Corporation Ltd., San Francisco, Calif., a corporation of California
Application October 30, 1931, Serial No. 572,110
1 Claim. (Cl. 219—36)

In a muffle of the character described, a heated muffle casing, an outer casing surrounding said muffle casing, fibrous heat insulation material mounted between said outer casing and muffle casing, and an intermediate casing of plastic composition immediately surrounding said muffle casing and spacing therefrom said insulation material, the inner side of said intermediate casing facing said muffle casing being spaced therefrom and glazed to reflect back to said muffle casing radiant heat from said muffle casing.

2,002,242
FLUID NOZZLE
Otto W. Greene, Elyria, Ohio, assignor to The Pfaudler Co., Rochester, N. Y., a corporation of New York
Application August 22, 1933, Serial No. 686,267
9 Claims. (Cl. 257—64)

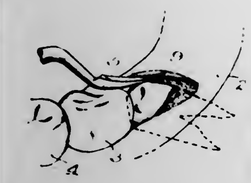


1. A fluid nozzle for immersion in a body of liquid, comprising a body having a stream-line shaped cross section rounded at one side and with a relatively thin edge at another side and having a fluid supply passageway extending through said body and a series of outlet orifices leading from said passageway and opening substantially at said thin edge, a controlling member movable within said passageway, said member having a portion for selectively covering or uncovering one or more of said orifices, and means for shifting said controlling member to control selectively the number of said orifices through which fluid may flow.

2,002,243
FORMALDEHYDE SOLUTION
Wilbie Scott Hinegardner, Prince Bay, Staten Island, N. Y., assignor to E. I. du Pont de Nemours & Company, Inc., Wilmington, Del., a corporation of Delaware
No Drawing. Application October 24, 1932, Serial No. 639,300
10 Claims. (Cl. 23—250)

1. A method of preventing polymer precipitation in an aqueous formaldehyde solution which comprises adding to said aqueous formaldehyde solution hydrogen sulfide in an amount insufficient to cause precipitation therein.

2,002,244
ROOFING TILE
Julius Kremper, Oakland, Calif.
Application August 28, 1931, Serial No. 559,889
3 Claims. (Cl. 108—10)



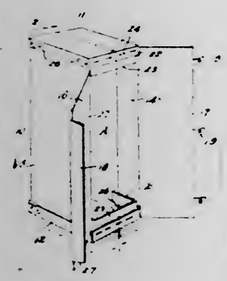
1. In a roofing tile, a generally rectangular body formed to have a longitudinal drainage channel intermediate the side edges thereof, a cross-wall closing the rearward end of said channel and provided with a transverse keyhole slot for removably receiving therethrough a headed nail extending from a roof element, an apron depending from the forward portion of said tile to extend into the corresponding said channel of a longitudinally overlapped and similar tile, a lug extending into the channel space from said cross-wall, and a pliable tying element carried by the lug of the underlying tile for tying engagement solely with said apron, said element arranged for tying at the front face of said apron whereby the element is replaceable from the weather side of the roof.

2,002,245
DENTAL INSTRUMENT FOR REMOVING IMPACTED TEETH
Donald J. McDaniel, Chicago, Ill.
Application November 10, 1932, Serial No. 641,971
10 Claims. (Cl. 32—46)

1. A dental instrument for cutting away the jaw-bone from an impacted tooth comprising a handle portion and a blade portion, said blade portion having a pointed end and a thickened curved rear edge, a transversely convex bottom

face and a transversely concaved top face, said top and bottom faces meeting to provide a thin front cutting edge, the axis of which lies at an angle to the axis of said thickened rear edge, whereby the convexed lower face and the thickened rear edge provide bearing portions for the blade in such manner as to rotatively support it upon the jaw-bone during the operations of said cutting edge.

7. The method of preparing an impacted tooth for extraction which consists in cutting away portions of the jaw bone adjacent to the impacted tooth by undermining rotational cuts which are continued until sufficient jaw bone has been removed from around the tooth to permit lifting and extraction of said tooth.



2,002,246

CLOTHING CONTAINER

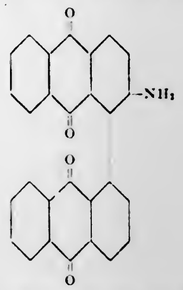
Elliot A. Miller, New York, N. Y.

Application August 15, 1934, Serial No. 739,844

2 Claims. (Cl. 312—144)

1. A storage container for clothing, including a body section and flanged end sections telescopically fitted over the opposite ends of the body section, said body section having a rear wall, a pair of opposed side walls defining an open front and inner and outer closures hingedly connected to the forward edges of the side walls with the outer closure of a size to overlie the end edges of the inner closure and for engagement against the forward flanged edges of the end sections for closing and sealing the open front of the container, an abutment strip extending across and protruding inwardly beyond the inner edges of each of the flanged end sections at the open front to provide a sealing surface with which the inner closure engages, the said abutment strips each having angularly disposed terminals engaging against the inner surfaces of the side walls, and means securing the said terminals thereto and to the flanges of the end sections.

2,002,247



ANTHRAQUINONE DERIVATIVE AND PROCESS OF MAKING THE SAME

Wilhelm Moser, Riehen, near Basel, and Walter Fioroni, Binningen, near Basel, Switzerland, assignors to firm of Society of Chemical Industry in Basle, Basel, Switzerland

No Drawing. Application February 25, 1935, Serial No. 8,216. In Switzerland February 27, 1934

2 Claims. (Cl. 260—60)

2. The 2-amino-1,1'-dianthraquinonyl of the formula

which forms orange colored crystals insoluble in water, but soluble in sulfuric acid to an orange solution and in alkaline hydrosulfite solution to a red-brown solution.

2,002,248

TRAFFIC SIGN

George H. Muehleisen, Canton, Ohio

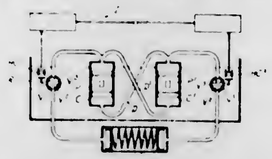
Application December 6, 1934, Serial No. 756,301

10 Claims. (Cl. 40—126)

1. A traffic sign including a portable base having a central socket, an upright having its lower end secured in said socket, a flat figure comprising a body portion secured to said upright, and interchangeable arms adapted to be arranged in different signalling positions detachably secured to said body portion.

2,002,249

APPARATUS FOR CONTROLLING EXCESSIVE MOVEMENTS IN SPRUNG BODIES ON MOTOR DRIVEN ROAD VEHICLES



William Robert Oyston, Melbourne, Victoria, Australia

Application December 21, 1933, Serial No. 703,482

In Australia January 24, 1933

10 Claims. (Cl. 280—112)

10. In spring supported motor vehicle bodies, a device for controlling oscillatory motion of the body about a transverse axis, comprising means actuated by said motion for generating energy, means for storing said energy, and means serv-

ing to control the application of said stored energy to dampen said motion, any excess or reactionary energy so applied being released or transferred to the source of stored energy.

2,002,250

PROCESS OF REFINING GASOLINE PRODUCED BY CRACKING

Claron R. Payne and Donald B. Stevens, Pittsburgh, Pa., assignors to Gulf Refining Company, Pittsburgh, Pa., a corporation of Texas

No Drawing. Application September 19, 1931, Serial No. 563,886

11 Claims. (Cl. 196—44)

1. In the manufacture of a motor fuel from a cracked gasoline distillate, the refining process which comprises mixing approximately from one-half of one per cent to three per cent by weight of anhydrous aluminum chlorid with the distillate and heating this mixture to approximately 400° C., and maintaining it at that temperature under a pressure of the order of one thousand to two thousand pounds per square inch for a period not substantially greater than twenty minutes; the said distillate being of such type that substantially no conversion takes place during the treatment specified.

2,002,251

DEFECTIVE LIGHT SIGNAL

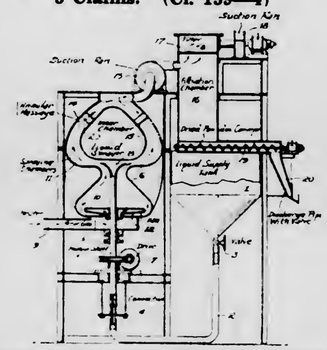
Frederick Harrison Sensiba and Claude Warner Sensiba, Crystal Falls, Mich., assignors of one-third to John B. O'Hora, Green Bay, Wis.

Original application December 17, 1931, Serial No. 581,759. Divided and this application September 8, 1932, Serial No. 632,258

2 Claims. (Cl. 177—329)

1. A signal apparatus comprising a signal box having a plurality of cells and provided with a sight opening in one side of each cell, a swinging back plate hinge at the lower edge to the box, a latch carried by the top of the plate and engageable over the top of the box to hold the back plate closed, fixed lamp supports carried by the inner face of said back plate and movable as a unit therewith when the back plate is opened or closed, lamps mounted in the several supports with their longitudinal axes in a plane parallel to the plane of the hinged back plate and movable therewith, end cleats secured to the bottom of the box, an insulated plate resting on said end cleats and spaced from the bottom of the box to form an intermediate chamber, resilient contacts, means for mounting the contacts on said insulated plate in position to engage the terminals of the lamps when the back plate is swung to closed position, and electric conductors extending through an opening in the bottom of the box and within said chamber for engagement with said contacts.

2,002,252



APPARATUS FOR THE CONVERTING OF MILKY LIQUIDS, SOLUTIONS, DISPERSIONS, AND EMULSIONS INTO POWDER FORM BY DRYING

Martinus Joännes Stam, The Hague, Netherlands

Application October 17, 1932, Serial No. 638,264

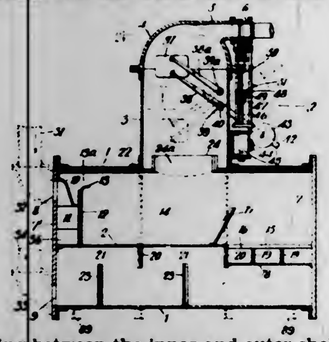
In the Netherlands January 23, 1931

3 Claims. (Cl. 159—4)

1. Apparatus for converting milky liquids, solutions, dispersions and emulsions into powder form by drying aided by centrifugal force, comprising a barrel, having a constricted middle portion dividing the barrel into an upper and a lower chamber, a baffle body within the upper chamber having a substantially flat bottom and having its sides substantially parallel to the sides of the upper chamber, thus providing a narrow annular passage around said body terminating in an outlet opening at the top of the upper chamber, means conveying a heated stream of gas through said constricted portion and through said passages, a centrifugal spraying element in said upper chamber beneath the bottom of the baffle adapted to spray the liquid into the gas and mingle therewith, thereby gradually carrying off the resultant powdered articles and drying them.

2,002,253

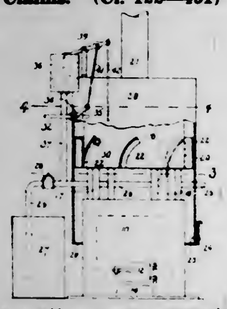
SEPARATOR FOR LIQUIDS HAVING DIFFERENT SPECIFIC GRAVITIES



Herbert Alexander Thompson, Benton, Northumberland, England

Application February 24, 1932, Serial No. 594,959½. In Great Britain January 25, 1932

16 Claims. (Cl. 210—43)



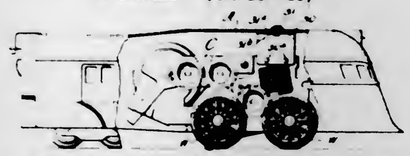
1. Apparatus for the separation of liquids of different specific gravities comprising an outer shell of ovate form in vertical cross-section with its sides converging downwardly, a smaller inner shell also of ovate form in vertical cross-section similarly arranged inside the outer shell at the top thereof and constituting a first-stage quiescence chamber, a collecting dome or chamber, for the liquid of lower specific gravity, secured to the top side of said outer shell and centrally thereof, an opening in said inner shell beneath the collecting dome by which the inner shell is in com-

munication therewith, an inlet opening at one end of said inner shell, a vertical baffle plate adjacent the inlet and dividing off part of the inner shell to form a swirl chamber, an opening in the bottom of the inner shell, at the opposite end to the inlet, by which the inner shell is in communication with the outer shell, division plates

extending between the inner and outer shells and dividing the space therebetween into a number of lower quiescence chambers communicating with the collecting dome, an outlet opening at the bottom of said outer shell, and means for drawing off the lighter separated liquid from the collecting dome.

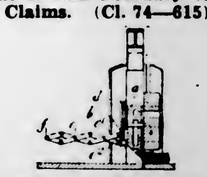
2,002,254
STEAM GENERATOR
James Treloar, Hamilton, New Zealand
Application March 13, 1934, Serial No. 715,358
In New Zealand March 30, 1933
6 Claims. (Cl. 122—451)

1. Steam generating means, comprising in combination, a boiler chamber having an internal furnace space and an exit passage therefrom through the chamber top, an enclosed water receiving chamber arranged above the boiler chamber, at a distance therefrom, and having a number of heat tubes extending vertically through its full length, water circulating tube connections between the two chambers, and a casing enclosing the upper chamber and the space between the two chambers, made to leave a clear space between it and the sides and top of the upper chamber and provided with an outlet flue leading from its top.



2,002,255
HARROW
Alister Stewart Bevin, Whangarei, New Zealand
Application February 13, 1934, Serial No. 711,038
In New Zealand November 1, 1933
3 Claims. (Cl. 55—149)

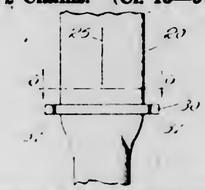
1. In a harrow having a draught frame embodying a main cross bar and a number of tines, said tines being formed of metallic bar lengths disposed to extend in parallel lines from the rear of the draught frame and each of which tines is independently pivoted at its forward end upon the cross bar and is shaped with its rear end



doubled round and upwardly and then to extend forwardly in tooth form, the forward edge of which inclines downwardly and forwardly from a distance above to a point positioned a distance below, the level of the main portion of the tine forming bar.

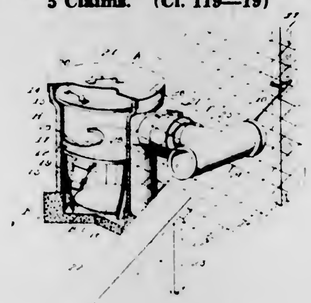
2,002,256
MOTOR MOUNTING FOR TOY LOCOMOTIVES
Earl D. Boisselier, Glen Ellyn, Ill., assignor to American Flyer Manufacturing Company, Chicago, Ill., a corporation of Illinois
Original application August 2, 1934, Serial No. 738,144. Divided and this application November 16, 1934, Serial No. 753,378
5 Claims. (Cl. 46—48)

1. A toy locomotive including in combination, a casing simulating a locomotive body and including a roof portion, a propelling unit concealed within the casing, means arranged between the propelling unit and the under side of the roof of the casing for supporting and spacing the latter with reference to the propelling unit proper, and means for connecting said last named means and the roof of the casing.



2,002,257
SAFETY GUARD FOR SHEARING PRESSES
Harold Alan Boyce, London, England, assignor of one-half to Jas. Truscott & Son Limited, London, England
Application May 11, 1933, Serial No. 670,563
In Great Britain February 25, 1933
3 Claims. (Cl. 74—615)

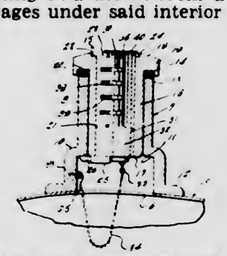
1. A shearing press or like machine having a reciprocable member in combination with a safety guard comprising a rigid guard member extending across the front of the press and substantially parallel to said reciprocable member, a bar operatively connected to said reciprocable member, means for guiding said bar in a straight



restricted path and extensible means pivotally connecting each end of the guard member to the corresponding end of the bar and to the frame of the machine.

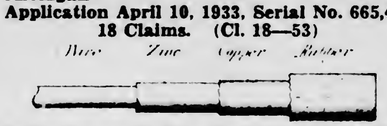
2,002,258
METHOD OF PRODUCING TUBING
Sylvester F. Clement, Chicago, Ill., assignor to The Visking Corporation, Chicago, Ill., a corporation of Virginia
Application April 9, 1934, Serial No. 719,783
2 Claims. (Cl. 18—57)

1. A method of making cellulose tubing which comprises: extruding viscose through an annular orifice into a coagulating bath, thereby forming a seamless tube; carrying the tube on rollers through a subsequent regenerating bath, or baths; and making slits in the tube at intervals and flattening and clamping the tube in flattened condition sufficiently close to the slits to prevent the tube from gaping open or wrinkling at the slit, the slits being left in open condition.



2,002,259
ANIMAL DEN
Florent S. Cole, Omro, Wis.
Application August 7, 1934, Serial No. 738,860
5 Claims. (Cl. 119—19)

1. An animal kennel comprising a base, a tile housing having an outwardly flared upper edge mounted on the base, a removable cover within the housing resting on the flared portion of the edge, a second removable cover resting on and covering the edge, a nest within the housing, and a pipe system connected to the housing to permit entrance to the kennel.



2,002,260
LOCKING CAP
Charles C. Curl, Helena, Ark.
Application December 12, 1932, Serial No. 646,888
Renewed October 23, 1934
2 Claims. (Cl. 70—90)

2. A locking cap for a filling neck having an interior shoulder, said locking cap comprising a cylindrical body having at one end a lateral flange for engaging the outer end of said filling neck and closing the same, said body having an axial bore in which is rotatably fitted a second cylindrical body having a second lateral flange at its outer end engaging a portion of the outer end of the first cylindrical body, a detent guide fixed to the inner end of said second body and slidably engaging the inner end of said first body, a sliding detent in said guide, a spring in said guide normally retracting said detent from a position in which it engages under said interior shoulder of

the filling neck, the engagement of said second lateral flange with the outer end of the first body and the engagement of said guide with the inner end of said first body operating to prevent relative axial movement but not relative rotation of said first and second cylindrical bodies, said second body being provided with a longitudinal bore, a key operated cylinder lock in said longitudinal bore having a cam engageable with the inner end of said sliding detent for projecting the same to locking position.

2,002,261
RUBBER COATED STEEL OBJECT AND METHOD OF MAKING THE SAME
Elgin Carlton Domm, Niles, Mich., assignor to National Standard Company, a corporation of Michigan
Application April 10, 1933, Serial No. 665,425
18 Claims. (Cl. 18—53)

1. In the production of brass coated ferrous base articles, the step of producing a brass coating by separately coating said article with a thin layer of zinc, and a layer of copper having a thickness less than approximately 1/60,000 inch, and of a thickness to alloy throughout with the zinc at atmospheric temperature or at the temperature of vulcanization and produce a thin layer of brass thereon, and vulcanizing a coating of rubber thereon.

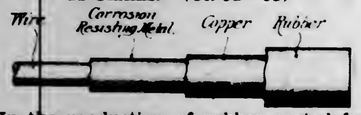
7. A rubber coated article comprising a ferrous metal base, a zinc coating over said base, a thin copper coating thereon having a thickness less than approximately 1/60,000 inch and of a thickness to alloy throughout with the zinc at atmospheric temperature or at the temperature of vulcanization, and produce a thin layer of brass thereon, and a coating of rubber vulcanized thereon.

2,002,262
RUBBER COATED OBJECT
Elgin Carleton Domm, Niles, Mich., assignor to National-Standard Company, Niles, Mich., a corporation of Michigan
Application April 16, 1934, Serial No. 720,890
17 Claims. (Cl. 18—53)

1. In the production of rubber coated ferrous base articles, the step of producing a cadmium

brass coating by separately coating said article with a thin coating of cadmium, and a layer of copper having a thickness less than approximately 1/66,000 inch and of a thickness to alloy throughout with the cadmium at atmospheric temperature or at the temperature of vulcanization and produce a thin layer of cadmium brass thereon, and vulcanizing a coating of rubber thereon.

7. A rubber coated article comprising a ferrous metal base, a cadmium coating over said base, a thin copper coating thereon having a thickness less than approximately 1/66,000 inch and of a thickness to alloy throughout with the cadmium at atmospheric temperature or at the temperature of vulcanization, and produce a thin layer of cadmium brass thereon, and a coating of rubber vulcanized thereon.



2,002,263

RUBBER COATED STEEL OBJECT

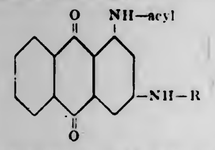
Elgin Carleton Domm, Niles, Mich., assignor to National Standard Company, Niles, Mich., a corporation of Michigan

Application July 30, 1934, Serial No. 737,666

11 Claims. (Cl. 91—68)

1. In the production of rubber coated ferrous base articles, the step of producing a rubber adherent coating by separately coating said article with a thin layer of corrosion resistant metal of the class consisting of zinc, cadmium, lead, tin and a layer of copper having a thickness less than approximately 1/60,000 inch, and of a thickness to alloy throughout with the corrosion resistant metal at atmospheric temperature or the temperature of vulcanization and produce a thin layer of rubber adherent alloy on the surface thereof, and vulcanizing a coating of rubber thereto.

2,002,264



ANTHRAQUINONE DERIVATIVE AND PROCESS OF MAKING SAME

Hermann Hauser, Basel, and Max Bommer, Riehen, near Basel, Switzerland, assignors to the firm Society of Chemical Industry in Basle, Basel, Switzerland

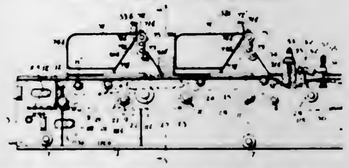
No Drawing. Application May 31, 1932, Serial No. 614,610. In Switzerland June 29, 1931

5 Claims. (Cl. 260—60)

1. As new products the anthraquinone derivatives of the general formula

in which R represents hydrogen, alkyl, phenyl, naphthyl or the radical of a higher condensed ring system, which products form yellow to orange to brown to red to violet to green powders which dissolve in concentrated sulfuric acid to yellow to red to blue solutions and dye cotton from the vat yellow to red to blue to green to black tints of very good fastness properties.

2,002,265



APPARATUS FOR ATTACHING METAL STRIPS TO SHEETS OF WOOD, COMPOSITION BOARDING, OR THE LIKE

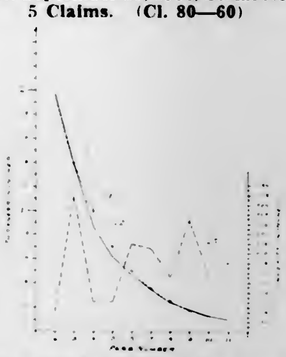
Andrew Mathis Kamper, Surbiton, England, assignor to No-Nail Cases Proprietary Limited, London, England, a company incorporated with limited-liability of Victoria, Australia

Application March 23, 1933, Serial No. 662,400

In Great Britain April 2, 1932

18 Claims. (Cl. 1—12)

1. Apparatus of the kind set forth comprising a device for securing a metal strip to a sheet by the application of pressure, a hopper adapted to contain a supply of sheets of one size, a runway leading from said hopper to said pressure device, a band conveyor for transferring sheets along said runway, a second hopper adapted to contain sheets of another size and disposed above said runway, a second band conveyor disposed parallel to said first-mentioned conveyor for transferring sheets from said second-mentioned hopper to said pressure device, and means which serve automatically to raise the sheets contained in said second-mentioned hopper so as to allow the passage thereunder of a sheet from said first-mentioned hopper.



2,002,266

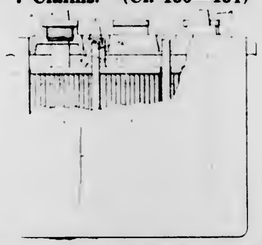
METHOD OF ROLLING STRIP MATERIAL

Charles A. Kral, Steubenville, Ohio

Application September 29, 1934, Serial No. 746,221

5 Claims. (Cl. 80—60)

1. In the method of rolling wide thin strip in a continuous mill having a plurality of stands of reducing rolls, the steps consisting in passing a work piece through the stands in a continuous manner, reducing the thickness of the work piece by single ply passes in each such stand, and in at least two successive passes, which passes are prior to the last reducing pass, drastically reducing the thickness to less than the thickness at that stage of the reduction which would result if a uniform percentage of reduction were taken in each stand to obtain the same total reduction.



2,002,267

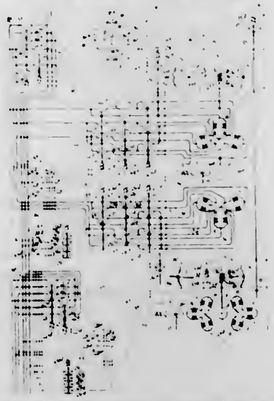
STORAGE BATTERY CONSTRUCTION

George L. Kyle, Niagara Falls, N. Y., assignor to U S L Battery Corporation, Niagara Falls, N. Y., a corporation of New York

Application November 25, 1927, Serial No. 235,601

7 Claims. (Cl. 136—134)

1. A multi-cell storage battery comprising, in combination, a container structure, plate groups, individual cell covers having depressed marginal portions defining sealing grooves, plastic sealing material in the grooves, and inter-cell conductors having U-portions within said grooves, embedded in the sealing material.



2,002,268

ELECTRIC MOTOR CONTROL SYSTEM

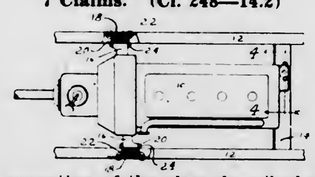
Eivind U. Lassen, West Allis, and Edwin W. Seeger, Wauwatosa, Wis., assignors to Cutler-Hammer, Inc., Milwaukee, Wis., a corporation of Delaware

Application July 15, 1933, Serial No. 680,536

17 Claims. (Cl. 156—46)

14. In an electric motor control system, in combination, a plurality of reversible electric driving motors, means individual to each of the respective motors for controlling the direction, rate, and degree of operation thereof, said individual control means each comprising a sending rheostat, a receiving rheostat and a polarized relay coil arranged in the form of a Wheatstone bridge, adjustable contactors associated with the respective rheostats, a plurality of pairs of electromagnetically operable switches each pair being controllable by one of said polarized relays for determining the direction and degree of operation of the motor respectively controlled thereby in accordance with the relative positions of said contactors, means associated with each of said individual control means to provide for preselection of a motor speed substantially proportional to the degree of operation preselected therefor, and means comprising a common control instrumentality for simultaneously initiating operation of all active motors.

2,002,269



MOTOR MOUNTING

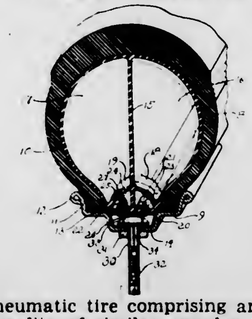
Roger K. Lee, Highland Park, Mich., assignor to Chrysler Corporation, Detroit, Mich., a corporation of Delaware

Application February 24, 1930, Serial No. 430,631

Renewed March 20, 1933

7 Claims. (Cl. 248—14.2)

1. A mounting of the class described comprising, an internal combustion engine, a support including side frame members and a cross member, a front engine connection between said engine and said cross member, and lateral connections at the rear of said engine between said engine and said side frame members, one of said lateral connections being in advance of the other of said lateral connections.



2,002,270

VALVE MECHANISM

Frederick A. Lind, Detroit, Mich., assignor to Chrysler Corporation, Detroit, Mich., a corporation of Delaware

Application July 3, 1933, Serial No. 678,918

18 Claims. (Cl. 152—22)

2. A pneumatic tire comprising an outer casing, a plurality of similar annular independent air containing cells disposed within said casing in side-by-side relationship, and means for admitting air to the several cells from a common source and for equalizing the volumes of air contained in the several cells.

2,002,271

KNITTED FABRIC

Vincent Lombardi, Garden City, N. Y.

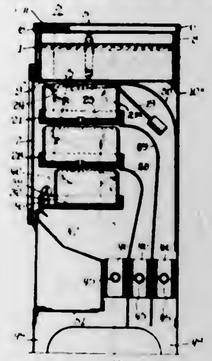
Application October 18, 1933, Serial No. 694,042

8 Claims. (Cl. 66—169)

1. A knitted fabric comprising yarn knitted into loops in a plurality of wales and rows, one section

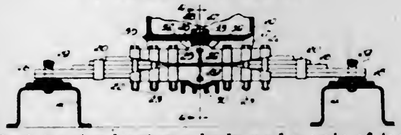
of said fabric comprising a first yarn group knitted into regular front loops in more than two successive wales, a second yarn group knitted into regular front loops in more than two successive wales in a second section of the fabric, a third yarn group knitted into regular front loops in more than two successive wales in a third section of the fabric, where any mentioned group may comprise only one yarn knitted in one row in a given section, said sections being disposed across the fabric parallel to a wale, said first yarn group lying loosely behind the loops in said second and third sections at least for a plurality of adjacent wales without forming any front loops in said

second and third sections, said second yarn group lying loosely behind the loops in said first and third sections at least for a plurality of adjacent wales without forming any front loops in said first and third sections, said third yarn group lying loosely behind the loops in said first and second sections at least for a plurality of adjacent wales without forming any front loops in said first and second sections, a loose yarn of said first yarn group in the rear of said second section being caught in the fabric in at least one wale of said second section and being caught in the fabric in at least one wale of said third section.



2,002,272
DISK HARROW
Edward Mowry, Rock Falls, Ill., assignor to International Harvester Company, a corporation of New Jersey
Application March 12, 1934, Serial No. 715,045
8 Claims. (Cl. 55—81)

1. A field implement comprising a pair of transversely positioned inner frame structures, a pair of transversely positioned outer frame structures, soil engaging means carried by said structures, draft means connected to said frame structures, the draft means for the outer frame structures being disconnectible for folding the implement for transport, means for pivotally connecting the inner and outer frame structures together at the adjacent ends and near the rear sides of the frame structures whereby the outer frame structures may be swung around to positions parallel to and behind the inner frame structures, and means for securing said outer frame structures in said parallel position for transport.

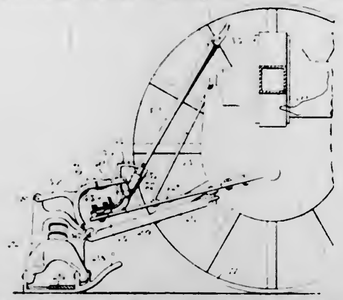


2,002,273
HUMIDIFIER
William H. Parker and Harry Jaffe, Chicago, Ill., assignors, by mesne assignments, to Sears, Roebuck and Co.
Application July 5, 1934, Serial No. 733,827
5 Claims. (Cl. 261—104)

1. A humidifier comprising a cabinet, a water tank in the upper portion of said cabinet, a shallow pan adapted to contain water below the water tank, a water-absorbing unit in said pan, the lower portion of said unit being arranged to extend into the water contained in said pan, an overflow outlet from said pan, a substantially similar pan below the first-mentioned pan and arranged to receive water flowing from said over-

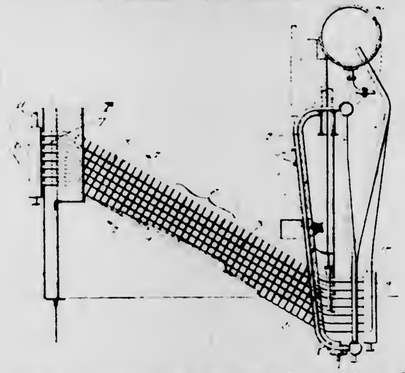
flow, a water-absorbing unit in the second pan, the lower portion of said unit being arranged to be submerged in water contained in the second pan, a float in the last-mentioned pan arranged to control the flow of water from the water tank, and partitions in the cabinet to direct air to each of said water-absorbing units.

2,002,274
TRACK TYPE TRACTOR
Norman O. Pansegrau, Chicago, Ill., assignor to International Harvester Company, a corporation of New Jersey
Application February 23, 1934, Serial No. 712,504
6 Claims. (Cl. 305—9)



3. A tractor having a body and a pair of track frames pivotally connected at their rear ends to support the body thereon at two points, an equalizer spring carried transversely across the track frames and under the body, upper and lower saddle blocks clamped around the spring, said blocks having rounded portions which are formed as surfaces of a common cylinder, an upper pad member between the body and the upper saddle block, said upper pad member having a rounded portion to receive the rounded portion on the upper saddle block, said upper pad having an upward extension slidably fitted into the body, a lower pad member having a rounded portion complementary to and receiving the rounded portion of the lower saddle block, and means to secure the lower pad member to the body to hold the equalizer in pivotal weight carrying relationship to the body.

2,002,275
TILTING MECHANISM FOR MOWERS
Charles Pearson, Waverly, Fla., assignor to International Harvester Company, a corporation of New Jersey
Application February 14, 1934, Serial No. 711,215
8 Claims. (Cl. 56—25)

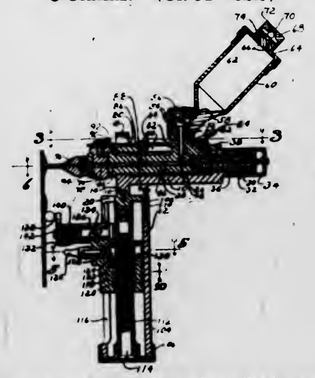


1. A mower comprising a frame, a coupling arm pivotally carried by the frame, a cutter bar

tiltably carried by the arm, a normally locked but releasable lever having connections to tilt

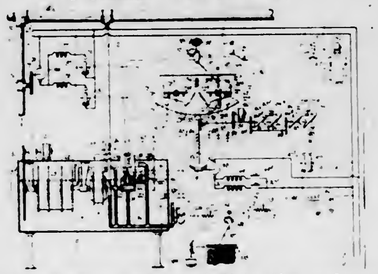
the bar, and means engaging said connections to enable the bar to tilt independently of the lever when the bar drops below the normal ground line.

2,002,276
FURNACE WALL
Herbert E. Preston, Philadelphia, Pa., assignor to American Engineering Company, Philadelphia, Pa., a corporation of Pennsylvania
Application August 6, 1931, Serial No. 555,548
3 Claims. (Cl. 122—6)



1. In a furnace, the combination with a fuel supporting structure, of a plurality of liquid conducting tubes provided at one side of said structure, and a plurality of rows of protective elements detachably secured against the tubes and providing a wall surface bounding the fuel bed, one of said rows of protective elements projecting inwardly from said wall surface to form a ledge overhanging the fuel bed whereby any slag flowing down the wall is diverted away from the wall surface therebelow, and into the fuel bed, and the inner surfaces of said last mentioned elements inclining downwardly and inwardly.

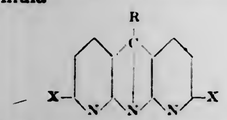
2,002,277
METHOD OF MAKING PHOSPHORUS OXYCHLORIDE
Harold P. Roberts, Nitro, W. Va., assignor, by mesne assignments, to Herbert S. Kreighbaum, Akron, Ohio
No Drawing. Application March 6, 1933, Serial No. 659,836
19 Claims. (Cl. 23—203)



1. A method of the character described, which comprises, reacting phosphoric acid, phosphorus trichloride and chlorine in the presence of water to form phosphorus oxychloride.

2,002,278
STRIPING DEVICE
Frank P. Ryan, Detroit, Mich., assignor to Chrysler Corporation, Detroit, Mich., a corporation of Delaware
Application March 14, 1929, Serial No. 346,833
8 Claims. (Cl. 91—62.6)

1. A device of the class described comprising, a handle portion, a body portion angularly movable on said handle portion, an axially movable member in said body portion, a fluid container carried by said member, a nozzle at the end of said axially movable member, said member being provided with a passage connecting the fluid container and the nozzle, and an angularly movable valve in said member to control the flow of fluid through said nozzle.

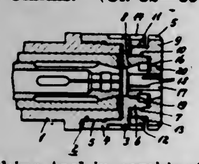


2,002,279
CALORIMETRIC METHOD AND APPARATUS ADAPTED FOR GAS MIXING CONTROL
Edwin X. Schmidt, Whitefish Bay, Wis., assignor to Cutler-Hammer, Inc., Milwaukee, Wis., a corporation of Delaware
Application May 29, 1931, Serial No. 540,863
9 Claims. (Cl. 48—180)

1. The method of regulating the volumetric proportionality of a plurality of flows of gaseous fluids to provide a gaseous mixture of substantially constant total heating value per unit volume which consists in effecting a flowing mixture of said fluids, continuously withdrawing and burning a volumetrically constant sample of said mixture to determine the instantaneous total heating value per unit volume thereof, automatically regulating the volumetric proportionality of said flows of fluids relatively to each other in accordance with the determinations so effected, and automatically discontinuing such regulation and giving an audible signal when the total heating value per unit volume of said mixture varies to a given degree with respect to a preselected value.

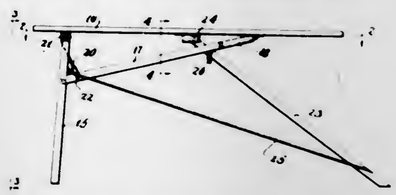
2,002,280
AMINO ANTHYRIDINES AND PROCESS OF MAKING SAME
Walter Schoeller, Berlin-Westend, and Otto von Schickh, Berlin, Germany, assignors to Schering-Kahlbaum A. G., Berlin, Germany
No Drawing. Application April 30, 1932, Serial No. 608,558. In Germany May 13, 1931
9 Claims. (Cl. 260—40)

1. The compounds being constituted according to the formula



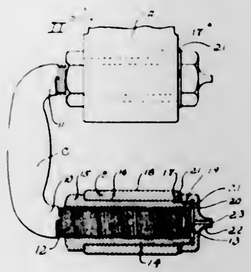
wherein X is an acylated or non-acylated amino group, while R is an alkyl group or hydrogen, these products being yellow colored, having vigorously bactericidal properties and dissolving in cold and better still in warm water with magnificent green fluorescence.

2,002,281
ELECTRONIC CURRENT REGULATOR
Carroll Stansbury, Wauwatosa, Wis., assignor to Cutler-Hammer, Inc., Milwaukee, Wis., a corporation of Delaware
Application May 24, 1930, Serial No. 455,444
15 Claims. (Cl. 175—363)



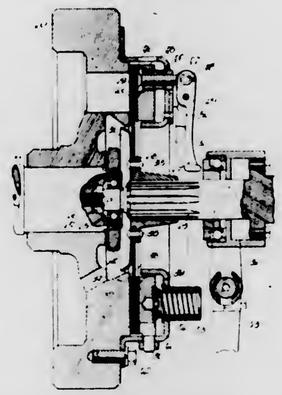
2. The method of regulating the flow of current through an electronic tube subjected to an alternating potential and having a controlling electrode which consists in storing energy in a circuit during alternate half cycles of such alternating potential, effecting and regulating discharge of such stored energy during the other half cycles to produce a transient voltage and subjecting said controlling electrode to the influence of such cyclic transient voltage.

2,002,282
WORKPIECE GUIDE FOR MACHINE TOOLS
Karl Tesaky, Esslingen-on-the-Neckar, Germany
Application March 31, 1934, Serial No. 718,337
In Germany May 4, 1933
8 Claims. (Cl. 82—39)



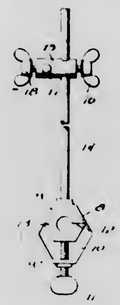
1. In a machine tool in combination a tubular spindle, a spindle head mounted on said spindle, a short workpiece guide and means for adjusting said guide to the diameter of the workpiece, both said guide and said adjusting means being accommodated within the front portion of said spindle head.

2,002,283
FOLDING IRONING TABLE
Samuel J. Bailey, Nicholson, Pa.
Application November 1, 1932, Serial No. 640,601
2 Claims. (Cl. 68—10)



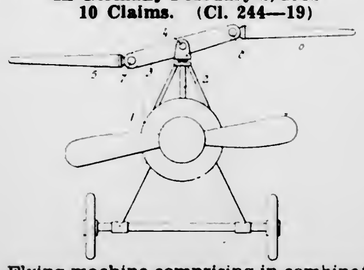
1. In a folding ironing table, a board, a transverse frame pivoted on the bottom thereof, a pair of legs pivoted on said frame for swinging together and apart and which upon turning of the frame moves to a position flat against the bottom of the board or to a depending position, a pair of braces pivotally mounted at one of their ends intermediate the ends of said legs, a pair of links pivotally mounted intermediate the ends of said braces and on the bottom of said board so that the legs are limited to substantially the vertical position or to a position flat against the bottom of said board, and a pair of cross braces pivotally mounted at one of their ends upon said legs and at their other ends upon said braces at points intermediate the pivot points of the braces with the legs and with said links, said cross braces having intermediate twists so that the pivoted ends are at right angles to each other.

2,002,284
OSCILLATORY CONNECTION
George D. Banta, Ypsilanti, Mich., assignor to Chrysler Corporation, Detroit, Mich., a corporation of Delaware
Application January 25, 1934, Serial No. 708,199
4 Claims. (Cl. 267—54)



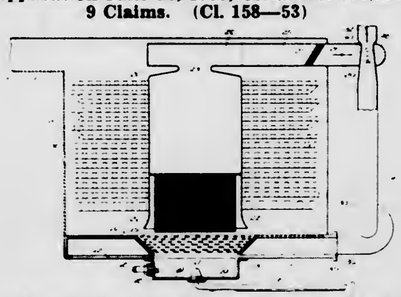
1. In a device of the character described, a member having an opening, a bushing fitting within said opening and having a shoulder at one end thereof engaging said member, said bushing having an exteriorly threaded portion at the other end thereof and being provided with an opening extending within the opening of said member, a shaft threadedly fitting within said bushing opening, and a nut engaging said threaded bushing portion and forcing said member against said shoulder, and means carried by said nut for passing lubricant to the threads of said shaft and bushing opening.

2,002,285
DRIVING DISK FOR CLUTCHES
William Otto Bechman, Chicago, Ill., assignor to International Harvester Company, a corporation of New Jersey
Application December 18, 1931, Serial No. 581,848
4 Claims. (Cl. 192—107)



1. A clutch assembly comprising two resilient disks secured in fixed position relative to each other with their peripheral portions in spaced relationship, each of said disks being formed with spaced radial slots extending inwardly from the periphery, the slots in one disk alternating with the slots in the other disk, the edge portions of one of the disks being turned inwardly adjacent the slots toward the adjacent disk, and contact elements secured to the outer sides of said disks.

2,002,286
BRAKE ADJUSTING GAUGE
George H. Crane, Muskegon, Mich.
Application July 21, 1934, Serial No. 736,319
6 Claims. (Cl. 33—180)

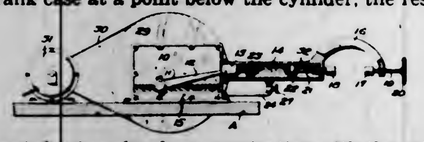


1. A brake adjusting gauge comprising a ring, a split threaded bushing mounted in said ring, a thumb screw holding the bushing in position and for adjusting the same, a rod extending outwardly from the ring, a slide mounted on said rod, a thumb screw for holding the slide in adjusted position, a finger slidably mounted in the slide at substantially right angles to the rod, and a thumb screw for holding the finger in adjusted position.

2,002,287
FLYING MACHINE
Anton Flettner, Berlin, Germany
Application January 27, 1933, Serial No. 653,768
In Germany February 2, 1932
10 Claims. (Cl. 244—19)

1. Flying machine comprising in combination a fuselage, a balance member mounted on said fuselage for rotatory and free rocking motion and wings articulated to said balance member for free oscillatory movement relative to said member.

2,002,288
LIQUID FUEL BURNER
Charles A. French, Riverside, Ill.
Application June 15, 1933, Serial No. 675,931
9 Claims. (Cl. 158—53)

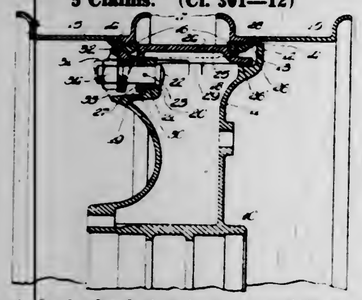


1. A liquid fuel vaporizer and burner comprising a combustion chamber, a burner grating positioned over one end of said chamber, a supply chamber in communication with said grating, a fuel nozzle positioned to deliver fuel at the combustion chamber side of said grating, means for supplying fuel to said nozzle, means for igniting fuel discharged from the nozzle, a receiving chamber positioned in the combustion chamber over the nozzle and spaced from the grating, gas moving means, means for delivering air and the gaseous products from the receiving chamber to said means, and means for delivering the mixture from said means to the supply chamber for the grating.

2,002,289
NUT CRACKING MACHINE
William H. Hancock, Okmulgee, Okla.
Application March 19, 1934, Serial No. 716,403
1 Claim. (Cl. 146—12)

A machine of the character described comprising a piston cylinder open at one end and closed at its other end and having a horn at the closed end, the free end of the horn being in the same plane with the cylinder, an anvil adjustably connected with the free end of the horn which constitutes an arbor, oppositely arranged pistons within the cylinder, a crank case connected with the open end of the cylinder, a crank shaft journalled in said case, a connecting rod operated by the crank shaft and working through the open end of the cylinder and having connec-

tion with the piston next thereto, an adjustable piston head on the last-named piston, a reservoir formed with the cylinder midway thereof, a by-pass connected with the reservoir and said crank case at a point below the cylinder, the res-



ervoir having plural communication with the cylinder, a cushioning element coactive with the other piston, an anvil connected with said other piston, a valve in said by-pass, and a power medium connected with said crank shaft.

2,002,290

DUAL WHEEL MOUNTING

Alfred Krieg and James A. Bundy, Fort Wayne, Ind., assignors to International Harvester Company, a corporation of New Jersey

Application December 23, 1933, Serial No. 703,796
5 Claims. (Cl. 301—12)

1. A dual wheel structure comprising a wheel body having spaced spokes extending therefrom, a shoulder formed on each spoke end, two rims mounted on the spoke ends, a spacer element mounted over each spoke end between the rims, and means for clamping the rims in position against the spacing elements and against the shoulders, said spacing elements having tongues projecting under one rim for centering the rim during assembly, and a lug at the other end engageable with a portion of the wheel structure to hold that end in position during assembling of the rims, inwardly projecting lugs being formed at the spoke end to support the spacing elements.

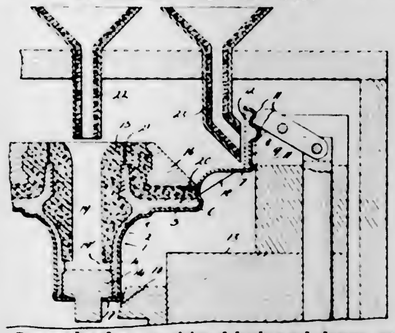
2,002,291

CONNECTER ELEMENT

Eugene R. Kulka, New York, N. Y., assignor to C. D. Wood Electric Co. Inc., New York, N. Y., a corporation of New York

Application November 26, 1929, Serial No. 409,830
2 Claims. (Cl. 173—361)

1. A connecter device having a body which comprises a pair of body members each of which is made of insulating material, one of said body members having a recess whose internal wall is threaded and into which an externally threaded wall of the other body member extends, one of said body members also having openings which are laterally spaced throughout from said internal threaded wall when said body members are assembled, said openings communicating with said recess, removable prongs located in said openings and having heads which extend laterally into said recess, the body members being held together and being movable towards each other by reason of their cooperating threads, said body members having inner lateral clamping wall portions between which said heads are clamped in position, one of said body members having an opening through which insulated conducting wires having bared ends can pass to the interior of the device to contact with said heads, the assembled body members having their outer



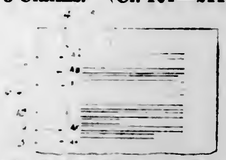
longitudinal peripheries exposed so that said outer longitudinal peripheries can be gripped, one of said body members being non-turnable relative to said removable prongs, so that said removable prongs can be turned in unison with the assembled body members.

2,002,292

WHEEL

Frank H. Le Jeune, Detroit, Mich., assignor, by mesne assignments, to The Kelsey-Hayes Wheel Company, Detroit, Mich., a corporation of Delaware

Application April 25, 1932, Serial No. 607,479
10 Claims. (Cl. 22—203)



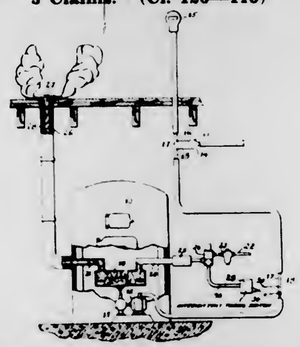
1. In a wheel, a combined hub and drum, comprising a one-piece sheet metal member having annular portions of different diameter and integrally connecting axially offset radially extending portions, and a member cast within the annular portion of smaller diameter and having a radially extending portion at the side of one of said radially extending portions, said cast member forming with said sheet metal member a wheel hub having a radially extending flange.

2,002,293

METHOD OF MAKING PROOFS

Rose Lowensohn, New York, N. Y.

Application March 6, 1934, Serial No. 714,218
8 Claims. (Cl. 101—211)



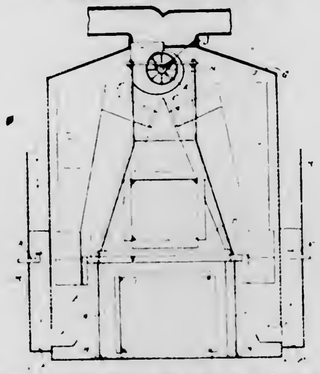
3. The method of making proofs, including providing a main type set up, and an auxiliary type set up for changes or insertions in the main type set up, inking the auxiliary type set up with a tacky relatively slow drying ink, arranging the different type set ups to produce a final single type set up, inking all the type of the final type set up with a less tacky relatively quick drying ink, the inks being coordinated so that indicia printed by the type of the original auxiliary set up shall have a different color than that of the remaining indicia, and finally printing with the type of the said final type set up to produce said indicia, as set forth.

2,002,294

HUMIDIFYING APPARATUS OR THE LIKE

Robert R. McMath, Detroit, Mich.

Application July 29, 1932, Serial No. 626,038
3 Claims. (Cl. 126—113)



1. The combination with a furnace having a burner and a thermostatic control therefor, of a humidifying apparatus comprising a vaporizing drum located within said furnace in juxtaposition to said burner to be subjected to the direct heat thereof, means for supplying water to said drum to be converted therein, into steam, said means including a water valve, electric means for intermittently opening said valve at predetermined intervals, and a means for leading steam from said vaporizer to the atmosphere to be humidified and diffusing it into said atmosphere, said electric means being in circuit with and primarily under the control of said thermostatic control.

2,002,295

HOT AIR HEATING FURNACE

Charles I. Murdock, Ann Arbor, and Charles C. Cobb, Lansing, Mich., assignors to Dail Steel Products Company, Lansing, Mich., a corporation of Michigan

Application July 20, 1931, Serial No. 552,008
7 Claims. (Cl. 126—105)

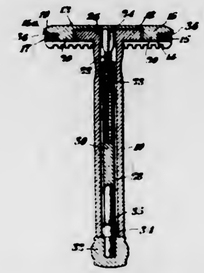
1. The combination of a base a hot air heating furnace mounted on said base a jacket for enclosing said furnace a skeleton frame mounted on said base separate from the furnace and arranged within said jacket and an air impeller mounted on said frame within the upper portion of said jacket.

2,002,296

SUPPORT FOR AWNINGS OR SUNSHADES

Arthur Joseph Pope, New York, N. Y.

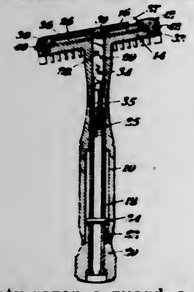
Application March 14, 1935, Serial No. 11,053
20 Claims. (Cl. 135—5)



1. An awning support having a fixed horizontal tubular member, a revolvable shaft therein, an awning cover supporting frame carried by the ends of the shaft so that the frame may be tilted to various angles relative to the horizontal, and means to secure the frame in adjusted position.

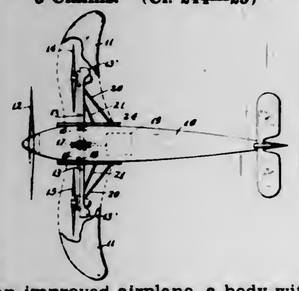
2,002,297

SAFETY RAZOR AND BLADE



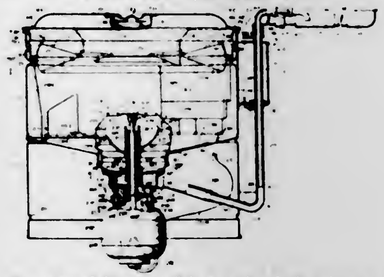
Hyman R. Segal, New York, N. Y.

Application October 3, 1931, Serial No. 566,619
4 Claims. (Cl. 30—12)



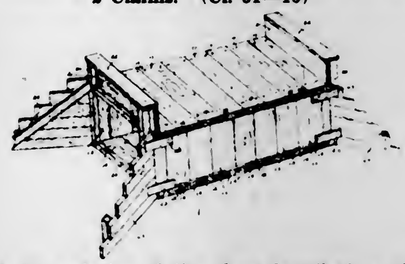
2. In a safety razor, a body part formed with a hollow handle, a clamping plate, an attachment shank thereon and means for attaching said plate to said body part comprising a finger-piece, an attachment stem carried thereby and rotatable within the handle and having a detachable threaded engagement with said shank, a bushing sleeve at the inner end of the handle abutting at its outer end against the finger-piece and forming an annular bearing member in which the said attachment stem is freely rotatable, the peripheral portion of said bushing having a friction fit within said handle adapting it to maintain its position therein while being withdrawable under a strong pull, and a retaining member within the hollow handle passing through the stem and engaging the end of the bushing and forming a coupling connection between the stem and bushing whereby the latter may be withdrawn from the handle by a pull upon the stem.

2,002,298
SAFETY RAZOR AND BLADE
Hyman R. Segal, New York, N. Y.
Application October 31, 1931, Serial No. 572,268
6 Claims. (Cl. 30—12)



1. In a safety razor, a guard, a hollow handle, the guard having a central non-circular opening extending therethrough and communicating with the handle, a clamping plate provided with an attachment shank having a portion of non-circular cross-section slidably engaging the opening in the guard and extending into the handle, anchoring means on the opposed faces of the guard and plate for anchoring a blade therebetween against relative longitudinal and lateral movements, said anchoring means comprising elongated interengaging recesses in the plate and projections on the guard arranged in axial alinement with and on opposite sides of the shank and opening, positioning means on the guard and plate comprising a pilot pin carried by one of said projections and a pin receiving opening in the plate intersecting one of the recesses therein, a rotary stem extending into the handle and having a threaded engagement at its inner end with the shank, a finger piece mounted upon the outer end of the stem and having a shoulder bearing against the inner end of the handle, a fastening pin extending diametrically through the stem within the hollow handle adjacent to the finger piece, and a bearing ring arranged upon the stem between the shoulder of the finger piece and said fastening pin, the stem being journaled for rotation in said ring and the ring being fitted with a press fit within the handle so as to be frictionally held from rotation therein while being longitudinally withdrawable from the handle with the stem under pressure thereon in the withdrawal movement of the stem.

2,002,299
AIRPLANE
Samuel Sera and John Hatala, Erie, Pa.
Application January 2, 1935, Serial No. 6
6 Claims. (Cl. 244—25)



1. In an improved airplane, a body with wings at the sides set back from the front, a motor driven propeller on the front of said body, a transverse shaft through the sides of the body and beneath said wings, motor driven propellers mounted upon the ends of said transverse shaft, means for turning said shaft for changing the direction of the propellers, grooved rings attached upon the sides of said body, and reinforcement struts rigidly connected with said shaft and slidably supported in said grooves.

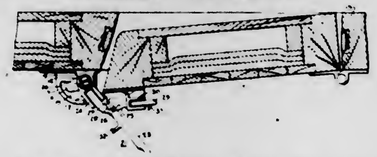
2,002,300
DISHWASHING MACHINE
Edgar S. Stoddard, Berwyn, Ill., assignor to The Conover Company, Chicago, Ill., a corporation of Illinois
Application March 5, 1929, Serial No. 344,112
6 Claims. (Cl. 141—9)

2. In a washing machine, a tank having a centrally draining bottom, a rotatable upright unenclosed impeller mounted above the lower portion of said draining bottom and spaced therefrom, a plurality of baffles secured to said draining bottom and spaced between said impeller and the wall of said tank, said baffles being spaced from said draining bottom and adapted to retard rotation of liquid; and a well chamber communicating centrally with the bottom beneath said impeller.

2,002,301
CULVERT
Mark C. Storms, Fort Madison, Iowa
Application April 24, 1933, Serial No. 667,621
2 Claims. (Cl. 61—16)

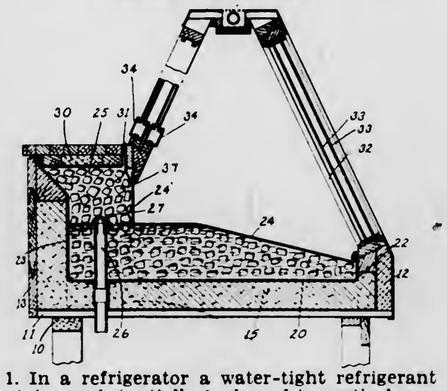
1. In a device of the class described, a plurality of four-sided box units each having a flat bottom portion, two spaced apart dove-tailed grooves in the upper surface of said bottom portion, a flat upper portion, two spaced apart dove-tailed grooves in the under surface of said upper portion, a side portion having a dove-tailed tongue at one end to engage one of the dove-tailed grooves in the bottom portion, and a dove-tailed tongue at its other end to engage one of the dove-tailed grooves in the upper portion, a second side portion having a dove-tailed tongue at one end to engage the other dove-tailed groove in the said bottom portion, and a dove-tailed tongue at its other end to engage the other dove-tailed groove in the upper portion; said upper portion and said lower portion over-lapping said side portions, a tongue and groove means for fitting and securing each of said units to each other to form an elongated conduit, and end portions secured to each end of the assembled units designed to form wings.

2,002,302
ELECTRIC CONNECTER PLUG
Herman L. Strongson, New York, N. Y., assignor to Beaver Manufacturing Company, Newark, N. J., a corporation of New Jersey
Application February 26, 1932, Serial No. 595,292
5 Claims. (Cl. 173—361)



5. An attachment plug comprising a body member of elastic material recessed at its upper portion, provided with an annular groove in the walls of the recessed portion, an insulating disc of thin stiff material adapted to peripherally engage the walls of said annular groove, contacts comprising upwardly extending prongs and base members seated in the recessed portion, terminal screws threaded into apertures in said base members, said disc being apertured to permit insertion of the prongs and being apertured to permit access to said terminal screws, said contacts being held in substantially rigid position solely by pressure exerted on the base members by the insulating disc, and without the use of permanent fastening devices.

2,002,303
WALL AND CEILING CONSTRUCTION
Gordon R. Walper, Detroit, Mich., assignor to Curry Ora Walper, Royal Oak, Mich.
Application May 25, 1929, Serial No. 365,951
7 Claims. (Cl. 72—115)



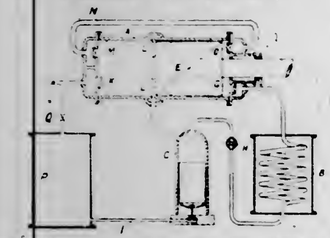
6. A reenforced stud for composition board, comprising a member I-shaped in cross section, having parallel flanges and a base section being provided with plaster retaining loops stretched from the metal.

2,002,304
REFRIGERATOR CAR DOORLOCK
Axel Wasberg, Chicago, Ill., assignor to Allen E. Ostrander, Larchmont, N. Y.
Application August 7, 1933, Serial No. 683,957
11 Claims. (Cl. 268—72)

1. Operating and locking mechanism for double doors hinged in a frame comprising, in combination, a keeper carried by the frame, a latch carried by one door for engaging the keeper, the latch and keeper being disposed to cooperate to apply pressure to the door on which said latch is carried, means for actuating the latch including a shaft journalled on said door for rotation on a vertical axis, a keeper provided on the other door and disposed to be engaged by the actuating means as the first door is being closed to exert a continued pressure on the second door to effect its full closure.

2,002,305
REFRIGERATOR
Charles F. Belshaw, Indianapolis, Ind.
Application April 29, 1931, Serial No. 533,693
3 Claims. (Cl. 62—37.3)

1. In a refrigerator a water-tight refrigerant container substantially L-shaped in vertical section having a horizontally-extended article supporting top of high heat conductivity upwardly inclined toward the vertical arm of said container and supplemented by a vertical extension forming one side of the vertical arm of said container, and the ends of the inclined top wall projecting beyond the end walls of said container, heat insulation imbedding the bottom, sides and ends of said container and the projected ends of the top plate, and a drainage passage leading from said container approximately at the level of the junction between the inclined top wall and its vertical extension, the vertical arm of the container extending substantially above the level of the drainage outlet.



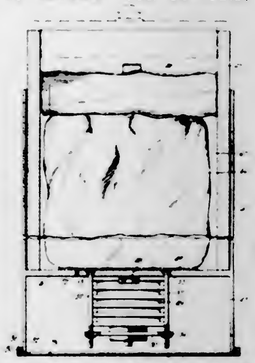
2,002,306
CONCEALED GARMENT FASTENER
Benjamin Berlin and Isidor Herman, New York, N. Y.
Application August 3, 1934, Serial No. 738,343
2 Claims. (Cl. 2—234)

1. In a garment, an invisible fastening means for said garment, the latter having overlapping and underlapping flaps defining an opening, a strip of garment material secured to said overlapping flap, said last mentioned flap overlying the front of the fastening means, said fastening means including a fastener of the continuous type utilizing a pair of stringers, a series of metallic elements secured to each of said stringers, a slider means for connecting and disconnecting said series of metallic elements, one of said stringers secured to said strip of gar-

ment material, the second stringer secured to the other flap, and a covering flap secured to said second stringer and overlying the back of the fastener, an edge of the underlapping flap and an edge of said strip being substantially in abutting relationship, whereby to provide a garment capable of receiving a neat pressing with the stringers lying in a single plane and the overlying flap lying flat closely adjacent thereto without bulging.

2,002,307
COMPRESSION REFRIGERATING SYSTEM FOR LOW TEMPERATURE PURPOSES
Henry Brier and John Hornsby Brier, Dartford, England
Application November 10, 1932, Serial No. 641,956
In Great Britain January 9, 1932
3 Claims. (Cl. 62—121)

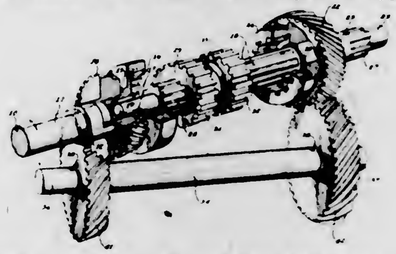
1. The improvement in the compression-refrigerating method of attaining unusually low temperatures by a refrigerant, comprising first subjecting the refrigerant to a primary evaporation to pre-cool same, then drawing the working gas or vapor from the main evaporator into a single container and adding the gaseous refrigerant from the primary evaporator, and effecting a first stage compression of the working gas from the main evaporator in the single container, thus raising its pressure to substantially that occurring in the primary evaporation zone, subjecting both charges to a second compression in said single container, and subjecting same therein to a third compression and into a condenser.



2,002,308
AUTOMATIC FIRE EXTINGUISHER
Leslie B. Burchfield, Houston, Tex.
Application September 6, 1932, Serial No. 631,759
4 Claims. (Cl. 169—26)

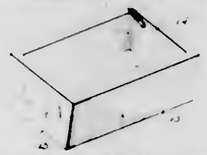
2. A fire extinguisher comprising a container, a base, upper and lower brackets of wire on said base having loops therein to receive and support said container, the wire of said lower bracket being extended downwardly therefrom, a spring arm formed as a continuation of said lower loop, a hammer on said arm, means to hold said arm retracted including a link restraining said spring arm, said link comprising two plates laterally recessed to engage said arm and said bracket, and easily fusible means securing said plates together, said hammer acting when released by said link to engage and break said container.

3. A fire extinguisher including a base, a container supported thereon having a reduced lower end forming a frangible seal, a spring arm on said base adjacent said seal, a link, secured to said base and engaging said spring arm, said link including two overlapping plates and a bond of easily fusible metal securing said plates together, and releasable at a predetermined temperature to allow said arm to strike and break said seal from said container and provide a small outlet for a stream of fluid and means below said container constructed and arranged to be engaged by said stream and to splash said stream laterally and atomize the same.



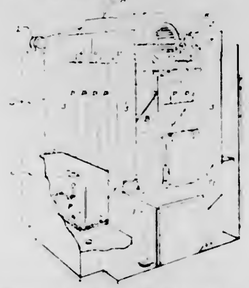
2,002,309
REFRIGERATING APPARATUS AND METHOD
Walter E. Carpenter, Belmar, N. J., assignor to McCabe Maier Corporation, Brooklyn, N. Y., a corporation of New Jersey
Application March 28, 1932, Serial No. 601,504
13 Claims. (Cl. 62—91.5)

1. In a refrigerating apparatus of the character described, a refrigerant container insulated at its top, bottom and sides, and having a heat conductive bottom, a platform constituting a vertically movable part of said bottom, and upon which a mass of solid refrigerant is adapted to rest, and thermostatically controlled means arranged exteriorly of the container operable to raise the platform and shift the solid refrigerant out of direct heat exchange relationship with the bottom of the chamber.



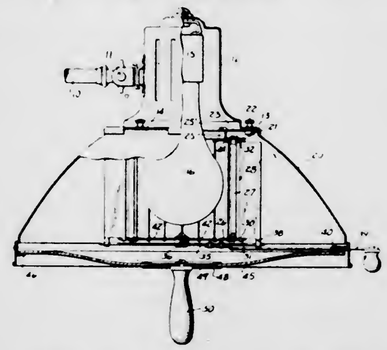
2,002,310
TRANSMISSION MECHANISM
John M. Christman, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a corporation of Michigan
Application November 30, 1931, Serial No. 577,913
8 Claims. (Cl. 74—370)

2. In a motor vehicle transmission having aligned drive and driven shafts, a gearing that comprises a rotatable shaft non co-planar with the axis of the drive and driven shafts, a pair of hypoid gears connecting the drive shaft with the rotatable shaft and a second pair of hypoid



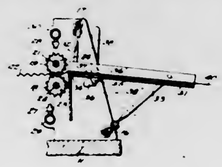
gears connecting the rotatable shaft and the driven shaft.

2,002,311
HOLLOW CEMENT BLOCK
David Stanley Corwin, Greenport, N. Y.
Application June 4, 1934, Serial No. 728,930
5 Claims. (Cl. 72—42)



1. A hollow cement block, comprising open mesh reinforcement consisting of mesh material having a bottom and side walls in the form of a box with an open top, a glass plate extending across the top edges of said side walls, and cement covering the inner and outer sides of said open mesh material and said plate and binding these parts together into a hollow unit.

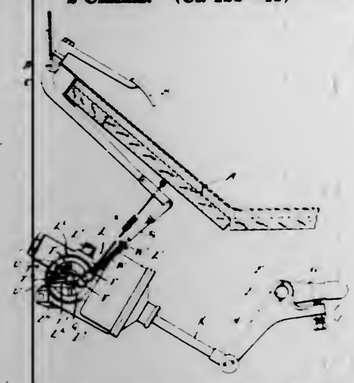
2,002,312
FURNACE AND AIR CONDITIONER
Ernest I. Dail, Lansing, Mich., assignor to Dail Steel Products Company, Lansing, Mich., a corporation of Michigan
Application July 30, 1932, Serial No. 626,362
4 Claims. (Cl. 126—113)



1. The combination of a warm air heating furnace, a jacket surrounding the same, a downwardly extending cold air conduit in heat conducting relation to said furnace to receive heat therefrom, said conduit communicating with the interior of said jacket at the lower end thereof, a water spray within the portion of said conduit preheated by said furnace and a self-washing filter in said conduit between said water spray and the communication of the conduit with said jacket.

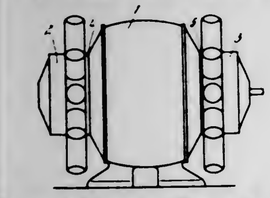
2,002,313
LIGHTING APPLIANCE
Leroy C. Doane, Meriden, Conn., assignor to Earl L. Canfield, Hillside, N. J.
Application December 24, 1934, Serial No. 758,896
20 Claims. (Cl. 240—1)

1. In a lighting appliance, the combination with a fixed light source of constant intensity and an outwardly flaring reflector for producing a beam of reflected light of fixed pattern from said source, and a screen for preventing admixture of direct light, of a light intercepting means between the light source and reflector for varying the intensity of the light in said beam without changing the light pattern from the reflector.



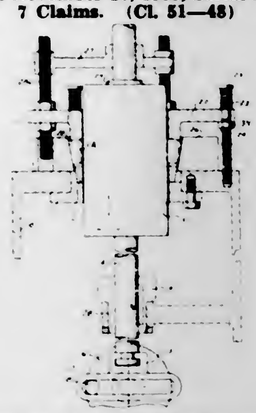
2,002,314
METHOD AND APPARATUS FOR PRODUCING CURLED OR CRIMPED GLASS WOOL
Paul O. E. Friedrich, Millville, N. J., assignor to firm Friedrich & Dimmock, New York, N. Y., a firm composed of Paul O. E. Friedrich and Frank L. Dimmock
Application January 26, 1934, Serial No. 708,529
5 Claims. (Cl. 49—7)

1. In a method of producing curled or crimped strands of glass wool, the steps of longitudinally dividing a flat sheet of glass wool into a plurality of strands, and of imparting a permanent wave formation to the divided strands.



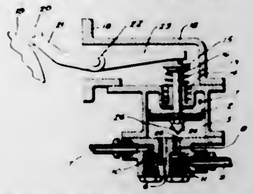
3. An apparatus for producing curled or crimped glass wool, comprising a pair of interweaved corrugated rolls, means for rotating said corrugated rolls, means for heating said corrugating rolls as said rolls are being rotated, a frame for supporting said corrugating rolls, said heating means and said rotating means, a table for feeding a flat sheet of glass thread through said corrugating roll, one edge of said table being adjacent the interweaving lines of contact between said roll, said table being supported on said frame, and means cooperating with said table adjacent and preceding said interweaving lines of contact, dividing the flat sheet of glass thread into a plurality of strands.

2,002,315
HYDRAULIC CLUTCH RELEASE
Claude E. Furgason, Lansing, Mich., assignor to Reo Motor Car Company, Lansing, Mich., a corporation of Michigan
Application August 29, 1932, Serial No. 630,932
2 Claims. (Cl. 121—41)



1. An hydraulic unit comprising a cylinder, a piston in said cylinder, a hollow stem for said piston extending therethrough and on opposite sides thereof being provided with ports on opposite sides of said piston, a connection between one end of said stem and the actuated member, an extension of said cylinder on the opposite side of said piston forming an oil pressure chamber surrounding said hollow stem and in communication with the interior thereof, a piston pilot valve within said hollow stem, and actuating means for said pilot valve in a direction axially of said hollow stem comprising a pin projecting from said valve extending through a slot in said hollow stem, a rockable lever engaging said pin to actuate the same, a fluid tight chamber in which said rockable lever is located, a rock shaft for said rockable lever extending out from said fluid tight chamber, and a manually operable control member for rocking said rock shaft.

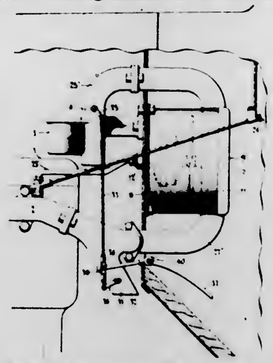
2,002,316
MACHINE SET COMPOSED OF TWO ENGINES AND A DRIVEN MACHINE
Fritz Gosslau, Berlin-Charlottenburg, Germany, assignor to Siemens & Halske Aktiengesellschaft, Siemensstadt, near Berlin, Germany, a corporation of Germany
Application September 29, 1931, Serial No. 565,805
In Germany October 3, 1930
3 Claims. (Cl. 123—2)



1. A machine set composed of a driven machine, and of two internal combustion engines of the radial type located at the two ends of the driven machine, and having their casings attached directly to the casing of the driven machine, the two ends of the shaft of the driven machine being coupled to the shafts of the internal combustion engines whereby the driven machine serves as a support for the internal combustion engines.

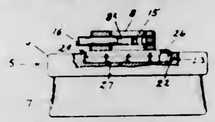
2,002,317
TAPER ROLLER LAPPING DEVICE AND METHOD
William E. Hoke, Baltimore, Md.
Application November 17, 1933, Serial No. 698,395
7 Claims. (Cl. 51—48)

1. A finishing device for taper rollers comprising in combination, a support, a work holder thereon for an annular series of rollers to be finished, an operating cylinder reciprocating and rotating while engaging and finishing said rollers, and a floating ring member freely movable on said support for retaining said rollers against said operative cylinder during the finishing operation.



2,002,318
VACUUM STABILIZER
Henry Hueber, Buffalo, and Erwin C. Horton, Hamburg, N. Y., assignors to Trico Products Corporation, Buffalo, N. Y.
Application September 26, 1929, Serial No. 395,443
10 Claims. (Cl. 60—60)

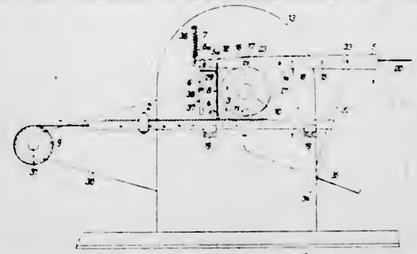
1. A suction operated pump for automobile accessories comprising a power drive, a cylinder, a piston operable in the cylinder, means detachably connecting the drive to the piston and adapted for being rendered inoperative upon excessive manifold suction, said pump having an inlet opening and an outlet opening, and a throttle valve carried by the piston and operable upon the breaking of said connection for restricting one of the openings of said pump.



2,002,319
MOTOR VEHICLE COOLING SYSTEM
Henry Hueber, Buffalo, N. Y., assignor to Trico Products Corporation, Buffalo, N. Y.
Application July 30, 1932, Serial No. 627,076
3 Claims. (Cl. 62—152)

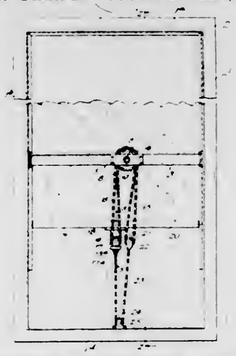
1. In a motor vehicle having a passenger compartment, a cooling system for the passenger compartment comprising, in combination with the intake manifold and the carburetor of the internal combustion engine of the motor vehicle power plant, a cooling member having an inlet connected to the carburetor and an outlet connected to the intake side of the engine, means for admitting air to the carburetor to partially form a combustible mixture, such mixture passing through said cooling member on its way to the

engine to effect a cooling of said cooling member by the evaporative action of the mixture as it passes through said member, means for admitting an additional quantity of air to such mixture between the cooling member and the intake manifold to complete the formation of the combustible mixture, and means for directing an air stream over the cooling member for discharge into the passenger compartment.



2,002,320
TOOTHBRUSH
Fred A. Jones, Los Angeles, Calif.
Application May 5, 1934, Serial No. 724,134
3 Claims. (Cl. 15—172)

1. In combination, a handle member having a bearing aperture or recess therein, a brush head having a cylindrical grooved portion which turnably engages said aperture or recess, and a spring pressed plunger carried by said handle to operatively engage said groove of said head and thereby releasably secure said head to said handle member, said groove having seats therein to cooperate with said plunger.

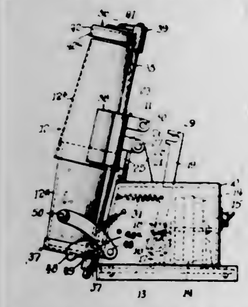


2,002,321
ROTARY DUPLICATOR
Leo Kluitmann, Dusseldorf, Germany
Application January 17, 1935, Serial No. 2,185
In Germany August 10, 1931
5 Claims. (Cl. 101—132)

1. In a rotary duplicator for printing on sheets a device for controlling the change of the form after a predetermined number of copies, comprising a rotatable printing drum, means for automatically changing the form, a movable rack, a rider adjustable on said rack, a stop lever operatively connected with the means for changing the form, and a control projection connected with said drum and being capable to rotate with the same, the said control projection being arranged so as to displace said rack step by step at each rotation of said drum until the rider

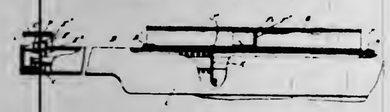
adjustable on the rack releases by means of said stop lever the means for automatically changing the form.

2,002,322
WINDOW REGULATOR MECHANISM
Waldo L. Kraemer, Brooklyn, N. Y., assignor to Kearfott Engineering Company, Inc., a corporation of New York
Application December 22, 1932, Serial No. 648,359
2 Claims. (Cl. 268—130)



1. In a window construction having a frame and a window-pane slidably mounted in the frame, a regulator for the window-pane comprising a waist rail mounted at substantially the longitudinal center of the frame, a pair of differential circular drive members rotatably mounted on the waist rail, an endles flexible motion-transmitting member engaging the drive members on the upper side thereof and forming two depending loops, an idler engaging the motion-transmitting member at each of said loops, another idler rotatably mounted on the lower cross member of the frame, a tension member connected between the idlers engaging the motion-transmitting member and engaging the idler mounted on the lower cross member, a connector for connecting the motion-transmitting member to the window-pane, and means for rotating the drive members to move the window-pane.

2,002,323
MIXING DEVICE
Arthur L. Kurz, Chicago, Ill., assignor to Kurz Company, Chicago, Ill., a copartnership comprised of N. W. Kurz, W. C. Kurz, and A. L. Kurz
Application April 14, 1934, Serial No. 720,604
10 Claims. (Cl. 259—75)



1. A device of the character described comprising, in combination, an elongated carriage, means

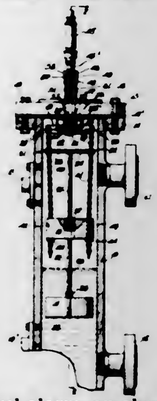
for clamping a shaker on said carriage, means supporting said carriage for limited oscillating movement back and forth about an axis extending transversely of said carriage for the purpose of

mixing materials in such a shaker, and for other movement to a substantially vertical position wherein such a shaker may be loaded thereon, and means for imparting such oscillating movement to said carriage.

2,002,324
GUN SIGHT
Charles F. Lefever, Plymouth, Mich., assignor to Daisy Manufacturing Company, Plymouth, Mich., a corporation of Michigan
Application September 12, 1932, Serial No. 632,856
2 Claims. (Cl. 33—47)

1. The combination with a gun barrel provided with a spring abutment therein, the end of said abutment extending upward through a slot in the barrel and fashioned to form a saddle, of a rear sight formed of a tube mounted above said barrel and provided with a centrally perforated disk arranged therein intermediate the ends thereof, said tube being secured to said barrel and resting upon the saddle at the upper end of said spring abutment.

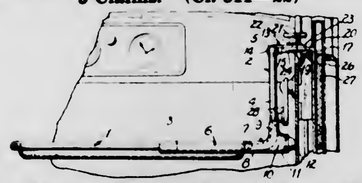
2,002,325
FINGER HAIR WAVE PINCER
Ragnvald G. Leland, New York, N. Y.
Application October 11, 1934, Serial No. 747,957
4 Claims. (Cl. 132—31)



1. Finger wave hair pincers comprising a pair of angle bars, each angle bar of the pair having a finger holding portion integrally extending therefrom.

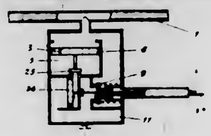
2,002,326
DOLL EYE MECHANISM
William Lorenz and Lazarus W. Pollack, New York, N. Y.; said Pollack assignor to said Lorenz
Application July 10, 1933, Serial No. 679,604
16 Claims. (Cl. 46—40)

16. An eye mechanism for dolls and the like, comprising a pair of hemi-spherical eyes developed from sheet material and each having opposed bridge pieces of the same stock slidably associated with each other, a gravity member attached upon one of said bridge pieces, and means for horizontally pivotally mounting said eyes in a doll's head, said bridge pieces being in face contact with each other, said gravity member including a vertical strip in contact with the free side of one of said bridge pieces, and lugs on the other of said bridge pieces engageable with the edges of said bridge piece and engaging through openings in said strip for mounting the eyes upon the gravity member and simultaneously holding the bridge pieces in slidable association with each other, said lugs being arranged upon the edge of the bridge piece.



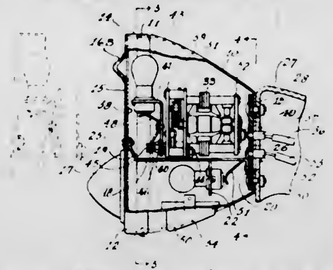
2,002,327
ALARM WATER COLUMN
Frank W. Miller, Philadelphia, Pa., assignor to Yarnall-Waring Company, Philadelphia, Pa., a corporation of Pennsylvania
Application August 21, 1933, Serial No. 686,108
1 Claim. (Cl. 137—102)

In a liquid level alarm, an alarm body having a cap and having spaced integral lugs extending below the cap, a knife edge support held by the lugs and extending between them, a pair of balance levers centrally pivoted side by side on the knife edge support, high and low weights spaced respectively above and below the intended normal level of liquid within the body depending from opposite arms of the balance levers, a valve operating axially vertically above the knife edge axis, indicating means controlled by the valve and a mechanical connection between the valve and the balance levers for operating the valve, said mechanical connection including a yoke pivoting to the respective balance levers on opposite sides thereof at points thereof equidistant form the



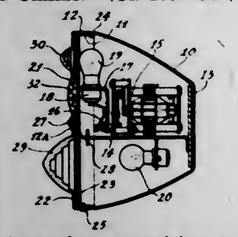
knife edge, the weights, yoke and valve being dimensioned so that, with the high weight above and the low weight below the liquid level within the body, the greater downward force of the high weight as compared to that of the low weight will be adapted to hold the valve closed, while, with partial emersion or immersion respectively of the low or high weight, will be adapted to respectively so increase the opposing downward pull of the low weight or diminish the downward pull of the high weight as to angularly move the levers to open the valve.

2,002,328
SERVING TRAY
Orville Mitchell, Dallas, Tex., assignor to Inside Tray Company, Dallas, Tex., a corporation of Texas
Application March 10, 1934, Serial No. 714,956
3 Claims. (Cl. 311—22)



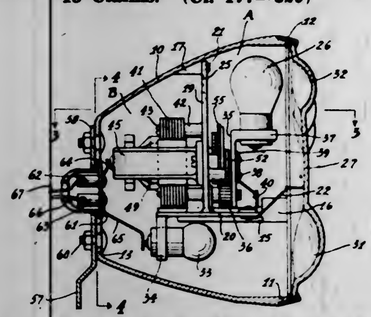
1. A serving tray adapted to be supported from the window sill of an automobile comprising, in combination, a tray, an integral supporting structure therefor consisting of a one-piece metal bar having parallel portions extending along opposite sides of the tray, side portions extending at right angles to said parallel portions and converging upwardly therefrom and a horizontal portion connecting the upper ends of said side portions, flanges on the sides of the tray inclosing and securing said parallel portions to the tray, metal clips secured to said supporting structure at the junctures of said side and parallel portions and projecting rearwardly therefrom, a bumper mounted on the projecting portion of each of said clips for resting against the inside of the door below its sill, and a suspension member secured on the upper end of said supporting structure and including a hook for engaging over the sill of the window, said hook and supporting structure being relatively adjustable.

2,002,329
PRESSURE MEDIUM CONDUIT
Ernst Möller, Karlshorst, Berlin, Germany, assignor to Knorr-Bremse Aktiengesellschaft, Berlin, Germany, a corporation of Germany
Application October 12, 1932, Serial No. 637,378
In Germany October 15, 1931
3 Claims. (Cl. 303—82)



1. In connection with a pressure medium conduit and particularly a compressed air brake pipe extending the length of a railway car, a pair of valve housings connected to said brake pipe and spaced apart so that one housing is disposed at each end of said car, a control piston movably disposed in one of said housings and having a draw wire secured thereto connecting said piston with an outlet valve in a valve housing fixedly associated with the other housing at the other end of the car, a second control piston movably disposed in said other housing also having a draw wire secured thereto and connecting said second piston to a second outlet valve in a valve housing which is fixedly associated with the first one of said housings, means resiliently tending to close said outlet valves, each of which outlet valves when open, admits air from said brake pipe into a chamber provided with means for releasing air therefrom at a predetermined rate of flow, a pressure medium storage chamber formed in each of said first pair of housings, a pair of additional valves individually disposed in said first pair of housings and interposed between said control pistons and the storage chambers in said pair of housings so as to individually control transmission of air from said storage chambers to the control pistons; and a pressure responsive piston both interposed between the storage chamber in each of said pair of housings and the supply thereto of pressure medium from said brake pipe and effective to open the one of said additional valves respectively associated with and controlling transmission of air from said latter storage chamber in each case.

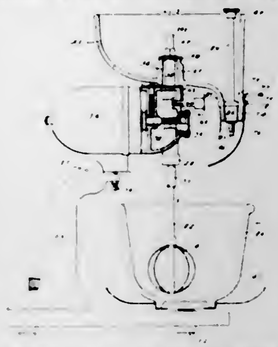
2,002,330
WIGWAG SIGNAL
William E. Signor, Gettysburg, Pa., assignor, by mesne assignments, to Seco Manufacturing Company, Gettysburg, Pa., a corporation of Pennsylvania
Application December 9, 1932, Serial No. 646,502
12 Claims. (Cl. 177—329)



1. A signal assembly comprising a tubular casing wall of which one end region is provided with an inturned rear flange and the opposite front casing end comprises an open mouth region, a bridging member removably mounted to interiorly overlie said flange, a cover for the casing mouth and which cover is provided with a course of transparencies in arcuate formation, a platelike carrier member mounted transversely of the inturned flange and secured to the bridging member, an arm pivot supported by said carrier member in approximate coaxial relation to the center of curvature of the aforesaid arcuate formation, a rocker arm mounted to turn about said pivot, a lamp bulb carried by the rocker arm to swing along the course of said transparencies into successive registration therewith, motive means supported by the carrier member in a forwardly spaced relation to the inturned flange and which means includes a movable actuating element, and a transmission gear also supported by the carrier member and which gear operatively interconnects said rocker arm with the movable actuating element, the aforesaid motive means, transmission gear and rocker arm together with the bridging member and its attached carrier member being assembled as a self-contained operative unit.

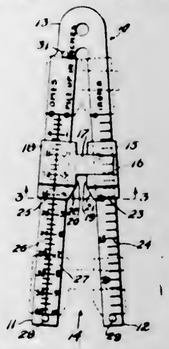
2,002,331
SIGNAL LENS MEANS
William E. Signor, Gettysburg, Pa., assignor, by mesne assignments, to Seco Manufacturing Company, Gettysburg, Pa., a corporation of Pennsylvania
Application August 10, 1933, Serial No. 684,488
9 Claims. (Cl. 177—329)

4. A signal member comprising a plurality of flashable lenses arranged abreast with their respective perimeters set apart and having interposed opaque spacings therebetween, each such lens being given a hollow substantially conical cross-sectional profile of which one lens surface is prismatically corrugated in stepped formation, movable flash lamp means, and means moving said lamp means into successive cooperative registration with the aforesaid lenses and their respective prismatic corrugations to produce a combined flash and simulated light whirling effect.



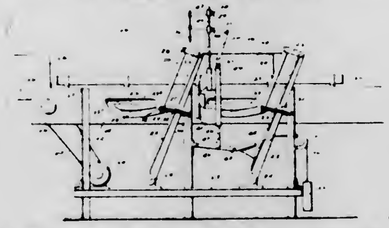
2,002,332
SIGNAL STRUCTURE
William E. Signor, Gettysburg, Pa., assignor, by mesne assignments, to Seco Manufacturing Company, Gettysburg, Pa., a corporation of Pennsylvania
Application August 10, 1933, Serial No. 684,489
15 Claims. (Cl. 177—329)

15. An article of manufacture comprising a die-cast motor mounting member including a foot flange having an apertured wall erected upon one side face of said flange and which flange has a lamp socket depending from its opposite side face, a resilient extension plate carried by the foot flange, and a dead axis entered into the wall aperture and extending axially lengthwise of the aforesaid one side face.



2,002,333
PORTABLE HOUSEHOLD MIXER AND JUICE EXTRACTOR
Hermann M. Alfred Strauss, Western Springs, Ill., assignor to Chicago Flexible Shaft Company, Chicago, Ill., a corporation of Illinois
Application September 8, 1931, Serial No. 561,578
9 Claims. (Cl. 259—84)

1. A household mixer and juice extractor having a motor and reduction gearing assembly, a vertical drive spindle permanently mounted in said assembly and driven by said reduction gearing, a beater shaft coaxial beneath and an extractor shaft coaxial above said drive spindle, each of said shafts having detachable engagement with said drive spindle, a juice extractor bowl having a central upstanding flange on its base provided with a vertical opening through

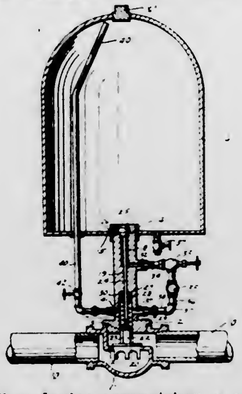


which the extractor cone shaft extends, a plate interposed between the extractor bowl and said assembly attached to the extractor bowl and serving to locate the extractor bowl with respect to said assembly, and means providing detachable engagement between said plate and said assembly serving to prevent accidental displacement of the extractor bowl from its operative position.

2,002,334
CALIPERING DEVICE
Alfred H. Avery, Malden, Mass., assignor to North American Holding Corporation, Syracuse, N. Y., a corporation of New York
Application January 11, 1934, Serial No. 706,182
4 Claims. (Cl. 33—143)

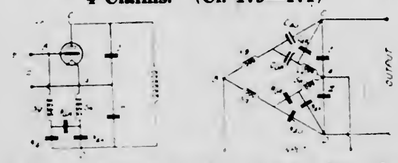
1. A calipering device for measuring the thickness grades of blanks used in the manufacture of shoes comprising a body member having two rigidly connected legs disposed side by side and extending divergently from their connected ends to receive between them a blank inserted edgewise, a measuring gauge including two jaw members, one mounted to slide on one of the legs and the other mounted to slide on the other leg, said jaw members being connected to slide in unison and having parallel blank engaging surfaces adapted to engage against opposite marginal surfaces of the blanks when the jaw members approach each other as they are slid inwardly on the body member toward the connected ends of the legs, and a transverse abutment on the gauge immediately adjacent the inner ends of the blank engaging surfaces of the jaw members to confine the measuring action of the blank engaging surfaces to the margin of the blank.

2,002,335
STENCILING OR DECORATING APPARATUS
Randolph H. Barnard, Toledo, Ohio, assignor to Owens-Illinois Glass Company, a corporation of Ohio
Application December 29, 1933, Serial No. 704,435
12 Claims. (Cl. 101—124)



1. A marking device, means for carrying articles in succession through a marking zone, means carried on said marking device in the path of said articles and providing with each article, a driving connection from said carrying means through the article to the marking device and causing the marking device to travel with each article through said zone, means for causing the marking device to mark each article, and means for returning the marking device.

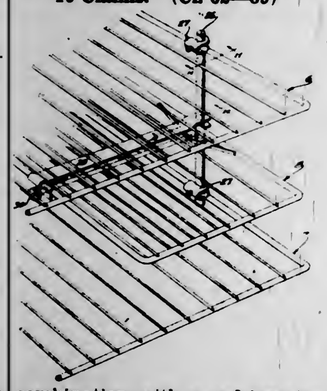
2,002,336
WINDSHIELD CLEANER
Barton A. Bean, Jr., Williamsville, N. Y., assignor to Trico Products Corporation, Buffalo, N. Y.
Application October 17, 1929, Serial No. 400,342
12 Claims. (Cl. 15—252)



1. A windshield cleaner comprising an endless actuator, spaced supports about which the actuator operates, means for reciprocating the actuator, an exterior wiper, an interior wiper, said wipers being disposed for acting respectively on the outer and inner surfaces of a windshield glass, means securing one of said wipers to the actuator for being moved thereby back and forth on one side of the windshield glass, and means detachably coupling the companion wiper to the actuator for being moved by the latter back and forth on the opposite side of the windshield glass, said coupling means comprising a position determining member fixed to said actuator at a point spaced from said one of said wipers and movable back and forth with the latter, and a coacting member connected to said companion wiper and automatically engageable with said position determining member in definitely spaced relation to said secured wiper, whereby said companion wiper will always be coupled to the actuator definitely spaced from said secured wiper to insure said wipers cooperating to clean predetermined surface portions of the windshield glass.

2,002,337
FEEDING DEVICE
Stephen Bullum, Overton, Tex., assignor of one-half to Jon R. Long, Fort Worth, Tex., and one-half to Wallace Davis, Houston, Tex.
Application March 27, 1933, Serial No. 662,992
9 Claims. (Cl. 137—165)

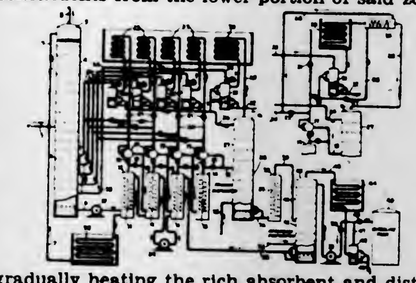
1. A feeding device comprising, a container for a liquid to be fed, a valve case, a valve in said case, a liquid feeding conductor extending from the container to the valve case, a second valve for controlling the flow of liquid from the container to the feeding conductor connected with the first valve and operated thereby, and a stuffing box between the valves and through which the connection between said valves passes to prevent the liquid or the fluid from by-passing the liquid feeding conductor.



2,002,338
BRIDGE ARRANGEMENT
Werner Buschbeck, Berlin, Germany, assignor to Telefunken Gesellschaft für Drahtlose Telegraphie m. b. H., Berlin, Germany, a corporation of Germany
Application October 31, 1933, Serial No. 696,067
In Germany August 20, 1932
4 Claims. (Cl. 179—171)

1. A neutralizing circuit of bridge form for an electron discharge device having an anode, cathode, and grid, and a condenser in the output circuit of said devices connected between said anode and cathode, comprising a first inductance of a value substantially equal to the self-inductance of the lead in the device connected to the grid, a second inductance of a value equal to the self-inductance of the lead in the device which is connected to the cathode, a direct connection from one terminal of said first inductance to said grid lead, and a direct connection from one terminal of said second inductance to said cathode, the other terminals of said two inductances being connected together through a condenser whose value is equal to the value of the internal capacity between said grid and cathode electrodes, and two serially connected condensers arranged in parallel with respect to said first condenser,

one of said two serially arranged condensers having a value substantially equal to the value of the internal capacity between said anode and grid, and the other of said two condensers having a value substantially equal to the internal capacity between said anode and cathode, and a connection between the junction point of said two condensers and said output circuit.



2,002,339
REFRIGERATOR STRUCTURE
Lloyd G. Copeman, Flint, Mich.
Application December 23, 1933, Serial No. 703,744
10 Claims. (Cl. 62—89)

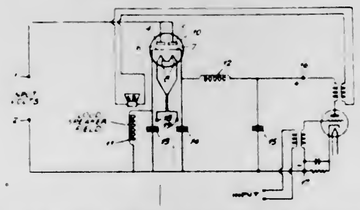
1. In combination with a refrigerator of the type having a food compartment, a perforate fixedly mounted shelf extending across the food compartment and spaced from the bottom of the main food compartment to form an auxiliary food compartment to receive articles of fairly large size, a cooling unit positioned in the food compartment for setting up a positive circulation of air in the compartment and through said shelf, a vertically adjustable perforate half shelf positioned beneath said fixedly positioned shelf, said half shelf being substantially flat and including micro-adjustment means for moving said half shelf from a point where said half shelf substantially merges with said fixed shelf to a point where said shelf substantially merges with the horizontal bottom of the food compartment whereby said entire space below the fixed shelf may be filled with large articles all the way across or said half shelf may be selectively adjusted to any position above smaller articles supported by the bottom of the food compartment and below the half shelf and thus permit the storing of food between the lowered half shelf and the fixedly mounted shelf to thereby permit filling at all times the entire vertical space between the fixedly positioned shelf, said half shelf increasing the mass of hold-over material within the food compartment without taking up any usable space and so connected with a wall of the food compartment as to accelerate the transfer of heat from foodstuffs placed thereon by heat conduction through the shelf and food compartment walls.

2,002,340
RECOVERY OF STABLE GASOLINE FROM NATURAL GAS
Edwin R. Cox, Los Angeles, Calif., assignor to The Texas Company, New York, N. Y., a corporation of Delaware
Application September 30, 1930, Serial No. 485,361
10 Claims. (Cl. 196—8)

1. In the recovery of gasoline from natural gas, the process that comprises charging a liquid absorbent downwardly through a zone of absorption, introducing a rich gas into an intermediate portion of said zone, withdrawing a substantially dry gas from the upper portion and rich absorbent containing the desired gasoline and other lighter constituents from the lower portion of said zone,

gradually heating the rich absorbent and distilling therefrom a plurality of fractions of different volatility containing substantially all of said other constituents and returning the latter, at different elevations, to the lower portion of said absorption zone and finally recovering a stable gasoline from the rich absorbent.

2,002,341
CORN CURE PACKAGE
Bertie Ellis, New York, N. Y.
Application April 3, 1934, Serial No. 718,751
3 Claims. (Cl. 206—47)



1. A corn cure package, comprising a bottle for liquid corn cure for initial application on corns, calluses, warts and the like, mole skin adhesive pads located around the sides of said bottle for subsequent application to the areas treated to destroy the root of the corn, etc., by protecting the tissues or underskin, means for securing said pads detachably in position to arrange for the use of the liquid of the bottle without disturbing the pads, and a "cellophane" or other similar wrapping around the bottle and holding the parts as a unit, said means for securing the pads comprising a sheet strip bent and secured to form sides, top and bottom for receiving and holding the bottle, but open at the front and back and front and rear portions partially extending across the open front and rear sides.

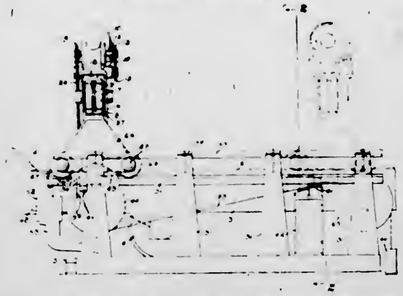
2,002,342
PROCESS FOR THE PRODUCTION OF CAUSTIC POTASH AND OXALIC ACID
Max Enderli, Oestrich, Germany, assignor to firm Rudolph Koepp & Co. Chemische Fabrik A. G., Oestrich, Germany, a corporation of Germany
No Drawing. Application July 5, 1933, Serial No. 679,080. In Germany July 9, 1932
2 Claims. (Cl. 260—115)

1. A process for the production of caustic potash and oxalic acid comprising the steps of producing potassium formate from potassium sulphate and an alkaline earth metal formate, converting the potassium formate by heating into potassium oxalate, converting the potassium oxalate with an alkaline earth metal hydroxide into potassium hydroxide and the corresponding alkaline earth metal oxalate, separating the resulting caustic potash solution from the alkaline earth metal oxalate and working up the alkaline earth metal oxalate with sulphuric acid into oxalic acid.

2,002,343
POWER CIRCUITS
Francis H. Engel, New York, N. Y., assignor to Radio Corporation of America, a corporation of Delaware
Application April 12, 1933, Serial No. 665,641
3 Claims. (Cl. 250—27)

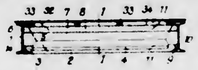
1. In a power supply circuit for energizing amplifying apparatus from either alternating current or direct current power mains, said amplifying apparatus including at least one space discharge device having an anode circuit and a reproducer provided with a field winding, an electronic tube having two anodes and two indirectly heated cathodes, a heating circuit for said cathodes, a connection from one terminal of the power mains to both said anodes, a connection from the other terminal of the mains to one of the rectifier cathodes, said last named connection including said field winding, a filter condenser shunted across said field winding, a connection from the other cathode to the last named terminal of the power mains including the anode circuit of the space discharge device and a filter condenser shunted across said anode circuit.

2,002,344
COMMUNICATION CABLE WITH REDUCED MAGNETIC COUPLING
Ernst Fischer, Berlin-Lichterfelde/West, and Hans Gantzckow, Berlin-Weissensee, Germany, assignors to Siemens & Halske, Aktiengesellschaft, Siemensstadt, near Berlin, Germany, a corporation of Germany
Application December 8, 1932, Serial No. 646,282
In Germany December 12, 1931
6 Claims. (Cl. 179—79)



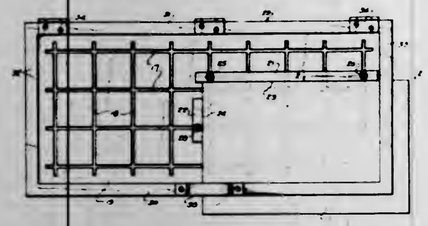
1. A cross-talk proof communication cable having twin cores, at least one of said twin cores forming only one single communication channel of the cable installation, and having each of its component core elements divided into a plurality of divisional conductors and twisted with the divisional conductors of the component core element to form a magnetically closed conductor system for preventing magnetic lines of force from straying from one communication channel into an adjacent channel.

2,002,345
PROCESS OF MAKING CHEESE
Carl Frehner, Evansville, Wis.
No Drawing. Application May 4, 1933, Serial No. 669,372
7 Claims. (Cl. 99—11)



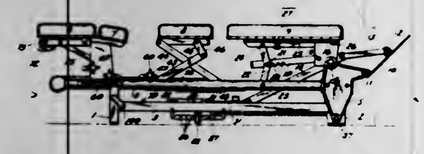
1. The process of making loaf-type cheese, which includes the use of comminuted natural cheese, heating said cheese, adding to said cheese a predetermined quantity of solid calcium sulphite, by weight up to approximately seventy-five one hundredths of one per centum of the weight of said cheese, mixing said calcium sulphite with said cheese, and thereafter putting said mixture into containers.

2,002,346
CUT-OFF MECHANISM FOR SHEET MATERIAL
David H. Goodwillie and Emmett L. Walters, Toledo, Ohio, assignors, by mesne assignments, to Libbey-Owens-Ford Glass Company, Toledo, Ohio, a corporation of Ohio
Application May 12, 1928, Serial No. 277,115
14 Claims. (Cl. 49—14)



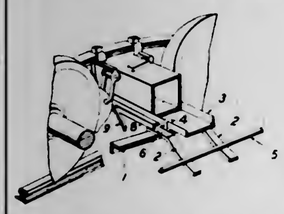
1. In a device of the character described, a series of traveling tables for supporting material to be cut, the adjacent ends of said tables being spaced, a cutter carriage, means for periodically moving the carriage forwardly in synchronism with the tables, a rotary transverse cutter supported by said carriage, and means for moving the carriage transversely across the material during its synchronous travel, said rotary cutter including a blade traveling in a plane substantially midway between the adjacent table ends and a pair of blades coaxial with the first blade but having a smaller diameter, said last mentioned blades, during their transverse travel, being in shearing relation to the adjacent table ends.

2,002,347
STRUCTURE FOR BUILDINGS
Heinrich Griesel, Berlin, Germany
Application September 30, 1931, Serial No. 566,023
In Germany October 3, 1930
24 Claims. (Cl. 72—66)



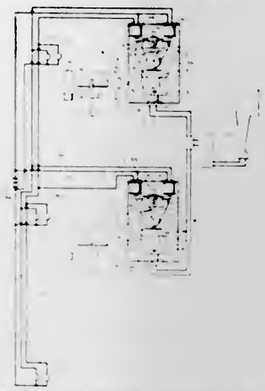
4. Means for producing a flexible and stress-proof connection of a lateral girder with a ceiling plate comprising flexible iron mountings which are inserted by one end into the ceiling plate and by the other end into the lateral girders, and thus spacedly interconnect the ceiling plate and the lateral girders.

2,002,348
CUTTING TABLE
Raoul J. Louviaux, Toledo, Ohio, assignor to Libbey-Owens-Ford Glass Company, Toledo, Ohio, a corporation of Ohio
Application November 7, 1931, Serial No. 573,544
8 Claims. (Cl. 33—80)



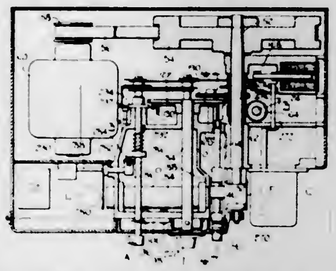
3. A cutting table for sheet material, including a substantially horizontal top upon which the sheet to be cut is adapted to rest, means secured to said top and engageable by said sheet to effect proper positioning of the latter, and a frame adapted to rest upon the sheet and acting as a guide for the cutting tool; said frame being composed of a plurality of members adjustable relative to one another and independently of said positioning means to vary the contour thereof.

2,002,349
ADJUSTABLE TABLE
Edward F. Lundeen, Rock Island, Ill.
Application June 22, 1934, Serial No. 731,906
18 Claims. (Cl. 128—72)



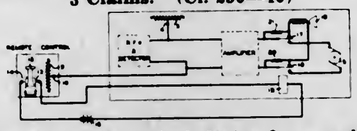
13. In a table of the character indicated, a cushion supporting frame, a cushion support rising therefrom and having a cushion pivotally connected thereto, a rack and pinion mechanism connecting said cushion and said support for adjusting the angular relation of the cushion with respect to the frame.

2,002,350
RAILWAY BRAKE BEAM AND BOTTOM ROD EMERGENCY SUPPORT
Errell C. Lunsford, Shreveport, La.
Application April 10, 1933, Serial No. 665,399
5 Claims. (Cl. 188—210)



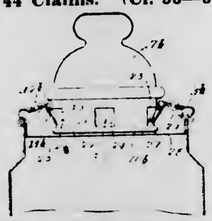
1. A structure of the character described having angle bars, each having two holes and two slots therein, two tieing straps adapted to be bolted on said angle bars in a manner to prevent said J bolts from sliding in the slots when attached to the spring plank of trucks of railway equipment.

2,002,351
SOUND FILM APPARATUS
Freeman H. Owens, New York, N. Y.
Application June 24, 1932, Serial No. 619,065
20 Claims. (Cl. 179—100.3)



1. Sound film apparatus comprising a photo-electric cell, an illumination system therefor, means to guide a film between the illumination system and the photo-electric cell, a perfectly opaque shutter so mounted as to be movable gradually into the path of illumination, and means to adjust and to hold the same fixedly in position of adjustment in order to provide optical means for determining the normal volume of the sound produced by said apparatus, and thereby to obviate the disadvantages attendant upon volume control by changes in the electrical circuits.

2,002,352
SOUND FILM APPARATUS
Freeman H. Owens, New York, N. Y.
Application March 21, 1933, Serial No. 661,901
41 Claims. (Cl. 179—100.3)



1. Sound film apparatus comprising a lamp, an optical system including a first lens system, a mechanical slit, and a second lens system, a light-sensitive cell, means to guide a film between the second lens system and the cell, and means to move the second lens system alone transversely of the axis of the optical system in order to shift the light beam transversely of the optical system to direct it upon a sound track on the film.

2,002,353
REMOTE CONTROL DEVICE
Louis W. Reinken, Brooklyn, N. Y., assignor, by mesne assignments, to Federal Telegraph Company, Newark, N. J., a corporation of California
Application February 27, 1932, Serial No. 595,560
3 Claims. (Cl. 250—40)

1. In a remote control device for a radio receiver, the combination of a radio receiver having an amplifying stage influenced by incoming signals, an energy supply circuit, an electrically balanced circuit by which said energy supply circuit is connected to the input of said amplifying stage, said electrically balanced circuit including a balancing resistance as a part thereof and when balanced preventing the supply of energy to said amplifying stage input and when unbalanced causing energy to be supplied thereto, means remote from said radio receiver for unbalancing said electrically balanced circuit, a motor having its field winding connected to said supply circuit and its armature connected to the output of said amplifying stage, a tuning element for the radio receiver connected to the armature shaft of the motor so as to be operated thereby, and a contact arm for said balancing resistance connected to the armature shaft of said motor and moved thereby over said balancing resistance until said connecting circuit is restored to balanced condition.

2,002,354
TOP FOR PERCOLATORS AND THE LIKE
Emiel P. Seghers, Chicago, Ill.
Application July 12, 1928, Serial No. 292,278
44 Claims. (Cl. 53—3)

4. A percolator cover comprising a lid having an opening therein, and a plurality of spaced resilient perforated clips adapted to engage a glass top having a lateral projection forming a retaining shoulder, when said top is in said opening, said clips having portions projecting toward the center of said opening in position to have their lower ends engage said projection on said top.

20. In a percolator cover, the combination with a lid having an opening therein, of an annular ring arranged within said opening and having a portion adapted to receive the edge of said lid surrounding said opening to hold said lid and ring in fixed relation to each other, a glass top having a flange fitting within said ring, said flange having a recess therein, and means on said ring arranged within said recess.

29. A percolator top having an apron and a bead thereabove for limiting movement of said apron into an opening in a percolator cover, said apron being provided with a circular abutment spaced from said limiting means, thus forming an annular depression between the limiting means and said abutment surface, a separate ring on said apron adapted to fit in said annular depression and also contacting the limiting bead, said ring having fingers thereon adapted to hold the top and cover together.

37. In combination, a coffee pot lid having a central opening, a percolator top having a circular bead and a depending apron provided with an enlargement and a separate continuous resilient ring encircling the apron above said enlargement for retaining the lid and top in locked relation.

2,002,355
PERCOLATOR TOP
Emiel P. Seghers, Chicago, Ill.
Application December 8, 1930, Serial No. 500,712
44 Claims. (Cl. 53—3)

1. In a percolator cover, the combination with a lid having an opening therein, of a glass top for said lid having a portion adapted to be arranged within said opening, a projection on said top for engaging the edge of said opening to resist withdrawal of said top from said lid, a second projection on said top spaced from said first projection in a direction away from the edge of said opening, and a spring co-operating with said lid and said top and resiliently engaging said second projection to hold said top firmly within said opening and thereby prevent rattling thereof while permitting unequal expansion and contraction of said top and lid.

21. A glass top for percolators comprising a bead on said top for limiting the movement of said top into the opening provided in the lid of a percolator, and a flange adapted to be arranged within said opening, of a peripheral projection on said flange and spaced from said bead, and a conical projection having the apex thereof extending toward the spherical projection and substantially in alignment therewith in a direction parallel with the axis of said top.

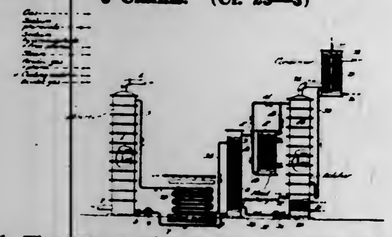
31. A container lid having an opening therein, a glass top having a portion fitting into said opening, means for limiting the movement of said top into said opening, a projection on said top portion spaced from said limiting means and adjacent said lid, a second projection of wedge shape on said portion with the face thereof opposed to said limiting means, and resilient means co-acting with said face and said lid to hold said top connected to said lid.

40. A container lid having an opening therein, a glass top having an apron portion fitting into said opening, means for limiting the movement of said apron into said opening, two spaced projections on said apron one above the other in a direction away from the said limiting means, and a ring having spring fingers contacting only the lower one of said projections.

2,002,356
VEHICLE
William M. Sheehan, Merion, Pa., assignor to General Steel Castings Corporation, Granite City, Ill., a corporation of Delaware
Application July 16, 1932, Serial No. 622,927
28 Claims. (Cl. 105—364)

1. A vehicle floor forming web having a portion recessed upwardly to provide a housing for

the upper part of a brake hanger and its supporting element, said housing including end walls adjacent to and extending alongside of said parts.

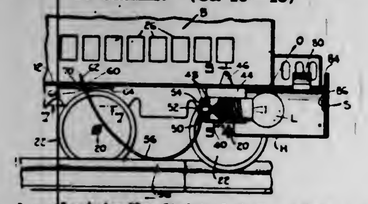


2,002,357

PROCESS FOR THE PURIFICATION AND SEPARATION OF GASEOUS MIXTURES

Mark Shield, Mount Lebanon Township, Allegheny County, Pa., assignor to The Koppers Company of Delaware, a corporation of Delaware

Application October 31, 1931, Serial No. 572,271
6 Claims. (Cl. 23—3)



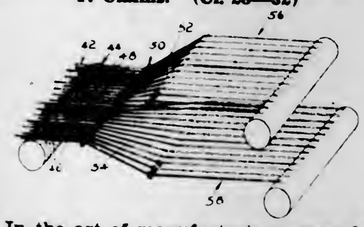
1. The process of removing an acidic gas such as hydrogen sulphide, carbon dioxide or the like from a gaseous mixture containing the same, which comprises recirculating an absorbent liquid comprising a solution of an alkali-forming metal and a phenol in proportions to form an immiscible phase thereof in the absorbent liquid at the absorption temperature in the absorption stage through a cycle comprising an absorption stage located in the path of the gas and thereby removing acidic gas aforesaid therefrom and an actification stage in which it is caused to pass in counter-current to a flow of steam and thereby be freed from the absorbed acidic gas and be regenerated for further absorption as aforesaid, cooling vapors issuing from said actification stage to cause the condensation of phenol therefrom, and transferring the thereby condensed phenol to said actification stage at a point in said stage intermediate the points of introduction thereto of the absorbent liquid and steam, respectively which is closer to the point of introduction of steam than to the point of introduction of the liquid and thereby maintaining an additional recirculating load of phenol into and out of the recirculating absorbent liquid in the actification stage.

2,002,358

ELECTRICALLY LIGHTED TOY

Anthony N. Smith, Girard, Pa., assignor to The Girard Model Works, Inc., Girard, Pa., a corporation of Pennsylvania

Application August 18, 1933, Serial No. 685,699
17 Claims. (Cl. 46—48)



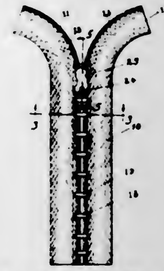
17. An electrically lighted toy railway coach comprising an enclosed small size toy body having a top, windowed side walls, and a bottom, a flanged wheel and axle assembly therebeneath, and lighting means for illuminating said toy body including a relatively small lamp housing detachably mounted beneath the bottom of the toy body, a lamp socket supporting a lamp in said housing, whereby said lamp is not directly visible when looking through said windows in normal manner, said socket being mounted and grounded on the toy body, and means connecting the insulated center contact of the lamp socket to a source of energization, the bottom of said toy body being cut away above said housing to permit the light from the lamp to shine upwardly into the toy body.

2,002,359

PRINTED FABRIC

Albert W. Baylis, Scarsdale, N. Y.

Application April 25, 1933, Serial No. 667,772
17 Claims. (Cl. 28—32)



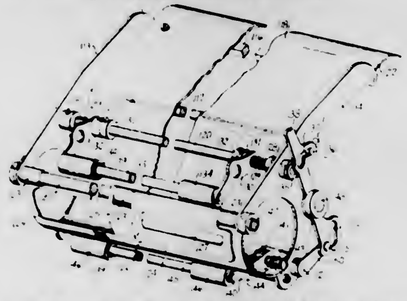
1. In the art of manufacturing woven fabrics having predetermined designs depicted thereon, in which the design, at least in part, is produced by a process of printing, which comprises: arranging a plurality of threads to produce a warp for the weaving of a fabric, printing on the warp so formed a predetermined design, and then separating the printed warp threads into a plurality of individual warps no one of which includes the original warp threads in the original relationship to each other, but the threads of each such individual warp maintaining the same succession as in the original relationship.

2,002,360

FASTENING AND BUTTONING MEANS FOR GARMENTS, AND THE LIKE

Arthur Berkner, Passaic, N. J.

Application June 24, 1933, Serial No. 677,363
2 Claims. (Cl. 24—207)



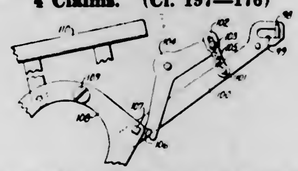
1. A device of the class described, comprising, in combination, a pair of flap-members to be fastened together, seams upon the edges of the latter, a strip of pliable material arranged beneath the said flap-members and having its lower end integrally connected thereto, fasteners secured to the said strip at intervals, each of the said fasteners having an integral body portion comprising a bottom piece and a downwardly curved top portion, a wall securing said bottom piece and top portion together, and having both sides formed with concave portions adapted to receive said seams therein, the said bottom piece being made with grooves and apertures therein to receive sew-on-threads, whereby to connect the fasteners to said strip of pliable material, the sew-on-threads passing through said apertures formed at the bottom of the grooves arranged in said fasteners, and a manipulating key mounted upon the other end of said strip, said key being formed with a body and a tongue pivotally secured thereto for gripping the flap members so as to arrest the movement of the strip, relative to the flap-members.

2,002,361

CARRIAGE FOR ACCOUNTING MACHINES

Raymond A. Christian, Dayton, Ohio, assignor to The National Cash Register Company, Dayton, Ohio, a corporation of Maryland

Original application January 2, 1932, Serial No. 584,438. Divided and this application October 28, 1933, Serial No. 695,661
4 Claims. (Cl. 197—127)



1. In a machine of the class described having printing means and a traveling carriage carrying a platen roll; the combination of a slip chute adapted to laterally locate slips having a plurality of vertical columns in proper relation to the printing means; means on the slip chute for concealing the printing in a particular column of the slip; and means for causing only the printing line to be exposed to view in other particular columns of the slip.

2,002,362

TABULATING MECHANISM FOR ACCOUNTING MACHINES

Raymond A. Christian, Dayton, Ohio, assignor to The National Cash Register Company, Dayton, Ohio, a corporation of Maryland

Original application February 2, 1932, Serial No. 584,438. Divided and this application October 28, 1933, Serial No. 695,662
4 Claims. (Cl. 197—176)

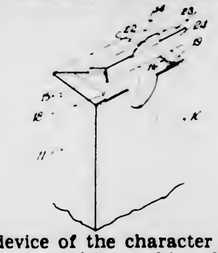
1. In a machine of the class described, having a traveling carriage and means for releasing the machine for operation; the combination of tabulating means for the traveling carriage; means for disabling the tabulating means; and means operated by the tabulating means when disabled for locking the machine releasing means.

2,002,363

DISPENSING CONTAINER AND METHOD OF MAKING THE SAME

Adrian O. Daller, Dennis Port, Mass., assignor to Daller Carton Company, Inc., New York, N. Y., a corporation of New York

Application May 6, 1933, Serial No. 669,664
7 Claims. (Cl. 229—17)



1. In a device of the character described, the combination comprising a wall having a plurality of layers and areas in registry in said layers adapted to be independently removed, a cover movably overlying said areas, and means adapted to hold said cover in closed position after said cover has once been movably opened.

2,002,364

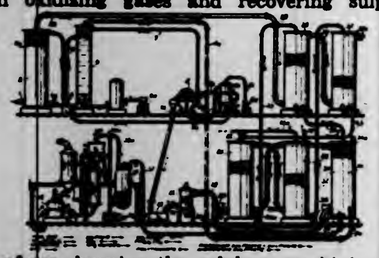
CONTAINER

Adrian O. Daller, Dennis Port, Mass., assignor to Daller Carton Co., Inc., New York, N. Y., a corporation of New York

Application March 16, 1934, Serial No. 715,866
11 Claims. (Cl. 229—51)

1. In a device of the character described, the combination comprising a hinged cover section and a second section integrally extending from and severable from a third section and secured in part to said cover section and having a free portion lying parallel with and adjacent said cover and adapted to be bent back on itself to serve as a tucking-in flap against said third section.

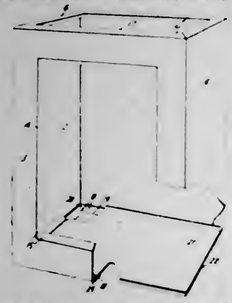
2,002,365



PROCESS FOR REMOVING HYDROGEN SULPHIDE FROM GASES CONTAINING AMMONIA AND HYDROGEN SULPHIDE

Constanz Eymann, Essen-Ruhr, Germany, assignor, by mesne assignments, to The Koppers Company of Delaware, Pittsburgh, Pa., a corporation of Delaware

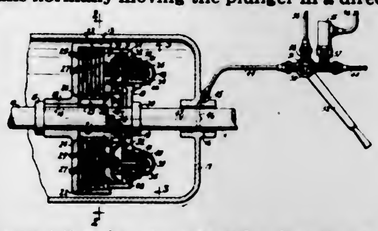
Application February 23, 1932, Serial No. 594,430
In Germany February 23, 1931
12 Claims. (Cl. 23—225)



1. The process for removing hydrogen sulphide from coal distillation gases or the like with recovery of useful substances, comprising treating the gas to be purified in one stage with a solution of alkali sulphur arsenic compounds capable of absorbing hydrogen sulphide and thereby removing such quantity of hydrogen sulphide from the gas as to leave therein substantially just that

quantity of hydrogen sulphide required for subsequent substantially complete hydrogen sulphide purification by the reaction between four molecules ammonium bisulphite with each molecule of hydrogen sulphide with the production of a residual liquor that is primarily polythionate, regenerating the used washing liquid by treating with oxidising gases and recovering sulphur

therefrom, burning the sulphur, combining the sulphur dioxide thus formed with ammonia from the gas to form a solution of ammonium sulphite and ammonium bisulphite, and treating the gas to be purified in another stage with the said ammonium sulphite ammonium bisulphite solution so as to remove the residual hydrogen sulphide with discharge of the solution as a principally polythionate liquor.

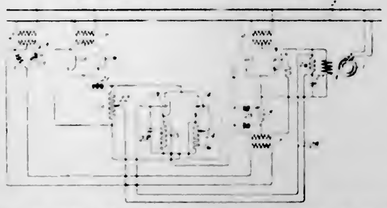


2,002,366
METALLIC CABINET STRUCTURE
Hiroshi Ete, Tokyo, Japan, assignor to General Electric Company, a corporation of New York
Application June 14, 1933, Serial No. 675,682
In Japan November 18, 1932
6 Claims. (Cl. 220—81)

1. A cabinet structure including a plurality of sheet metal walls, one of said walls having an opening therein, a metal plate welded to said one wall within said structure and closing the opening in said wall, said plate having a peripheral flange spaced from the others of said walls, and means including resilient material between said flange and said walls for hermetically sealing said plate and said walls.

2,002,367
HYDRAULIC CLUTCH
Emery H. Fahrney, Oak Park, Ill.
Application March 20, 1933, Serial No. 661,723
3 Claims. (Cl. 192—85)

1. An hydraulic clutch comprising a driving and a driven shaft, a housing secured to each of the shafts and each having an open side, the open sides of the housing being disposed adjacent each other and one telescoping into the other for a short distance, a series of laterally spaced friction discs secured to one of the shafts, a series of friction discs secured to the other shaft and alternately arranged with respect to the first said series, said discs being laterally shiftable, a plunger in one of said housings encompassing the shaft and contacting one of the discs, resilient means normally moving the plunger in a direction



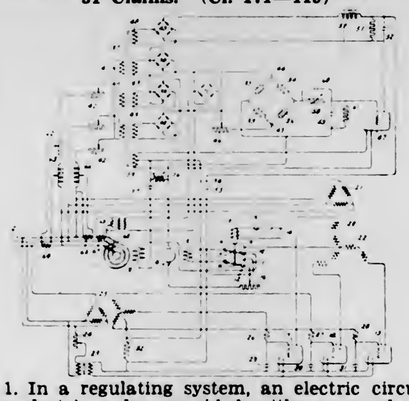
to retract the plunger, means for directing a fluid under pressure into one of the housings to act upon the plunger to move it against the stress of the said resilient means to force the discs into frictional engagement, a channel in one face of the plunger and encompassing the shaft in said chamber, and a packing fitting in said channel and contacting the wall of the housing.

2,002,368
DIAPER PAD
Charles L. Fancher, Cleveland, Ohio
Application June 28, 1934, Serial No. 732,906
2 Claims. (Cl. 128—284)

1. A sanitary diaper pad comprising a sheet of waterproof material, a layer of cellulose absorbent material characterized by its ability to disintegrate when wet, and fastening means for securing the layer and sheet together at intervals but permitting said layer when wet to become detached from the sheet for disposal.

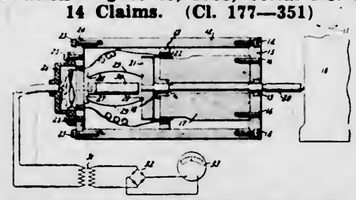
2,002,369
ELECTRIC CONTROL MEANS
Claus Frohmer, Berlin-Charlottenburg, Germany, assignor to General Electric Company, a corporation of New York
Application November 18, 1932, Serial No. 643,248. Renewed October 27, 1934. In Germany November 25, 1931
9 Claims. (Cl. 171—119)

1. In combination, a control device comprising two pairs of impedances connected in the form of an electric bridge, two of said impedances comprising electric valves connected in electrically adjacent arms of said bridge and provided with a control grid, an electric circuit connected to control the potential of the control grid of one of said valves in accordance with a condition to be controlled, and an electric circuit connection to control the potential of the control grid of the other of said valves in accordance with the anode current of said other valve.



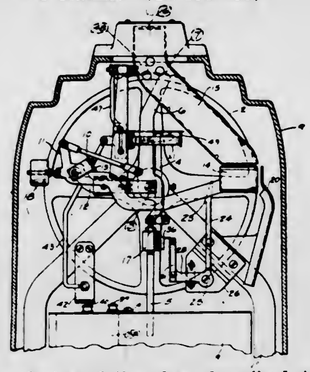
CARNEGIE LIBRARY OF ATLANTA

2,002,370
BRUSH
Clinton E. Frost, Youngstown, Ohio, assignor to The Osborn Manufacturing Company, Cleveland, Ohio, a corporation of Ohio
Application October 14, 1930, Serial No. 488,586
4 Claims. (Cl. 15—181)



3. In a rotary brush, an annular bristle body, and mounting means for the body comprising a pair of side plates, at least one of said plates being annular in form and having a series of circumferentially spaced tongues extending from its inner peripheral edge, said tongues having a portion thereof normal to the plane of the plate to form a support for the bristles, and the ends of said tongues being bent outwardly upon the other plate to hold the plates together, and portions of the other plate lying between the tongues, whereby relative rotation between the two plates is prevented.

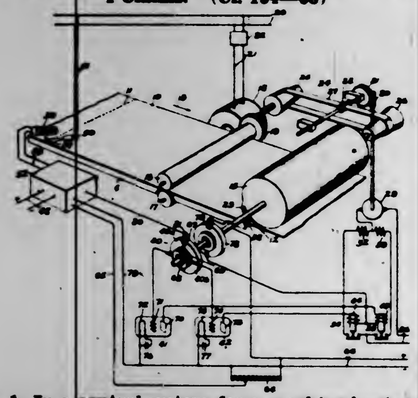
2,002,371
REGULATING SYSTEM
George W. Garman, Scotia, N. Y., assignor to General Electric Company, a corporation of New York
Application December 1, 1930, Serial No. 499,380
31 Claims. (Cl. 171—119)



1. In a regulating system, an electric circuit, an electric valve provided with an anode, a cathode and a control electrode for controlling an electrical condition of said circuit, a source of alternating potential connected to energize the anode of said valve, means for impressing on said control electrode an alternating potential of substantially constant value and fixed phase relation with respect to said anode potential, and means for superimposing a unidirectional potential varying in accordance with the electrical condition to be regulated on the alternating potential of said control electrode in a manner to vary the conductivity of said valve in proportion to the deviation from a predetermined value of the electrical condition to be regulated.

2,002,372
VIBRATION VELOCITY MEASURING DEVICE
Charles D. Greentree and Milton S. Mead, Jr., Schenectady, N. Y., assignors to General Electric Company, a corporation of New York
Application August 23, 1933, Serial No. 686,404
14 Claims. (Cl. 177—351)

5. In a device for converting vibration energy into electrical energy and vice versa, the combination of a movable structure arranged to receive or deliver said vibration energy, another structure, one of said structures comprising a magnetic field system having an air gap as a part of its magnetic circuit and the other of said structures comprising a coil disposed in said air gap to cut the magnetic flux passing thereacross in response to a relative movement of said structures, at least one column spring interposed between said structures for producing an elastic restoring force therebetween, said column spring having two critical deflection values between which its stiffness is considerably lower than that prevailing from its free state to the lower of its two critical deflection values, said spring stiffness changing almost abruptly at the lower of the two critical deflection values, and means for limiting the relative motion of said structures to confine the deflections of said spring between its critical deflection values, the relationship between the mass of the second-mentioned structure and the stiffness of said spring between its critical deflection values being such that the natural frequency of vibration of the second-mentioned structure is appreciably below the lowest frequency of said vibration energy, whereby only a negligible vibration force is transmitted by the first-mentioned structure to the second-mentioned structure during the frequency range of said vibration energy.



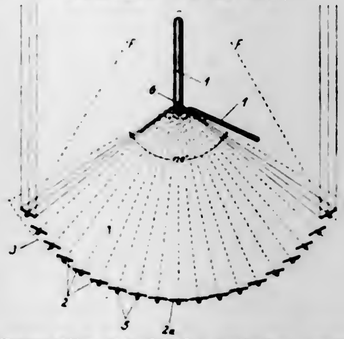
2,002,373
COIN CONTROLLED INDICATING DEVICE
Samuel N. Hurt, Toledo, Ohio, assignor to Toledo Scale Manufacturing Company, Toledo, Ohio, a corporation of New Jersey
Application July 6, 1932, Serial No. 621,051
6 Claims. (Cl. 194—95)

1. In a device of the class described, in combination, weighing mechanism, an indicator,

means for connecting said weighing mechanism to said indicator, a shutter for revealing or concealing said indicator, coin controlled means for opening said shutter, latch means for holding said shutter open, and means for releasing said latch means, said releasing means comprising a relatively movable pawl and a series of teeth mounted respectively on said connecting means and said latch means.

2,002,374
CONTROL SYSTEM
William R. King, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
Application May 30, 1930, Serial No. 457,589
4 Claims. (Cl. 164—68)

1. In a control system for a machine having an element operating upon a moving strip of material in predetermined relationship with respect to markings thereon, means for driving said strip and said element at predetermined speeds, a light-sensitive device arranged to be responsive to the passage of said markings and a switching device cooperating with said light sensitive device to produce controlling impulses in response to variation of said strip from a predetermined relationship with respect to said elements, means responding to said impulses comprising an electric discharge device containing an ionizable medium and provided with an input circuit, and an output circuit connected to a direct current source so that said discharge device remains energized after the termination of an impulse, means for interrupting said output circuit to deenergize said discharge device after a predetermined interval of time, and means responsive to energization of said discharge device for reestablishing said predetermined relationship between said strip and said element.

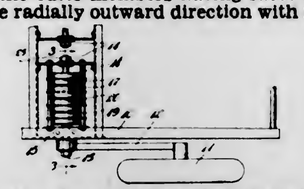


2,002,375
METHOD OF MAKING ORNAMENTED RUBBER ARTICLES
Leslie H. L'Hollier, Waltham, Mass., assignor to Hood Rubber Company, Inc., Watertown, Mass., a corporation of Delaware
Application April 24, 1934, Serial No. 722,122
4 Claims. (Cl. 18—58)

4. The method of making an ornamented rubber article which comprises providing a negative form configured with miniature valleys and hillsides in its surface, depositing on said form an ornamenting dispersion of such fluidity that, after draining and at least partially drying, the residue of the deposit appears principally at the hillsides merging with areas in the valleys of fainter hue, permitting the dispersion so to drain and effecting such acceleration of the drying that the meniscus of the residue in each valley does not materially sag by gravity, then depositing

upon the form a layer of rubber and removing the latter to provide a positive of the surface configuration with the ornamenting deposits adhered to its surface and with its surface color appearing between the areas of deepest hue of the deposits.

2,002,376
SEARCHLIGHT REFLECTOR
Manfred Mannheimer, Berlin-Charlottenburg, Germany
Application November 19, 1931, Serial No. 576,109
In Germany March 16, 1931
3 Claims. (Cl. 40—130)

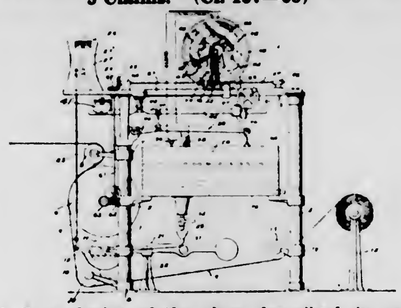


1. Composite searchlight reflector comprising a plurality of spherical mirrors and means for individually adjusting said mirrors in any desired directions, the vertices of the mirrors having such positions relative to a given point (6) on the axis of the total arrangement of mirrors, that the distance of the vertex of each mirror from said point is equal to the focal length of the mirror in question.

2,002,377
RESILIENT CONNECTER
Robert Mayne, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a corporation of New York
Application June 20, 1932, Serial No. 618,285
8 Claims. (Cl. 267—21)

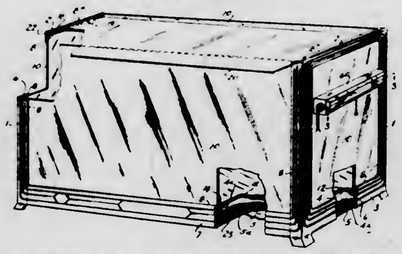
1. A resilient connecter comprising three rigid members, one of which is disposed between the other two and each of which is mounted for relative rotation with respect to the other two and cushions of resilient material mounted between the intermediate member and the two outer members and resisting such movement, the central of

the three rigid members being a plate-like member and the outer members having faces diverging in the radially outward direction with respect



to the faces of the central member, the said resilient material sustaining substantially the entire strain of such movement by engagement with the faces of said members.

2,002,378
BIRD BATH
Walter G. Richardson, South Gardner, Mass.
Application May 17, 1934, Serial No. 726,042
5 Claims. (Cl. 119—1)

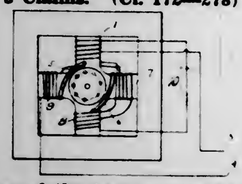


1. A bird bath comprising a bowl and a shallow water-retaining bath tray within said bowl, said bowl and tray providing an annular soil receiving channel of substantial width between them in which vegetation may grow to surround the water in the tray, the top of the tray being somewhat below the top of the bowl, said bowl having a drainage passage for said channel opening through the bottom of said bowl under said tray.

2,002,379
CONTROLLING DEVICE
Edward G. Thomas, Toledo, Ohio, assignor to Toledo Scale Manufacturing Company, Toledo, Ohio, a corporation of New Jersey
Application January 5, 1928, Serial No. 244,593
5 Claims. (Cl. 137—68)

1. In a device of the class described, in combination, a receptacle adapted to contain a liquid material, a valve in said receptacle, a body suspended in said liquid and partially supported thereby, automatic load-counterbalancing mechanism, means connecting the suspended body and said load-counterbalancing mechanism, said mechanism thereby supporting the portion of the weight of said body not supported by said liquid, and means connected to said load-counterbalancing mechanism to control said valve mechanism.

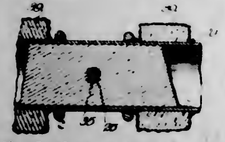
2,002,380
PLANT PROPAGATOR, ETC., OR AQUARIUM
Gilbert Wernicke and Alfred R. Lintern, Cleveland, Ohio
Application March 9, 1932, Serial No. 597,722
24 Claims. (Cl. 47—38)



1. A case for the purposes described, comprising end frame members, a hollow base forming a floor surface for the case and having substantially vertical flanges at its ends, the end frame members being rigidly secured to the base adjacent said flanges in face-to-face relationship therewith to hold the end frame members in upright position, each of said end frame members including corner post portions of angular cross section, separate side and end transparent panels supported at their lower edges by the said floor surface of the base and each vertical edge of the panels being in the embrace of one of said post portions of the end frame members, there being means on said end frame members for securing two respective opposite panels in upright position, the vertical edges of said opposite panels engaging the inner marginal surfaces of the remaining opposite panels to hold the latter in upright position.

2,002,381
ELECTRIC DISCHARGE DEVICE
Willem F. Westendorp, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
Application July 21, 1934, Serial No. 736,363
4 Claims. (Cl. 176—124)

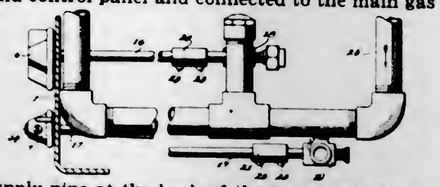
1. In combination, an electric discharge device provided with an anode, a cathode, a heater for said cathode, a constant current circuit, means for dividing the available energy received from said circuit between said cathode heater and the discharge path between said anode and cathode, and a circuit connected in shunt to said electrodes arranged to carry the normal discharge current until the said cathode has been preheated.



2,002,382
SINGLE PHASE MOTOR
Alexander M. Wilson, Cincinnati, Ohio
Application April 6, 1934, Serial No. 719,354
3 Claims. (Cl. 172—278)

1. A motor of the type mentioned comprising in combination with a primary magnetic pole piece, a shading ring on said pole piece, an auxiliary magnetic pole piece, said shading ring being extended so as to embrace all or a portion of the auxiliary magnetic pole piece.

2. A motor of the type mentioned comprising in combination with primary magnetic pole pieces, auxiliary magnetic pole pieces, a transformer on one set of said pole pieces, an impedance across the secondary of said transformer, and a coil on the other set of pole pieces in series in the primary circuit of said transformer.



2,002,382
METHOD OF STOPPING GAS FLOW THROUGH PIPES
Irwin H. Witt, Evanston, Ill.
Application October 5, 1931, Serial No. 566,881
8 Claims. (Cl. 137—73)

1. The method of stopping the flow of fluid in a main preparatory to connecting a branch pipe thereto which comprises inserting a substance, which is fluid at the normal temperature of said main but which is more readily freezable than said fluid, through the walls of the main at each side of the place where the connection is to be made, congealing said substance within the main across the cross sectional area thereof prior to connecting said branch to the main by subjecting the latter to a temperature change different from the normal temperature of said main, and maintaining said temperature difference so long as it is desired that no fluid shall flow through the main.

2,002,384
GAS AND COAL RANGE
James W. Ammerman, Jesse W. Barker, William H. Klopfer, and Frederick C. Manss, Geneva, N. Y., assignors to Andes Range and Furnace Corp., Geneva, N. Y., a corporation of New York
Application October 22, 1931, Serial No. 570,378
1 Claim. (Cl. 126—39)

The combination of a coal and gas range, comprising a control panel located at the front of the top of the range, a series of handles mounted in front of said panel, a gas supply pipe immediately behind said panel and extending to the rear of the stove for connection to a gas main, valves connected to said gas supply pipe for some of said handles and concealed by said panel, burners on the top of the gas range substantially on a level with said control panel connected to and controlled by said valves, an oven located higher up on the range than said burners with an open space between them, a back panel located at the rear of the top of the range behind said burners and extending up to the rear of the underside of said oven, a burner in said oven, a valve on a level with said control panel and connected to the main gas

supply pipe at the back of the range, a rod connecting said valve directly to a handle on said panel, all of said handles and valves having horizontal axes, a gas supply pipe back of the back panel of the range leading up directly from said valve to the burner in the oven higher up, said oven gas supply pipe and said valve being concealed from view from in front of the range by said back panel and being short and direct.

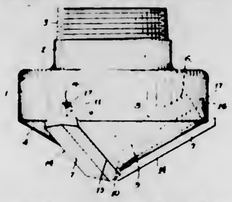
2,002,385
DRILLING APPARATUS
Clyde E. Bannister, Akron, Ohio
Application May 1, 1931, Serial No. 534,322
Renewed November 9, 1933
9 Claims. (Cl. 255—4)

1. Well drilling apparatus comprising a rigid non-rotating drill stem, a fluid pressure motor suspended therefrom for universal movement relative thereto, a boring tool operable by said fluid pressure motor, and a barrel enclosing said motor, the mass of said barrel with respect to said motor and said boring tool being such that said fluid pressure motor will effect operation of said boring tool independently of movement of said barrel.

2,002,386
DOUBLE PISTON FLUID MOTOR
Clyde E. Bannister, Akron, Ohio
Application May 15, 1931, Serial No. 537,617
Renewed November 17, 1933
10 Claims. (Cl. 121—119)

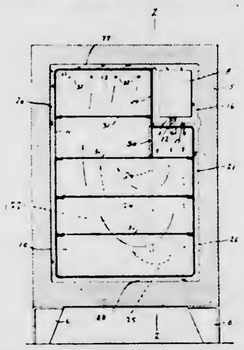
1. In a fluid pressure motor, a pair of cylinders, a piston reciprocable in each of said cylinders, a hollow rod depending from each of said pistons, an inlet port at the upper end of each of said cylinders, a valve cooperating with each inlet

port, a valve stem depending from each valve and extending through its respective piston and piston rod, a rocker, the lower end of each of said



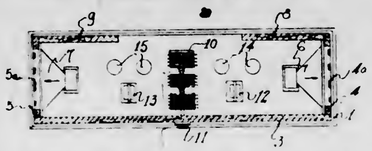
valve stems being in engagement with said rocker, and means to pivot said rocker to seat one valve and unseat the opposite valve.

2,002,387
WELL DRILLING APPARATUS
Clyde E. Bannister, Houston, Tex.
Application June 1, 1933, Serial No. 673,798
18 Claims. (Cl. 255—4)



1. Well drilling apparatus comprising at least a pair of oppositely-rotating bits, a mounting common to the bits, means for circulating a current of fluid to wash the cuttings of the bits to the top of the well, and means in the vicinity of the bits and driven by the said current of fluid for driving the bits.

2,002,388
ROCKER BLADE BIT
Clyde E. Bannister, Akron, Ohio
Application November 14, 1933, Serial No. 697,883
12 Claims. (Cl. 255—61)



1. A bit of the kind described, having a conical lower portion and having a plurality of inclined converging recesses formed in the conical portion thereof terminating at a substantially common center, a shaft passing through each of said recesses, a blade pivotally mounted on each of said shafts, and means to limit the pivotal movement of each blade.

2,002,389
REFRIGERATION APPARATUS
Eugene L. Barnes, Buffalo, N. Y.
Application January 21, 1931, Serial No. 510,138
4 Claims. (Cl. 62—1)

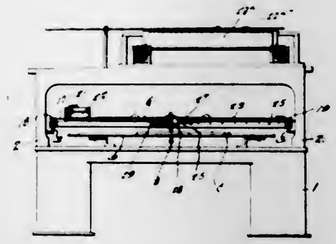
1. An iceless refrigerating apparatus, comprising a refrigerating cabinet, a food compartment arranged within the cabinet and in interspaced relation therewith, a cooling unit separate from the food compartment and in free communication with the space between the cabinet and the food compartment, the food compartment being provided with relatively small inlet openings arranged below the cooling unit, and also with relatively small outlet openings arranged in the upper portion of the food compartment and in line with the upper portion of the cooling unit.

2,002,390
ACOUSTIC DEVICE
Powel Crosley, Jr., and Henry Gest, Cincinnati, Ohio, assignors to The Crosley Radio Corporation, Cincinnati, Ohio, a corporation of Ohio
Application August 15, 1932, Serial No. 628,815
11 Claims. (Cl. 250—14)

4. In a radio set, a cabinet of elongated shape, having sides of negligible responsiveness to wave impulses and end members considerably interspaced, speakers of the cone type located adjacent the ends of said cabinet and facing in substantially opposite directions and having sound openings in said end members and the front portion of said cabinet being of substantial extent between said ends whereby it is adapted to act as a wave impulse baffle, and baffling members on the rear portion of said cabinet extending inwardly sufficiently from the end portions to provide a wave impulse baffling effect, said speakers connected to a source of exciting current in in-phase oppositely vibrating relationship.

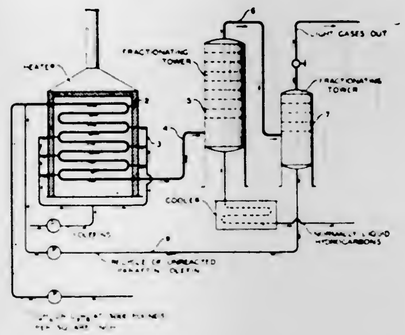
2,002,391
METHOD OF MAKING ORNAMENTED RUBBER ARTICLES
Alvin L. Diller, Belmont, and Leslie H. L'Hollier, Waltham, Mass., assignors to Hood Rubber Company, Inc., Watertown, Mass., a corporation of Delaware
Application February 27, 1934, Serial No. 713,167
4 Claims. (Cl. 18—58)

1. The method of making an ornamented rubber article which comprises providing a negative form configured with miniature valleys and hillsides in its surface, depositing on said form an ornamenting dispersion of such fluidity and low content of coloring matter that, after draining and at least partially drying, the residue of the deposit appears in areas of relatively deep hue merging with areas of fainter hue, permitting the deposited dispersion thus to drain and dry, then depositing upon the form a layer of rubber and removing the latter to provide a positive of the surface configuration with the ornamenting deposits adhered to its surface and with its surface color appearing between the areas of deepest hue of the deposits.



2,002,392
CAR DOOR
Carl E. Ekblad, Chicago, Ill., assignor, by mesne assignments, to The Youngstown Steel Door Company, Cleveland, Ohio, a corporation of Ohio
Application September 23, 1932, Serial No. 634,462
10 Claims. (Cl. 189—46)

1. In a metallic car door having a panel, a rigidifying member secured to the forward margin of said panel, said member having a flange overlapping said panel and secured to the inner face thereof, a transverse flange extending inwardly from said securing flange, and a flange extending at substantially a right angle from said transverse flange terminating in a transverse flange of less length than said first mentioned transverse flange.

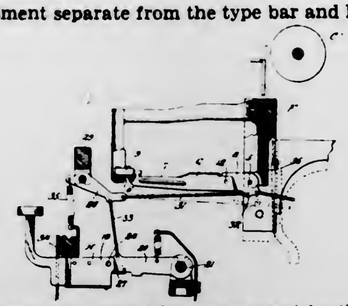


2,002,393
AUTOMATIC PANTOGRAPH MACHINE
Harvey Henry Freed, Belleville, and Harold Bickley Mann, Newark, N. J.
Application December 13, 1932, Serial No. 647,026
3 Claims. (Cl. 33—23)

1. A method of transferring the outline of any design to a textile printing surface by electrical means consisting in scanning the design with a light sensitive cell located in an amplifying system, and producing indentations on the said surface corresponding to the edges of the design, said indentations being in such proximity as to

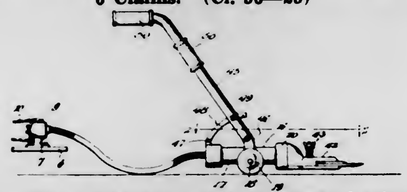
form a solid outline of the design on the printing surface.

2,002,394
PROCESS FOR CONVERTING HYDROCARBONS
Frederick E. Frey, Bartlesville, Okla., assignor to Phillips Petroleum Company, a corporation of Delaware
Application June 22, 1934, Serial No. 731,920
7 Claims. (Cl. 196—10)



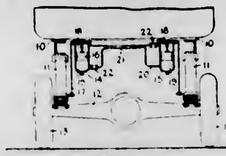
2. In a process for the production of higher boiling hydrocarbons from lower boiling hydrocarbons, the step which consists in adding to a stream of predominantly saturated hydrocarbons, maintained at a conversion temperature and pressure, successive small quantities of predominantly olefinic hydrocarbons, in such amount that the content of added olefins in the mixture at no time exceeds 10% by weight of the total hydrocarbons present.

2,002,395
TYPEWRITING MACHINE
Edward B. Hess, Orlando, Fla., assignor to Royal Typewriter Company, Inc., New York, N. Y., a corporation of New York
Original application May 5, 1933, Serial No. 669,611. Divided and this application December 11, 1933, Serial No. 701,893
10 Claims. (Cl. 197—27)



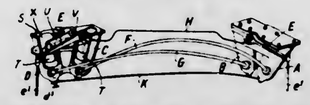
4. The combination of a pivoted type bar for typewriting machines comprising hingedly connected type and heel sections, the hinge pivot being located adjacent the type bar pivot, and an

abutment separate from the type bar and located



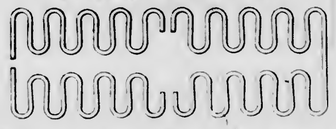
adjacent both pivots for engagement by the heel section.

2,002,396
GRASS TRIMMER
Rollie B. Hite, Nevada, Ohio
Application January 15, 1934, Serial No. 706,755
6 Claims. (Cl. 56—25)



1. The combination with a mower having a power shaft, of a grass trimmer including a casing, an axle extending transversely of the center of the casing, wheels mounted on the axle, a cutter head carried by the casing, guide fingers disposed on opposite sides of the cutter head and extending longitudinally beyond the same, a handle pivotally mounted on the axle, a quadrant pivotally connected with the casing at the rear of the handle and extending through a slot in the handle, means engaging the quadrant for holding the handle in adjusted position, and a flexible cable forming a connection between the cutter head and power shaft for transmitting motion from one to the other.

2,002,397
HYDRAULIC SHOCK ABSORBER FOR AUTOMOBILES
Hugo Höme, Essen, Germany
Application October 25, 1933, Serial No. 695,196
In Germany November 10, 1932
4 Claims. (Cl. 267—11)



1. In a motor vehicle, the combination of relatively movable frame and axle members, two double-acting hydraulic shock absorbers spaced apart and connected between the frame and axle members, each shock absorber having two working chambers, a pipe connection from each working chamber of one shock absorber to the opposite working chamber of the other shock absorber, a throttle valve inserted in each said pipe connection, an auxiliary chamber for each shock absorber communicating by a by-pass with each of the working chambers thereof, and means inserted in said by-pass allowing the fluid in the working chambers to pass through said by-pass only with small relative movements between the frame and the axle.

2,002,398
STABILIZER FOR VEHICLES
Hugo Höme, Essen, Germany
Application April 9, 1934, Serial No. 719,794
In Germany April 15, 1933
6 Claims. (Cl. 267—11)

1. A stabilizing device for vehicles, comprising two double-acting hydraulic shock-absorbers, mounted one at each side of the vehicle, operating means connecting said shock-absorbers with an unsprung part of the vehicle, each of said shock-absorbers comprising two working chambers, conduits connecting the working chambers of one shock-absorber with the opposite working chambers of the other shock-absorber, and a constricted by-pass open to flow in both directions and connected between two of said working chambers not connected by one of said conduits.

2,002,399
FLAT SPRING AND METHOD OF MAKING THE SAME
Karl Kaden, Muhlbach Bez. Chemnitz, Germany
Application January 15, 1932, Serial No. 586,838
In Germany April 16, 1931
6 Claims. (Cl. 29—173)

1. The method of making a wire spring including bending the wire laterally into sinuous form and longitudinally to give it a permanent set in a position of greater curvature than it assumes when in use.

2,002,400
FERTILIZER
Edward T. Keenan, Frostproof, Fla., assignor of one-half to Florida Fruit Canners Inc., Frostproof, Fla., a corporation of Florida
No Drawing. Application January 21, 1933, Serial No. 652,933
2 Claims. (Cl. 71—9)

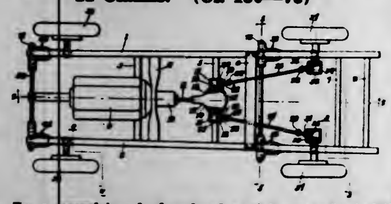
1. A process of preparing a fertilizer which comprises mixing cyanamid and fruit pomace, piling the mixture for a period of time, whereby a reaction ensues and a rise in temperature takes place, and thereafter while at the increased temperature adding to the mixture alkali metal nitrates, ammonium sulphate, and super phosphate, which combine with the mixture.

2,002,401
RUG-HOOKING DEVICE
Herman Kohanek, Portland, Oreg.
Application August 14, 1934, Serial No. 739,821
6 Claims. (Cl. 112—80)

1. In a turfing implement, a frame consisting of spaced apart parallel side members formed of

a single piece of material and integrally joined at one end, the opposite ends of said side members being rounded to form presser feet, a filler block secured between said side members adjacent to their connected ends to form a handle, a needle guide between said members adjacent to their rounded ends and adjustable with respect thereto, a crank shaft journalled transversely through said members intermediate their ends and having its crank positioned therebetween, a gear on the crank shaft, a stub shaft journalled in the frame,

a gear on the stub shaft of greater size than the crank shaft gear and in mesh therewith, said stub shaft and said crank shaft having projecting end portions, a crank handle having means selectively attachable to the projecting portions of either the crank shaft or stub shaft, a tubular holder having an integral extension at one end encircling the shaft crank, a needle telescoping within the other end of said holder, and a set screw threaded in connection with the holder for engaging and clamping the needle in adjusted positions.



2,002,402

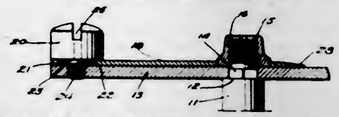
COMBINED SHOCK ABSORBING AND STABILIZING STRUCTURE

Joseph Kanopka, Detroit, Mich.

Application May 4, 1934, Serial No. 723,982

11 Claims. (Cl. 180—73)

1. In a combined shock absorbing and stabilizing structure for automotive vehicles, the combination with the side bars of the chassis and the rear wheels of the vehicle, of a pair of parallel spaced endwise opposed bearings secured to the lower face of said bars, a hanger shaft journaled in and extended laterally from said bearings, a pair of stabilizing elements having forked shaped forward ends straddling said bearings and pivotally mounted on said shaft and having laterally extending tubular means at the rear ends, driven axle spindles extending through said means and connected to said wheels, and resilient means interposed between the said tubular means and the lower face of said bars.



2,002,403

FISHING REEL CONSTRUCTION

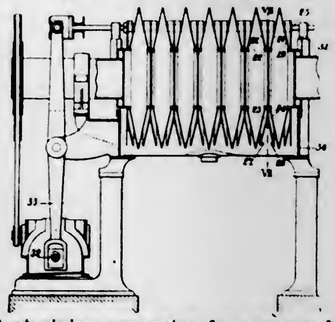
Gustav Kosma, Philadelphia, Pa., assignor to Ocean City Manufacturing Company, Philadelphia, Pa., a corporation of Pennsylvania

Application August 2, 1934, Serial No. 738,125

7 Claims. (Cl. 74—548)

1. In a reel, a rotatable spindle having a shoulder, a reel handle seated against said shoulder, a nut to clamp the reel handle against the shoulder, a wrench overlying the reel handle and shaped to conform thereto and having an opening receiving the nut, and means to hold the wrench against rotation with relation to the reel handle.

2,002,404



PULP STRAINER

Marcel Lamort, Vitry-le-Francois, France, assignor to Etablissements E. & M. Lamort Fils, Vitry-le-Francois, France

Application August 12, 1933, Serial No. 684,915

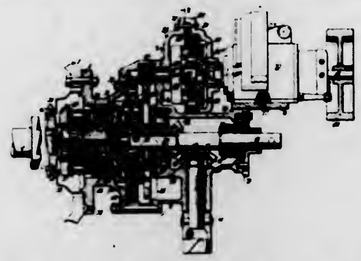
In France August 29, 1932

6 Claims. (Cl. 92—33)

1. A straining apparatus for paper pulp comprising a tank for said pulp, a drum located in said tank having a periphery forming a straining surface, said periphery being formed of inclined rings assembled side by side at their bases, means causing an irregular alternating displacement between said pulp and said drum and means for rotating said drum about its axis.

2,002,405

ENGINE STARTING MECHANISM



Raymond P. Lansing, Montclair, N. J., assignor, by mesne assignments, to Eclipse Aviation Corporation, East Orange, N. J., a corporation of New Jersey

Application September 30, 1931, Serial No. 566,127

9 Claims. (Cl. 123—179)

1. In an internal combustion engine having a crank-shaft and magneto for supplying ignition current, means for imparting rotation initially to both said magneto and crank-shaft comprising a gear train having high and low speed ends drivably connected with said magneto and crank-shaft respectively and a member of intermediate speed interposed between said high and low speed ends, means engageable with said intermediate member for imparting rotation to both said crank-shaft and magneto, and means operable in response to such rotation to enable both

said magneto and crank-shaft to simultaneously overrun said gear train, said last named means including a magneto driving element rotatable by said high speed end of the gear train and free to over-run upon every deceleration of said

gear train during the cranking process, and a crankshaft driving element which is free to overrun the low speed end of the gear train whenever the crankshaft accelerates to a speed in excess to the gear train speed.

2,002,406

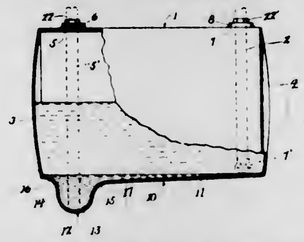
PROCESS OF DYEING

Robert Lantz, Paris, France, assignor of one-half to Societe Anonyme des Matieres Colorantes & Produits Chimiques de Saint-Denis, Paris, France

No Drawing. Application June 11, 1931, Serial No. 543,730. In France June 21, 1930

10 Claims. (Cl. 8—5)

1. A process of dyeing materials which comprises treating said materials in a sulphide bath by an azo-dyestuff containing at least one disulphide group in the molecule at a temperature lower than 65° C.



2,002,407

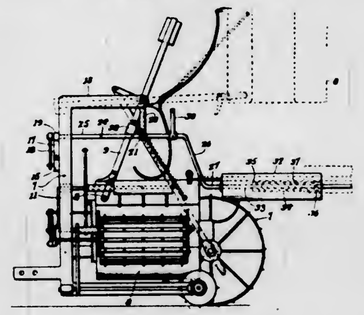
FUEL STORAGE TANK

Hugo C. Lemke, Reedsville, Wis.

Application December 6, 1933, Serial No. 701,193

8 Claims. (Cl. 216—57)

5. In a fuel storage tank, a horizontally disposed annular body, a pair of heads for closing the ends of said body, said body being formed at its top with a pair of spaced openings, the bottom of said body formed with a lengthwise disposed portion extending at a downward inclination from one of said heads to a point inwardly of and in spaced relation to the other of said heads, the remaining portion of said bottom being formed of series of imperforate parts depending from said portion, the other of said heads and the sides of said body and a horizontally disposed imperforate part integral with the lower ends of the said other parts, the said several parts coacting to provide a transversely disposed open top uninterrupted trap arranged inwardly of the said other head and aligning with one of said openings.



2,002,408

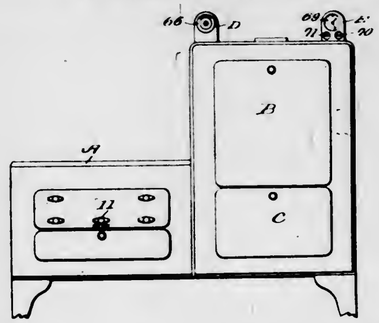
SHOCK COMPRESSING ATTACHMENT FOR GRAIN SHOCKERS

Albin P. Lofstrand, Chicago, Ill.

Application November 2, 1934, Serial No. 751,226

14 Claims. (Cl. 56—430)

1. A shock compressing attachment for grain shockers comprising the combination of a movable part of the shocker, spaced parallel rollers for compressing the top of a shock dumped from the dumping reeeptacle of the shocker, a pair of horizontally oppositely disposed rock shafts carrying said rollers, means for connecting said shafts to the shocker, and two pair of coacting elements for rocking said shafts in unison to active position with respect to the shock, one of the elements of each pair of coacting elements arranged in the path of the other coacting element of each pair of coacting elements, one of the coacting elements of each pair of coacting elements being carried by the said movable part of the shocker and the other coacting element of each pair of coacting elements being anchored to said shafts.

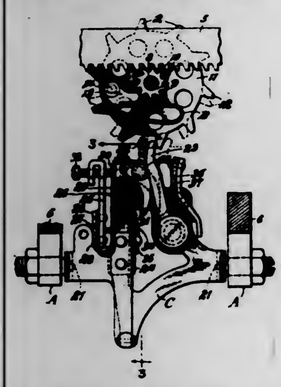


2,002,409

COMBINED THERMOSTATIC AND TIME HEAT CONTROL FOR STOVE OVENS

Benjamin Edward Meacham, Lorain, Ohio, assignor to American Stove Company, St. Louis, Mo., a corporation of New Jersey

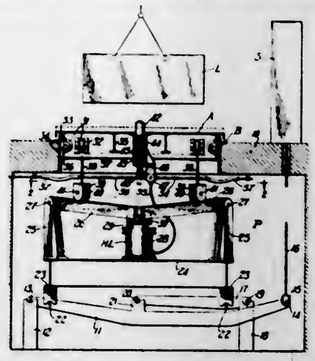
Application August 26, 1932, Serial No. 630,606



13 Claims. (Cl. 236—15)

1. An improved heat control for use with a stove having an oven with a gaseous fuel burner

therein and a constant burning pilot light for said burner, comprising a safety pilot light adapted to be ignited by said constant burning pilot light, a main fuel line, a thermostatically operated valve in said main fuel line for controlling the flow of fuel to the burner, a thermo member positioned in the heat zone of said safety pilot light and remote to the heat zone of the oven for actuating said valve, a second fuel line leading to the safety pilot light, a thermostatic regulator operatable by the heat in said oven positioned in said second fuel line, a time operated valve positioned in said second fuel line back of said thermostatic regulator, and time operated means for operating said time controlled valve to open and close the same at predetermined times, the parts operating as and for the purpose described.



2,002,410
TYPEWRITING MACHINE
William O. Michelsen, Long Island, N. Y., assignor to Royal Typewriter Company, Inc., New York, N. Y., a corporation of New York
Original application September 5, 1934, Serial No. 742,787. Divided and this application December 11, 1934, Serial No. 757,044
5 Claims. (Cl. 197—88)

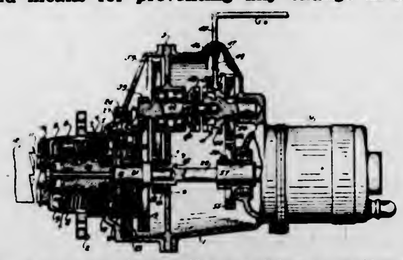
1. In a typewriting or like machine, an escapement mechanism including an escapement wheel, a dog rocker, a fixed dog and a movable dog mounted on the rocker and alternately movable into engagement with the teeth of the wheel, a support mounted on the rocker for adjustments towards and from the movable dog, a wiper cam pivoted on the support and contacting the movable dog, and a spring connecting the cam and the rocker for holding the cam in yielding contact with the pivoted dog.

2,002,411
APPARATUS FOR RELIEVING SHOCKS ON SCALES
Stephen D. Mosley, Birmingham, Ala., assignor to American Cast Iron Pipe Company, Birmingham, Ala., a corporation of Alabama
Application July 8, 1931, Serial No. 549,475
21 Claims. (Cl. 265—72)

1. Apparatus of the character described comprising a movable load receiving platform, weighing mechanism, a support for holding said platform out of weighing relation with the weighing mechanism, a member positioned for movement by the load as the load is deposited on the platform, and mechanism supported by the weighing mechanism and operable by said member to

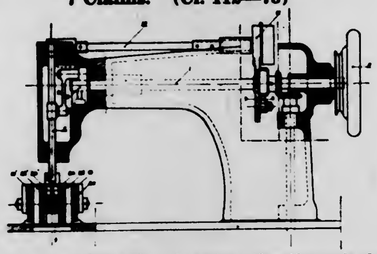
establish the platform in weighing relation with the weighing mechanism.

2,002,412
SPOOL HOLDER
John T. Murchie, Jr., Portsmouth, Ohio, assignor to Jack Murchie, Portsmouth, Ohio
Application July 7, 1934, Serial No. 734,186
1 Claim. (Cl. 242—134)



A spool holder comprising an elongated flat metal strap constituting a support, said strap formed with an opening in one end by which the strap is adapted to be suspended in a vertical position, a disk rotatably mounted on a pin carried by the other end of said strap, the plane of the disk being parallel with the metal strap support, a pair of diametrically opposed yielding accommodation arms anchored at their inner ends to the margin of the disk and disposed in perpendicular relation to the disk, said accommodation arms being arcuate in cross section with the convex surface thereof on the outside whereby a spool may be confined between the arms or a web of material may be wound around the outside of the arms, and said disk being spaced longitudinally from the opening so that the intervening space on the strap may be used to support other objects.

2,002,413
ENGINE STARTING MECHANISM
Romeo M. Nardone, East Orange, N. J., assignor to Eclipse Aviation Corporation, East Orange, N. J., a corporation of New Jersey
Application October 2, 1930, Serial No. 486,026
3 Claims. (Cl. 74—7)

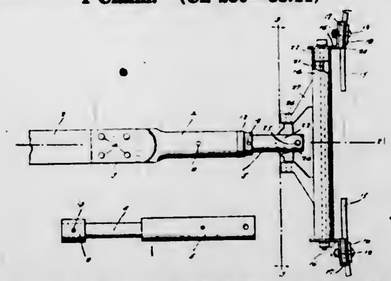


1. The combination with a rotatable member of an internal combustion engine, of a substantially constant speed motor, means responsive to energization of said motor to produce immediate operative connection between said motor and engine member whereby the latter is caused to rotate at any selected one of a plurality of substantially constant speeds bearing a constant

ratio to the speed at which said motor operates, and means for preventing any change in said

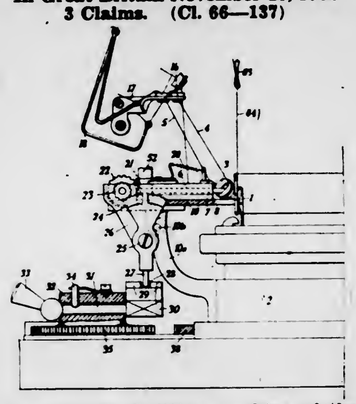
constant ratio during the cranking operation except by manual intervention.

2,002,414
MACHINE FOR DRAWING THREADS FROM FABRICS
Jacques Ollendorff, Paris, France, assignor to Anciens Etablissements E. Cornely & Cie., Société Anonyme, Paris, France, a company of France
Application February 16, 1932, Serial No. 593,349
In France February 21, 1931
7 Claims. (Cl. 112—78)



1. In a machine for drawing the threads from fabrics, a fabric feeding and stretching device comprising in combination, a work plate having a cylindrical shallow groove at right angles to the direction of feed, two parallel rollers coaxially disposed with respect to said cylindrical groove and the peripheries of which are arranged to fit in said groove against the bottom thereof, said peripheries being made of a material upon which the fabric does not slide, and means for imparting a discontinuous feed motion to said rollers, whereby the fabric is tightly held between said cylindrical groove and said rollers and caused to move together with said rollers.

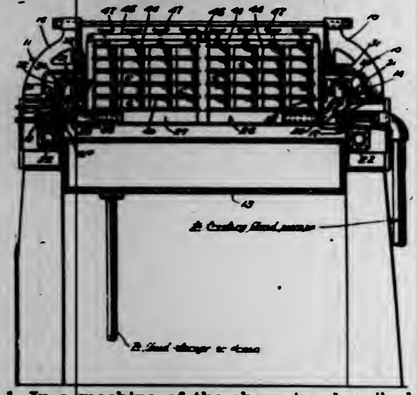
2,002,415
METHOD OF PRODUCING SEAMLESS DRAWN TUBES AND OTHER TUBULAR ARTICLES
Peter Otto, Duesseldorf-Oberkassel, Germany
Application March 5, 1932, Serial No. 597,021
In Great Britain March 19, 1931
2 Claims. (Cl. 29—156)



1. In the manufacture of seamless tubes, the steps of forming an open ended hollow ingot by centrifugal casting, closing one end of said ingot while the latter is still in the casting apparatus, and subjecting the thus formed ingot to a push bench drawing process to produce an elongated thin-walled tube.

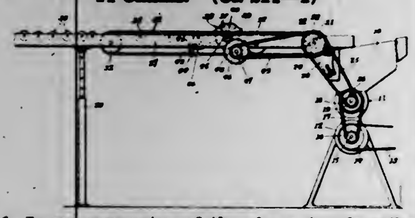
2,002,416
TRAILER HITCH
George Jacob Shafer, Jacksonville, Oreg., assignor of one-third to Barney Cody, Jacksonville, Oreg.
Application October 11, 1934, Serial No. 747,935
1 Claim. (Cl. 280—33.44)

A hitch for trailer drawbars comprising spaced, opposed brackets mounted on the rear bumpers of an automobile, said brackets including plates clamped to the opposite sides of the bumpers, horizontal flanges on the upper end of one of the plates of each pair engaged with the upper edges of the bumpers, a tubular shaft mounted between the brackets, a bolt extending through the shaft and anchored in the brackets, centering plugs encircling the bolt in the end portions of the tubular shaft, arms projecting from the tubular shaft, and a cross head journalled between said arms and adapted to be pivotally connected to a draw bar.



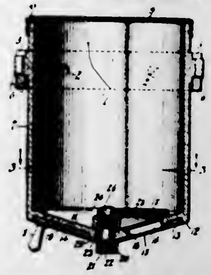
2,002,417
KNITTING MACHINE
Harold William Simpson, Long Eaton, near Nottingham, England, assignor to William Gibson & Son, Limited, Nottingham, England
Application November 16, 1933, Serial No. 698,346
In Great Britain November 16, 1932
3 Claims. (Cl. 66—137)

1. In a circular knitting machine of the type specified, reverse plating means comprising a feeder head formed with two diametrically opposed and symmetrical feed holes which converge towards the needles, through which holes the threads are fed to said needles, a spindle which is radial to the cylinder, a pivot pin extending at right angles to the spindle for pivoting the head to said spindle, means for rotating the spindle, at intervals of time, through 180° between attitudes in which the said pin is inclined to the plane



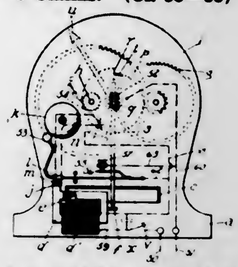
containing the axes of the spindle and needle cylinder, whereby the feeder head is rotated about an axis transverse to the needle circle to reverse the plating relation of the threads fed by it, and means for maintaining the feeding head tilted downwards and towards the needles during the stationary periods between the intermittent semi-rotary movements of the spindle.

2,002,418
CAKE WASHING AND CONDITIONING MACHINE
John Joseph Sippel, Upper Darby, Pa., assignor to H. W. Butterworth & Sons Company, Philadelphia, Pa., a corporation of Pennsylvania
Application December 13, 1932, Serial No. 647,068
11 Claims. (Cl. 12—8)



1. In a machine of the character described, a row of nozzles, a header having an inlet, means supporting the header for movement along said row of nozzles in spaced relation to said nozzles, means for intermittently moving the header from one nozzle to another, and means for transversely shifting the header to bring the inlet of the header into sealing engagement with each nozzle when the header is aligned therewith.

2,002,419
OIL WELL CEMENT MIXER
Earl W. Stegadill, Lynwood, Calif.
Application September 7, 1934, Serial No. 743,143
14 Claims. (Cl. 214—1)

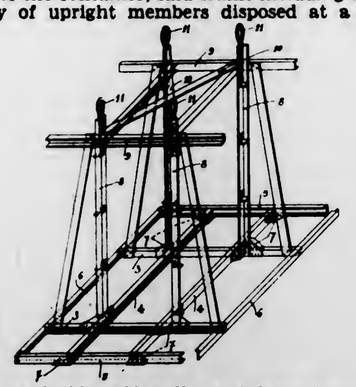


1. In an apparatus of the character described, the combination of a cement feeder having a hopper, a cement sack conveyor leading to the feeder and consisting of a pair of spaced apart parallel conveyor belts, a frame in which said belts operate having at the discharge end thereof a portion extending over the hopper and provided with cross rods forming an open sack holder, sack splitting means intermediate the ends of said belts and upstanding between the same, and a third conveyor belt extending from said splitting means to the discharge ends of the first belts to support the split portion of each sack during its movement to the said hopper.

2,002,420
COFFEE PRESERVER
Mark Strook, Berkeley, Calif.
Application May 26, 1934, Serial No. 727,795
5 Claims. (Cl. 221—66)

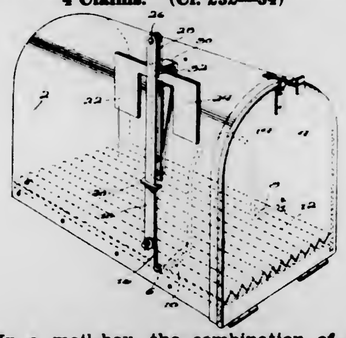
1. A coffee preserver of the character described comprising a container having at the bottom an aperture, a closure plate arranged beneath said bottom but in engagement therewith, said closure plate having an aperture therein adapted to register with the aperture in said bottom, rotatable means connected with the closure plate and positioned within the container for forcing some of the contents of the container from said aperture when in registry and resilient means acting on said rotatable means for pulling said closure plate towards the exterior surface of said bottom.

2,002,421
ELECTRIC TIMEPIECE
Louis Tisseyre and Ionel Cotnareanu, Paris, France, assignors, by direct and mesne assignments, to George P. Cowles, Waterbury, Conn.
Application May 20, 1929, Serial No. 364,601
In France December 22, 1928
8 Claims. (Cl. 58—38)



8. In an electric alarm clock, a clock mechanism, an alternating current electric motor having a magnetic field core and an armature operated thereby and operatively connected to the clock mechanism for driving the latter, a vibratory armature energized by said core and adapted to operate at a predetermined time, and mechanism operatively connected to said clock mechanism for controlling the operation of said vibratory armature.

2,002,422
CONTAINER FOR THE TRANSPORTATION OF GOODS
Michel Marie Jean Lefevre-Utile, Paris, France
Application April 6, 1933, Serial No. 664,824
In France May 21, 1932
2 Claims. (Cl. 105—366)

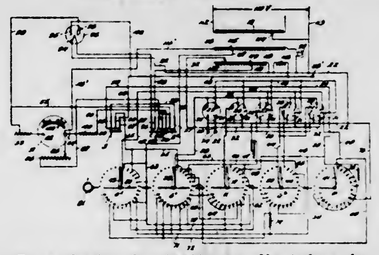


1. A shipping container, which comprises in combination, a metal frame, panels carried by

said frame so as to form the walls, top and bottom of the container, said frame including a plurality of upright members disposed at a fixed

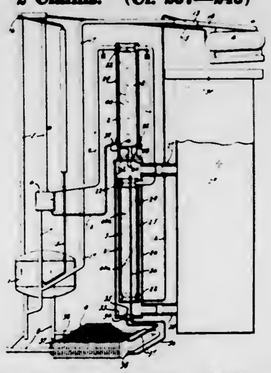
distance inside said walls, and fastening means carried by the tops of said upright members respectively, whereby the container can be readily connected to hoisting means.

2,002,423
RURAL FREE DELIVERY LETTER BOX
Thomas G. Wade, Greensboro, N. C.
Application July 21, 1932, Serial No. 623,841
4 Claims. (Cl. 232—34)



2. In a mail-box, the combination of signal flags pivotally secured thereto, a sinuous shaft extending through the box in close proximity to the bottom thereof, a crank-arm secured to one end of said shaft, a connecting rod between said crank-arm and said signal flags, and means for rotating said shaft to effect a pivotal movement of the flags.

2,002,424
CASTING REEL
Edward G. Weaver, Butte, Mont.
Application October 20, 1932, Serial No. 638,809
7 Claims. (Cl. 242—84.7)



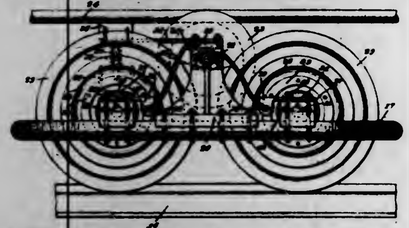
5. A fishing reel including a frame having an end wall, a spool rotatable therein, a plate shiftably mounted on said wall, a gear on said plate, a pinion on the spool, a crank carried on the frame and having an end portion projecting through the end wall and being bent for engagement with the plate, said crank being adapted for imparting shifting movement to the plate for permitting intermittent meshing of the gear and pinion, means for rotating the gear, and manually engageable means projecting from the plate adjacent thereto and adapted for locking the gear and pinion in meshing relation.

2,002,425
VACUUM TUBE TESTER
Jewell R. Williams, Little Rock, Ark., assignor to Apparatus Design Company, Little Rock, Ark., a corporation of Arkansas
Application August 4, 1933, Serial No. 683,688
14 Claims. (Cl. 250—27)

1. In a device for testing radio tubes, in combination, a plurality of sockets, each having a different number of terminals, means connecting together the common terminals of the sockets, means to supply an adjustable voltage to the filament terminals of all sockets, a network adapted to supply simultaneously a plurality of testing voltages, a meter in circuit with one of said voltages, a selector switch for each type terminal except filament, and circuits whereby each selector may connect an associated terminal to any one of said voltages.

2,002,426
REFRIGERATING APPARATUS
Edmund E. Allyne, Shaker Heights, Ohio
Application February 25, 1932, Serial No. 595,136
2 Claims. (Cl. 257—243)

1. Refrigerating apparatus of the character described, comprising a heat transfer device including two concentric tubes spaced apart and secured to each other at their ends, means for circulating material to be cooled through the



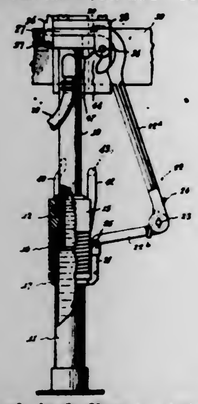
annular cavity between said tubes for dissipation of its heat through the surfaces of the two tubes, a receptacle for cooling medium, and a tubular heat conducting member concentric with said tubes forming a connection between the said tubes and the said receptacle and adapted to conduct heat therebetween, said connection having side openings for the admission of cooling medium to the channel within the inner tube.

2,002,427

ELECTRICALLY DRIVEN LURE CARRIAGE AND TRACKAGE THEREFOR

Willard M. Bacon, Jr., Miami, Fla., assignor to J. Hunter Ellis and E. J. O'Hare, both of Chicago, Ill.

Application August 1, 1934, Serial No. 738,003
4 Claims. (Cl. 104—121)



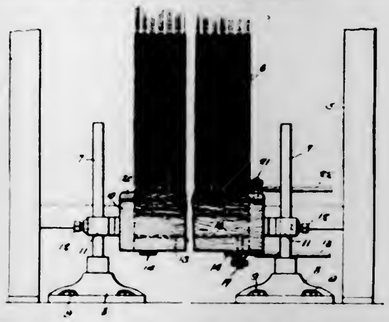
1. The combination of a monorail track, an electric conductor rail supported above the track, a carriage having a lure support, electric motors fitted in said carriage and having stationary armatures and rotor fields, wheels driven by the rotor fields of said motors and traversing the monorail track, a guide roller journaled on the lure support and insulated therefrom and engageable with the conductor, a resilient wiper shoe engaging said conductor, contact rings carried by the rotor fields of said motors, and brushes carried by the carriage and connected with the wiper shoe and engaged with said contact rings for completing an electric circuit between the conductor and the monorail track.

2,002,428

AUTOMOTIVE JACK

Benjamin Black, Brooklyn, N. Y.

Application September 8, 1931, Serial No. 561,738
1 Claim. (Cl. 254—86)



A vehicle jack including an extensible lifting leg having a swinging connection with the vehicle and means for first partially extending the leg while the latter is in elevated position and for then lowering the leg to a vertical position and then further extending it, said means comprising a fluid under pressure within said leg, and a jointed arm composed of pivotally connected sections of which one is terminally connected with a section of the lifting leg and the other with a fixed part of the vehicle, and spring means compressed during the partial extension of the leg and adapted to contract the leg when the fluid pressure is released.

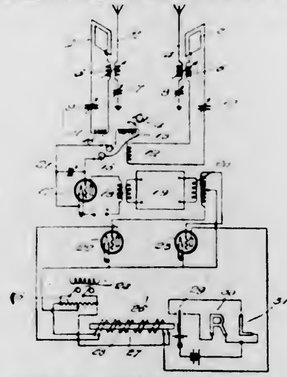
2,002,429

STOP MOTION CONTROL FOR JACQUARD LOOMS

Lester Clarence Brady, Burlington, N. C., assignor of twenty-four and one-half per cent to George Washington Morris and twenty-four and one-half per cent to Shirley Webster

Application July 27, 1933, Serial No. 682,483
1 Claim. (Cl. 139—336)

The combination with the lingoes and electric stop motion mechanism of a jacquard, of an electric stop motion controlling device, comprising a box-like body portion, a contact plate covering the inner surface of the bottom of the body portion, a contact member constructed of wire mesh material presenting square openings, held on the body portion in space relation with the contact plate, a frame secured over the second mentioned contact member securing the second mentioned contact member in position, the lingoes of the stop motion mechanism extending into the square openings of the wire mesh contact member, filling the openings, and electric wires connected with the contact plate and contact member, whereby an electric circuit is completed when the lingoes drop and engage the contact plate.



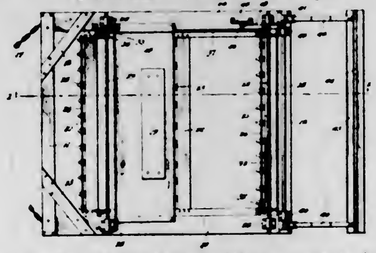
2,002,430

RADIO RECEIVING SYSTEM

Ben J. Chromy, Hopkins, Minn.

Application April 11, 1930, Serial No. 443,564
8 Claims. (Cl. 250—11)

1. In directional radio receiving systems, the combination of a plurality of directional antennæ adjusted to receive signaling energy of maximum intensity from different directions, amplifying means, means for successively coupling said antennæ to said amplifying means, a relay having a plurality of windings, a plurality of electron discharge devices connected to the output of said amplifying means, different ones of said relay windings being connected to the anode circuits of different ones of said electron discharge devices, means for periodically varying the energization of said anode circuits simultaneously as different ones of said antennæ are coupled to said amplifying means whereby selected ones



of said relay windings are energized in accordance with signals intercepted by different ones of said antennæ.

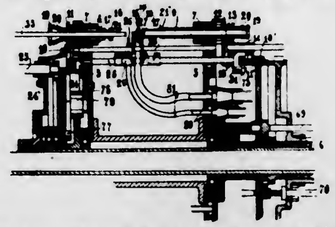
2,002,431

ROAD MACHINE

Omer F. Church, Arthur, Ill., assignor to Road Supply Co., Arthur, Ill., a firm composed of John S. Pribble and Chester E. Cahill

Application January 26, 1933, Serial No. 653,691
3 Claims. (Cl. 37—145)

1. A road machine comprising runners, downwardly and rearwardly inclined links disposed adjacent the front and rear ends of the runners and pivoted at their front upper ends upon the inner sides of the runners, a scarifier frame including side bars disposed adjacent and parallel to the respective runners and pivoted to the lower ends of the links, series of scarifier teeth carried by said frame, means carried by the runners and connected with the front and rear ends of the frame for raising and lowering the frame, and a drag carried by the rear ends of the runners and arranged transversely thereto.



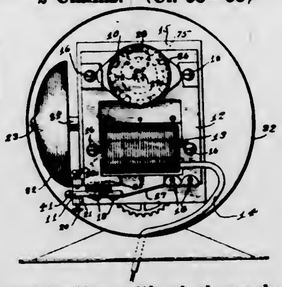
2,002,432

AUTOMATIC MACHINE FOR MAKING SERUM PHIALS

Léon Louis Comoy, Paris, France

Application October 9, 1933, Serial No. 692,852
In France October 15, 1932
4 Claims. (Cl. 49—7)

1. In a machine for fabricating ampoules or similar articles, a device for feeding glass tubes of indefinite length used in their entire length for the making, without loss, of a number of the articles, comprising a magazine for the tubes; mechanism for distributing the tubes singly in a rotary intermittently moving shaping drum provided with receiving sockets; means for axially moving each tube in each operation through the desired length; means for starting the tube-distributing mechanism when the tubes being operated upon are exhausted; means for shaping the articles in the rotary drum; and means for discharging the shaped articles.



2,002,433

ELECTRICAL ACTUATING MEANS FOR CLOCKS AND INSTRUMENTS

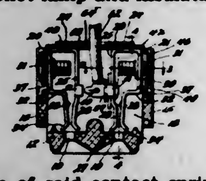
George P. Cowles, Waterbury, Conn.

Application December 18, 1929, Serial No. 414,940
2 Claims. (Cl. 58—38)

1. In combination with clock mechanism and an alternating current synchronous motor for operating the same, said motor including a coil and magnetizable core; a magnetically operated alarm device comprising coacting sound producing elements connected with the opposite ends of the motor core, and setting means for the alarm device including a detent and means for moving the same in one direction to engage the detent between said coacting members to prevent operation of the alarm device, and spring means acting to move said detent in the opposite direction at a predetermined time in the operation of the clock mechanism to permit operation of the alarm device.

2. In combination with clock mechanism and an alternating current synchronous motor for operating the same, said motor including a coil and a magnetizable core; a magnetically operated alarm device including a vibratory armature one end of which is connected to one end of said motor core and the other end of which is adjacent the other end of said core, a spring detent adapted to engage between said armature and the adjacent end of said core to prevent operation of the alarm, and means operatively connected to said clock mechanism and adapted to release said detent at a predetermined time in the operation of the clock mechanism to permit operation of the alarm.

2,002,434



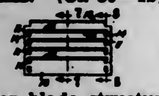
CONVENIENCE OUTLET

Victor R. Despard, Syracuse, N. Y., assignor to Pass & Seymour, Inc., Syracuse, N. Y., a corporation of New York

Application April 21, 1932, Serial No. 606,733
12 Claims. (Cl. 177—311)

1. In a convenience outlet, in combination, a pair of contact springs for connection to a power

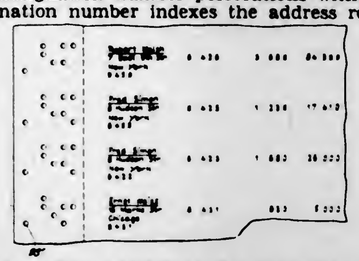
circuit and arranged to be contacted by the prongs of an attachment plug, a contact for connection to a pilot lamp and insulating means at-



tached to one of said contact springs and supporting said contact therefrom and in the path of the plug prong engaging said spring for contact therewith.

2,002,435
CLOTHESLINE RING
Truxton Dessey, Aruba, Dutch West Indies
Application November 21, 1933, Serial No. 699,054
1 Claim. (Cl. 24—139)

A ring or pin of the kind described, comprising a single convolution formed from a length of resilient wire, the free ends of the wire being outwardly and inwardly curled at opposite sides of the convolution and disposed to project entirely without the said convolution to be exposed to their full extent beyond the convolution and at diametrically opposite points with respect thereto.



2,002,436
SAFETY RAZOR BLADE STRUCTURE AND HOLDER FOR SAME
Albert W. Franklin, New York, N. Y.
Application May 10, 1933, Serial No. 670,259
7 Claims. (Cl. 30—12)

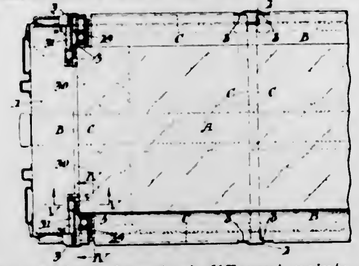
7. A safety razor blade structure comprising a strip of steel having a plurality of successively disposed, transversely extending slots to form a series of cutting edges, all of said edges presenting in the same direction the transverse slots terminating within the side edges of the steel strip, the side edges of said strip being formed with inwardly extending notches disposed in transverse line with the edge forming slots to permit ready severance of the successive blades from said strip.

2,002,437
MECHANICAL METHOD OF PREPARING STATEMENTS, BILLS, AND THE LIKE
Michael Maul, Berlin-Johannisthal, Germany
Application July 15, 1931, Serial No. 550,939
In Germany July 28, 1930
20 Claims. (Cl. 101—47)

1. A mechanical method of preparing statements, bills and the like which consists in printing numerical accounting data associated to different designation numbers upon records, punching upon the same records to said numerical data the corresponding designation number perforations, analyzing and comparing the designation number perforations of said records and designation number indexes associated to address carriers, and printing upon agreement of said designation number perforations with said designation number indexes the address repre-

sented on said address carrier upon the corresponding perforated records to print upon the latter the address in addition to the numerical accounting data previously printed thereupon.

2,002,438
WINDSHIELD STORM SCREEN
John R. Oishei and Earl V. Schaal, Buffalo, N. Y., assignors to Trico Products Corporation, Buffalo, N. Y.
Application March 18, 1931, Serial No. 523,620
21 Claims. (Cl. 219—19)



1. An attachment for motor vehicle windshields, and the like, including a heating frame, and means for movably mounting the frame adjacent the windshield supporting structure, an arm pivotally secured to the supporting bracket means and engaging the heating frame adjacent its outer extremity, a secondary arm carried by said bracket and engaging said heating frame to restrict free arcuate movement of the heating frame about the supporting bracket means, and means for associating said secondary arm and the heating frame, said means being releasable to change the position of the heating frame.

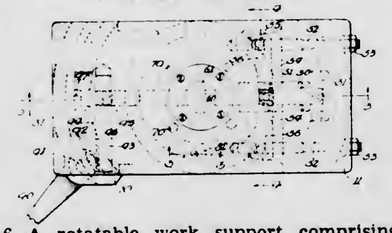
2,002,439
MOVABLE ABUTMENT FOR CONTAINER VEHICLES
Samuel H. Owens, Altoona, Pa.
Original application April 28, 1932, Serial No. 608,007. Divided and this application April 28, 1932, Serial No. 608,006
5 Claims. (Cl. 105—366)

1. In a container carrying vehicle, a platform, a shaft mounted transversely of said platform, a seating abutment for a container slidable along

said shaft and rotatable thereon, and means for

locking said abutment at different points along the length of said shaft.

2,002,440
MOVABLE ABUTMENT FOR CONTAINER VEHICLES
Samuel H. Owens, Altoona, Pa.
Application April 28, 1932, Serial No. 608,007
10 Claims. (Cl. 105—366)



1. In a vehicle for carrying containers of the character described, a vehicle platform having a normally unobstructed floor space, abutments positively attached to said platform but freely movable transversely and along the surface of the platform toward the center line thereof and additional abutments freely movable longitudinally and along the surface of the vehicle and defining with said first abutments rectangular seats for the accommodation of containers of varying base dimensions as to width and length, in spaced relation along the length of the platform, each said abutment having capacity for locking engagement with said platform.

2,002,441
SILHOUETTE FORM
Ida R. Rock, Brooklyn, N. Y.
Application April 13, 1933, Serial No. 665,852
5 Claims. (Cl. 223—18.1)

1. An adjustable form for the display of apparel comprising an extensible standard, a coat hanger or the like carried by the said standard, a plane body or sheet having the outline form of a torso silhouette or portion thereof with no substantial thickness adjustably positioned on said standard and means for adjustably varying the position of said body or sheet on the said standard with relation to said hanger.

2,002,442
ROTATABLE WORK TABLE
Fred R. Swanson, Rockford, Ill., assignor to Sundstrand Machine Tool Co., Rockford, Ill., a corporation of Illinois
Application November 28, 1932, Serial No. 644,638
7 Claims. (Cl. 90—58)

6. A rotatable work support comprising in combination, a base providing a loading station and a working station, an elongated table rotatable thereon to position each end alternately at the loading and the working station, a pivot pin for centering the table movably mounted on the base, means for clamping the end of the table at the working station to the base, a bar movably mounted centrally of the base and extending longitudinally thereof, means actuated by the bar upon longitudinal movement thereof to draw the pivot pin downwardly to clamp the center of the table, means including a pair of pivoted levers disposed on opposite sides of said bar for actuating said clamping means upon longitudinal movement of said bar simultaneously with the clamping of the center of the table, an operating handle extending from said base at the loading end, means including toggle mechanism connecting said handle and the adjacent end of said bar, and means for locking the table against rotation comprising a recessed member secured to the underside of the table and a lock bolt slidably mounted on the base at the working end thereof and connected to the adjacent end of said bar accurately to position the end of the table at the working station.

2,002,443
REMOTE CONTROL DEVICE FOR RADIO-RECEIVERS
Adolph A. Thomas, New York, N. Y.
Application October 26, 1929, Serial No. 402,571
36 Claims. (Cl. 250—20)

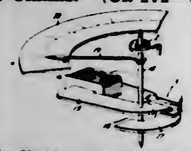
1. In radio tuning apparatus, a remote control box having a series of electric contacts represent-

ing each a selected station, a rotary switch arm normally out of engagement with said contacts and movable axially into engagement with a selected contact, a normally open motor switch in said box, a manually operable member for closing said switch arm against any one of said contacts and at the same time closing said motor switch, and spring means for automatically restoring said switch arm and motor switch to normal position upon the manual release of said member, in combination with a radio receiver having adjustable tuning means, an electric motor for operating said tuning means, said normally open switch being connected in the circuit of said motor, and control mechanism operatively connected with said contacts to stop said motor when said tuning means has tuned in the station represented by the particular contact which said switch arm engages when the motor switch is closed.

2,002,444
REFRIGERATOR EVAPORATOR

Henry S. Woodruff, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York

Application August 28, 1929, Serial No. 389,047
44 Claims. (Cl. 62—95)

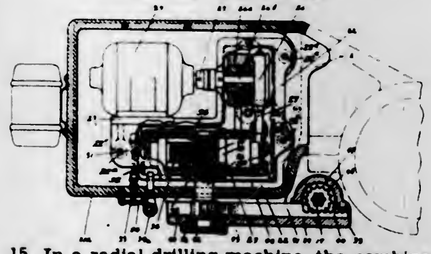


1. An evaporator for refrigerating machines including a flat upper surface for supporting articles to be frozen and a header extending along one edge of the evaporator, said evaporator having a plurality of passages extending from said header to the opposite side of said flat surface for the circulation of refrigerant therethrough and having a passage extending along the edge thereof communicating with the passages extending from said header.

2,002,445
TRANSVERSELY MAGNETIZED VANE INSTRUMENT

Ralph G. Arey, Swampscott, and Harold T. Faus, Lynn, Mass., assignors to General Electric Company, a corporation of New York

Application January 26, 1934, Serial No. 708,440
9 Claims. (Cl. 171—95)



7. A ratio indicator comprising in combination a pair of stationary elements, each comprising a current conducting winding and a magnetic yoke linking said winding and having a pair of pole ends spaced to form an air gap therebetween, and a movable element carrying a sheet of transversely magnetized magnetic material mounted with the axis of rotation perpendicular to said sheet, the air gaps of said stationary members being adjacent to permit said movable sheet to pass from one air gap to the other, the connections of said current conducting windings being such that said movable vane is repulsed by each of said stationary members, thereby causing said movable member to be balanced in a position indicating the ratio of the currents flowing in said current conducting winding.

2,002,446
CLAMPING MECHANISM FOR RADIAL DRILLS

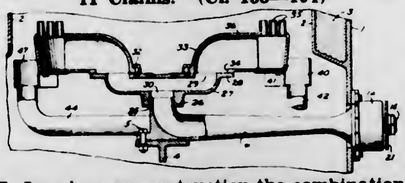
Jack C. Carlton, Cincinnati, Ohio, assignor to The Carlton Machine Tool Company, Cincinnati, Ohio, a corporation of Ohio

Application January 9, 1931, Serial No. 507,673
17 Claims. (Cl. 77—28)

15. In a radial drilling machine, the combination of a base, a rotatable column extending thereabove, a clamp for clamping said rotatable column in fixed relation to said base, a drill arm having a bearing about said column and provided with a shelf at the rear of said bearing, and a clamp operating unit secured under said shelf substantially within the horizontal projection of said drill arm, said clamp operating unit including a support and a separate reversible electric motor, a reversible hydraulic pump and a reversible hydraulic motor interconnected and mounted on said support, a liquid reservoir under said reversible hydraulic motor, inwardly opening check valves communicating with the respective sides of said reversible hydraulic motor and having suction connection with the liquid in said reservoir, the interconnections between said electric motor, said pump and said hydraulic motor including a drive connection between said reversible electric motor and said reversible hydraulic pump journaled on said support, said pump and said hydraulic motor each provided with opposite ports, and liquid passages between said ports of said pump and of said hydraulic motor respectively, and arranged for reverse operations of said reversible hydraulic motor by reverse operations of said reversible electric motor, and clamp operating means having operative connections with said reversible hydraulic motor and said clamp for translating the opposite movements in said reversible hydraulic motor into clamping and unclamping movements of said clamp.

2,002,447
HALOGEN ALKENYL PHENOLS AND MANUFACTURE THEREOF

Stanislaus Deichsel, Wuppertal-Elberfeld, Germany, assignor to Winthrop Chemical Company, Inc., New York, N. Y., a corporation of New York



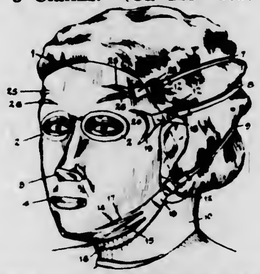
No Drawing. Application October 30, 1933, Serial No. 695,958. In Germany November 11, 1932
14 Claims. (Cl. 260—154)

1. Phenols which are substituted at the benzene nucleus by a halogen atom and by an unsaturated organic radical of 4 to 7 carbon atoms selected from the group consisting of alkenyl and cycloalkenyl groups containing one double bond, which products display a disinfecting action.

2,002,448
ATMOSPHERIC GAS BURNER

Harry H. Dodge, Williamsport, Pa.

Application November 1, 1932, Serial No. 640,701
11 Claims. (Cl. 158—104)

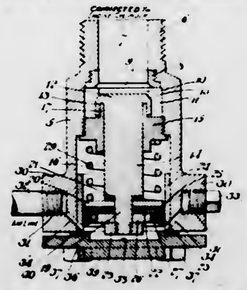


7. In a burner construction the combination of a spider for receiving fuel; a conduit for supplying fuel to said spider, said conduit delivering the fuel through the bottom wall of the spider; and a plurality of burner chambers one for each branch of the spider, said chambers having arms radially adjustable upon the upper surfaces of the branches of said spider and adapted to receive the fuel therefrom, each burner chamber provided with ports for exhausting the fuel, whereby the complete burner is capable of being adjustably fitted to fire pots of different dimensions.

2,002,449
DERMATOID MASK

Elizabeth Dohm, Toledo, Ohio, assignor of one-half to Florence R. Seyfried, Toledo, Ohio

Application October 18, 1934, Serial No. 748,786
8 Claims. (Cl. 128—163)



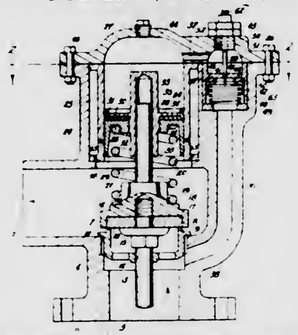
1. A dermatoid mask having elastic, porous material, tension members extending from parts of the mask to draw at a plurality of points from central portions of the mask, and ribs for directively distributing the tension over desired parts of the skin of the person.

2,002,450
CYLINDER COCK

Robert H. George, Philadelphia, Pa., assignor to George Manufacturing Company, Inc., Philadelphia, Pa., a corporation of Delaware

Application March 9, 1933, Serial No. 660,083
8 Claims. (Cl. 121—134)

1. A cylinder cock comprising a casing, a guide member mounted therein forming a horizontal partition separating the interior of the casing into a valve chamber and a piston chamber, the casing having a port forming a communication between the engine cylinder and the valve chamber and an opening in the side wall forming a communication between the valve chamber and the exterior, a valve disposed in the valve chamber adapted to close said port, said valve having a stem extending through the guide member, the guide member having an upwardly extending annulus surrounding the valve stem, and the valve member having a recess into which said annulus projects, a piston mounted on the lower end of the valve stem, the casing having a fluid pressure connection and a port extending therefrom to the



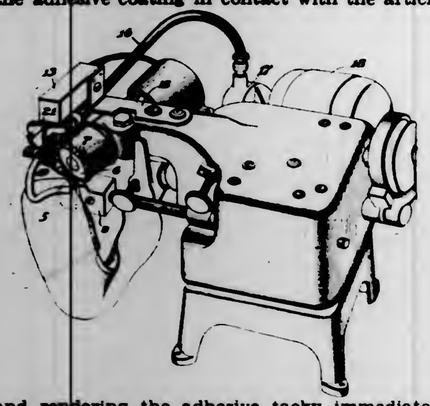
piston chamber below the piston, a bonnet for closing the lower end of the casing, said bonnet having a boss normally disposed exteriorly but adapted when the bonnet is reversed to hold the valve in the closed position.

2,002,451
WATER HAMMER ELIMINATOR

Wallace M. Gray, Cincinnati, Ohio

Application January 21, 1935, Serial No. 2,768
6 Claims. (Cl. 137—71)

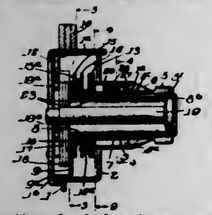
1. A water hammer eliminator comprising in combination: a body having an inlet port for fluid under pressure and a waste discharge port to be placed in fluid communicative relationship with the inlet port, a valve normally barring communication between said ports, a cylinder, and a plunger therein movable toward and from the valve, said cylinder having a fluid chamber above the plunger, means constantly yieldingly urging the plunger away from the valve and tending always to reduce the capacity of the said fluid chamber, a by-pass providing for a restricted flow of fluid from the inlet port to the fluid chamber above the plunger, and means providing for a copious flow of fluid in the opposite direction, upon application to the valve of a sudden high pressure surge of fluid in the inlet port sufficient to open the valve and move the plunger.



2,002,452
METHOD OF AND MACHINE FOR APPLYING REENFORCING STRIP MATERIAL

Robert A. Hartt, Lynn, Mass., assignor, by mesne assignments, to Griess, Pfleger & Company, Inc., Cincinnati, Ohio, a corporation of Ohio

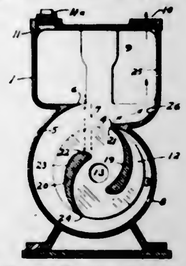
Application June 3, 1930, Serial No. 459,066
2 Claims. (Cl. 12—55)



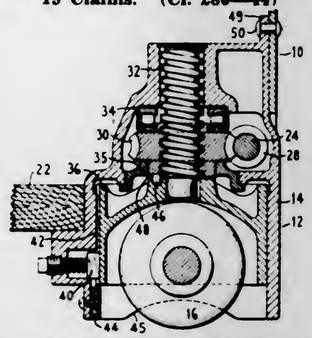
1. That improvement in methods of securing a reenforcing strip of sheet material coated with

a meltable adhesive to an article of work which consists in relatively feeding said article and strip, pressing said strip against said article with the adhesive coating in contact with the article,

and rendering the adhesive tacky immediately prior to bringing it into contact with said article by blowing a hot gaseous fluid along the surface of said adhesive coating longitudinally of said strip.



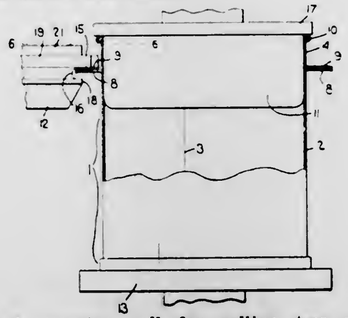
2,002,453
LOCK
Edwin W. North, Rockford, Ill., assignor to National Lock Co., Rockford, Ill., a corporation of Delaware
Application April 23, 1931, Serial No. 532,149
13 Claims. (Cl. 70—53)



1. A combination lock having a rotatable dial knob, a rotatable key post concentric with said knob, permutation disks operable by the dial knob, a lock bolt, a member operable by the key post for operating said lock bolt, and means cooperable with the disks for operating the lock bolt by the dial knob, said means comprising an index element pivotally connected to the lock bolt and normally held by said disks in cooperative engagement with an abutment on said member to establish an operative connection between said member and lock bolt but displaceable from such engagement to disestablish such connection when the disks are manipulated to establish condition for operating the lock bolt by the dial knob.

2,002,454
CENTRIFUGAL SELF-PRIMING PUMP
Herbert E. Rupp, Mansfield, Ohio, assignor to Gorman-Rupp Company, Mansfield, Ohio, a corporation of Ohio
Application May 8, 1933, Serial No. 669,890
10 Claims. (Cl. 103—113)

8. A non-recirculating self-priming centrifugal pump, comprising, a volute impeller chamber having an intake port, a liquid retaining chamber over the impeller chamber, a single communicating passage between the two chambers disposed intermediate the sides thereof with respect to the plane of impeller rotation therein, and a rotary impeller in said impeller chamber having backwardly curving blades arranged to pass close to one side of the passage and therewith provide a liquid cut-off from the upper to the lower chamber.

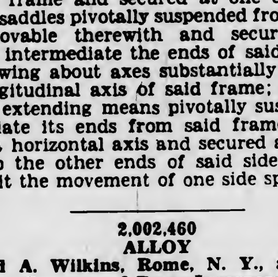


2,002,455
SHIPPING CONTAINER WITH MECHANICAL JACK
Frank H. Schwerin, Bellevue, Pa., assignor to The Duff-Norton Manufacturing Company, Pittsburgh, Pa., a corporation of Pennsylvania
Application July 2, 1932, Serial No. 620,628
19 Claims. (Cl. 280—44)

1. In combination with a shipping container; lifting devices connected with the container above the base of the container, each lifting device including a wheel and means for thrusting the wheel downwardly below the bottom supporting surface, and thus lifting the container so that it is supported by the wheels, mechanism operable to turn each wheel through a definite angle so that the shipping container can be rolled in different lines of direction, and means for holding each wheel in various planes of rotation.

2,002,456
METHOD OF AND APPARATUS FOR MAKING A CAN
Harry Sebell, Boston, Mass., assignor of one-half to Arthur H. Parker, Lexington, Mass.
Application May 3, 1933, Serial No. 669,127
15 Claims. (Cl. 113—7)

10. The method of making a can which consists in (1) assembling in axial alignment and with their seaming flanges in mating relation a body portion having at its upper end an outwardly-directed seaming flange and a neck portion having the same internal diameter as the upper part of the body portion and is provided with a seaming flange which mates the seaming flange of the body portion, (2) introducing into the aligned neck and body portions a seaming chuck which fits the interior of the body and neck portions, and (3) rolling the mating flanges into a double lock seam.



14. A seaming roll for rolling two mating flanges into a double lock seam, said roll having a peripheral curling groove to act on the edges of both flanges and roll them into a double lock seam and also having an annular flange portion adapted to engage the face of one of the seaming flanges, said flange portion being sectionally contractible.

2,002,457
CAN
Harry Sebell, Boston, Mass., assignor of one-half to Arthur H. Parker, Lexington, Mass.
Application June 5, 1933, Serial No. 674,388
1 Claim. (Cl. 220—42)

A can having a body section and a seamless neck section forming an extension of the body section and adding to the capacity of the can, the material forming the side walls of the neck section being bent back on itself with the two plies in contact with each other, said two-ply portion of the neck section fitting into the upper portion of the body section, and said neck section and body section being secured together by two outwardly-extending contacting seaming flanges, one on the neck section and the other on the body section, which are rolled together to produce a double lock seam on the exterior of the cam, the lower end of the neck section and the portion of the body section immediately below the neck section having the same diameter and forming together a chuck-engaging surface for engagement with a chuck during the rolling of the seaming flanges to form the double lock seam.

2,002,458
CAN
Harry Sebell, Boston, Mass., assignor of one-half to Arthur H. Parker, Lexington, Mass.
Application September 26, 1933, Serial No. 691,004
1 Claim. (Cl. 220—42)

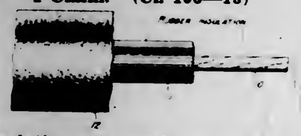
A can having a body section and a seamless neck section secured to the body section with a double lock seam, said neck section forming an extension of the body section and the upper edge of the neck section being curved outwardly to present a bead, the lower end of the neck section being bent back on itself with the two plies in contact with each other and the two-ply portion of said section fitting within the upper end of the body section, and the body section having an interior shoulder engaging the lower end of the neck section, a cover having a frictional fit within

the neck section and having a bead at its periphery, said neck section having an internal shoulder forming a stop portion against which the cover rests when it is in operative position closing the can, said stop portion being so positioned that when the cover rests against it the bead of the cover is spaced slightly from the bead of the neck, thereby providing a space in which an implement may be inserted for prying the cover from the can.

2,002,459
VEHICLE SPRING SUSPENSION
Philip Viviano, St. Louis, Mo.
Application March 12, 1934, Serial No. 715,090
2 Claims. (Cl. 267—36)

1. The combination with a vehicle frame and an axle, of side springs extending longitudinally of said frame and secured at one end to said frame; saddles pivotally suspended from said axle and movable therewith and secured to the springs intermediate the ends of said springs so as to swing about axes substantially parallel to the longitudinal axis of said frame; and transversely extending means pivotally suspended intermediate its ends from said frame to rotate about a horizontal axis and secured adjacent its ends to the other ends of said side springs to transmit the movement of one side spring to the other.

2,002,460
ALLOY
Richard A. Wilkins, Rome, N. Y., assignor to Revere Copper and Brass Incorporated, Rome, N. Y., a corporation of Maryland
No Drawing. Application March 2, 1935, Serial No. 9,109
3 Claims. (Cl. 75—1)



1. Substantially zincless copper-base alloys capable of being worked both hot and cold, and

capable when in the cold rolled and drawn condition of being heat treated at temperatures below recrystallization temperatures markedly to increase the yield point without reduction in tensile strength and ductility, consisting essentially of copper, silicon and tin within the following approximate ranges and proportions: silicon 2.25 to 3.5%, tin 0.25 to 2%, balance substantially copper, the minimum amount of tin being 0.25% for all values of silicon, and the maximum amount of tin varying between 1.8 and 2% linearly and directly with the silicon when the latter is between 2.25 and 3%, and varying between 1.7 and 2% linearly and inversely with the silicon when the latter is between 3 and 3.5%, the alloys being further characterized by a tensile strength of at least 55,000 pounds per square inch with an elongation of at least 60% in 2 inches when in the fully annealed condition, and when in this condition being capable of being cold drawn to secure a tensile strength of at least 105,000 pounds per square inch with an elongation of at least 9% in 2 inches or cold rolled to secure a tensile strength of at least 100,000 pounds per square inch with an elongation of at least 4% in 2 inches.

2,002,461
RUBBER INSULATION FOR SUBMARINE CABLES

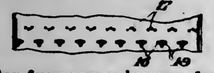
Robert R. Williams, Roselle, and Archie R. Kemp, East Orange, N. J., assignors to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York

Application December 4, 1923, Serial No. 678,509
1 Claim. (Cl. 106—13)

An insulating material comprising rubber highly freed of water soluble materials, and a filler, the particles of said filler being such as will pass a sieve of 100 meshes per inch but will not pass a sieve greatly finer than 200 meshes per inch.

2,002,462
WELDING ROD

Gorham W. Woods, Houston, Tex., assignor, by mesne assignments, to Haynes Stellite Company, Kokomo, Ind., a corporation of Indiana



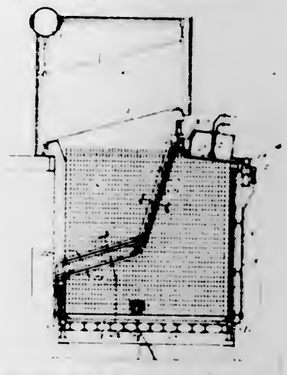
No Drawing. Application August 6, 1928, Serial No. 297,909
7 Claims. (Cl. 219—8)

1. A welding rod comprising an aggregate of small particles of tungsten carbide mixed with a binder of iron, said iron and carbide being alloyed together along the outer surfaces of said particles.

2,002,463
STEAM BOILER

Ervin G. Bailey, Easton, Pa., and Howard J. Kerr and Ralph M. Hardgrove, Westfield, N. J., assignors to Fuller Lehigh Company, Fullerton, Pa., a corporation of Delaware

Application December 11, 1929, Serial No. 413,200
Renewed February 8, 1934
21 Claims. (Cl. 122—235)

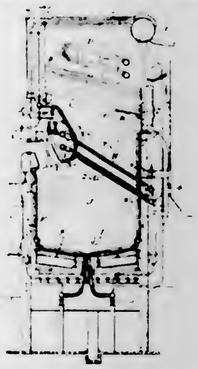


1. In a boiler furnace, a burner for introducing pulverized slag forming fuel into said furnace, and rows of groups of slag collecting tubes extending across the upper portion of said furnace above said burner, each group being wider than twice the diameter of one tube.

2,002,464
BOILER FURNACE

Ervin G. Bailey, Easton, Pa., Howard J. Kerr, Westfield, N. J., and Ralph M. Hardgrove, Bethlehem, Pa., assignors to Fuller Lehigh Company, Fullerton, Pa., a corporation of Delaware

Application December 11, 1929, Serial No. 413,201
14 Claims. (Cl. 122—235)



1. In a water tube boiler, a furnace, a baffle extending downwardly into said furnace from the upper portion thereof, a fuel burner projecting pulverized slag forming fuel downwardly into said furnace in front of said baffle, and staggered slag removing tubes extending across said furnace from the lower edge of said baffle.

2,002,465
SLAG DRIP AND SCREEN

Ervin G. Bailey, Easton, Pa., and Howard J. Kerr, Westfield, N. J., assignors to The Babcock & Wilcox Company, Bayonne, N. J., a corporation of New Jersey

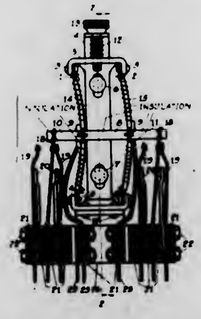
Application October 28, 1930, Serial No. 491,682
Renewed April 3, 1934
27 Claims. (Cl. 122—235)

1. In a steam generator, a furnace, a water tube boiler positioned beyond the furnace relative to gas flow, means for burning a slag forming fuel in said furnace, and a water tube screen forming a combined gas agitating and slag collecting screen between the furnace and the boiler, the tubes thereof having transverse metal projections hotter than the body of the tubes whereby slag directed there-against is hindered from freezing thereon and consequently runs off, said projections being arranged along the tubes to prevent the accumulation of slag at positions near the ends of the tubes, the water tubes of the screen consisting of a single thickness of metal with a cooling fluid contacting their inner surfaces and with the metallic extensions welded or otherwise integrally joined with the metal of the tubes on their outer surfaces.

2,002,466
KNOB OR HANDLE CONSTRUCTION

Don A. Belden, Akron, Ohio, assignor to The Baker-McMillen Company, Akron, Ohio, a corporation of Ohio

Application May 1, 1934, Serial No. 723,350
6 Claims. (Cl. 16—121)

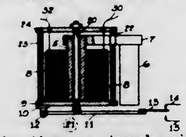


1. An attachment for a sheet metal or similar construction comprising a knob having a preformed recess, a projection integral with the knob and located in the recess, a headed rivet having a shank portion which is split to provide prongs, the projection being compressed between the prongs of the rivet when the same is forced into position.

2,002,467
SNAP ACTING THERMAL DEVICE

Edwin O. Blodgett, Rochester, N. Y., assignor to General Railway Signal Company, Rochester, N. Y.

Application May 13, 1931, Serial No. 536,991
11 Claims. (Cl. 200—122)

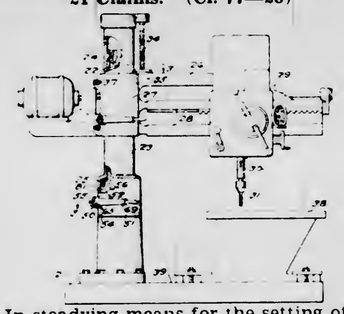


1. In a thermal-electric device, two opposed thermo-responsive strips, a rigid support at each end of said strips, compression biasing means on said supports arranged to produce a longitudinal buckle in said strips, individual electrical heating elements associated with each strip and means rigidly interconnecting intermediate portions of said strips.

2,002,468
SIGNALING SYSTEM FOR RAILROADS

Theodore Bodde, Rochester, N. Y., assignor to General Railway Signal Company, Rochester, N. Y.

Application October 15, 1930, Serial No. 488,897
17 Claims. (Cl. 246—41)



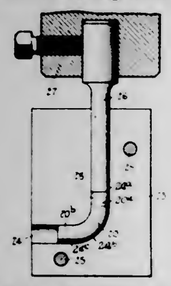
1. In combination, a track circuit including track rails having a section insulated from adjacent sections, a track battery connected across the rails at one end thereof, and a compensated track relay connected across the rails at the other end comprising, a quick acting means including a main coil, and slow acting means included in the same circuit with said quick acting means for changing the operating characteristic of said quick acting means in accordance with the flow of current in said main coil.

2,002,469
COLUMN CLAMP FOR RADIAL DRILLS

Jack C. Carlton, Cincinnati, Ohio, assignor to The Carlton Machine Tool Company, Cincinnati, Ohio, a corporation of Ohio

Application September 2, 1933, Serial No. 688,008
21 Claims. (Cl. 77—28)

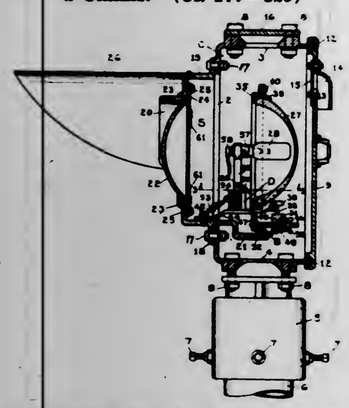
1. In steadying means for the setting of a tool in a drilling machine, the combination with the drill-arm on which the tool is located, and means for adjusting said drill-arm and the tool thereon into various radial positions of a clamp bearing for said arm comprising resilient cheeks and a part toward which said cheeks are clamped, means clamping said cheeks toward said part, and means adjusting the relative resilience between said cheeks for adjusting the relative clamping moments between said cheeks and said part so that said cheeks are clamped simultaneously and equally for maintaining said clamp bearing and said part in adjusted relation throughout the clamping.



2,002,470
METHOD OF MAKING ELBOW PIPE FITTINGS OF INTEGRAL TUBULAR METAL

Edward S. Cornell, Jr., Larchmont, N. Y., assignor to American Radiator & Standard Sanitary Corporation, New York, N. Y., a corporation of Delaware

Application January 16, 1932, Serial No. 586,981
2 Claims. (Cl. 29—157)

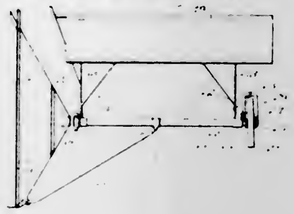


1. The method of forming an elbow pipe fitting of integral wrought metal having a wall thickness

incapable of forming a thread, which comprises taking a substantially rectilinear tubular length of integral wrought metal having a wall thickness incapable of forming a thread, placing the same in a forming die having a channel comprising an arcuate channel portion corresponding to the angular degree of the degree of the desired elbow pipe fitting, said channel further having channel portions respectively anterior to and posterior of and directly communicating with the stated arcu-

ate channel portion, applying active pressure solely endwise at the edge of the anterior portion of the tubular length, and subjecting the posterior portion of the tubular length firstly to arcuate bending and subsequently to rectilinear configuration and the intermediate portion of the tubular length to arcuate bending solely by the action of the walls of the stated arcuate and posterior portions of the channel conjointly with the stated applied active pressure, the aforesaid being effected in the absence of supplied heating.

2,002,471
LIGHT SIGNAL
Salisbury M. Day, Rochester, N. Y., assignor to General Railway Signal Company, Rochester, N. Y.
Application March 2, 1925, Serial No. 12,582
2 Claims. (Cl. 177—329)

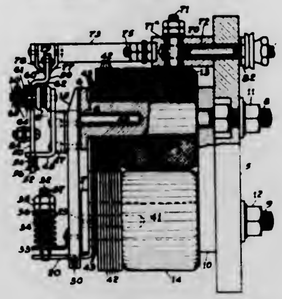


1. In a light signal, in combination, a casing, a lens supporting ring secured to the casing, a lens in the ring, a shelf on the ring and extending into the casing, a light source, means for supporting the light source on the shelf, a concave reflector, means securing the reflector to the shelf, means for positioning the light source at the focal point of the reflector, and means for adjusting the reflector to project a beam through the lens.

2,002,472
HOSE COUPLING
James A. Jensen, Philadelphia, Pa., assignor to Quaker City Iron Works, Philadelphia, Pa., a corporation of Pennsylvania
Application May 16, 1934, Serial No. 725,961
3 Claims. (Cl. 285—143)

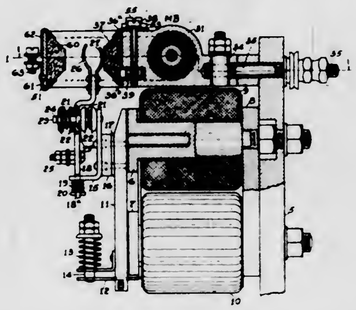
1. A hose coupling of the type described comprising a tubular fitting having a manipulator enlargement intermediate its ends, an annular longitudinal recess in said fitting to one side of the enlargement for connecting-reception of a hose end, a shouldered portion at the other side of said enlargement having a comparatively coarse right-hand screw-thread with a plain cylindrical extension; a sleeve slidably fitting said extension with means preventing its rotation relative thereto, said sleeve having an exterior left-hand screw-thread, of corresponding pitch to the plain shouldered portion right-hand screw-thread, and embodying a shroud flange for engagement over the terminal flange of an axially-aligning fitting; and an adjuster nut collar having internal right and left-hand screw-threaded portions for cooperation with the extension and sleeve threaded parts to effect coupling connection of an aligned fitting or attachment of the coupling to a drain outlet.

2,002,473
COMBINED GRAIN AND TRANSPORT WHEEL FOR HARVESTER THRESHERS
Edward A. Johnston, Chicago, Ill., assignor to International Harvester Company, a corporation of New Jersey
Application September 13, 1926, Serial No. 134,992
4 Claims. (Cl. 56—122)



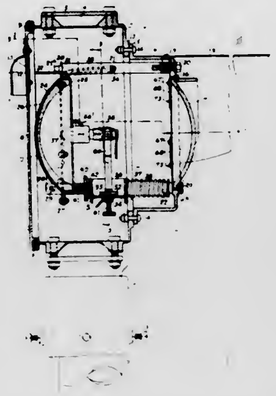
1. In a machine of the class described, a main frame, a harvester including an axle laterally offset from the main frame and foldingly connected thereto for rearward and horizontal folding, an arm on the free end of the axle, a yoke pivoted to the arm, a wheel carried in said yoke, means for preventing pivotal movement of the yoke when the harvester is in its normal offset position, and means for causing pivotal movement of said yoke when the harvester is in its folded position.

2,002,474
FRAME FOR TRACK TYPE TRACTORS
Edward A. Johnston, Chicago, and David B. Baker, Riverside, Ill., assignors to International Harvester Company, a corporation of New Jersey
Original application May 6, 1932, Serial No. 609,650. Divided and this application June 30, 1933, Serial No. 678,338
8 Claims. (Cl. 280—106)



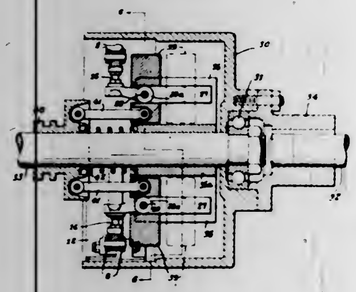
1. A frame for track type tractors comprising a front part cast into one piece and substantially rectangularly shaped in plan, said front part serving as a motor support and at its rear being formed with a flange, a rear part cast hollow into one piece including a narrow front portion with a flange bolted to the flange on the front part casting, said rear part being widened out transversely to form a relatively large rear box portion having parallel sides and a transverse rear vertical open end, the parallel sides having depending portions extending below the bottom of the box portion and concaved with the sides to form a circular gear nest, said box including at each side an integrally cast shaft mount arranged in the concaved sides forwardly and eccentrically thereof, and a thickened portion in advance of each said shaft mount joining the front narrow frame portion and the rear box portion and formed with transversely aligned trunnion mount openings.

2,002,475
TRACTIVE TYPE RELAY
Joseph F. Merkel, Rochester, N. Y., assignor to General Railway Signal Company, Rochester, N. Y.
Application June 19, 1931, Serial No. 545,402
8 Claims. (Cl. 200—87)



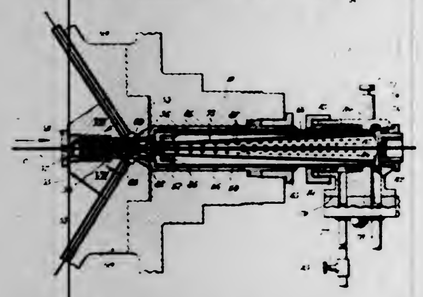
6. In a relay for controlling circuits of large current carrying capacity, in combination, two vertically spaced electro-magnets, a vertical armature coacting with the two electro-magnets, front and back fixed contacts, movable contacts cooperating with said fixed contacts, means biasing the armature away from the electro-magnets, oppositely arranged contact biasing means normally centering the movable contacts relative to the armature, and means preventing the actuation of the movable contacts by the contact biasing means beyond said centered relation to the armature.

2,002,476
TRACTIVE TYPE RELAY
Joseph F. Merkel, Rochester, N. Y., assignor to General Railway Signal Company, Rochester, N. Y.
Application July 24, 1931, Serial No. 552,906
2 Claims. (Cl. 200—147)



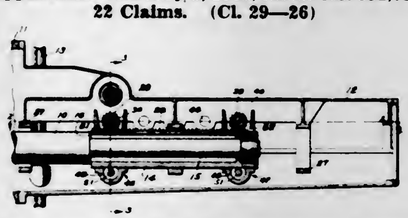
1. In combination, a terminal board, a back spacer and a front spacer mounted on the terminal board, two separate units, and a single rod holding the units between said spacers, each unit comprising a molded bakelite coil mounting, a coil within said mounting, a core within said coil, two pole pieces, one mounted on either end of said core, two spaced contacts mounted between said pole pieces, and two porcelain shields for insulating said spaced contacts from the said pole pieces respectively.

2,002,477
LIGHT SIGNAL FOR RAILROADS
Joseph F. Merkel, Rochester, N. Y., assignor to General Railway Signal Company, Rochester, N. Y.
Original application August 25, 1926, Serial No. 131,465. Divided and this application June 18, 1934, Serial No. 731,027
5 Claims. (Cl. 240—44.26)



1. In a light signal, a light source and light concentrating and projecting means, a support frame therefor, focus finding means carried by the frame and including, at least three finders pivoted to the frame and extending into the path of the projected light beam, and a notched portion on each finder unit defining an indicating line.

2,002,478
TRANSMISSION CLUTCH
Eugene Roberts, Hastings, N. Y., assignor to The Western States Machine Company, Salt Lake City, Utah, a corporation of Utah
Application October 17, 1932, Serial No. 638,057
11 Claims. (Cl. 192—105)



1. A centrifugal clutch for releasably coupling a drive shaft with a driven pulley, embracing a spider fast on the drive shaft, shoe-carrying arms pivotally connected to the spider, each arm carrying a pivotal clutch-shoe movable by centrifugal force into clutching engagement with the surrounding rim of the driven pulley, manually controllable retracting means including a pivoted lever, one of whose arms has retracting connection with said shoe-carrying arm, and a centrifugally acting counterweight arranged to exert a counterbalancing thrust on the retracting lever to weaken or overcome the centrifugal force actuating the brake shoe to its active position according to the distance of the counterbalancing weight from the fulcral point of the retracting lever.

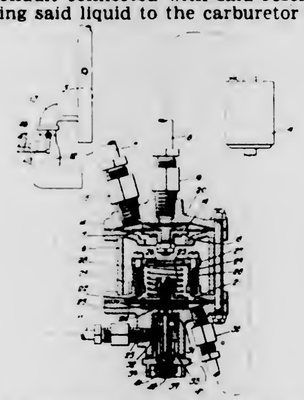
2,002,479
MANUFACTURE OF FLEXIBLE SHAFTING
Robert C. Angell, Prince Bay, N. Y., and Frank L. O. Wadsworth, Pittsburgh, Pa., assignors to The S. S. White Dental Manufacturing Company, a corporation of Pennsylvania
Application August 20, 1931, Serial No. 558,340
13 Claims. (Cl. 29—148)

3. An improvement in the art of fabricating flexible shafting which comprises the successive steps of heating a strand wire, winding the said heated wire on a core body at a pitch angle of less than 45 degrees to a line transverse to the axis of the core body, and then subjecting the wound layer of wire to a mechanical working to thereby relieve unbalanced stresses and strains therein.

2,002,480
DRIVE FOR MACHINE TOOL ELEMENTS
Keith F. Gallimore, Fond du Lac, Wis., assignor to Giddings & Lewis Machine Tool Co., Fond du Lac, Wis., a corporation of Wisconsin
Application February 8, 1932, Serial No. 591,739
22 Claims. (Cl. 29—26)

1. In a machine tool, in combination, an elongated horizontal casing having a plurality of spaced bearing brackets alined longitudinally thereof, an elongated horizontal sleeve slidable longitudinally in said brackets, a spindle having one end extending through said sleeve and being rotatably and non-translatably mounted therein, said sleeve being formed longitudinally with an elongated gear rack, two pinions mounted in said casing and adapted selectively to mesh with said rack, said pinions being spaced apart a distance substantially equal to the effective length of said rack, and means for driving said pinions simultaneously and at the same peripheral speed in the same direction.

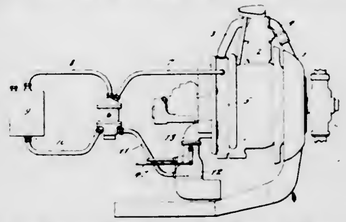
2,002,481
ARTIFICIAL SILK MANUFACTURE
Beirne Gordon, Jr. and Harold J. V. Michel, Utica, N. Y., assignors to Skenandoa Rayon Corporation, Utica, N. Y., a corporation of Delaware
Application September 10, 1931, Serial No. 562,022
7 Claims. (Cl. 18—54)



1. Method of manufacturing artificial silk which comprises the steps of spinning a yarn cake in the usual manner, removing the spun cake from the spinning bucket and applying a fabric thereto without distorting the cake, subjecting the cake while thus covered by the fabric and in its undistorted form to the action of desired treating fluids, inserting a collar within the fabric and cake to support the cake, turning the fabric back onto the collar to expose the cake while leaving it supported by the collar, and unwinding the yarn from the cake.

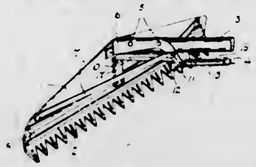
2,002,482
MEANS FOR AUTOMATIC CONTROL OF ANTIKNOCK LIQUIDS
Leo B. Kimball, New Haven, Conn., assignor to Fuel Development Corporation, a corporation of Delaware
Application January 20, 1934, Serial No. 707,550
11 Claims. (Cl. 123—119)

1. In means for controlling the supply of varying amounts of a supplementary liquid, other



than the fuel itself, for distribution in the air-fuel mixtures used in operating an internal-combustion engine, apparatus comprising, a closed reservoir for providing a constant supply of said supplementary liquid, means for producing fluid pressure above atmospheric pressure on said liquid, a conduit connected with said reservoir for conducting said liquid to the carburetor for said

engine, a controlling device in said conduit for permitting the admission and for regulating the amount of said liquid to be supplied, and means connected with said device and actuated by the fluid pressure above atmospheric pressure in said reservoir and in said conduit, to determine the conditions for actuating said device to control the admission and the rates of flow of said liquid therethrough.

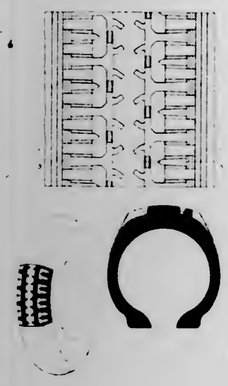


2,002,483
METHOD FOR AUTOMATIC CONTROL OF ANTIKNOCK LIQUIDS
Leo B. Kimball, New Haven, Conn., assignor to Fuel Development Corporation, a corporation of Delaware
Original application January 20, 1934, Serial No. 707,550. Divided and this application March 7, 1934, Serial No. 714,442
8 Claims. (Cl. 123—119)

1. The method of supplying a supplementary liquid in varying amounts for distribution in the air-fuel mixtures used in operating an internal-combustion engine, which comprises, producing a fluid pressure above atmospheric pressure in substantial proportion to the power developed by the engine, causing said fluid pressure to act elastically upon the surface of said supplementary

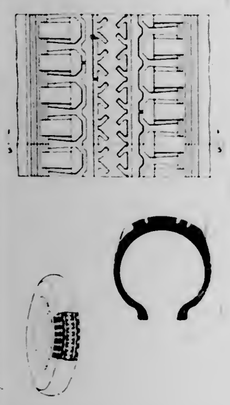
liquid and impel the same to flow in the desired direction, and then regulating the rates of flow of said supplementary liquid in proportion to the fluid pressure on the same.

2,002,484
GARDEN RAKE TOOTH CLEANING APPLIANCE
Walter B. Zimmerman, Winnipeg, Manitoba, Canada
Application November 4, 1933, Serial No. 696,719
3 Claims. (Cl. 55—146)



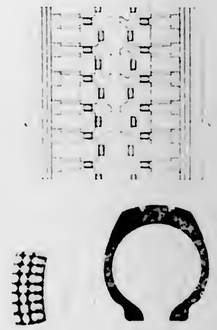
1. The combination with a handle, a headstock attached to said handle and a curved rake head secured thereto and provided with teeth, of a cleaning bar located to the inner side of the head and pivotally connected to said headstock, a hand trigger pivotally attached to the end of the handle remote from the head, an operating connection between the trigger and the cleaning bar to shift said cleaning bar on its pivot in an arcuate path following the curve of said rake head and teeth to clean said teeth, means normally holding the cleaning bar in an elevated position in regard to the teeth and means co-acting with said bar and said operating connection to yieldably press the bar towards the rake head as it passes downwardly towards the points of the teeth.

DESIGNS



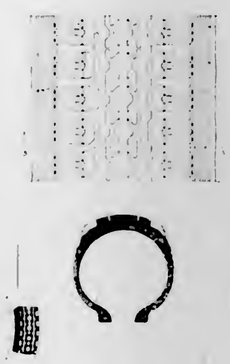
MAY 21, 1935

95,622
DESIGN FOR A TIRE
Arthur Balthazar and John E. Allen, Chicopee Falls, Mass., assignors to Gamble Stores, Inc., Minneapolis, Minn., a corporation of Delaware
Application March 4, 1935, Serial No. 55,718
Term of patent 14 years



The ornamental design for a tire as shown.

95,623
DESIGN FOR A TIRE
Arthur Balthazar and John E. Allen, Chicopee Falls, Mass., assignors to Gamble Stores, Inc., Minneapolis, Minn., a corporation of Delaware
Application March 4, 1935, Serial No. 55,720
Term of patent 14 years

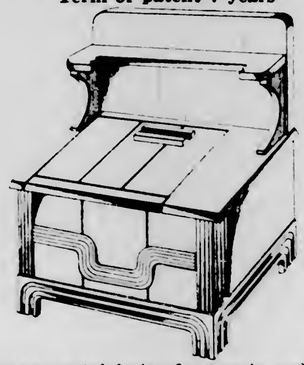


The ornamental design for a tire as shown.

95,624
DESIGN FOR A TIRE
Arthur Balthazar and John E. Allen, Chicopee Falls, Mass., assignors to Gamble Stores, Inc., Minneapolis, Minn., a corporation of Delaware
Application March 4, 1935, Serial No. 55,721
Term of patent 14 years

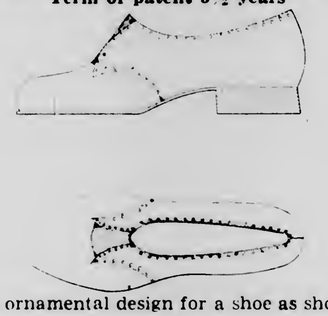
The ornamental design for a tire as shown.

95,625
DESIGN FOR A TIRE
Arthur Balthazar and John E. Allen, Chicopee Falls, Mass., assignors to Gamble Stores, Inc., Minneapolis, Minn., a corporation of Delaware
Application March 4, 1935, Serial No. 55,722
Term of patent 14 years



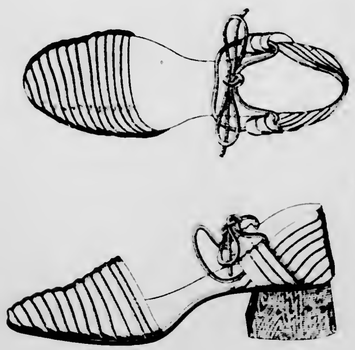
The ornamental design for a tire as shown.

95,626
DESIGN FOR AN ENSEMBLE DRESS
Louis Baum, New York, N. Y.
Application April 11, 1935, Serial No. 56,339
Term of patent 3½ years



The ornamental design for an ensemble dress, substantially as shown and described.

95,627
DESIGN FOR A RECIPE CABINET
Charles E. Bisbey, Metaline Falls, Wash.
Application February 4, 1935, Serial No. 55,242
Term of patent 7 years



The ornamental design for a recipe cabinet substantially as shown.

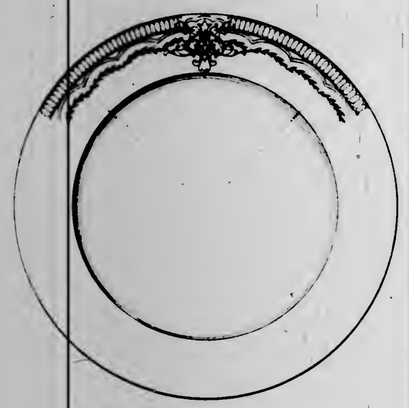
95,628
DESIGN FOR A SHOE
Everett Bradley, Haverhill, Mass.
Application April 6, 1935, Serial No. 56,247
Term of patent 3½ years

The ornamental design for a shoe as shown.

95,629
DESIGN FOR A SHOE
Albert M. Bressler, New York, N. Y.
Application March 26, 1935, Serial No. 56,056
Term of patent 3½ years

The ornamental design for a shoe substantially as shown.

95,630
DESIGN FOR A SHOE OR ARTICLE OF ANALOGOUS NATURE
Samuel Brietman, Chelsea, Mass.
Application April 4, 1935, Serial No. 56,215
Term of patent 3½ years



The ornamental design for a shoe or article of analogous nature, substantially as shown and described.

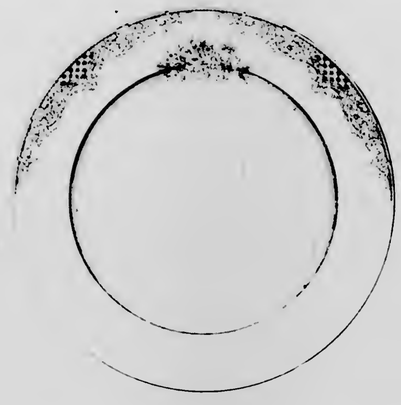
95,631
DESIGN FOR A PLATE OR SIMILAR ARTICLE
Yukio Buma, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a corporation of Japan
Application September 1, 1934, Serial No. 53,157
Term of patent 7 years

The ornamental design for a plate or similar article, as shown and described.

95,632
DESIGN FOR A PLATE OR SIMILAR ARTICLE
Yukio Buma, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a corporation of Japan
Application September 1, 1934, Serial No. 53,158
Term of patent 7 years

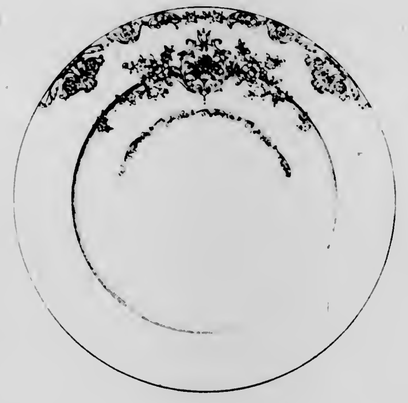
The ornamental design for a plate or similar article, as shown and described.

95,633
DESIGN FOR A PLATE OR SIMILAR ARTICLE
Yukio Buma, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a corporation of Japan
Application September 1, 1934, Serial No. 53,159
Term of patent 7 years



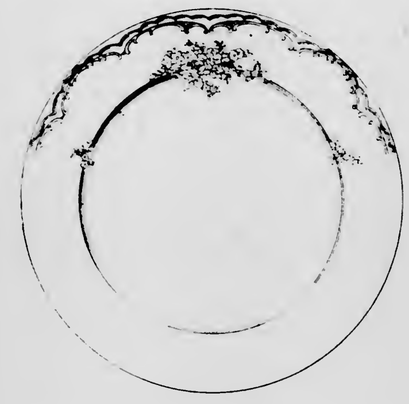
The ornamental design for a plate or similar article, as shown and described.

95,634
DESIGN FOR A PLATE OR SIMILAR ARTICLE
Yukio Buma, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a corporation of Japan
Application September 1, 1934, Serial No. 53,160
Term of patent 7 years



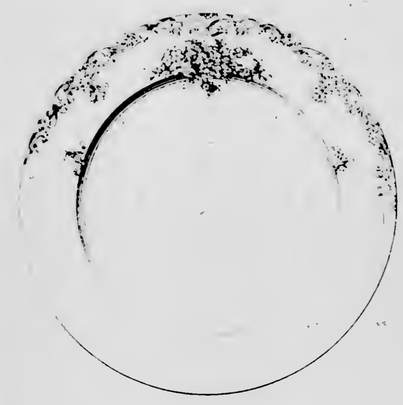
The ornamental design for a plate or similar article, as shown and described.

95,635
DESIGN FOR A PLATE OR SIMILAR ARTICLE
Yukio Buma, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a corporation of Japan
Application September 1, 1934, Serial No. 53,161
Term of patent 7 years



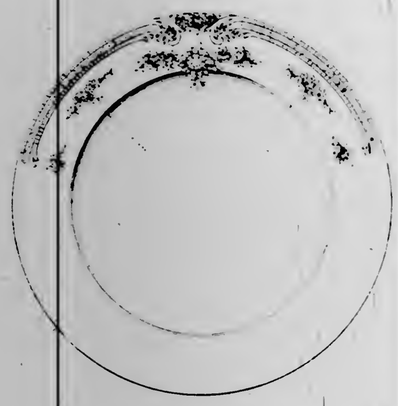
The ornamental design for a plate or similar article, as shown and described.

95,636
DESIGN FOR A PLATE OR SIMILAR ARTICLE
Yukio Buma, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a corporation of Japan
Application September 1, 1934, Serial No. 53,162
Term of patent 7 years



The ornamental design for a plate or similar article, as shown and described.

95,637
DESIGN FOR A PLATE OR SIMILAR ARTICLE
Yukio Buma, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a corporation of Japan
Application September 1, 1934, Serial No. 53,163
Term of patent 7 years



The ornamental design for a plate or similar article, as shown and described.

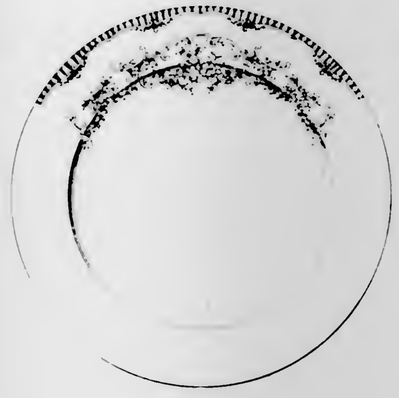
95,638
DESIGN FOR A PLATE OR SIMILAR ARTICLE
Yukio Buma, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a corporation of Japan
Application September 1, 1934, Serial No. 53,164
Term of patent 7 years

The ornamental design for a plate or similar article, as shown and described.

95,639
DESIGN FOR A PLATE OR SIMILAR ARTICLE
Yukio Buma, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a corporation of Japan
Application September 1, 1934, Serial No. 53,165
Term of patent 7 years

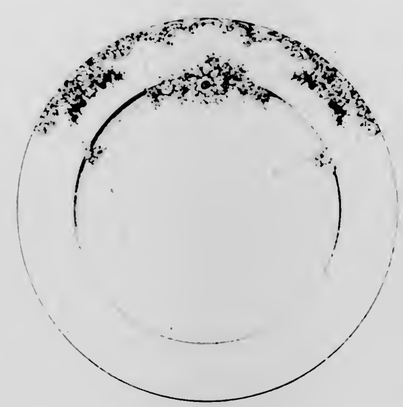
The ornamental design for a plate or similar article, as shown and described.

95,640
DESIGN FOR A PLATE OR SIMILAR ARTICLE
Yukio Buma, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a corporation of Japan
Application September 1, 1934, Serial No. 53,166
Term of patent 7 years



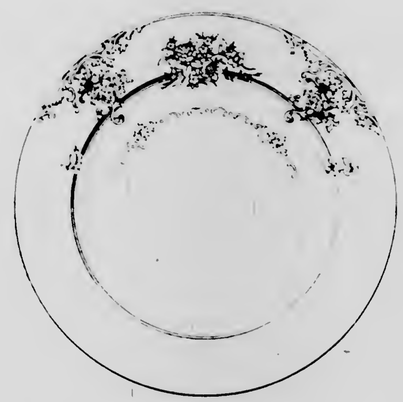
The ornamental design for a plate or similar article, as shown and described.

95,641
DESIGN FOR A PLATE OR SIMILAR ARTICLE
Yukio Buma, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a corporation of Japan
Application September 1, 1934, Serial No. 53,167
Term of patent 7 years



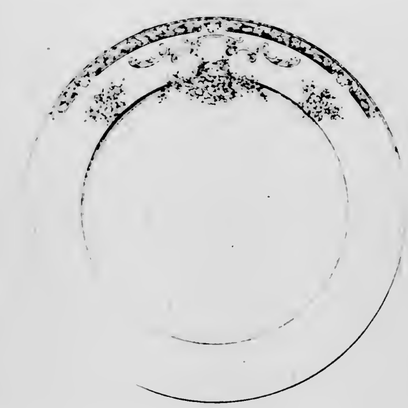
The ornamental design for a plate or similar article, as shown and described.

95,642
DESIGN FOR A PLATE OR SIMILAR ARTICLE
Yukio Buma, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a corporation of Japan
Application September 1, 1934, Serial No. 53,168
Term of patent 7 years



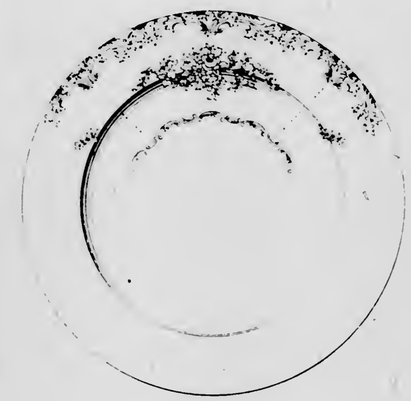
The ornamental design for a plate or similar article, as shown and described.

95,643
DESIGN FOR A PLATE OR SIMILAR ARTICLE
Yukio Buma, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a corporation of Japan
Application September 1, 1934, Serial No. 53,169
Term of patent 7 years



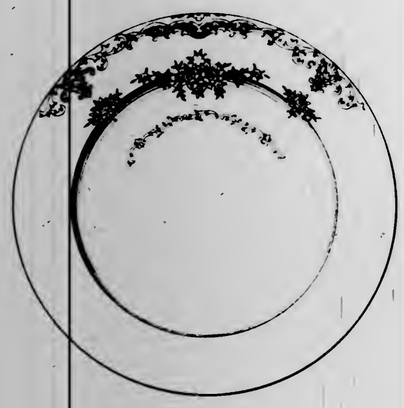
The ornamental design for a plate or similar article, as shown and described.

95,644
DESIGN FOR A PLATE OR SIMILAR ARTICLE
Yukio Buma, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a corporation of Japan
Application September 1, 1934, Serial No. 53,170
Term of patent 7 years



The ornamental design for a plate or similar article, as shown and described.

95,645
DESIGN FOR A PLATE OR SIMILAR ARTICLE
Yukio Buma, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a corporation of Japan
Application September 1, 1934, Serial No. 53,171
Term of patent 7 years



The ornamental design for a plate or similar article, as shown and described.

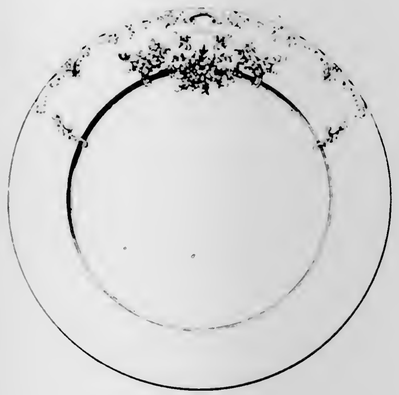
95,646
DESIGN FOR A PLATE OR SIMILAR ARTICLE
Yukio Buma, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a corporation of Japan
Application September 1, 1934, Serial No. 53,172
Term of patent 7 years

The ornamental design for a plate or similar article, as shown and described.

95,647
DESIGN FOR A PLATE OR SIMILAR ARTICLE
Yukio Buma, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a corporation of Japan
Application September 1, 1934, Serial No. 53,173
Term of patent 7 years

The ornamental design for a plate or similar article, as shown and described.

95,648
DESIGN FOR A PLATE OR SIMILAR ARTICLE
Yukio Buma, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a corporation of Japan
Application September 1, 1934, Serial No. 53,174
Term of patent 7 years

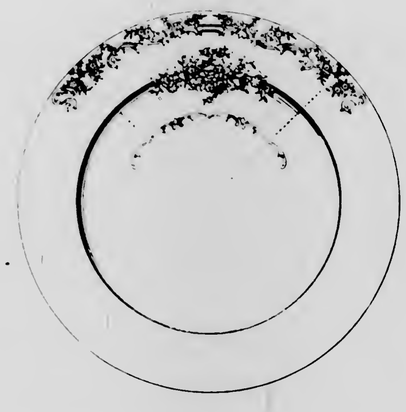


The ornamental design for a plate or similar article, as shown and described.

95,649
DESIGN FOR A PLATE OR SIMILAR ARTICLE
Yukio Buma, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a corporation of Japan
Application September 1, 1934, Serial No. 53,175
Term of patent 7 years

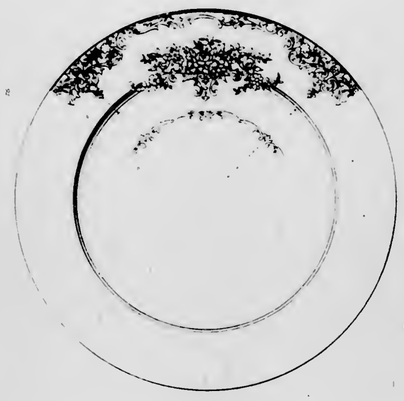
The ornamental design for a plate or similar article, as shown and described.

95,650
DESIGN FOR A PLATE OR SIMILAR ARTICLE
Yukio Buma, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a corporation of Japan
Application September 1, 1934, Serial No. 53,176
Term of patent 7 years



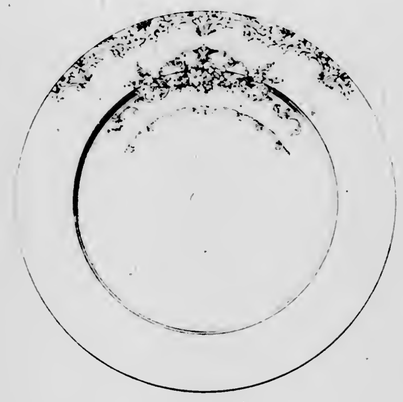
The ornamental design for a plate or similar article, as shown and described.

95,651
DESIGN FOR A PLATE OR SIMILAR ARTICLE
Yukio Buma, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a corporation of Japan
Application September 1, 1934, Serial No. 53,177
Term of patent 7 years



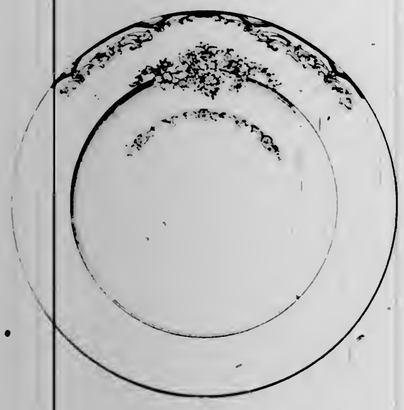
The ornamental design for a plate or similar article, as shown and described.

95,652
DESIGN FOR A PLATE OR SIMILAR ARTICLE
Yukio Buma, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a corporation of Japan
Application September 1, 1934, Serial No. 53,178
Term of patent 7 years



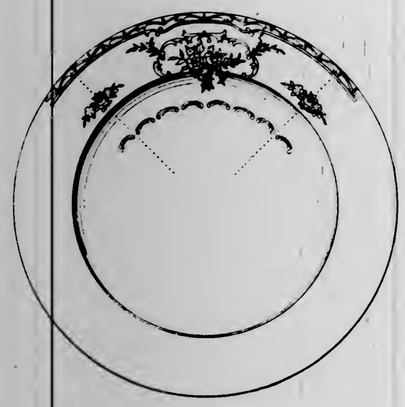
The ornamental design for a plate or similar article, as shown and described.

95,653
DESIGN FOR A PLATE OR SIMILAR ARTICLE
Yukio Buma, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a corporation of Japan
Application September 1, 1934, Serial No. 53,179
Term of patent 7 years



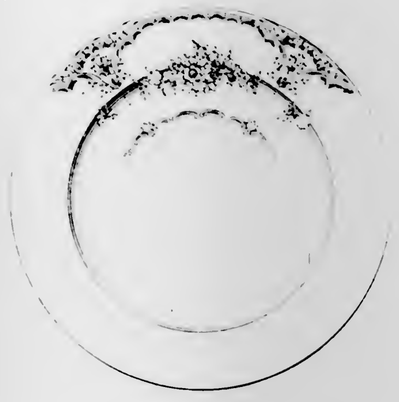
The ornamental design for a plate or similar article, as shown and described.

95,654
DESIGN FOR A PLATE OR SIMILAR ARTICLE
Yukio Buma, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a corporation of Japan
Application September 1, 1934, Serial No. 53,180
Term of patent 7 years



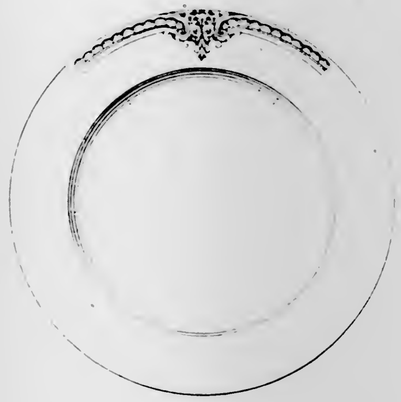
The ornamental design for a plate or similar article, as shown and described.

95,655
DESIGN FOR A PLATE OR SIMILAR ARTICLE
Yukio Buma, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a corporation of Japan
Application September 1, 1934, Serial No. 53,181
Term of patent 7 years



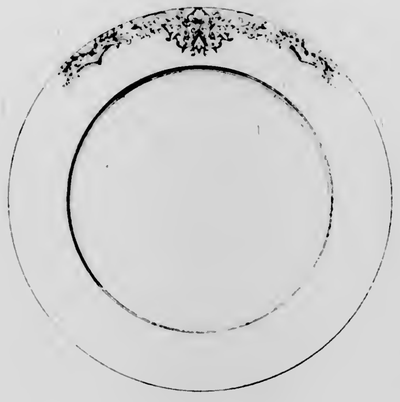
The ornamental design for a plate or similar article, as shown and described.

95,656
DESIGN FOR A PLATE OR SIMILAR ARTICLE
Yukio Buma, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a corporation of Japan
Application September 1, 1934, Serial No. 53,182
Term of patent 7 years



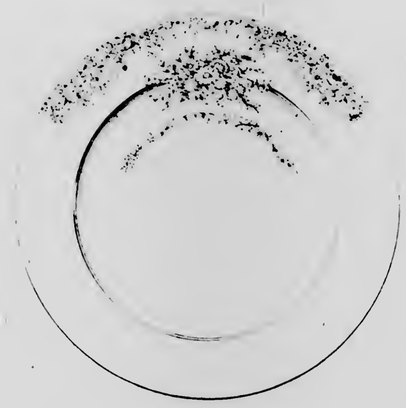
The ornamental design for a plate or similar article, as shown and described.

95,657
DESIGN FOR A PLATE OR SIMILAR ARTICLE
Yukio Buma, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a corporation of Japan
Application September 1, 1934, Serial No. 53,183
Term of patent 7 years



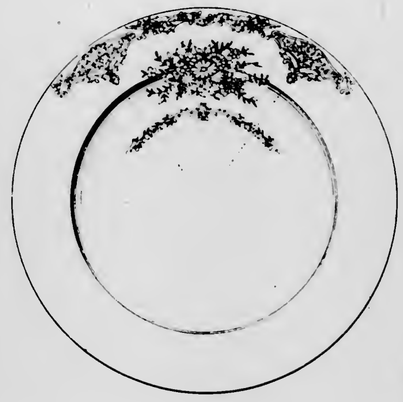
The ornamental design for a plate or similar article, as shown and described.

95,658
DESIGN FOR A PLATE OR SIMILAR ARTICLE
Yukio Buma, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a corporation of Japan
Application September 1, 1934, Serial No. 53,184
Term of patent 7 years



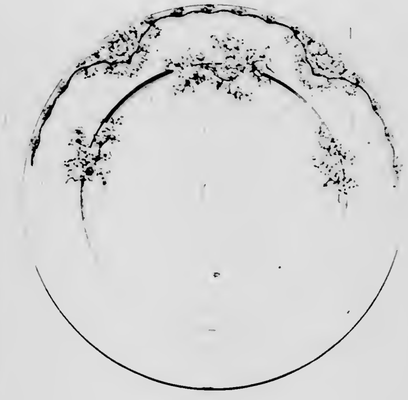
The ornamental design for a plate or similar article, as shown and described.

95,659
DESIGN FOR A PLATE OR SIMILAR ARTICLE
Yukio Buma, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a corporation of Japan
Application September 1, 1934, Serial No. 53,185
Term of patent 7 years



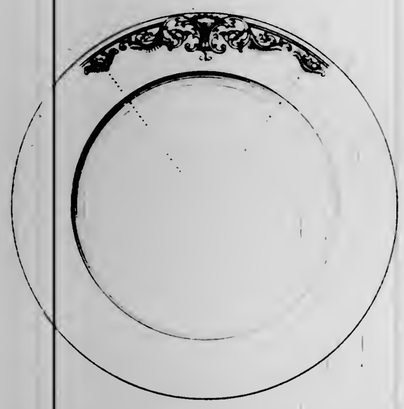
The ornamental design for a plate or similar article, as shown and described.

95,660
DESIGN FOR A PLATE OR SIMILAR ARTICLE
Yukio Buma, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a corporation of Japan
Application September 1, 1934, Serial No. 53,186
Term of patent 7 years



The ornamental design for a plate or similar article, as shown and described.

95,661
DESIGN FOR A PLATE OR SIMILAR ARTICLE
Yukio Buma, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a corporation of Japan
Application September 1, 1934, Serial No. 53,187
Term of patent 7 years

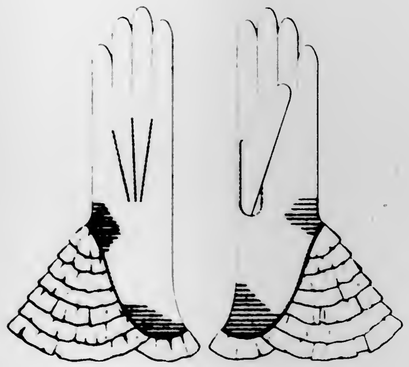


The ornamental design for a plate or similar article, as shown and described.

95,662
DESIGN FOR A PLATE OR SIMILAR ARTICLE
Yukio Buma, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a corporation of Japan
Application September 1, 1934, Serial No. 53,188
Term of patent 7 years

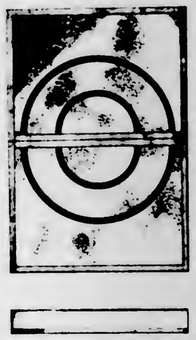
The ornamental design for a plate or similar article, as shown and described.

95,663
DESIGN FOR A PLATE OR SIMILAR ARTICLE
Yukio Bama, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a corporation of Japan
Application September 1, 1934, Serial No. 53,189
Term of patent 7 years



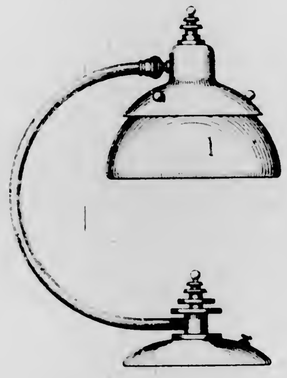
The ornamental design for a plate or similar article, as shown and described.

95,664
DESIGN FOR A SANDAL
George B. Carrier, Hudson, Mass., assignor to Firestone Footwear Company, Boston, Mass., a corporation of Massachusetts
Application March 22, 1935, Serial No. 56,000
Term of patent 14 years



The ornamental design for a sandal as shown.

95,665
DESIGN FOR A GLOVE
Mildred Crandall, Dunkirk, N. Y., assignor to Van Raalte Company, Inc., New York, N. Y., a corporation of New York
Application February 21, 1935, Serial No. 55,544
Term of patent 3½ years

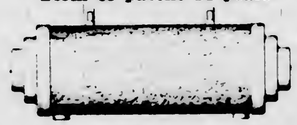


The ornamental design for a glove, as shown and described.

95,666
DESIGN FOR A GAME BOARD
Edith L. Crawford, Bronxville, N. Y.
Application March 23, 1935, Serial No. 56,016
Term of patent 7 years

The ornamental design for a game board as shown.

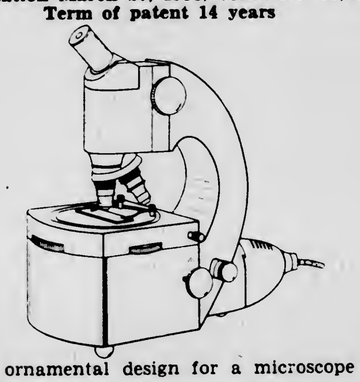
95,667
DESIGN FOR A LAMP
Bert A. Dickerson, Decatur, Ill., assignor to Faries Manufacturing Company, Decatur, Ill., a corporation of Illinois
Application February 20, 1935, Serial No. 55,515
Term of patent 3½ years



The ornamental design for a lamp, as shown.

95,668
DESIGN FOR A LAMP
Bert A. Dickerson, Decatur, Ill., assignor to Faries Manufacturing Company, Decatur, Ill., a corporation of Illinois
Application February 20, 1935, Serial No. 55,516
Term of patent 3½ years

The ornamental design for a lamp as shown.



95,669
DESIGN FOR A TRANSFORMER CASING
Ralph A. Dicksen, Chicago, Ill., assignor to Sola Electric Co., Chicago, Ill., a corporation of Delaware
Application October 3, 1934, Serial No. 53,467
Term of patent 14 years

The ornamental design for a transformer casing substantially as shown.

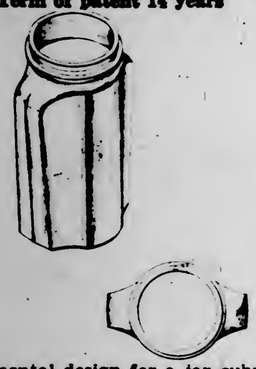
95,670
DESIGN FOR A MICROSCOPE
Gustave Fassin, Irondequoit, N. Y.
Application March 27, 1935, Serial No. 56,081
Term of patent 14 years

The ornamental design for a microscope as shown.

95,671
DESIGN FOR A CHAISE LONGUE
Paul T. Frankl, Los Angeles, Calif., assignor to Frank Debski, New York, N. Y.
Application February 20, 1935, Serial No. 55,520
Term of patent 3½ years

The ornamental design for a chaise longue, as shown and described.

95,672
DESIGN FOR A BOTTLE
Brooks D. Fuerst, Toledo, Ohio, assignor to United Distillers (of America) Ltd., Baltimore, Md., a corporation of Maryland
Application March 1, 1935, Serial No. 55,671
Term of patent 14 years

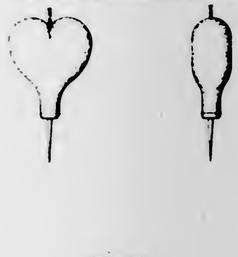


The ornamental design for a bottle substantially as shown.

95,673
DESIGN FOR A SIPHON HEAD
Edwin W. Fuerst, Toledo, Ohio, assignor to Owens-Illinois Glass Company, Toledo, Ohio, a corporation of Ohio
Application March 11, 1935, Serial No. 55,806
Term of patent 14 years

The ornamental design for a siphon head substantially as shown.

95,674
DESIGN FOR A JAR
Edwin W. Fuerst, Toledo, Ohio, assignor to Owens-Illinois Glass Company, Toledo, Ohio, a corporation of Ohio
Application October 31, 1934, Serial No. 53,828
Term of patent 14 years

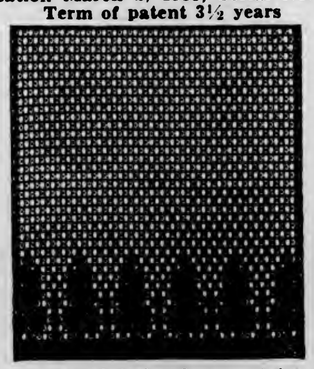


The ornamental design for a jar substantially as shown.

95,675
DESIGN FOR A BOTTLE CLOSURE
Edwin W. Fuerst, Toledo, Ohio, assignor to The Closure Service Company, Toledo, Ohio, a corporation of Ohio
Application March 13, 1935, Serial No. 55,873
Term of patent 14 years

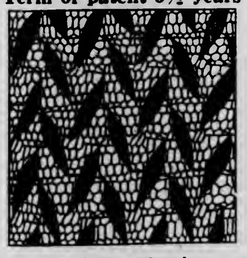
The ornamental design for a bottle closure substantially as shown.

95,676
DESIGN FOR A CANDLE
Maria H. Gastel, Los Angeles, Calif.
Application March 27, 1935, Serial No. 56,086
Term of patent 14 years



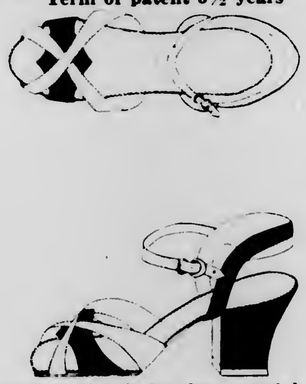
The ornamental design for a candle substantially as shown.

95,677
DESIGN FOR A BLOUSE
Irving Geist, New York, N. Y.
Application January 7, 1935, Serial No. 54,769
Term of patent 3½ years



The ornamental design for a blouse, as shown.

95,678
DESIGN FOR A CURTAIN
Frederick Gentner, Philadelphia, Pa., assignor to The North American Lace Company, Inc., Philadelphia, Pa.
Application March 2, 1935, Serial No. 55,694
Term of patent 3½ years



The ornamental design for a curtain as shown.

95,679
DESIGN FOR LACE
Jacob M. Golding, Long Island, N. Y.
Application March 27, 1935, Serial No. 56,067
Term of patent 3½ years

The ornamental design for lace, substantially as shown.

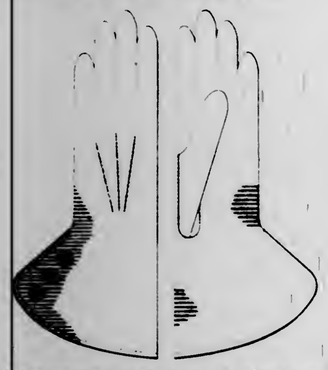
95,680
DESIGN FOR A SANDAL
Leo Goodkind, Woodmere, N. Y.
Application April 1, 1935, Serial No. 56,141
Term of patent 3½ years

The ornamental design for a sandal as shown.

95,681
DESIGN FOR A CLIP FOR A FOUNTAIN PEN OR SIMILAR ARTICLE
Benjamin W. Hanle, Elizabeth, N. J., assignor to Eagle Pencil Company, New York, N. Y., a corporation of Delaware
Application February 21, 1935, Serial No. 55,530
Term of patent 7 years

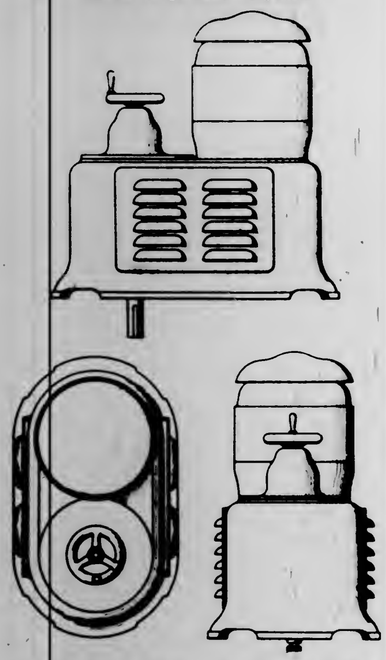
The ornamental design for a clip for a fountain pen or similar article, as shown.

95,682
DESIGN FOR A BOTTLE OR SIMILAR ARTICLE
Herbert H. Harris, New York, N. Y.
Application February 21, 1935, Serial No. 55,545
Term of patent 14 years



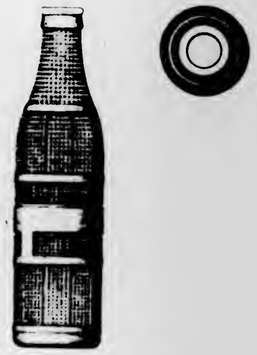
The ornamental design for a bottle or similar article, substantially as shown.

95,683
DESIGN FOR A SPOON OR OTHER ARTICLE OF FLATWARE
Lillian V. M. Helander, Meriden, Conn., assignor to International Silver Company, Meriden, Conn., a corporation of New Jersey
Application April 6, 1935, Serial No. 56,245
Term of patent 7 years



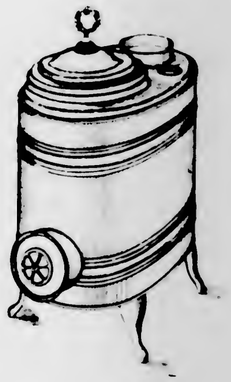
The ornamental design for a spoon or other article of flatware, substantially as shown and described.

95,684
DESIGN FOR A GLOVE
Irving E. Hesnberg, New York, N. Y., assignor to Van Raalte Company, Inc., New York, N. Y., a corporation of New York
Application February 21, 1935, Serial No. 55,543
Term of patent 3½ years



The ornamental design for a glove, as shown and described.

95,685
DESIGN FOR AN ELECTRICALLY DRIVEN VARIABLE SPEED POWER UNIT
Don Heyer, Los Angeles, Calif., assignor to United States Electrical Manufacturing Company, Los Angeles, Calif., a corporation of California
Application December 26, 1934, Serial No. 54,607
Term of patent 14 years



The ornamental design for an electrically driven variable speed power unit substantially as shown.

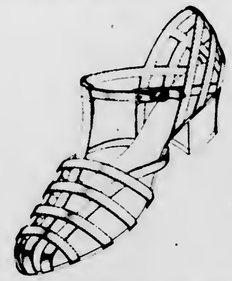
95,686
DESIGN FOR A BOTTLE
Clayton J. Howel, Chicago, Ill.
Application February 27, 1935, Serial No. 55,639
Term of patent 14 years

The ornamental design for a bottle as shown.

95,687
DESIGN FOR A HEATING STOVE
Martin L. Hunker, Dover, Ohio, assignor to The Reeves Manufacturing Company, Dover, Ohio, a corporation of Ohio
Application September 6, 1934, Serial No. 53,211
Term of patent 14 years

The ornamental design for a heating stove, as shown and described.

95,688
DESIGN FOR A SHOE
Albert Hurtig, St. Louis, Mo., assignor to The G. Edwin Smith Shoe Company, Columbus, Ohio, a corporation of Ohio
Application March 28, 1935, Serial No. 56,103
Term of patent 3½ years

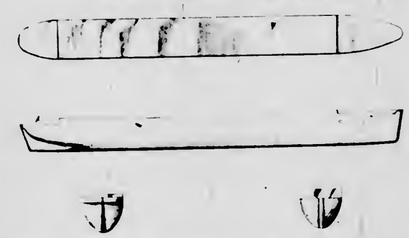


The ornamental design for a shoe, substantially as shown.

95,689
DESIGN FOR A PLATE OR SIMILAR ARTICLE
Bernard N. Kane, East Liverpool, Ohio, assignor to The Decal Products Company, East Liverpool, Ohio, a corporation of Ohio
Application March 15, 1935, Serial No. 55,886
Term of patent 3½ years

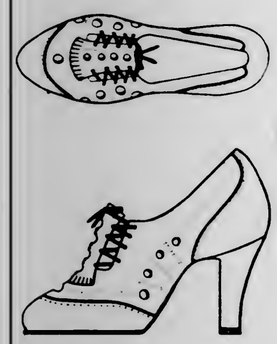
The ornamental design for a plate or similar article, as shown.

95,690
DESIGN FOR A SANDAL
Harry Koomruian, New York, N. Y.
Application January 10, 1935, Serial No. 54,789
Term of patent 7 years



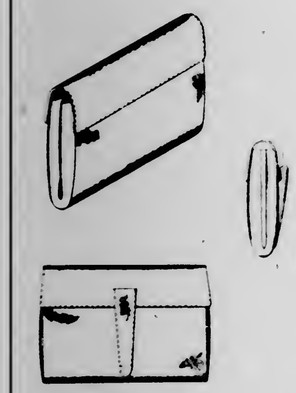
The ornamental design for a sandal substantially as shown and described.

95,691
DESIGN FOR A SHOE
Charles Kosta, New York, N. Y.
Application March 11, 1935, Serial No. 55,815
Term of patent 7 years



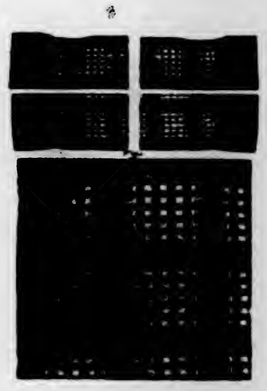
The ornamental design for a shoe as shown.

95,692
DESIGN FOR A TOY MODEL SHIP'S HULL
William Kramer, Richmond Hill, N. Y.
Application January 10, 1935, Serial No. 54,784
Term of patent 14 years



The ornamental design for a toy model ship's hull, as shown.

95,693
DESIGN FOR A SHOE
David Levin, New York, N. Y.
Application April 4, 1935, Serial No. 56,202
Term of patent 3½ years

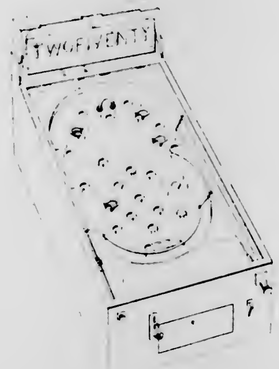


The ornamental design for a shoe, substantially as shown.

95,694
DESIGN FOR A POCKETBOOK
Florence N. Lewis, New York, N. Y.
Application January 30, 1935, Serial No. 55,137
Term of patent 7 years

The ornamental design for a pocketbook, as shown.

95,695
DESIGN FOR A CURTAIN
Samuel Libou, New York, N. Y., assignor to Eastern Trimming & Cord Co., Inc., New York, N. Y., a corporation of New York
Application March 5, 1935, Serial No. 55,747
Term of patent 3½ years



The ornamental design for a curtain as shown and described.

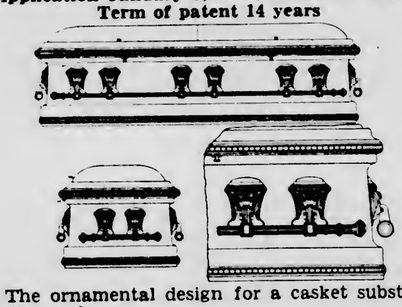
95,696
DESIGN FOR A CURTAIN
Samuel Libou, New York, N. Y., assignor to Eastern Trimming & Cord Co., Inc., New York, N. Y., a corporation of New York
Application March 6, 1935, Serial No. 55,755
Term of patent 3½ years

The ornamental design for a curtain as shown and described.

95,697
DESIGN FOR AN AMUSEMENT GAME CABINET
Fred C. McClellan, Chicago, Ill.
Application March 20, 1935, Serial No. 55,967
Term of patent 3½ years

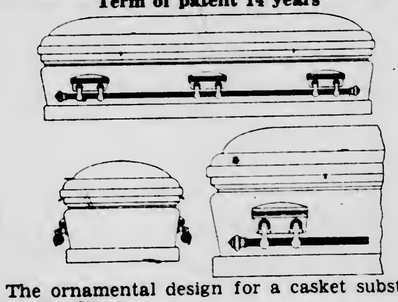
The ornamental design for an amusement game cabinet as shown.

95,698
DESIGN FOR AN ADJUSTABLE MIRROR FRAME AND SUPPORT THEREFOR
Vincent D. Milliken, St. Joseph, Mich.
Application September 27, 1934, Serial No. 53,409
Term of patent 7 years



The ornamental design for an adjustable mirror frame and support therefor, substantially as shown.

95,699
DESIGN FOR A SHOE
Leslie A. Morrill, Bradford, Mass.
Application March 14, 1935, Serial No. 55,879
Term of patent 3½ years



The ornamental design for a shoe, substantially as shown and described.

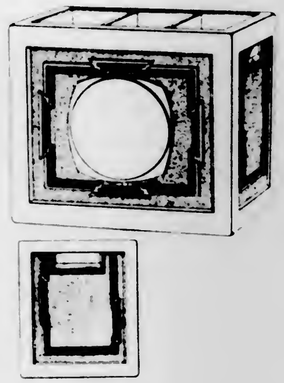
95,700
DESIGN FOR A CASKET
Harry A. Neff, Bellaire, Ohio, assignor to The Belmont Casket Mfg. Company, Columbus, Ohio, a corporation of Ohio
Application January 3, 1935, Serial No. 54,710
Term of patent 14 years

The ornamental design for a casket substantially as shown.

95,701
DESIGN FOR A CASKET
Harry A. Neff, Bellaire, Ohio, assignor for The Belmont Casket Mfg. Company, Columbus, Ohio, a corporation of Ohio
Application January 3, 1935, Serial No. 54,711
Term of patent 14 years

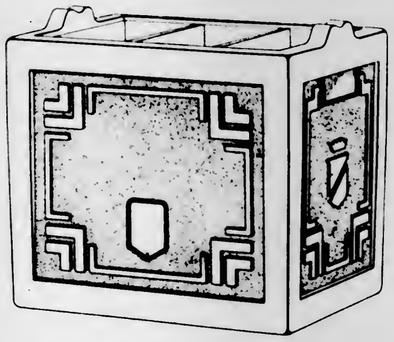
The ornamental design for a casket substantially as shown.

95,702
DESIGN FOR A FLOOR MAT
Enoch E. Paine and Frank D. Adams, Cleveland Heights, Ohio, assignors to The Paine & Williams Company, Cleveland, Ohio, a corporation of Ohio
Application March 5, 1935, Serial No. 55,748
Term of patent 7 years



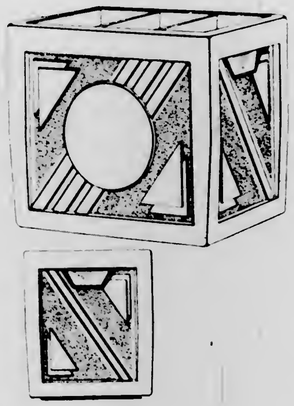
The ornamental design for a floor mat, substantially as shown.

95,703
DESIGN FOR A BOTTLE
Robert F. Richardson, Reidsville, N. C., assignor to Nu-Shine Company, Rockingham, N. C.
Application February 28, 1935, Serial No. 55,662
Term of patent 14 years



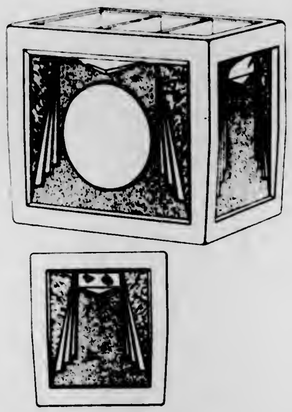
The ornamental design for a bottle as shown.

95,704
DESIGN FOR A STORAGE BATTERY CASE
Oliver O. Rieser, Oak Park, Ill., assignor to The Richardson Company, Lockland, Ohio, a corporation of Ohio
Application March 20, 1935, Serial No. 55,973
Term of patent 7 years



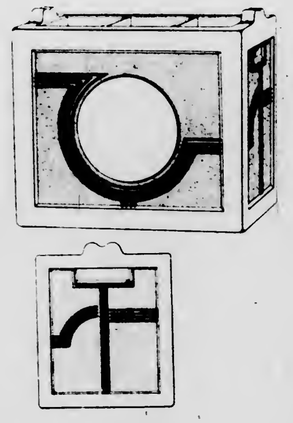
The ornamental design for a storage battery case, as shown and described.

95,705
DESIGN FOR A STORAGE BATTERY CASE
Oliver O. Rieser, Oak Park, Ill., assignor to The Richardson Company, Lockland, Ohio, a corporation of Ohio
Application March 20, 1935, Serial No. 55,975
Term of patent 7 years



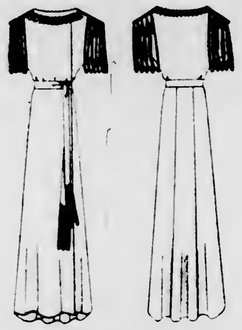
The ornamental design for a storage battery case, as shown and described.

95,706
DESIGN FOR A STORAGE BATTERY CASE
Oliver O. Rieser, Oak Park, Ill., assignor to The Richardson Company, Lockland, Ohio, a corporation of Ohio
Application March 20, 1935, Serial No. 55,977
Term of patent 7 years



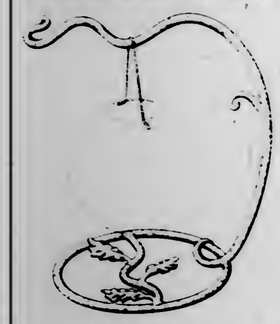
The ornamental design for a storage battery case, as shown and described.

95,707
DESIGN FOR A STORAGE BATTERY CASE
Oliver O. Rieser, Oak Park, Ill., assignor to The Richardson Company, Lockland, Ohio, a corporation of Ohio
Application March 20, 1935, Serial No. 55,978
Term of patent 7 years



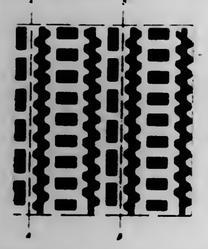
The ornamental design for a storage battery case, as shown and described.

95,708
DESIGN FOR A STORAGE BATTERY CASE
Oliver O. Rieser, Oak Park, Ill., assignor to The Richardson Company, Lockland, Ohio, a corporation of Ohio
Application March 21, 1935, Serial No. 55,987
Term of patent 7 years



The ornamental design for a storage battery case, as shown and described.

95,709
DESIGN FOR A NEGLIGEE
Pauline Schnittman, New York, N. Y.
Application April 4, 1935, Serial No. 56,203
Term of patent 3½ years



The ornamental design for a negligee, substantially as shown.

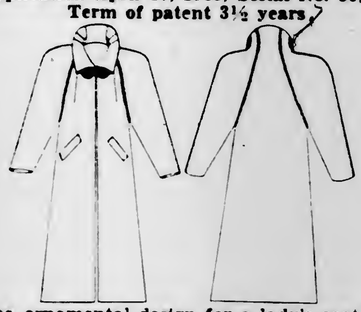
95,710
DESIGN FOR A COMBINED FLOWER STAND AND HOLDER
Irving G. Scott and Maud C. Fox, New York, N. Y.
Application October 12, 1934, Serial No. 53,604
Term of patent 3½ years

The ornamental design for a combined flower stand and holder, as shown.

95,711
DESIGN FOR LEATHER
Samuel Shapiro, New York, N. Y.
Application March 18, 1935, Serial No. 55,917
Term of patent 3½ years

The ornamental design for leather as shown and described.

95,712
DESIGN FOR A LAUNDRY BAG OR SIMILAR ARTICLE
Irene F. Silverstein, St. Albans, N. Y.
Application March 12, 1935, Serial No. 55,854
Term of patent 3½ years

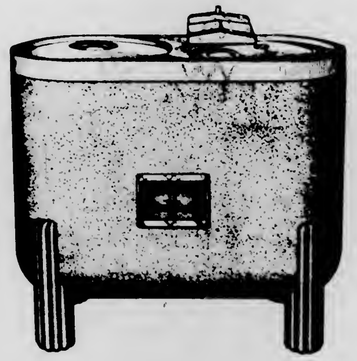


The ornamental design for a laundry bag, or similar article, as shown.

95,713
DESIGN FOR A WHEEL
Charles W. Sinclair, Detroit, Mich., assignor to Kelsey-Hayes Wheel Company, Detroit, Mich., a corporation of Delaware
Application May 28, 1934, Serial No. 51,948
Term of patent 14 years

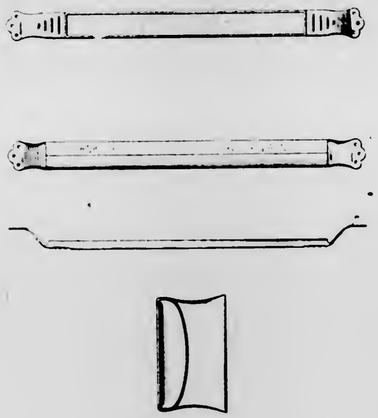
The ornamental design for a wheel substantially as shown.

95,714
DESIGN FOR A LADY'S COAT
Abraham Sisselman, New York, N. Y.
Application April 17, 1935, Serial No. 56,423
Term of patent 3½ years



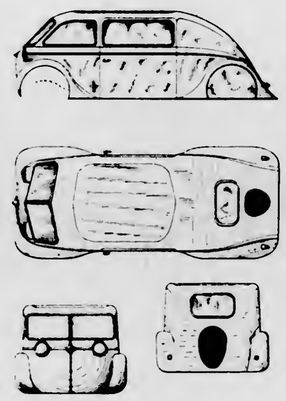
The ornamental design for a lady's coat, substantially as shown.

95,715
DESIGN FOR A COMBINED WRINGER AND CASING FOR DOMESTIC WASHING MACHINES
Walter D. Teague, Forest Hills, N. Y., assignor to Nineteen Hundred Corporation, Binghamton, N. Y., a corporation of New York
Application September 18, 1934, Serial No. 53,318
Term of patent 14 years



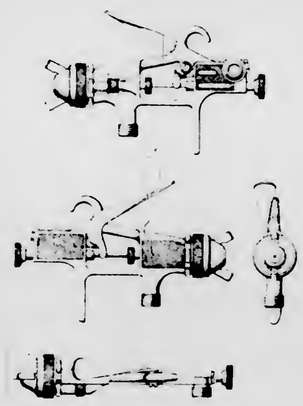
The ornamental design for a combined wringer and casing for domestic washing machines, as shown and described.

95,716
DESIGN FOR A CASING FOR A COMBINED WASHING MACHINE AND DRIER
Walter D. Teague, Forest Hills, N. Y., assignor to Nineteen Hundred Corporation, Binghamton, N. Y., a corporation of New York
Application September 18, 1934, Serial No. 53,319
Term of patent 14 years



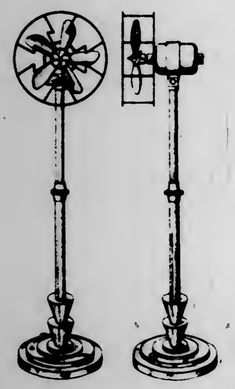
The ornamental design for a casing for a combined washing machine and drier, as shown and described.

95,717
DESIGN FOR A PUSH GUARD
Fred L. Vernon, Newton, Iowa
Application November 19, 1934, Serial No. 54,080
Term of patent 7 years



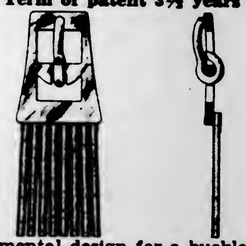
The ornamental design for a push guard, substantially as shown.

95,718
DESIGN FOR AN AUTOMOBILE BODY
Alexander E. Voigt, Philadelphia, Pa.
Application January 17, 1935, Serial No. 54,896
Term of patent 14 years



The ornamental design for an automobile body as shown.

95,719
DESIGN FOR A SPRAY GUN
Fritz Wahlin, Chicago, Ill., assignor to Binks Manufacturing Company, Chicago, Ill., a corporation of Delaware
Application March 18, 1935, Serial No. 55,926
Term of patent 14 years



The ornamental design for a spray gun, substantially as shown.

85,720
DESIGN FOR AN AIR CIRCULATOR
Max Weber, Chicago, Ill.
Application September 20, 1934, Serial No. 53,335
Term of patent 14 years

The ornamental design for an air circulator substantially as shown.

85,721
DESIGN FOR A BUCKLE
Herbert G. Whitehouse, Newark, N. J.
Application February 27, 1935, Serial No. 55,640
Term of patent 3½ years

The ornamental design for a buckle as shown, and described.

85,722
DESIGN FOR A DRESS
Irving A. Winter, Woodmere, N. Y.
Application April 26, 1935, Serial No. 56,582
Term of patent 3½ years

The ornamental design for a dress, substantially as shown and described.

CARNEGIE LIBRARY OF ATLANTA

Patents Nos. 2,002,485 to 2,003,278

THE
OFFICIAL GAZETTE
OF THE
United States Patent Office

Vol. 454—No. 4 TUESDAY, MAY 28, 1935 Price—$16 per year

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $16.00 per annum, including annual index, $18.75; single numbers, 35 cents each.
PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For the latter address the Commissioner of Patents, Washington, D. C.
CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

Disclaimers

1,809,720.—*Norton A. Mears and Dibrell P. Hynes*, Chicago, Ill. HOOD LATCH. Patent dated June 9, 1931. Disclaimer filed April 29, 1935, by the assignee, *Chicago Forging & Manufacturing Co.*

Hereby enters its disclaimer to claims 5, 6 and 7 of the said patent, No. 1,809,720, because the said claims are not by their language limited to such coaction between the members designated the cam members and the cranks at the ends of the rock shaft as to cause the cranks to engage said cam members at all times in all normal adjustments at a point intermediate the extension of the cam portions of said cam members.

1,816,161. *Joseph Kaye Wood*, Mount Vernon, N. Y. SUPPORT. Patent dated July 28, 1931. Disclaimer filed May 6, 1935, by the assignee, *General Spring Corporation*.

Hereby enters this disclaimer to that part of the specification printed on page 1, lines 82 and 83, which is in the following words, to wit: "Figure 5 is a diagrammatic view illustrating an additional compensating device"; and page 2, lines 47 to 71, of said patent which is in the following words, to wit: "as for example by means of a device as shown in Figure 5 in which the springs 21 and 22 connected to the lever 19 at one end and to the cross bar 13 at the other, act upon the accurately designed cam 23 connected to the lever 19. In the embodiment illustrated in Figure 5 the cam 23 is made with a central circumferential groove and the springs 21 made of music wire or other wear-resisting spring wire, have straight portions connected with the spiral portions so that the straight portions ride in the groove of the cam 23. The resistance of the springs 21, 22 to separation by the cam 23, plus the pull of the springs on the lever, serves to compensate for the inaccuracies of the device without such compensator. The elliptical form of cam shown in Figure 5 is sufficiently accurate for practical purposes. The exact contour of the cam, however, if mathematically accurate, would vary slightly from the elliptical and will vary slightly according to the general design of the main features of the support", and to claim 8 of said specification which is in the following words, to wit: "A yieldable support as defined in claim 2 which includes a supplementary spring and a cam moved by the lever and shaped so as to condition the action of the spring upon said lever to compensate for residual variations in the load carrying force exerted by the part of the apparatus defined in claim 2"; and to that part of the drawings designated as Figure 5.

1,864,224.—*Wesley B. Wells*, Wilkinsburg, Pa. LIGHT-SIGNAL. Patent dated June 21, 1932. Disclaimer filed May 7, 1935, by the assignee, *The Union Switch & Signal Company*.

Hereby disclaims the subject matter of claim 1.

1,885,433.—*Ernest A. Hall*, Toledo, Ohio. GAS CONTROLLING MEANS. Patent dated November 1, 1932. Disclaimer filed April 29, 1935, by the assignee, *The Columbia Burner Company*.

Hereby enters this disclaimer to claims 13 and 14 of said patent, reading, to wit:

"13. In combination, a gas burner, electrical means normally responsive to temperature conditions for automatically controlling the supply of gas to the burner, manually operable means for controlling the gas supply when the electric current fails, and means for automatically rendering said manual control ineffective as soon as the electric current is restored.

"14. In combination, a gas burner, electrical means normally responsive to temperature conditions for automatically supplying gas to the burner, said means being effective to cut off the gas whenever the electric current fails, manually operable means for subsequently controlling the supply of gas, and means for automatically rendering said manual control ineffective as soon as the electric current is restored."

Condition of Applications Under Examination at Close of Business May 11, 1935

(Total number of applications awaiting action, excluding Trade-Mark Division, 34,033; Trade-Mark Division, 1,301. Oldest new case, January 14, 1935; oldest amended, January 11, 1935.)

DECISIONS IN PATENT AND TRADE-MARK CASES

U. S. Court of Customs and Patent Appeals

In re Burk

No. 3,127. Decided January 28, 1935

[74 F.(2d) 547]

1. Patentability—Process of Inhibiting Gum-Formation in Cracked Petroleum Motor-Fuel Distillates.

Certain claims for a process of inhibiting gum-formation in cracked petroleum motor-fuel distillates *Held* unpatentable in view of the prior art.

2. Same—Same—Claims Broader Than Invention.

Certain claims for a process of inhibiting gum-formation in cracked petroleum motor-fuel distillates *Held* unpatentable as broader than applicant's disclosure.

Appeal from the Patent Office. Affirmed.

Lenroot, *J.*, concurring.

Messrs. Fay, Oberlin & Fay and *Mr. Almon S. Nelson* for Burk.

Mr. T. A. Hostetler and *Mr. Howard S. Miller* for the Commissioner of Patents.

Graham, *P. J.*:

The appellant filed an application in the United States Patent Office for a patent on an improvement in a process for inhibiting gum-formation in cracked petroleum motor-fuel distillates and the product thereof. Two claims were allowed and seven, numbers 1, 2, 3, 7, 8, 9, and 17 rejected by the Examiner, and, on appeal, the decision was affirmed by the Board of Appeals. Claims 1, 2, 3, and 8 are thought to be typical of the rejected claims, and are here quoted:

1. A process of inhibiting gum-formation in cracked petroleum motor-fuel distillates, which comprises subjecting the cracked distillate to the action of a normally liquid amine soluble in the distillate, and one of the following: a normally liquid aliphatic mercaptan, a phenol soluble in the distillate, in total amount not substantially in excess of 1 per cent.

2. A process of inhibiting gum-formation in cracked petroleum motor-fuel distillates, which comprises subjecting the cracked distillate to the action of a normally liquid amine soluble in the distillate, and a normally liquid aliphatic mercaptan containing not less than 5 carbon atoms, in total amount not substantially in excess of 1 per cent.

3. A process of inhibiting gum-formation in cracked petroleum motor-fuel distillates, which comprises subjecting the cracked distillate to the action of a normally liquid amine soluble in the distillate, and a single ring phenol, in total amount not substantially in excess of 1 per cent.

8. A cracked petroleum motor fuel distillate containing the reaction products of ingredients thereof and a normally liquid amine soluble in the distillate, and a normally liquid aliphatic mercaptan containing not less than 5 carbon atoms, in total amount not substantially in excess of 1 per cent.

The Examiner originally rejected all of the applicant's claims. However, after the final rejection, an affidavit was presented by the applicant, as a result of which the Examiner allowed claims 6 and 12, and as to which he said:

• • • It is noted that an affidavit has been submitted since the final rejection was entered, which tends to show that a certain amine used with a phenol would give less gum than either of these inhibitors used severally. In view of this, the Examiner would be inclined to allow specific claims.

As to the remainder of the claims, the Examiner stated:

The action of gum inhibitors is catalytic, it being generally accepted in the art that there is no prediction as to operativeness of large classes of compounds. This is broadly substantiated by Mead and Somerville. It is further pointed out that applicant's disclosure is very meager and insufficient even under the doctrine of In re Ellis, 167 O. G. 981, or *Chipman* v. *Reade*, 16 U. S. Pat. Q. 2, to support such broad classes of compounds as amines, or phenols. This is pointed out specifically in paper No. 6. The term "normally liquid amine" may be interpreted upon practically all amines, since amines are usually liquid normally. The term "amines" includes many thousands of compounds, many of which would be of doubtful operativeness when used alone, such doubt assuming large proportions when the operativeness of the amine is considered in combination with other inhibitors. When the final test of unusual result produced in the combination applied to all substances within the scope of the broad claims is considered, the holding of undue breadth appears to be proper.

The Board of Appeals agreed with the conclusion of the Examiner, stating, also:

• • • While applicant's specification mentions two particular amines either of which may be used, this disclosure is regarded as not warranting the broad definition of amine recited in the appealed claims.

References were cited by both tribunals below, as follows: Brooks, 1,748,507, February 25, 1930; Somerville (British), 289,347, April 27, 1928; Mead, Journal of Industrial and Engineering Chemistry, Vol. 19, pp. 1240–1245 (1927).

The affidavit referred to by the Examiner is that of John P. Smoots, an expert in chemical engineering, which affidavit does not appear in the printed record but was brought here in answer to a writ of certiorari. Affiant states, in general, that he made tests, in an approved method, of gum inhibitors, namely, triamylamine, cresol, and hydroquinone, separately used with cracked petroleum distillates, and gives his results, showing gum inhibition in each case. He then combined triamylamine and cresol, and also triamylamine and hydroquinone, and used these combinations, separately, as inhibitors. The result of such combinations was a much greater inhibition than that which followed the use of either constituent thereof, separately. The affiant states that he is unable to explain such phenomena, but gives simply the result of the use of such combinations.

It was upon the strength of this affidavit that the Examiner allowed claims 6 and 12, which are as follows:

6. A process of inhibiting gum-formation in cracked petroleum distillates, which comprises subjecting the cracked distillate to the action of di-normal butylamine and normal amyl mercaptan, in total amount not much in excess of 1 per cent.

12. A cracked petroleum distillate containing the reaction products of ingredients thereof and di-normal butylamine and normal amyl mercaptan, the total amount of the amine and mercaptan being not much in excess of 1 per cent.

The reference Brooks is a patent for a process of producing stable hydrocarbon oils which will not become discolored or sedimented. The specification of this patent recites that various amines may be used for such purpose. We have held, in the recent case *In re Burk*, 22 C. C. P. A. (Patents) ——, 73 F.(2d) 497, 450 O. G. 939, that this patent may be treated as anticipatory of a gum-inhibiting process, and further comment thereon is deemed unnecessary here.

The British patent to Somerville is for a process of inhibiting gum-formation in combustible organic

liquids, including "cracked petrol," used for motor fuel. Somerville also has claims covering the product. The patentee accomplishes his object by adding certain substances to the distillate. He names many of these substances in his specification as examples, such as:

• • • aromatic hydroxy dihydroxy and trihydroxy compounds (e. g. phenols and cresols), amino compounds, amino phenols, and nitro aromatic compounds or combinations of these. • • •

Again he states:

• • • Phenol itself and other phenols and amines may be employed.

• • • • • • • •

We have found, on the basis of this test, that the tendency to resinification is increased by certain substances e. g. acids, aldehydes and mercaptans, decreased by others, e. g. phenols, amino-phenols, nitrobenzene and amines while some substances such as water, alcohols, ethers, thiophene and carbon bisulphide, appear to have little or no effect.

• • • • • • • •

The inhibitor which may consist of a single substance or a plurality of substances must have the following characteristic properties.

• • • • • • • •

As examples of the phenolic bodies which may be employed as inhibitors we may mention aromatic hydroxy, dihydroxy, and trihydroxy compounds including cresols and amino phenols. Combinations of two or more inhibitors may be employed. • • •

[1] This record seems to fairly show that the action of the various substances used by appellant is catalytic, and that this was known to the art when appellant entered the field. The reference Mead is a discussion of certain catalytic agents to prevent deterioration of mineral oils, particularly adapted for use in commercial transformers. In making these tests, many amines, phenols, and other substances were used. The experimenter concluded:

• • • It seems to be quite impossible to draw any generalized conclusions from the results, as to the types of compounds which act as antioxidants, since for every compound which acts as a negative catalyst one of the same type can readily be discovered which acts as a positive catalyst. • • •

From this last statement, the Board here concludes that the fact that one amine or one phenol, or both, may act as gum-inhibitors, does not establish that the whole class of such substances will do so.

Whether this Mead reference may be said to be applicable or not, it seems quite certain to us that the Brooks and Somerville references fully anticipate such claims here as call for the use of amines, or phenols, or a combination of both, as gum-inhibitors. A reading of the excerpts from Somerville's specification heretofore quoted shows a plain disclosure of this.

This construction is sought to be avoided by the appellant by calling attention to the language of his claims, "a *normally liquid amine soluble in the distillate.*" (Italics are ours.) However, the Examiner states, and appellant does not deny, that all amines "are usually liquid normally." In addition, Somerville discloses as to his inhibitor:

6. It must be capable of dissolving or uniformly dispersing in the fuel.

We conclude, therefore, that claims 3, 9, and 17, which are based upon the use of a combination of an amine with a phenol or cresol, are anticipated by the said references.

The second class of claims, consisting of claims 1 and 7, is based upon a combination of a normally liquid amine and either a normally liquid aliphatic mercaptan or a phenol. Here the claim must be read broadly. *In re Horton*, 19 C. C. P. A. (Patents) 871, 875, 54 F.(2d) 961, 418 O. G. 273. If it covers a combination of an amine and a phenol, it is met by Brooks and Somerville, as we have already stated. As they are capable of this interpretation, the rejection of these claims, also, must be sustained.

[2] This leaves claims 2 and 8 for consideration, and these present more difficulties. They are based upon a combination of "a normally liquid amine" and "a normally liquid aliphatic mercaptan, containing not less than 5 carbon atoms."

It must be conceded that there is no teaching of the prior art of any such combination. None of the references disclose the use of a mercaptan as a gum-inhibitor. Only once is a mercaptan named in the cited art, and that is in Somerville, where the patentee, in a portion already hereinbefore quoted, states that the tendency to resinification is *increased* by the use of mercaptans. Thus, we observe that appellant suggests the use as an inhibitor of a substance which, in the prior art, was thought to be a gum-increaser. Instead of following the teaching of the art, appellant was proceeding contrary to it.

In his specification, the appellant states:

Quite a range of mercaptans may be availed of, but ordinarily the higher boiling mercaptans are desired, for example normal amyl mercaptan, iso amyl mercaptan, heptyl mercaptan, etc.

As to the amine element, which may be used, the appellant's specification states:

As amine component, an alkyl amine is preferred, and particularly a higher boiling amine, for example di normal propylamine, di-normal butylamine, etc.

The appellant has in these claims suggested for the first time, so far as the record now before us discloses, that a combination of an amine and a mercaptan will inhibit gum-formation in cracked petroleum motor fuel distillates. In this respect, the inventive idea deals not so much with specific amines and mercaptans as it does with the discovery that a combination of species taken from these genera will produce a gum-inhibiting effect.

However, here again we must consider the broad character of these rejected claims 2 and 8, as to the amine element of the combination. A distinction between patent applications involving chemical compounds, and those involving other products, has been recognized by the authorities. Our recent decision in *In re Walker*, 21 C. C. P. A. (Patents) 1121, 1127, 70 F.(2d) 1008, 447 O. G. 761, is a case in point. There we said:

It is true, as argued by counsel, that appellant is entitled to claim not only the substances enumerated by him in his specification, but also their equivalents. However, in cases of this character, involving chemicals and chemical compounds, many of which of course differ radically in their properties, it must appear in the specification, either by the enumeration of a sufficient number of the members of a group or by other appropriate language, that "the chemicals or chemical combinations included therein were generally capable of accomplishing the desired result." See *In re Ellis*, 37 App. D. C. 203; *In re Dosselman*, 37 App. D. C. 211; *In re Langmuir*, 20 C. C. P. A. (Patents) 733, 62 F.(2d) 93.

The applicant here does not allege in his specification, or show by the affidavit, that amines, normally liquid and soluble in the distillate, are "generally capable of accomplishing the desired result." The Examiner states that all amines are usually liquid normally, and that there are "many thousands of compounds" included within the term "amines," "many of which would be of doubtful operativeness when used alone." There is no showing to the contrary. In addition, the reference Mead, while dealing with antioxidants in transformer oils, seems plainly to indicate and teach that some amines will act as catalytic agents and some will not, and that only experimental work will establish the efficiency of any particular substance.

Therefore, claims 2 and 8, also, must be held to be broader than appellant's disclosure, and to have been properly rejected.

The decision of the Board of Appeals is affirmed.

Affirmed.

LENROOT, *J.*, concurs in the conclusion.

U. S. Court of Customs and Patent Appeals

IN RE BECKER

No. 3,330. Decided January 7, 1935

1. PATENTABILITY—RES ADJUDICATA.

Where, in applicant's earlier application, the Commissioner of Patents had held claims of substantially the same scope as appealed claims 1, 2, and 5 unpatentable, *Held* that the question of patentability of those claims is *res adjudicata*.

2. SAME—EDIBLE CONTAINER FOR ICE CREAM.

Claims 3 and 4 for an edible container for ice cream *Held* unpatentable over the prior art.

APPEAL from the Patent Office. Affirmed.

Messrs. Hammond & Littell for Becker.

Mr. T. A. Hostetler and *Mr. Howard S. Miller* for the Commissioner of Patents.

HATFIELD, *J.*:

This is an appeal from the decision of the Board of Appeals of the United States Patent Office affirming the decision of the Primary Examiner rejecting all of the claims, Nos. 1 to 5, inclusive, in appellant's application for a patent for an alleged invention relating to improvements in confection, comprising an edible container composed of chocolate, having a non-edible handle support, and adapted to temporarily retain ice cream or other semiplastic food while the same is being eaten.

The alleged invention is sufficiently described in the involved claims, which, due to the issues here presented, we deem it necessary to set forth. They read:

1. An edible dispensing container of the described character adapted to temporarily retain a semi-plastic food while the same is being eaten, comprising a confection open topped container made of chocolate mounted and supported upon a non-edible non-softening holder in stick form embedded in the base thereof, the material of the container being reinforced by an increased thickness where the holder is embedded in the base of the container.

2. A confection and ice cream holder comprising a relatively hard bowl or cup like confection portion made of chocolate having a tapering base, said base being of relatively greater thickness than the body of the confection and rigid and non-edible stick portion secured at one extreme end in said thickened base portion in the process of making.

3. An edible dispensing container for dispensing a semi-plastic food while the same is being consumed, comprising a dense chocolate open topped container having an enlarged reinforcing base portion and a non-softening, non-edible handle in stick form embedded therein, said chocolate being substantially non-porous, and provided with a glossy surface thereon.

4. An edible container for ice cream of the class described comprising a pressure molded chocolate cup of very great density, having a glossy, non-porous surface, and an enlarged reinforced base portion adapted to receive a non-edible handle, the confection adapted to support and be eaten with the ice cream.

5. An edible dispensing container of the kind described to receive food stuffs to be eaten therein, said container being open at the top and having a recessed interior extending from the top to the bottom to form a space for the food stuffs, the bottom of the container being shaped on the exterior to provide a projecting portion of increased thickness and a handle attached to the container by embedment in the thickened part of the bottom.

The references are: Stuckes, 325,711, September 8, 1885; Mugrauer et al., 612,806, October 18, 1898; Hinck, 1,312,325, August 5, 1919; Winnie, 1,367,848, February 8, 1921; Becker, 1,617,564, February 15, 1927.

All of the claims were rejected by the Primary Examiner on two grounds: First, that substantially the same subject-matter had been previously considered and held to be unpatentable by the Primary Examiner, the Examiners in Chief, and the Commissioner of Patents in an earlier application filed by appellant, Serial No. 567,388, on the references cited in the present case, and that, therefore, the doctrine of *res adjudicata* was applicable to the involved claims; second, that the claims were not patentable over the references, and that such advance as appellant had made in the art resided in the method of producing the involved product for which a patent, No. 1,617,564, was issued to appellant on February 15, 1927.

On appeal, the Board of Appeals stated that appellant's involved application is a continuation of an earlier application, Serial No. 567,388, and includes, by reference, appellant's patent No. 1,617,564, an additional disclosure; that the involved claims are narrower than the original claims involved in the earlier application, in that they state that the "edible container" is "made of chocolate"; and that two of them, claims 3 and 4, are further limited by the statement that the "edible containers" are substantially non-porous and have glossy surfaces. The Board further stated, however, that during the consideration by the Commissioner of the claims in the earlier application, appellant requested that if claim 1 there involved was not considered patentable, the Commissioner consider the patentability of that claim as amended by the insertion of the words "made of chocolate" after the word "container" in line 4; that the Commissioner considered the claim, both in its original and amended form, and held that it was unpatentable over the references of record, particularly the patents to Hinck and Winnie, and that as that claim, as amended, is identical with the involved claim 1, the decision of the Commissioner is *res adjudicata* of the issues involved therein; and that as claims 2 and 5 "do not include anything which was not involved in the claims rejected in the earlier application" the Commissioner's decision in that case is *res adjudicata* of the issues raised by those claims.

As appealed claim 3 limits the edible part of the containers defined therein to substantially non-porous chocolate having a glossy surface, and as

claim 4 is limited to chocolate containers which are "pressure molded," the chocolate being of "very great density," and having a "glossy non-porous surface," the Board held that the Commissioner's decision, relative to the claims involved in the earlier application, was not *res adjudicata* of the issues presented by claims 3 and 4. The Board held, however, that those claims were not patentable over the prior art, and affirmed the decision of the Primary Examiner. Concluding its decision, the Board said:

> It is common to press chocolate bars so as to form a hard, dense, glossy surface and in making a cup out of chocolate for holding ice cream it would be obvious that, in order to obtain sufficient strength and freedom from porosity, it should be pressed in molds like the bars above referred to.

It appears from the record that claim 1 in appellant's earlier application, as amended by the addition of the words "made of chocolate," as requested by appellant, is identical, except as to an immaterial change in punctuation and the spelling of the word "semiplastic," with the involved claim 1, and that appealed claims 2 and 5 are substantially the same as claim 1, as amended, of the earlier application.

[1] As no appeal was taken from the decision of the Commissioner of Patents in the earlier application, his decision, although counsel for appellant contends to the contrary, is *res adjudicata* as to the issues presented in this appeal by claims 1, 2, and 5. *In re Barratt*, 14 App. D. C. 255; *In re Edison*, 30 App. D. C. 321; *Williams Oil-O-Matic Heating Corporation* v. *The Butler Co.*, 17 C. C. P. A. (Patents) 934, 39 F.(2d) 693; 34 C. J. Secs. 1154, *et seq.*

The patent to Stuckes relates to a confection capsule composed of sugar, adapted to be filled with liquids, such as fruit juices, etc.; the capsule and its contents being so proportioned as to make a suitable beverage when dissolved in water.

The patent to Mugrauer et al., relates to an edible dish and spoon composed of candy, designed to be eaten with, or subsequent to the eating of, the contents of the dish, such as ice cream. The patentee stated that the dish might be made of two layers, the outer, of some hard impervious candy, while the inner layer might be composed of chocolate "so that in the process of eating ice-cream from such a plate this material may be eaten therewith."

The patent to Hinck relates to a mold for making "candied sticks," and discloses a relatively hard flat piece of candy applied to one end of a stick. Such confections are familiarly known as lollipops, etc.

The patent to Winnie discloses the well-known ice-cream cone, composed, as stated by the patentee, "of a baked or otherwise prepared edible material" having a bowl, and, as an integral part thereof, a tapered or cone-shaped stem of the same material.

The patent to Becker, the appellant in the case at bar, relates to a method and an apparatus for molding the chocolate containers here involved.

It appears that the application on which the patent to Becker was issued was co-pending with the application of which the one here involved is a continuation, and apparently was cited by the Primary Examiner merely for the purpose of disclosing that appellant had received a patent for a method and an apparatus for producing the product defined in the appealed claims, which, according to the views of the Examiner, constituted the advance in the art made by appellant.

In his present application, appellant stated that—

> The molding of chocolate, in which molten chocolate is poured into an open mold is well known. Such chocolate, however, has little mechanical strength, is brittle and porous, having many air bubbles. Attempts have been made to employ such chocolate as a support for ices, ice cream, and the like, but these have failed in their object because the chocolate was only sufficiently strong to form a thin coating thereon, and such coating was additionally undesirable as it required the consumer to hold the confection in his fingers, causing the coating to melt and soil the hands. Coverings, such as paper or foil wrappings or ingredients put in the chocolate were also unsatisfactory. It was also necessary that the chocolate coating be placed on the ice cream at the place of manufacture and necessary to keep the confections very cold to prevent melting.
>
> In my prior patent, No. 1,617,564, issued Feb. 15, 1927, I have described a method and apparatus for molding chocolate confections for receiving ice cream or the like, by which the chocolate is produced in a sufficiently dense, strong condition to act as a suitable support for the ice cream and will withstand strains set up at the point of handle attachment and by which the chocolate has a generally improved strength and does not become brittle or porous.
>
> It is the principal object of this invention *to provide an article of confection produced by the heretofore disclosed process* said article comprising a relatively hard, dense confection of molded chocolate suported [supported] on a non-edible handle and adapted to be filled with a relatively soft confection. (Italics ours.)

It is contended by counsel for appellant that there is no disclosure in any of the references of a container composed of chocolate having a substantially non-porous structure and a glossy surface; that appellant's product is not suggested by the references, and is new, useful, and commercially successful; that it involved something more than a mere substitution of materials; and that it required the use of the inventive faculties to produce it. It is further contended that the Board of Appeals erred in holding that it was a common practice to press "chocolate bars so as to form a hard, dense, glossy surface," and that it would be obvious to press chocolate in molds in order to obtain sufficient strength and freedom from porosity; that the quoted statement by the Board of Appeals is wholly unsupported by the record; and that, as a matter of fact, it was not, prior to appellant's invention for which he received a patent, common to press chocolate bars.

It appears from the affidavit of one Howard S. Baum, dated March 31, 1926, who had been engaged in the manufacture of chocolate confections for 45 years, that the involved product could not be produced by any method known to the art, prior to the method invented by appellant, Patent No. 1,617,564; and that appellant's apparatus and method, as well as the resultant product, were all new to the confectionery art.

It clearly appears from appellant's application that those skilled in the art had attempted to employ chocolate as a container for ices, ice cream, and similar substances, and that they were not successful because chocolate produced by the then known methods was brittle, porous, and had little mechanical strength. Accordingly, the problem confronting appellant, in view of the references of record, was to devise a method and an apparatus by which a non-porous chocolate, having sufficient mechanical strength, might be produced so that it could be used, as were other materials disclosed in the prior art, as a satisfactory temporary container for ices, ice cream, and similar substances.

Appellant solved the problem by devising the method and the apparatus for which a patent was issued to him, No. 1,617,564, on February 15, 1927. It appears from the involved application that the product defined by the involved claims, 3 and 4, was produced by the process covered by that patent. There is no suggestion in the record that the involved product could be produced by any other process. The presumption is, therefore, that it could not be produced in any other way. Accordingly, so far as the patented process and the claimed product are concerned, there is but one invention. *Plummer* v. *Sargent*, 120 U. S. 442–448. This conclusion is entirely consistent with the decision of the Primary Examiner.

The question whether, as held by the Board of Appeals, it is common to press chocolate bars or chocolate in any other form so as "to form a hard, dense, glossy surface" is not of great importance in view of the fact that the Board stated that it did not consider the involved claims patentable over the prior art, and affirmed the decision of the Primary Examiner rejecting claims 3 and 4.

Accordingly, our holding does not amount to a new ground of rejection. *In re Wagenhorst*, 20 C. C. P. A. (Patents) 991, 64 F.(2d) 78.

We are of opinion that appellant's contribution to the art consisted in molding chocolate under pressure so as to give it the proper and necessary consistency and strength to make it adaptable as a container for ices, ice cream, and similar substances, for which he has already received a patent.

In view of the foregoing considerations, and the references of record, we conclude that claims 3 and 4 are not patentable over the prior art, and that the Patent Office tribunals reached the right conclusion.

The decision of the Board of Appeals is, therefore, affirmed.

Affirmed.

U. S. Court of Customs and Patent Appeals

IN RE MARTIN

No. 3,378. Decided January 28, 1935

[74 F.(2d) 951]

1. PATENTABILITY—PUBLIC USE.

"We think that when Congress provided a two-year period within which the inventor should not be held to be barred by public use, but that any public use for more than two years prior to the application should be a bar, it did not intend to imply an exception to the effect that an innocent public use for more than two years prior to the application should not be within the bar of the statute because someone with whom the user has innocently dealt may have been guilty of fraudulent conduct against the inventor."

2. SAME—SAME—PROCESS OF CONCENTRATING ORES.

Claims for a process of concentrating ores *Held* properly refused on the ground that the invention had been in public use for more than two years prior to the filing of applicant's application.

APPEAL from the Patent Office. Affirmed.

Messrs. Semmes and *Semmes*, *Mr. Harry H. Semmes*, *Mr. S. Warwick Keegin*, and *Mr. F. Bruce McMullen* for Martin.

Mr. T. A. Hostetler and *Mr. Howard S. Miller* for the Commissioner of Patents.

LENROOT, *J.*:

This is an appeal from a decision of the Board of Appeals of the United States Patent Office, affirming a decision of the examiner, rejecting claims 1 to 11, inclusive, of appellant's application upon the ground of public use of the invention for more than two years prior to the filing date of his application, viz., June 14, 1926.

The claims involved in this appeal are all process claims; claim 6 is illustrative of the claims in issue and reads as follows:

> 6. The process of concentrating ores which consists in agitating a suitable pulp of an ore with a mineral-frothing agent and an alkaline xanthate adapted to cooperate with the mineral-frothing agent to produce by the action of both a mineral-bearing froth containing a large proportion of a mineral of the ore, said agitation being so conducted as to form such a froth, and separating the froth.

The record before us consists principally of a purported stipulation of facts. Throughout the stipulation reference is made to certain exhibits, but none of the exhibits accompanied the stipulation. Reference is also made to certain testimony by giving the numbers of the questions, but no transcript of such testimony accompanied the stipulation. Reference is also made to certain patent applications, viz., Serial No. 115,857, and Serial No. 114,857, but such applications do not accompany the stipulation, nor is there any statement in the stipulation with respect to their contents, although counsel making the stipulation evidently were of the opinion that said patent applications were material to the issues raised by appellant upon this appeal.

The stipulation purports to be made under rule 25, paragraph 3 (E) of the rules of this court. We do not commend its form, and it is questionable whether it complies with said rule respecting some of the issues of fact raised by appellant. However, it is sufficient with respect to one question which we hold is decisive of the case.

The invention may be generally stated as comprising the process of using xanthate, an organic compound, as a flotation agent for the concentration of minerals. The invention is admittedly patentable.

It appears from the stipulation that between March, 1914, and February, 1915, appellant, while in the employ of the Utah Copper Company, made the invention here involved; that he entered the employment of the "Minerals Separation American Syndicate (1913) Ltd." on March 6, 1915, and remained in its employ until July 3, 1926; that "Minerals Separation North American Corporation" is the legal successor of said "Minerals Separation American Syndicate (1913) Ltd." (both of said corporations will be hereinafter referred to as "Minerals Separa-

tion"); that on March 6, 1915, appellant entered into an agreement referred to as "Sales Agreement" with Minerals Separation whereby the latter was given an option to purchase for $5,000 all inventions theretofore made by appellant on the treatment of ores, and the subject matter of the application now on appeal was among the inventions referred to in said agreement. It does not directly appear from the stipulation that this option was ever exercised by Minerals Separation, but it may be inferred, we think, from the entire stipulation, that it was exercised and appellant's counsel upon oral argument stated that the stipulation should be so construed as such was the fact. Under said sales agreement, according to the stipulation, appellant was to disclose to Minerals Separation all his inventions relative to ore treatment "for the purpose of enabling patent applications to be drawn for such of said inventions or improvements as the company may desire to protect by patent applications," "such patents to be obtained in the name of said Martin."

The sales agreement is not included in the record, other than certain quotations therefrom.

The sales agreement also provided, according to the stipulation, that appellant should not disclose said inventions or file any applications for patents therefor, except through Minerals Separation. It also provided that if

> * * * in the opinion of the company Martin's reagents, modified oils, or other chemicals useful for flotation concentration of ores can be successfully and profitably manufactured as a *patented flotation oil or reagent*, the company will do their best to form a corporation for such manufacture, or to arrange with a suitable corporation or group for the *manufacture* of the same, and the company will pay Martin twenty-five per cent (25%) of the net profits received by the company therefrom. (Italics ours.)

The stipulation also recites that appellant disclosed the invention here involved on March 19, 1915, and August 15, 1915, to officials of Minerals Separation who were responsible for the filing of applications and the securing of patents for the company; that on October 23, 1923, an application for patent was filed in the name of one Keller and one Lewis, which application was subsequently amended to become a sole application by Keller; that Keller was an employee of Minerals Separation; that his application was filed with the assistance of one Higgins, an official of Minerals Separation, who at the time of such filing was entirely familiar with the disclosure made by appellant in 1915; that said Keller assigned to Minerals Separation the patent thereafter issued on said application, but received nothing therefor other than his regular and normal salary; that a patent was issued to Keller upon his said application on September 22, 1925; that appellant did not learn of Keller's application until June or July, 1925, and did not learn that there had been any public use of his invention until the spring of 1925; that when appellant learned of Keller's application he attempted to get his employer, Minerals Separation, "to rectify the wrong done, but met with no success," and he resigned his position with said company on June 3, 1926; that some time subsequent to the filing of appellant's application here involved, an interference, No. 55,642, was declared between the claims of appellant's application and claims of the Keller patent; that on November 12, 1927, Minerals Separation, Keller's assignee, petitioned for public use proceedings with respect to the invention here involved; that appellant in response to said petition alleged that the public use was instigated by appellant's employer and was a surreptitious and fraudulent public use against him, appellant; that testimony was taken in said public use proceeding and it was established that the process here involved was commercially used by the Anaconda Copper Mining Company more than two years prior to the date on which appellant filed his application, and that such use was a public use; that such use was instigated by Minerals Separation. There is nothing in the stipulation to indicate that anyone connected with the Anaconda company had any knowledge of any fraud upon the part of Minerals Separation, if there was any fraud upon its part, and upon oral argument appellant's counsel conceded that there was no fraudulent use of the invention here involved by the Anaconda company.

The decision of the Law Examiner and the decision of the Board of Appeals upon appeal upon said public use proceeding are contained in the record before us, from which it appears that said interference was dissolved upon the ground that appellant's invention had been in public use more than two years prior to the filing date of appellant's application. Both tribunals declined to consider appellant's contention that Minerals Separation fraudulently instigated such public use by the Anaconda company, said contention being regarded by both of said tribunals of the Patent Office as immaterial, and neither made any finding with respect thereto.

After the dissolution of said interference the examiner, in this *ex parte* proceeding, finally rejected the claims here involved "upon the ground of public use in accordance with the decision in interference No. 55,642."

Upon appeal, this decision of the examiner was affirmed, and from the decision of the Board of Appeals appellant took this appeal to this court.

Appellant's reasons of appeal contain but two assignments, which read as follows:

> (1) The Board of Appeals erred in not considering the fraudulent nature of the use of Martin's invention by his employer, and in not finding that such fraudulent use did not constitute a bar of public use against Martin.
>
> (2) The Board of Appeals erred in not considering the fraudulent nature of the use of Martin's invention by his employer, and in not finding that such fraudulent use did not constitute a bar of public use against Martin—merely because, as stated by the Board of Appeals, "As we are not aware of any decision definitely deciding a surreptitious or fraudulent use to be without the prohibitions of the statute, as it now reads, we feel constrained to follow the strict terms of the statute."

We would observe that none of the tribunals of the Patent Office found any public use by the employer of appellant, Minerals Separation, but they found public use by the Anaconda Copper Mining Company, which company was not the employer of appellant. However, as appellant contends here that the public use by the Anaconda company was fraudulently instigated by Mineral Separation, and that the Board of Appeals refused to consider such question, we will, for the purposes of this appeal, regard the reasons of appeal as sufficient to raise the question of the materiality of such contention under the conceded facts in the case at bar.

Section 4886, Revised Statutes, 35 USCA §31, at the time appellant's application was filed, read as follows:

> Inventions patentable. Any person who has invented or discovered any new and useful art, machine, manufacture, or composition of matter, or any new and useful improvements thereof, not known or used by others in this country, before his invention or discovery thereof, and not patented or described in any printed publication in this or any foreign country, before his invention or discovery thereof, or more than two years prior to his application, *and not in public use or on sale in this country for more than two years prior to his application*, unless the same is proved to have been abandoned, may, upon payment of the fees required by law, and other due proceeding had, obtain a patent therefor. [Italics ours.]

In 1930 this section was amended in certain respects not affecting the questions here involved.

The provision of said section with which we are concerned is the clause "* * * and not in public use or on sale in this country for more than two years prior to his application * * *."

It is appellant's contention that, while there was a public use of his invention by the Anaconda Copper Mining Company for more than two years prior to his application, and while such use was innocent upon the part of said Anaconda company, its use was fraudulently instigated by said Minerals Separation, and that therefore the use by said Anaconda company was not such a use as the statute contemplates.

Appellant's counsel in their brief frankly state:

> This is a case of first instance, the question having never been squarely presented to any court for decision.

The provision here under consideration had its origin, in substantially its present form, in section 7 of the act approved March 3, 1839, 5 Stat. 354. Appellant relies upon certain *dicta* in decisions of the Supreme Court of the United States, relating to public use prior to the application for patent, rendered under patent laws prior to that of 1839, to support his contention that the two years' public use referred to in the statutes beginning with 1839 does not include a fraudulent use or a use instigated by fraud.

In the case of *Andrews* v. *Harcy*, 124 U. S. 694, 42 O. G. 1285, these prior decisions are cited and reviewed, but the question before us was not involved in said case. In its opinion, however, speaking of the act of 1839, there is stated the following:

> It may well be that a fraudulent, surreptitious, and piratical purchase or construction or use of an invention prior to the application for the patent would not affect the rights of the patentee under either clause of the 7th section: * * *.

In said case the court found neither fraud nor surreptitious use of the invention there involved, and therefore the above quoted language from its opinion was *dictum*. The court concluded its opinion in said case with the following:

> * * * The second clause of the 7th section [the two year clause] seems to us to clearly intend, that, where the purchase, sale, or prior use referred to in it has been for more than two years prior to the application, the patent shall be held to be invalid, without regard to the consent or allowance of the inventor. Otherwise the statute cannot be given its full effect and meaning.

The case of *Eastman* v. *Mayor, Etc., of City of New York*, 124 Fed. 844, decided by the Circuit Court of Appeals, Second Circuit, was an infringement suit involving a patent issued under said act of 1839. One of the defenses urged was that the invention embraced in the patent had been in public use for more than two years prior to the application therefor by the inventor, and was therefore invalid under the 7th section of that act. The complainant there charged, as does the appellant here, that the public use of the invention was a fraudulent use and therefore should not be held to invalidate the patent there involved. As in the case of *Andrews* v. *Hovey*, supra, the court found upon the facts that there had been no fraudulent use of the invention against the inventor or his assignee. The court, however, in the *Eastman* case reviewed prior decisions of the United States Supreme Court and other Federal courts upon the questions of prior public use and surreptitious use, and concluded its discussion of those subjects with the following:

> The question, what constitutes a fraudulent, piratical or wrongful appropriation, sale or use of the invention, is left very much as the earlier authorities leave it, in obscurity. We have been referred to no case since the clear exposition of the law in *Andrews* v. *Hovey* where a plain case of public use earlier than two years before the application for the patent has been held to be ineffectual as a defense because the use was surreptitious. When the question is fairly presented it may be that the courts will hesitate to introduce exceptions to the rule as broadly stated by the Supreme Court, with the confusion and uncertainty incident thereto.
>
> If it be once understood that the object of the act "was to require the inventor to see to it that he filed his application within two years from the completion of his invention, so as to cut off all questions of the defeat of his patent by a use or sale of it by others more than two years prior to his application,' the courts will no longer be vexed by the perplexing questions which must frequently arise when the intent of the user and the bona fides of the use are questions to be determined on oral testimony. Isolated instances of injustice to the inventors may result, but the remedy is certain and sure. The inventor is master of the situation and has it in his power by prompt action to make the defense of prior public use impossible. Surely two years after he has completed his invention is ample time in which to file his application. If he fails to take so simple and reasonable a precaution why should it not be said that the risk is his and that he cannot complain of the consequences of his own supineness?

After careful research we have been unable to find any authoritative decisions upon the question of whether a fraudulent public use of an invention for more than two years prior to the filing of an application for patent for such invention, or such public use of an invention instigated by fraud, bars the issuance of a patent upon said application, or renders void a patent if issued.

We do not find it here necessary to decide whether a fraudulent use of an invention for more than two years prior to an application for a patent therefor bars the issue of a patent upon such application under the provision of said section 4886, Revised Statutes. We here use the words "fraudulent use" in the sense that the user of the invention is guilty of fraud, or at least has knowledge of fraud perpetrated against the inventor. In the case at bar it is established that the use of the invention by the Anaconda company was not fraudulent and there is nothing in the record to indicate that it had any knowledge that any rights of appellant had been violated, if any had been violated. Had the use here established been a use by Minerals Separation, a different

question would have been presented, concerning which we need here express no opinion.

It is our opinion that, whatever the correct rule may be with respect to a fraudulent use by another of an invention for more than two years prior to the filing of an application for patent therefor, there is no implied exception in the two-year provision removing the bar of the statute where there is a public use of an invention by an innocent user for more than two years prior to the application for patent. In other words, we hold that any public use of an invention, which is not fraudulent upon the part of the user, for more than two years prior to the application for patent for such invention, bars the issue of a patent upon such application.

[1] We think that when Congress provided a two-year period within which the inventor should not be held to be barred by public use, but that any public use for for more than two years prior to the application should be a bar, it did not intend to imply an exception to the effect that an innocent public use for more than two years prior to the application should not be within the bar of the statute because someone with whom the user has innocently dealt may have been guilty of fraudulent conduct against the inventor.

To hold that in such a case as the one at bar the two-year public use provision did not apply because of the conduct of Minerals Separation would, in principle, open wide the door to the granting of patents for inventions which had long been in public use if it appeared that communication of the invention to the public had been originally made by one who had betrayed some trust, or violated some duty to the inventor requiring him to keep the invention secret, such conduct being without the knowledge of the user.

An inventor has two years from the time of the completion of his invention to file an application for a patent therefor without being subject to the bar of public use. In the case at bar, appellant did not file his application until more than eleven years after he asserts he completed his invention. It is stipulated that he had knowledge of public use of his invention for more than one year prior to his application. It is true that it appears from the stipulation that in 1915 he entered into a contract with Minerals Separation agreeing to convey to it the invention here involved, together with other inventions, upon certain conditions, and that in said contract he agreed that he would file no applications for patent upon his said inventions except through Minerals Separation. This, however, was appellant's voluntary act and affords no excuse for his not filing or causing to be filed an application for patent in time to avoid the bar of public use.

Appellant's counsel, in his brief and upon oral argument, has treated the case before us as a contest between appellant and Minerals Separation. It is not such; this is an *ex parte* proceeding in which the Commissioner of Patents represents the public. Whatever rights appellant may have against Minerals Separation, or whatever defenses Minerals Separation may have against the asserted rights of appellant under the contract between them, cannot be determined by us in this *ex parte* proceeding, and we express no opinion with respect thereto.

It may be that in the interference proceeding between appellant and Keller, whose patent was assigned to Minerals Separation, said Minerals Separation should have been held to be estopped to bring a public use proceeding. But even so, and as to this we express no opinion, after the evidence was taken and public use established as hereinbefore set forth and the interference was dissolved, it clearly was proper in this *ex parte* proceeding for the Patent Office tribunals, representing the public, to take cognizance of such public use of the invention established in the interference proceeding.

[2] Inasmuch as it is an established fact that there was a public use of the invention here involved for more than two years prior to appellant's application, and further, that such use was without fraud upon the part of the user, Anaconda Copper Mining Company, the Board of Appeals did not err in affirming the rejection by the examiner of appellant's claims here involved, and its decision is affirmed.

Affirmed.

Changes in Classification

Order No. 3,309, May 3, 1935, directs:

In *class 31, Dairy* (Division 2), abolish the following subclass, with its definition:

Milking pails and cans
55 Stands.

The patents formerly contained in this subclass have been placed for the most part in class 248, SUPPORTS, subclass 146, established in this order.

In *class 31, Dairy* (Division 2), change the title of subclass 54 to read as follows:

Milking pails and cans
54 Lap supported.

and following the definition of subclass 50 establish the following note:

Note.—For mere supports for milking pails and cans not limited by structure to that use, see class 248, SUPPORTS, especially subclass 146, and indented subclasses.

In *class 40, Card, Picture, and Sign Exhibiting* (Division 35), abolish the following subclasses, with their definitions:

145.1 **Picture hangers**
145.7 Plaque retainers.
145.2 Adjustable
145.3 Cord
145.4 Pawl and ratchet.
145.5 Steps.
145.6 Slide and clamp.
145.8 Retaining cord.
146 **Picture stands and supports**
147 Illuminators.
148 Frames.
149 Single blank
150 Braces.
151 Wire.

The patents formerly contained in these subclasses have been placed for the most part in this class, subclasses 124.1, 152.1, and 152.2, established in this order, and in class 248, SUPPORTS, subclass 28, and indented subclasses, established in this order.

In *class 40, Card, Picture, and Sign Exhibiting* (Division 35), establish the following subclasses and definitions:

124.1 **Display cards.**
Picture frames
152.1 With supports
152.2 Illuminated.

124.1. Cards having advertising matter or pictures on their face to be displayed.

Note. This subclass includes the supports for the cards where they are an integral part of the card or are combined therewith.

Note. For mere supports for a display card, see class 248, SUPPORTS, subclass 28, and indented subclasses.

152.1. Picture frames having their supports combined therewith.

Note.—For mere supports for a picture frame, see class 248, SUPPORTS, subclass 28, and indented subclasses.

152.2. Picture frames having their supports combined therewith with illuminating means whereby the picture is illuminated. This subclass also includes supported frames wherein light is transmitted through the picture.

The patents contained in subclass 124.1 have been taken for the most part from this class, subclass 149, abolished in this order; those contained in subclass 152.1 have been taken for the most part from this class, subclass 148, abolished in this order, and those contained in subclass 152.2 have been taken for the most part from this class, subclass 147, abolished in this order.

In *class 67, Illuminating Burners* (Division 30), establish the following subclass and definition:

Solid fuel
Candlesticks
25.5 Christmas-tree.

25.5. Devices for supporting candles on a Christmas tree.

The patents contained in this subclass have been taken for the most part from class 248, SUPPORTS, subclass 42, abolished in this order.

In *class 68, Laundry* (Division 27), abolish the following subclass:

12 **Clothesline fasteners.**

The patents formerly contained in this subclass have been placed for the most part in class 248, SUPPORTS, subclass 353, established in this order.

In *class 83, Mills* (Division 25), abolish the following subclass:

Bagging grain
26 Bag holders.

The patents formerly contained in this subclass have been placed for the most part in class 248, SUPPORTS, subclass 95, and indented subclasses, established in this order.

In *class 135, Tents, Canopies, Umbrellas, and Canes* (Division 53), abolish the following subclasses, with their definitions:

9 **Canopy supports**
10 Baby carriage.
11 Bicycle.
12 Body harness.
13 **Umbrella supports.**

The patents formerly contained in these subclasses have been placed for the most part in this class, subclass 7.1, class 224, PACKAGE AND ARTICLE CARRIERS, subclass 5.1, and class 248, SUPPORTS, subclass 38, and indented subclasses, all established in this order.

In *class 135, Tents, Canopies, Umbrellas, and Canes* (Division 53), establish the following subclass and definition:

Canopies
7.1 Frames.

7.1. Frames for supporting canopies.

The patents contained in this subclass have been taken for the most part from this class, subclass 9, and indented subclasses, abolished in this order.

In *class 156, Curtains, Shades, and Screens* (Division 53), change the title of subclass 22 to read:

Curtain
22 Poles, with supports.

and change the title of subclass 24 to read:

Shade
24 Shades with brackets.

In *class 211, Supports, Racks* (Division 8), abolish the following subclasses, with their definitions:

Special article
25 Watch or clock holders.
154 **Stands**
155 Vertically adjustable.
156 Of sheet material
157 Single blank.
158 Of wire.
159 Knockdown.
160 **Easels**
161 Of wire.

The patents formerly contained in subclass 25 have been placed for the most part in class 248, SUPPORTS, subclass 114, and indented subclasses, established in this order, and the patents formerly contained in subclasses 154–161 have been placed for the most part in class 248, SUPPORTS, subclasses 127, and indented subclasses, and 195, and indented subclasses, established in this order.

In *class 211, Supports, Racks* (Division 8), change the title of subclass 65, and indented subclass, to read:

Special article
Slender article type
65 Brush and broom
66 Suspended,

and after the definition of subclass 65 establish the following note:

Note.—For cabinets for brushes and brooms, see class 312, SUPPORTS, CABINET STRUCTURES, subclass 112.5;

change the title of subclass 135, and indented subclass, to read:

Shelf type
135 Of sheet material
136 Vertically adjustable,

and change the definitions thereof by changing the word

"metal" in line 2 of subclass 135 and line 3 of subclass 136 to *material*.

In *class 221, Package and Article Carriers* (Division 29), establish the following subclass and definition:

Body and belt attached
5.1 Umbrella or canopy.

5.1. Article carriers within the definition of subclass 5 in which the article carried is an umbrella or canopy which may be supported on the person in position for use or transportation.

The patents contained in this subclass have been taken for the most part from class 135, TENTS, CANOPIES, UMBRELLAS, AND CANES, subclass 12, abolished in this order.

In *class 222, Deposit and Collection Receptacles* (Division 29), abolish the following subclass, with its definition:

Letter boxes
Supports and fastenings
40 Movably attached.

The patents formerly contained in this subclass have been placed for the most part in class 248, SUPPORTS, subclass 128, and indented subclasses, established in this order.

In *class 222, Deposit and Collection Receptacles* (Division 29), change the title of subclass 39 to read as follows:

Letter boxes
39 With supports;

abolish the existing definition, and establish the following definition in lieu thereof:

39. Letter boxes combined with their supports or supports for letter boxes limited by structure to use with a letter box.

Note.—For mere supports for letter boxes not limited by structure to use with letter boxes, see class 248, SUPPORTS, appropriate subclasses, particularly subclass 128, and indented subclasses, and subclass 146, and indented subclasses.

In *class 304, Scaffolds* (Division 4), abolish the following subclasses, with their definitions:

Roofing
22 Grip jaw.
23 Ridge engaging.
Details
33 Brackets
34 Ladder
35 Reversible.
36 Stile carried.

The patents formerly contained in these subclasses have been placed for the most part in class 248, SUPPORTS, subclass 235, and indented subclasses, established in this order.

In *class 312, Supports, Cabinet Structures* (Division 8), establish the following subclass and definition:

Wall or window mounted type
112.5 Brush or broom.

112.5. Cabinets mounted on a wall or window and specially designed to encase and support brushes or brooms. It includes devices in which the casing is in the form of a drinking glass.

Note.—For clasp supports for brushes and brooms, see class 24, BUCKLES, BUTTONS, CLASPS, ETC., subclasses 249, 254, and 257.

Note.—For paint brush holders having provision for cleaning the brush, see class 91, COATING, subclass 63.

Note.—For receptacles for brushes, see class 206, SPECIAL RECEPTACLES AND PACKAGES, subclass 15.1.

Note.—For racks for brushes and brooms, see class 211, SUPPORTS, RACKS, subclass 65.

Note.—For mere supports for a brush or broom, see class 248, SUPPORTS, subclass 110, and indented subclasses, and for brush and broom supports which remain with the brush or broom while in use, see class 248, SUPPORTS, subclass 359, and indented subclass.

The patents contained in this subclass have been taken for the most part from class 248, SUPPORTS, subclass 63, abolished in this order.

In *class 248, Supports* (Division 52), abolish the existing subclass titles and establish in lieu thereof the subclasses indicated in the new loose leaves now being printed for insertion in the Manual of Classification, and definitions which will appear in Bulletin No. 68.

Lists of subclass titles, and the definitions, may be seen in the Classification Division, Room 3616, and in the Search Room, pending publication.

Changes in Classification

Order No. 3,310, May 9, 1935, directs:

In *class 211, Supports, Racks* (Division 8), abolish the following subclass, with its definition:

Elements
185 Legs, bases, and pedestals.

The patents formerly contained in this subclass have been placed for the most part in class 248, Supports, subclass 194.

Notices of Cancellation

U. S. PATENT OFFICE, *Washington, May 8, 1935.*

W. Margulis, his assigns or legal representatives take notice:

An application for cancellation having been filed in this Office by Clover Leaf Products Co., 1848 East Vernon Avenue, Los Angeles, Calif., to effect the cancellation of trade-mark registration of W. Margulis, 671 Rio Street, Los Angeles, Calif., No. 317,803, dated October 2, 1934, and the notice of such proceeding sent by registered mail to the said W. Margulis at the said address having been returned by the post office undelivered, notice is hereby given that unless said W. Margulis, his assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the cancellation will be proceeded with as in the case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

R. SPENCER,
First Assistant Commissioner.

U. S. PATENT OFFICE, *Washington, May 10, 1935.*

Geo. B. Clemmer, his assigns or legal representatives take notice:

A cancellation proceeding has been instituted by this Office upon the application of Ray Day Piston Corporation of Detroit, 6656 Walton Avenue, Detroit, Michigan, to effect the cancellation of trade-mark registration No. 181,877, issued March 25, 1924, to Geo. B. Clemmer, 114 Mount Royal Avenue, Baltimore, Maryland, James A. Hughes, 311 Second Highland Avenue, Baltimore, Maryland, having been joined with said Geo. B. Clemmer as respondent. The notice of such proceeding sent to said Geo. B. Clemmer by registered mail at the said address having been returned by the post office undeliverable, notice is hereby given that unless said Geo. B. Clemmer, his assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the cancellation will be proceeded with as in the case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

RICHARD SPENCER,
First Assistant Commissioner.

Interference Notice

U. S. PATENT OFFICE, *Washington, May 9, 1935.*

James H. Dalbey, his assigns or legal representatives, take notice:

An interference has been declared by this Office between an application for patent filed by James H. Dalbey, c/o Hotel McAlpin, 10th and Chestnut Streets, Philadelphia, Pennsylvania, and an application for patent filed by Charles Henderson, 19 West Plumstead Avenue, Lansdowne, Pennsylvania. The attorney for Dalbey states that he is unable to locate said Dalbey. Notice is hereby given that unless said Dalbey, his assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

RICHARD SPENCER,
First Assistant Commissioner.

TRADE-MARKS

OFFICIAL GAZETTE, MAY 28, 1935

[VOL. 454. No. 4]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 1 of said act, a fee of ten dollars must accompany each notice of opposition.

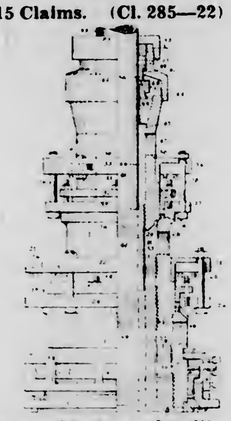
15,181.—*Title:* NO BELTS GEARS NO VALVES SPRINGS NO PISTONS LEATHERS NO POUNDING HAMMERING. For Turbine Pumps and Water Systems. WESTCO PUMP CORPORATION, Davenport, Iowa. Published April 17, 1935.

REISSUES



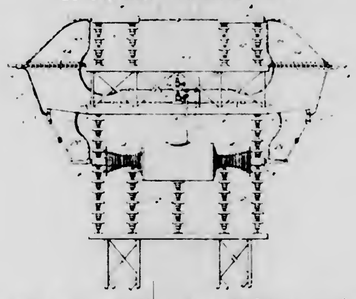
MAY 28, 1935

19,587
CASING HEAD

Merton T. Archer, Toledo, Ohio, assignor, by mesne assignments, to The National-Superior Company, Toledo, Ohio, a corporation of Delaware

Original No. 1,887,865, dated November 15, 1932, Serial No. 531,908, April 22, 1931. Application for reissue November 10, 1934, Serial No. 752,538

15 Claims. (Cl. 285—22)



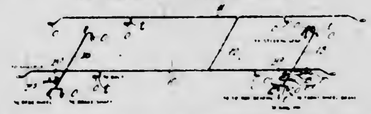
1. In a casing head, a plurality of annular superposed heads, each head having an internal shoulder on which the next head above rests, a stuffing box surrounding each upper head above the shoulder upon which the upper head rests, packing within each stuffing box, an annular gland resting on each packing, and adjustable means connecting each head and its associated gland for varying the compression of the packing.

19,588
HIGH VOLTAGE ELECTRICAL SWITCH

Frank G. Baum, deceased, late of San Francisco, Calif., by Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa., assignee

Original No. 1,895,907, dated January 31, 1933, Serial No. 295,007, July 24, 1928. Application for reissue January 17, 1935, Serial No. 2,231

41 Claims. (Cl. 200—150)



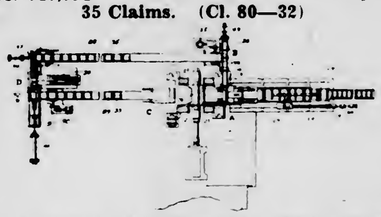
41. For a power line, a switching mechanism comprising a liquid-containing tank arranged with its longitudinal axis horizontal, said liquid containing tank including a metal portion forming the central part of the tank and a pair of axially aligned insulator bushings forming the end portions of the tank, line terminals at the opposite ends of said insulator bushings, a contact rod axially slidable in each bushing for opening and closing the circuit between said line terminals, a pair of disconnecting switches outside of said liquid-containing tank and electrically connected in series with said contact rods in the tank, said disconnecting switches each being connected to one of said terminals at the ends of the insulator bushings for disconnecting both terminals from the line, and means for actuating said disconnecting switches including an operating member movable in each of said insulator bushings.

19,589
LUBRICATING INSTALLATION

Joseph Bijur, deceased, late of New York, N. Y., by Auto Research Corporation, Dover, Del., assignee

Original No. 1,797,203, dated March 17, 1931, Serial No. 616,016, January 31, 1923. Application for reissue September 14, 1932, Serial No. 633,114

21 Claims. (Cl. 184—7)

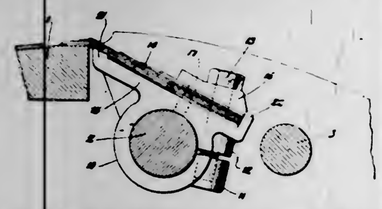


1. In a chassis lubricating installation, in combination, a plurality of independent lubricant conduits, one for each of the substantially distinct structural units of the chassis, said conduits including readily accessible inlet fittings for the nozzle of a lubricant gun and each including a plurality of outlets to corresponding bearings, and control elements in the lines, one near each of the outlets, the elements on each line responding automatically to pressure applied by the gun at the corresponding inlet fitting to deliver lubricant in predetermined proportions from the conduit to the bearings supplied from the branches thereof.

19,590
METHOD AND MILL FOR ROLLING METAL

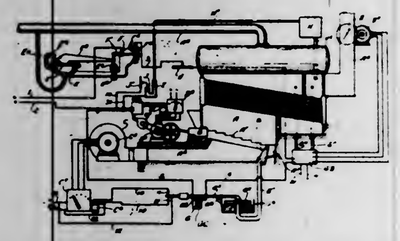
James R. Coe, Watertown, Conn., assignor to The American Brass Company, Waterbury, Conn., a corporation of Connecticut

Original No. 1,925,896, dated September 5, 1933, Serial No. 635,216, September 28, 1932. Application for reissue October 10, 1934, Serial No. 747,794



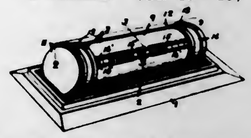
35 Claims. (Cl. 80—32)

1. A method of rolling metal which comprises passing metal bars through a rolling mill, coiling the strip into a coil as it leaves the mill, stor-



ing a plurality of the coils on a conveyor, straightening the tail end of the coil so that it sticks out straight from the coil, storing a plurality of coils with straightened ends on a conveyor, conveying said coils one at a time to the front of the mill, and again passing the coils through the mill after resetting the rolls thereof.

19,591
FOLDING MECHANISM
Curtis S. Crafts and Charles Alonzo Harless, Oak Park, Ill., assignors to The Goss Printing Press Company, Chicago, Ill., a corporation of Illinois
Original No. 1,895,124, dated January 24, 1933, Serial No. 580,930, December 14, 1931. Application for reissue September 9, 1933, Serial No. 688,869
11 Claims. (Cl. 101—409)

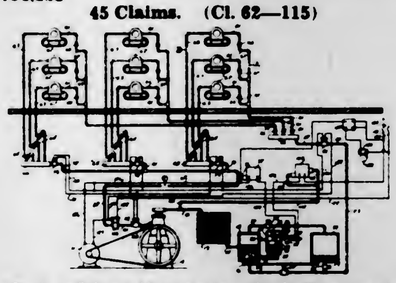


9. A gripping device including in combination a shaft, a plurality of spaced apart laminated, leaf spring sheet holding members mounted on the shaft, means for imposing initial spring tension independently on the various sheet holding members, said shaft and sheet holding members being movable between open and closed position.

19,592
COMBUSTION REGULATION
George H. Gibson, Upper Montclair, N. J.
Original No. 1,583,396, dated May 4, 1926, Serial No. 733,289, August 21, 1924. Application for reissue October 28, 1933, Serial No. 695,703
9 Claims. (Cl. 236—14)

1. In a combustion regulating system for a boiler furnace comprising provisions tending to vary the supply of fuel and air for its combustion in accordance with the boiler load, said provisions including means for establishing a measure of the rate of fuel supply, regulating means responsive to variations in said measure, means for establishing a measure of the rate of air supply, and air supply regulating means responsive to variations in the last mentioned measure, the improvement which consists in means responsive to the CO_2 content in the products of combustion for varying the ratio of fuel supply to air supply to minimize variations in said content.

19,593
MORTUARY RECORD CONTAINER
Hans P. Hansen, Syracuse, N. Y.
Original No. 1,900,768, dated March 7, 1933, Serial No. 526,307, March 30, 1931. Application for reissue July 12, 1933, Serial No. 680,060
3 Claims. (Cl. 40—19)



1. In a mortuary record holder, the combination of a tubular section, cap-sections fitted over and upon both ends of the tubular section and having their inner ends extended beyond their areas of contact with the tubular section and in spaced relation thereto to form annular grooves, and a sealing material inserted in said grooves for hermetically sealing the joints.

19,594
PROCESS OF MANUFACTURING TITANIUM OXIDE SUITABLE FOR USE AS A PIGMENT
Karl Leuchs, Berlin-Zehlendorf, Germany, assignor, by mesne assignments, to Krebs Pigments & Color Corporation, a corporation of Delaware
No Drawing. Original No. 1,853,626, dated April 12, 1932, Serial No. 149,800, November 20, 1926. Application for reissue April 6, 1934, Serial No. 719,405. In Germany November 27, 1925
14 Claims. (Cl. 23—202)

7. In a process of manufacturing titanic oxide from a titanium ore the steps which comprise rendering titanium ore soluble by means of sulfuric acid, dissolving the product in water, dissolving titanium hydroxide in the so obtained solution, the amount of said titanium hydroxide dissolved in said solution being such as to substantially increase the ratio of titanium to SO_4 ions present in the solution, and heating this latter solution to precipitate titanic oxide therefrom.

19,595
REFRIGERATION APPARATUS
Edward T. Williams, Pelham Manor, N. Y.
Original No. 1,947,574, dated February 20, 1934, Serial No. 410,026, November 27, 1929. Application for reissue November 19, 1934, Serial No. 754,123
45 Claims. (Cl. 62—115)

40. A refrigerating system including condensing and evaporating means connected in series, and means adapted to operate upon the occurrence of a leak in any portion of said system to subdivide the system into a number of isolated sections.

PLANT PATENTS

GRANTED MAY 28, 1935

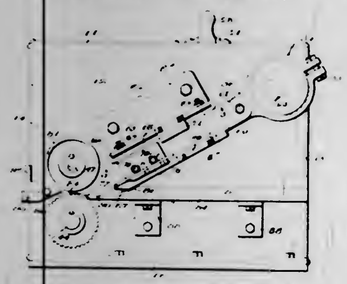
125
APPLE
Edgar W. Hartman, Cashtown, Pa., assignor, by direct and mesne assignments, of one-fourth to Buntings' Nurseries, Selbyville, Del., a corporation of Delaware, one-fourth to Waynesboro Nurseries, Inc., Waynesboro, Va., a corporation of Virginia, and one-fourth to Harrisons' Nurseries, Inc., Berlin, Md.
Application December 22, 1933, Serial No. 703,620
1 Claim. (Cl. 47—62)

The apple as described and shown, being a sport of York Imperial having substantially the same characteristics of size, shape, flavor and keeping qualities as the York Imperial, but distinguishing therefrom in color which is a deep purplish carmine almost uniformly covering the surface of the apple and showing pale or russet dots distributed over the surface of the apple with fair uniformity.

126
ORANGE TREE
Roy Robertson, Redlands, Calif., assignor to Armstrong Nurseries, Ontario, Calif.
Application February 5, 1935, Serial No. 5,081
1 Claim. (Cl. 47—62)

The variety of navel orange tree herein described and illustrated, characterized particularly by its heavier and more uniform production of fruits of the Washington navel variety type, but occurring in clusters and maturing two to three weeks earlier.

PATENTS

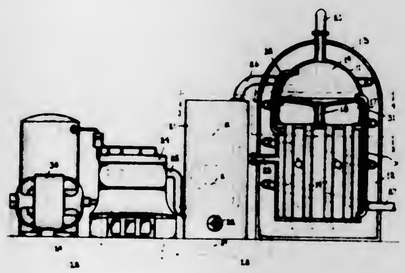


GRANTED MAY 28, 1935

2,002,485
CARTON
Clarence J. Alfred, Orange, N. J., assignor to The American Sugar Refining Company, New York, N. Y., a corporation of New Jersey
Application November 26, 1934, Serial No. 754,711
11 Claims. (Cl. 229—17)

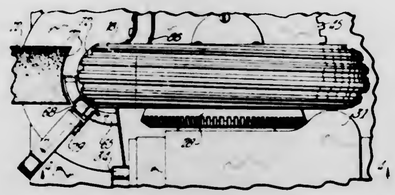
6. In a carton, the combination of a pair of inner flaps extending from opposite walls of the carton and folded inwardly at the end of the carton, each flap having a cut-out with said cut-outs cooperating to form a pouring opening, an intermediate flap extending from another wall of the carton and folded inwardly to overlie said inner flaps, a tab section defined at least in part by weakened lines terminating inward from the connection between the intermediate flap and the wall of the carton from which it extends, an outer flap extending from another wall of the carton and folded inwardly over said intermediate flap, said outer flap having a movable section normally overlying said tab section, and films of adhesive securing said intermediate flap to said inner flaps and said outer flap to said intermediate flap.

2,002,486
MACHINE FOR SLITTING WELTS
Arthur J. Beford, Littlestown, Pa.
Application August 17, 1934, Serial No. 740,303
3 Claims. (Cl. 164—49)



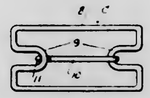
1. A welt-slitting machine comprising a housing, an inclined guideway supported at each side of the housing, said guideway including a plate having spaced laterally projecting flanges, an adjusting plate associated with one flange, means carried by said flange for causing adjustment of the plate, a slide in the form of an elongated bar mounted for reciprocation between the plate and the other flange, a bar secured to the outer edge of each flange and engaging the slide, knives secured to the lower end of the slide, means for causing reciprocation of the slide, rollers located in spaced relation adjacent the knives and tracks associated with the rollers for guiding the welts beneath the knives, said rollers adapted to pull the welts along the tracks.

2,002,487
HAIR WAVING APPLIANCE
Bernhard M. Beskow, Miami Beach, Fla.
Application June 15, 1934, Serial No. 730,817
16 Claims. (Cl. 132—41)



1. A hair waving appliance comprising elongated inner and outer hair confining means between which hair to be waved may be freely inserted, one of said means having an element shiftable toward the other means to cause hair so inserted and confined to be closely engaged between said element and said other means.

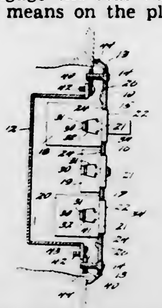
2,002,488
ELECTRICALLY CONTROLLED STEAM ENGINE
Ralph R. Blank, Fremont, Nebr.
Application December 3, 1934, Serial No. 755,777
3 Claims. (Cl. 219—38)



1. An electrically controlled steam engine comprising, in combination with a steam cylinder and piston movable therein for rotating a traction wheel, a casing providing a pair of communicating steam boilers, a pair of steam heating compartments above said boilers, a pair of steam condensing chambers above said compartments in communication with said boilers and an intermediate heating chamber, a housing providing a heat insulating chamber surrounding said casing, means for conducting water to said boilers, energized electrical devices in said boilers for producing steam, heat-conducting pipes projecting into said intermediate chamber and extending spirally around said boilers for producing steam, and a steam outlet pipe in communication with said boilers and steam cylinder for moving said piston.

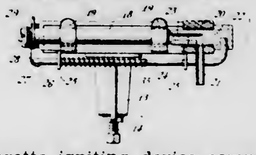
2,002,489
GRINDING MACHINE
Clement Booth and Andrew Strom, Cincinnati, Ohio, assignors to Cincinnati Grinders Incorporated, Cincinnati, Ohio, a corporation of Ohio
Application July 3, 1931, Serial No. 548,609
14 Claims. (Cl. 51—103)

1. In a grinding machine for grinding tapered radius rolls the combination of opposed contragenerically formed grinding and regulating wheels having a grinding throat therebetween, the regulating wheel having a spiral track conforming to the periphery of the rolls, and means for positively feeding the work pieces in an arcuate path through the grinding throat while the said work is in simultaneous contact with the face of the grinding wheel and the spiral track of the regulating wheel.



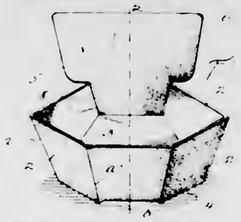
2,002,490
BUCKLE
John R. Bryant, Springfield, Tenn., assignor of one-half to Hatton N. Batson, Bowling Green, Ky.
Application March 20, 1934, Serial No. 716,518
2 Claims. (Cl. 24—163)

1. A buckle of the class described comprising a substantially rectangular shaped frame formed of an endless piece of material and having the central portion of each end piece bent inwardly into U shape, a tongue having an elongated slot therein through which passes the bight of one U-shaped part of the frame for pivotally and slidably connecting the tongue with said U-shaped part, said slot extending to a point adjacent one end of the tongue the other end of the tongue having a hook for engaging the bight of the other U-shaped part.



2,002,491
ELECTRIC WIRING APPARATUS
Victor R. Despard, Syracuse, N. Y., assignor to Pass & Seymour, Inc., Syracuse, N. Y., a corporation of New York
Application May 23, 1932, Serial No. 613,035
6 Claims. (Cl. 247—20)

1. The combination with a plate having a plurality of uniform openings per gang therethrough, a plurality of individual wiring devices of various functions, each having a neck to fit into any one of said openings, a shoulder behind said neck to engage the rear wall of said plate, and individual means on the plate and devices



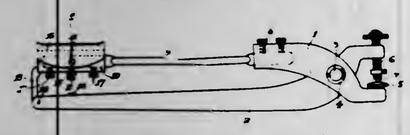
to automatically cooperate to secure the devices in position on the plate.

2,002,492
CIGARETTE LIGHTER
Ben Dess, Chicago, Ill.
Application October 19, 1932, Serial No. 638,645
Renewed March 27, 1935
4 Claims. (Cl. 219—32)

1. A cigarette igniting device comprising the combination of a suction line and a control valve therein including a movable element, a circuit including an igniting element, and a latching mechanism for holding the suction line open and the circuit closed a sufficient length of time to effect the igniting of a cigarette, said latching mechanism including a member attached to the movable valve element and including a temperature-responsive element arranged in the circuit in close proximity to the igniting element and having a portion releasably latchable to said member by movement of the latter and said movable valve element toward the igniting element.

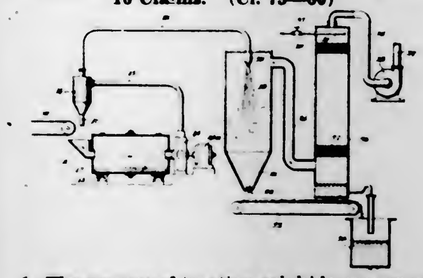
2,002,493
DISPLAY CONTAINER OR RECEPTACLE
Morris M. Einson, Yonkers, N. Y., assignor to Einson-Freeman Co., Inc., Long Island City, N. Y., a corporation of New York
Application February 1, 1932, Serial No. 590,143
3 Claims. (Cl. 206—44)

1. A container of the class described composed of a strip of sheet material having its ends united by an intermediate connecting piece and folding to form walls of the container, a bottom forming piece hingedly and detachably secured respectively at the front and rear ends to said strip and



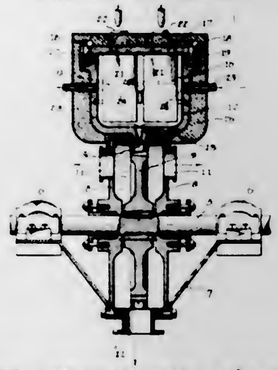
said bottom forming piece being foldable on itself to permit collapsing of the container without release of the detachable connection.

2,002,494
CIGARETTE HOLDER
William Eisenberg, Minneapolis, Minn.
Application April 29, 1933, Serial No. 668,489
4 Claims. (Cl. 206—41)



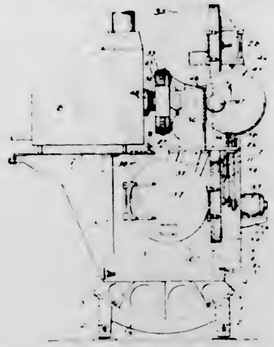
1. A cigarette holder for sheathing a lighted cigarette and maintaining the same lighted pending its subsequent use, said holder comprising a tubular sheath, means for supporting the same in upright position, said sheath being adapted to receive a cigarette, lighted end foremost, an ejector movable up and down within the sheath and adapted normally to occupy a position at the lower portion of the sheath, said sheath having a slot therein, a finger piece issuing from the ejector and extending through said slot for elevating the ejector in the sheath to project a contained cigarette therefrom, said ejector providing a perforate rest for the lighted end of the cigarette, said sheath providing an ash receiving chamber beneath said ejector, the side wall of said sheath having a perforation therein beneath the elevation normally occupied by said ejector, said perforation and said slot providing for a natural supply of combustion supporting air to the burning end of the cigarette resting on said ejector.

2,002,495
APPARATUS FOR THE DETERMINATION OF BRINELL-NUMBERS
Stig Lennart E:Son Falk, Vasteras, Sweden
Application August 1, 1932, Serial No. 627,211
In Sweden August 6, 1931
3 Claims. (Cl. 265—12)



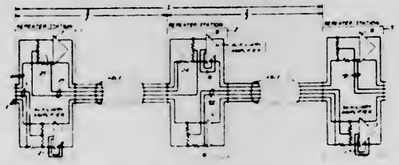
3. Apparatus for the determination of the degree of hardness of materials in accordance with the so-called Brinell method comprising a pair of tong members pivoted to provide a pair of jaws, a ball holder and an anvil positioned on the opposing jaws, respectively, means to subject the ball to be tested to a controllable spring pressure, said means comprising an exchangeable and calibrated flat spring member extended in prolongation of the shank of one of said tong members, and means including a latch member pivotally attached to the extended shank of the other of said tong members to prevent the spring from being stressed in the initial position of said spring.

2,002,496
METHOD OF ROASTING SULPHIDE ORE
Horace Freeman, Montreal, Quebec, Canada, assignor to Nichols Engineering & Research Corporation of Canada, Limited, a corporation of Canada
Application March 25, 1932, Serial No. 601,138
16 Claims. (Cl. 75—60)



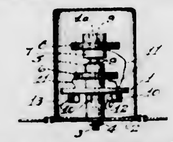
1. The process of treating sulphide ores or concentrates which comprises reacting said ores and concentrates, in a state of subdivision between substantially 250 mesh and colloidal, in suspension in a fluid medium with an oxidizing agent under conditions favorable to the formation of sulphur dioxide, the large ratio of surface area to the mass of the particles permitting a rapid oxidation of the sulphur, maintaining the area of roasting and the sulphur dioxide gases while in the chamber above the temperature of formation of sulphur trioxide, and permitting the heat of the reaction to radiate from the particles whereby fusion of the particles themselves is prevented.

2,002,497
HIGH VAPOR EXPANSION TURBINE
Homer M. Barber, Reno, Nev.
Application February 3, 1933, Serial No. 655,123
1 Claim. (Cl. 122—41)



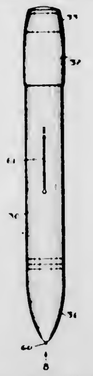
In a high pressure generator, a heating chamber, a plurality of heating elements extending into said heating chamber, said elements being spaced one from the other, the outer surfaces of said heating elements being in close proximity to the surface of said heating chamber, each of said heating elements having a recess formed therein, the recesses of the adjacent heating elements being opposed to each other, a ball positioned between said heating elements and within said recesses, means for injecting fine jets of water against said balls, and an outlet port communicating with said heating chamber.

2,002,498
PROJECTING MACHINE AND THE OPTICAL SYSTEM THEREFOR
Joseph D. Basson, New York, N. Y.
Application December 29, 1931, Serial No. 583,669
7 Claims. (Cl. 88—24)



1. In a moving picture picture apparatus, the combination with a main frame, of two supports pivotally connected to the front end of the main frame to move outwardly from said main frame about a vertical axis and in turn inwardly to be locked to said main frame adjacent to one another in projecting position, two projector devices, each having a lamp, a light aperture, a projecting lens, and a film feeding mechanism, the lamps being mounted on said main frame and the film feeding mechanisms being mounted on said supports respectively in registration with said lamps in projecting position, the projecting lenses being disposed in close proximity to each other when the supports are locked to the main frame and the focal axes of the projector devices converging in projecting position to alternately project from either projector onto a given screen area, and two parallel adjacent lamp housings mounted on the rear of said frame and in alinement with and adjacent to the rear end of said light apertures when in projecting position, one of said lamps being mounted in each of said housings, said supports when swung outwardly affording access both to the front of said lamps and to said film feeding mechanisms.

2,002,499
WAVE TRANSLATION SYSTEM
Harold S. Black, Westfield, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application September 30, 1932, Serial No. 635,525
16 Claims. (Cl. 178—44)

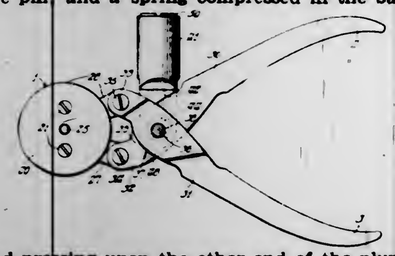


1. A wave translating system comprising a wave propagation path extending from one of two geographically separated points to the other, a wave amplifying device in said path, said amplifying device having a feedback path extending from one of two geographically separated points to the other and feeding back gain-reducing waves in said amplifying device.

2,002,500
HIGH-FREQUENCY COUPLING DEVICE
Alfred Crossley and Herbert E. Meinema, Chicago, Ill., assignors to Johnson Laboratories, Inc., Chicago, Ill., a corporation of Illinois
Application April 10, 1934, Serial No. 719,905
4 Claims. (Cl. 171—242)

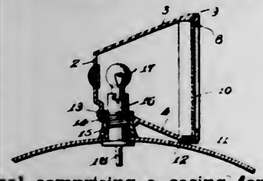
1. A high-frequency coupling device including a concentrated primary winding and a concentrated secondary winding, a ferro-magnetic core for each of said windings, said primary winding having a natural frequency lower than any frequency to which said secondary winding is intended to be tuned, said cores being adjacently and coaxially disposed and relatively adjustable, whereby the electro-magnetic coupling between said primary winding and said secondary winding may be conveniently adjusted to any desired value within the range of said device.

2,002,501
COMBINATION WRITING IMPLEMENT
Giuseppe Donato, Philadelphia, Pa.
Application February 9, 1934, Serial No. 710,390
10 Claims. (Cl. 120—9)



1. A pen structure comprising a barrel having a conoidal extremity provided with a plurality of perforations adapted for the exsertion of writing parts, said perforations being connected by a vent.

2,002,502
SWAGING MACHINE
Harry A. Douglas, Bronson, Mich.
Application December 15, 1932, Serial 647,327
Renewed August 20, 1934
15 Claims. (Cl. 81—15)



1. In a hand swaging device, a pair of levers having intercalated bifurcated ends: a pivot pin passing through said ends, one of the levers having holes receiving said pin closely therethrough and the other lever having relatively larger holes loosely receiving said pin, said holes being in register; a spring barrel transverse to the levers, said barrel having one end bifurcated and fixed to the bifurcations of the lever having the larger holes; holes in said bifurcated end of the spring barrel registering with the holes in the lever to

which it is fixed; a plunger housed in said barrel, one end of the plunger having an arcuate recess therein receiving the pivot pin and together with the holes in the other lever providing a seat for the pin, and a spring compressed in the barrel

and pressing upon the other end of the plunger to normally maintain the pivot point in fixed position with respect to both levers but yieldable to permit the pin to move with respect to one of the levers upon a predetermined resistance to relative movement thereof.

2,002,503
DIRECTION SIGNAL FOR AUTOMOBILES
Charles Foti, Arnold, Pa., assignor of one-third to John Speranza and one-third to Marco D. Achille, both of Arnold, Pa.
Application November 19, 1930, Serial No. 496,730
1 Claim. (Cl. 177—329)

A signal comprising a casing formed with a transparency in one wall thereof and with a bottom wall inclined upwardly to lie in a plane at an acute angle to the plane of said lens and provided with an opening disposed adjacent its highest point, a sleeve for seating on a vehicle fender in surrounding relation to an opening formed therein, means on said sleeve to engage the bottom of said fender, and a socket threaded in the sleeve, the upper end of the sleeve being receivable in the opening in the inclined bottom wall of the casing and the latter having a fastener to fixedly engage it with the sleeve, whereby the lens carrying end of the casing may seat on the curved upper face of the vehicle fender, while the sleeve engaging portion remains elevated from the fender.

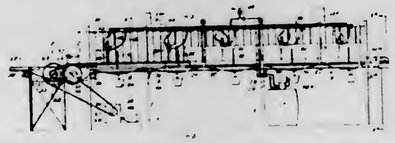
2,002,504
TELEPHONE HANDSET SWITCH
George A. Graham and George O. Tapper, Fort Monmouth, Oceanport, N. J.
Application September 26, 1932, Serial No. 634,914
8 Claims. (Cl. 179—103)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. In combination with a telephone handset, including a transmitter, a receiver, and a hollow connecting handle; a switch assembly comprising in a unitary structure self-restoring spring contact elements mounted within the handle; and means to effect the circuit controlling action of said elements in groups, said means comprising a cam co-acting with said spring elements; and a lever located to operate entirely clear of the surface of said handle and forming part of the switch assembly for actuating the cam, said lever being formed with a pair of oppositely extending

finger grips to permit manipulation of said handset by either hand, and each of said grips providing a different selective control of the switching action.

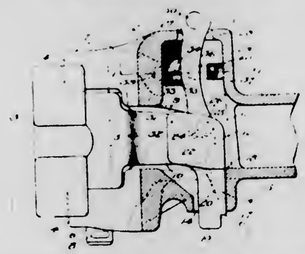
2,002,505
PREPARATION OF EMULSIONS OF THERMOPLASTIC MATERIALS
Arthur Warren Hixson, Leonia, N. J., and Jacob Mitchell Fain, Brooklyn, N. Y.
No Drawing. Application February 23, 1932, Serial No. 594,732
13 Claims. (Cl. 134—1)

1. The process of stabilizing a hydrophilic dispersion of thermoplastic material which comprises incorporating therewith tannin material and a protective colloid capable of being precipitated by a heavy metal salt, and mixing a heavy metal salt with said dispersion to precipitate said protective colloid and convert said tannin material to a heavy metal tannate sol.



2,002,506
TRUSS STRUCTURE
Hamilton L. Loudenback, Sidney, Ohio, assignor of one-third to Clarence F. Loudenback, Sidney, Ohio
Application November 3, 1931, Serial No. 572,825
4 Claims. (Cl. 108—23)

1. A wooden multi-ply arched truss structure comprising spaced upper and lower chord members, each of said chord members comprising segments arranged end to end and in butting contact, sheathing members connected to the opposite faces of the chord members and bridging the space therebetween, compression members secured against the outer faces of the sheathing



members at opposite sides of the upper and lower chord members, said compression members also comprising segments arranged end to end and in butting contact, sheathing members secured to the outer faces of the compression members and bridging the space therebetween, the sheathing members being diagonally disposed with the members of the sheathing at one side of the chords being inclined in a direction opposite to the inclination of the sheathing members at the opposite side of the chords and the sheathing members secured to the outer faces of the compression members being inclined in a direction opposite to the inclination of the sheathing members connecting the chord members, struts interposed between and coplanar with the segments of the upper and lower chords, and additional struts interposed between and coplanar with the compression members of the upper and lower chords.

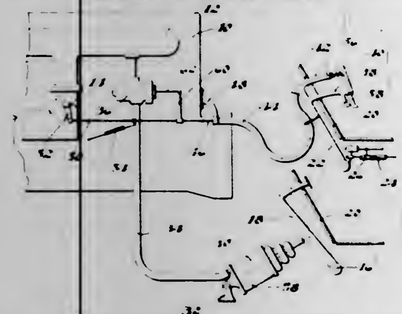
2,002,507
COATING APPARATUS
Sidney C. Porter, Newell, W. Va., assignor to The Globe Brick Company, Kenilworth, W. Va., a corporation of West Virginia
Application August 26, 1931, Serial No. 559,468
20 Claims. (Cl. 91—45)

1. In apparatus of the class described, the combination of conveying means for supporting bricks in upright position on their side faces in side by side spaced parallel relation and conveying them in such position from a loading station to an unloading station, said conveying means comprising a main section, a delivery section consisting of a driven endless belt and stationary transfer devices disposed between said sections and over which the bricks slide from said main section to said delivery section, and means for spraying the bricks while moving along said main section.

2,002,508
COUPLER
Willard F. Richards, Depew, N. Y., assignor to The Gould Coupler Company, New York, N. Y., a corporation of Maryland
Application March 22, 1929, Serial No. 349,131
12 Claims. (Cl. 213—128)

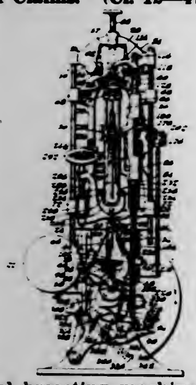
1. In combination, a coupler head with walls defining a mechanism pocket, a knuckle pivoted thereto, a locking block vertically movable in said pocket and guided by said walls, a lock lifter operating in an aperture in the upper wall of said head and having trunnion means with a flattened normally vertical side interlocking with said block, said block having a slot extending diagonally rearward and upward, from a pocket adapted to pivotally receive and normally provide for interlocking of the trunnion means therein, and in width corresponding with the minimum width of the trunnion means, to provide for assembly and disengagement with respect to said lifter only when the block and lifter are disposed in an abnormal angular relation.

2,002,509
SUCTION CLEANER
Frederick Riebel, Jr., Toledo, Ohio, assignor to Air-Way Electric Appliance Corporation, Toledo, Ohio, a corporation of Delaware
Application February 27, 1933, Serial No. 658,684
15 Claims. (Cl. 15—155)



1. In a suction cleaner, a floor tool, a supporting roller, a mounting attached to the floor tool, said mounting including a projecting movable part on which said roller is journalled and a resilient portion which resiliently transfers the weight of the cleaner to the roller, and adjusting means carried solely by the mounting for varying the tension in said resilient portion, whereby to vary the normal riding position of the floor tool determined by the balance between the weight of the cleaner and the tension in said resilient portion when flexed under said weight, and whereby said floor tool may be manually depressed below any of said normal riding positions, against the tension of said resilient portion.

2,002,510
BUILDING CONSTRUCTION
Maurice C. Rosenblatt, Philadelphia, Pa.
Application November 18, 1931, Serial No. 575,829
7 Claims. (Cl. 72—18)

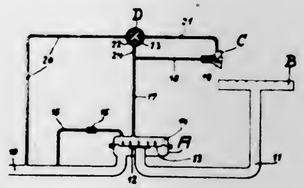


1. An acoustic block comprising a hardened sheet of cementitious material having a reinforcing rib formed on one surface and having a plurality of tapering apertures extending through the sheet from one surface to the other adjacent said rib, said apertures arranged with their larger ends in the surface having the rib.

2,002,511
CONTROL MECHANISM
Roy S. Sanford, South Bend, Ind., assignor to Bragg-Kliesrath Corporation, South Bend, Ind., a corporation of New York
Application August 28, 1931, Serial No. 560,005
2 Claims. (Cl. 192—.01)

1. A vehicle provided with a throttle, a valve controlled fluid power operated clutch, and a brake, and a common manually operable means for controlling the operation of each of said controls, said means comprising a pedal member, means interconnecting said pedal and brake, a supplemental clutch and throttle control pedal member pivotally mounted on said brake pedal member, a flexible conduit connected at one of its ends to a fixed portion of the vehicle and at its remaining end to said brake operating pedal, a flexible connection connected at one of its ends to said supplemental pedal and at its remaining end to said throttle, and a connection interconnecting the control valve of said clutch operating power means and said flexible connection whereby the clutch and throttle may be operated with operation of the supplemental pedal and the brake may be operated, with operation of the first mentioned pedal to the exclusion of the operation of the throttle and clutch.

2,002,512
HEEL BREASTING MACHINE
Thomas H. Seely, Melrose, and Milton H. Ballard, Beverly, Mass., assignors to United Shoe Machinery Corporation, Paterson, N. J., a corporation of New Jersey
Application November 16, 1932, Serial No. 642,920
111 Claims. (Cl. 12—47)



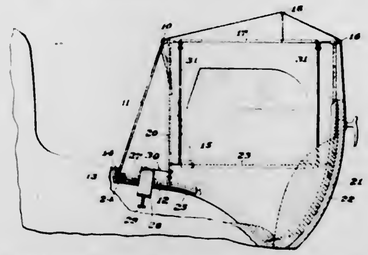
13. In a heel breasting machine, a breasting knife, a knife slide, and a knife actuator mounted in said slide and arranged for measured movement relatively to said slide.

30. In a heel breasting machine, a shank presser, a presser post, a head in which said post is slidably mounted, connections between said head and a source of power, and pawl and ratchet connections between said head and said post.

54. In a heel breasting machine, a shoe supporting jack yieldingly supported and arranged for straight line movement toward and from operative position.

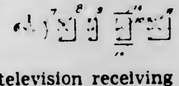
87. In a heel breasting machine, a shoe supporting jack, a heel stop, and means actuated by the cutting thrust of the knife for locking the heel stop in heel engaging position.

2,002,513
CONTROLLING ARRANGEMENT FOR A GAS BURNER
Friedrich Wilhelm Stockmeyer and Wilhelm Römmelt, Stuttgart, Germany, assignors to Junkers & Co., Gesellschaft mit beschrankter Haftung, Dessau, Germany
Application June 6, 1932, Serial No. 615,676
In Germany June 18, 1931
8 Claims. (Cl. 158—117.1)



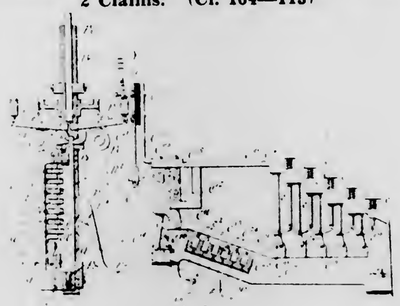
1. A controlling arrangement for a gas burner comprising the combination with a gas burner, of a valve chest, a main supply valve and diaphragm therefor dividing said valve chest into a main gas chamber and a control chamber and operable under difference of pressure in the chambers to control the supply of gas to the burner, a gas main connected to said main gas chamber, a burner conduit between the burner and said main gas chamber controlled by the said valve, a pilot burner, a pilot conduit between the control chamber and said pilot burner, a thermostatic valve responsive to the heat of the pilot burner and operative to control said pilot conduit, a throttled connection between the said chambers, a by-pass conduit around said thermostatic valve and extending between the gas main and said pilot burner, and means including a valve in said by-pass conduit automatically connecting said control chamber directly to the main pressure gas supply upon opening said by-pass conduit.

2,002,514
REMOVABLE RUMBLE SEAT TOP
Earl S. Tupper, Shirley, Mass.
Application August 8, 1932, Serial No. 627,819
Renewed November 10, 1933
23 Claims. (Cl. 296—99)



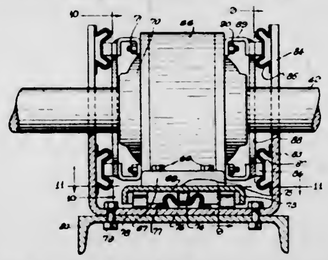
1. A removable top for the rumble seat of an automobile in which the rumble seat opening presents a gutter at its front and sides, comprising a front frame having a front bottom rail to seat in said front gutter and two relatively short side bottom rails to seat in said side gut-

ters, means for detachably securing said frame in place, a roof member connected to said front



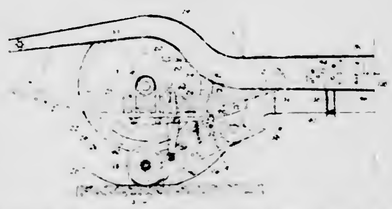
frame and side members connected to said roof member.

2,002,515
PRODUCING COLOR IN TELEVISION
Robert H. Worrall, Washington, D. C.
Application August 9, 1932, Serial No. 628,090
12 Claims. (Cl. 178—6)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. In a television receiving device, a source of light, a condensing lens disposed to receive light from said source, a polarizing and an analyzing prism disposed in the path of the beam from said lens, a means adapted to change the polarization by double refraction of said light operatively positioned between said prisms, said means including a cell comprising photo active material and means to apply a fluctuating electric field thereto, means for biasing the cell, and means to restore the optical characteristics of the beam back to their unbiased condition.

2,002,516
TAPE PERFORATING MACHINE
William Ackerman, Towners, N. Y., assignor to Mergenthaler Linotype Company, a corporation of New York
Application March 22, 1929, Serial No. 349,240
2 Claims. (Cl. 164—113)

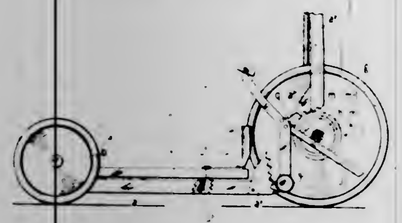


2. A perforating machine including, in combination, a tape perforating mechanism for producing a series of symbols representative of a line of characters to be reproduced by the tape, a keyboard, code devices acting in response to the actuation of the keyboard to control the operation of said perforating apparatus, a magazine containing a set of typographical elements, means controlling the release of said elements from the magazine, a series of power-operated reeds for actuating said releasing means, a series of intermediate locking bars movable to active or inactive position singly or in groups to establish different combinations in controlling the operation of the individual reeds, and means also controlled by the keyboard for operating said bars.

2,002,517
ANTIVIBRATION BOAT CONSTRUCTION
Bruno E. Balduf, Chicago, Ill., assignor to United States Gypsum Company, Chicago, Ill., a corporation of Illinois
Application June 20, 1931, Serial No. 545,706
6 Claims. (Cl. 115—34)

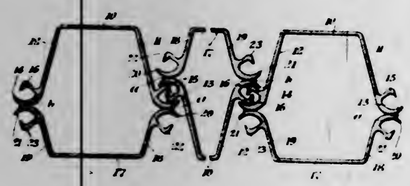
6. In a resilient construction for boats, a boat frame, a propeller shaft, means for rotating said shaft, a thrust bearing supporting said shaft on said frame, and resilient, flat, spring clips associated with said thrust bearing for permitting both vertical and axial movement of said shaft relative to said frame.

2,002,518
POWER DRIVEN VEHICLE
James H. Baldwin, New Milford, Conn.
Application February 27, 1932, Serial No. 595,479
Renewed October 16, 1934
7 Claims. (Cl. 180—15)



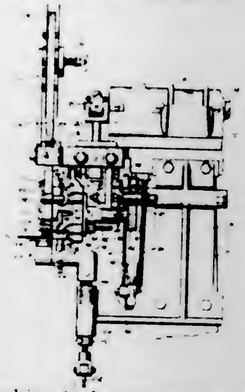
2. In a power driven vehicle, a pair of axially aligned wheels having ground contacting tires provided with rims, and auxiliary mechanism including a pivotally mounted gripper belt frame, belt rollers carried thereby, a gripper belt on said belt rollers, a power take-off roller in driving relation with the periphery of one of said tires for driving one of said belt rollers, and mechanism for pivotally moving said gripper belt frame in one direction to bring a portion of said gripper belt into ground contact in line with the ground contacting portions of said wheels, and in the reverse direction to bring the lowest part of said auxiliary mechanism above the lowest part of the rim of its associated tire.

2,002,519
PROCESS FOR THE ISOLATION OF WATER-SOLUBLE VITAMINS
Richard J. Block, New York, N. Y., and George R. Cowgill, Hamden, Conn., assignors to Simon J. Dannenberg, New York, N. Y.
No Drawing. Application April 20, 1932, Serial No. 606,514
6 Claims. (Cl. 167—81)



1. In a process for the isolation of water-soluble antineuritic vitamins from materials containing them, the steps which consist in oxidizing the impurities in the presence of an organic solvent for the vitamins and separating the vitamin solution from the precipitated impurities.

2,002,520
SCOOTER
Daniel J. Bontrager, Portland, Oreg.
Application July 17, 1931, Serial No. 551,338
8 Claims. (Cl. 208—37)



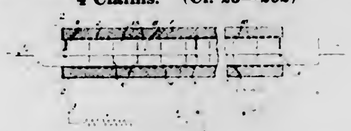
1. A toy of the character described including a frame, a platform carried by said frame, a wheeled support for said frame, said support including one non-steering wheel, a foot lever mounted adjacent said non-steering wheel, and a pawl-and-ratchet mechanism adapted to connect said foot lever with said wheel, the pawl of said mechanism being externally arranged with respect to the ratchet, said pawl being gravity engaged and being unrestrained, thus being adapted to be disengaged by centrifugal force.

2,002,521
BOX PILING
Adolf Borberg, Short Hills, N. J., assignor to Dortmund Hoerder Huettenverein Aktiengesellschaft, Dortmund, Germany, a corporation of Germany
Application January 5, 1934, Serial No. 705,363
5 Claims. (Cl. 61—61)

1. In combination, a series of three or more box pile units, each of said units comprising a pair of half wave arched web pile sections of unequal depth, each section having along each of its edges an interlock member, the pile sections of each pair being rigidly secured together along their edges with their concave faces inward and the two edges of one section adjacent the two edges of the other section to form a box, said series of box pile units being interconnected with their deeper arched sections alternately disposed with respect to the series axis.

2,002,522
MACHINE FOR ROUGHING SHOE PARTS
Charles G. Brostrom, Lynn, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a corporation of New Jersey
Application October 20, 1931, Serial No. 569,938
6 Claims. (Cl. 51—57)

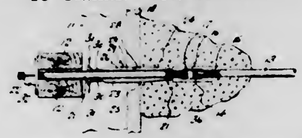
2. A roughing tool comprising a carrier member having a backing roll at its outer end, and means for guiding an abrasive band in a loop about said roll, including a centrally disposed friction member, and releasable presser members arranged to press the band against the opposite sides of said friction member.



2,002,523
PROCESS OF PREVENTING CORROSION
Hyym E. Buc, Roselle, N. J., assignor to Standard Oil Development Company, a corporation of Delaware
No Drawing. Application July 23, 1932, Serial No. 624,361
10 Claims. (Cl. 252—5)

1. The process of decreasing the corrosion of a metal in contact with an aqueous medium which comprises adding to the medium a small amount of an alkylated phenol as corrosion inhibitor.

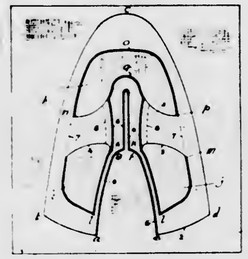
2,002,524
THERMAL TREATMENT OF GASES AND VAPORS
Adrien Cambron and Colin Hahnemann Bayley, Ottawa, Ontario, Canada
No Drawing. Application February 23, 1933, Serial No. 658,098
5 Claims. (Cl. 260—170)



1. In the thermal treatment of hydrocarbon gases or vapors in an externally heated reaction zone the process which comprises maintaining within the zone a temperature in excess of 700° C., causing said gases or vapors to flow through a continuous unobstructed narrow space along the heated wall of said zone and abruptly varying the linear velocity of the gases or vapors at successive points in their flow in said space along said heated wall.

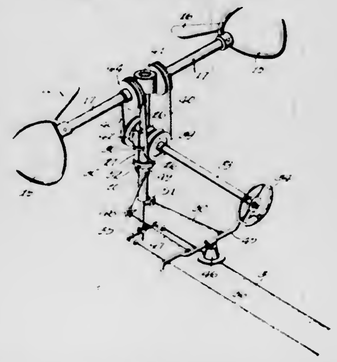
2,002,525
THERMAL TREATMENT OF GASES AND VAPORS
Adrien Cambron and Colin Hahnemann Bayley, Ottawa, Ontario, Canada
Original application February 23, 1933, Serial No. 658,098. Divided and this application January 31, 1934, Serial No. 709,202. In Canada February 18, 1933
4 Claims. (Cl. 23—252)

1. Apparatus for the thermal treatment of gases which comprises an externally heated reaction chamber having a heated wall and a plurality of spaced baffles in said chamber all of which are arranged to provide a plurality of narrow unobstructed annular passages between said baffles and the heated wall of said chamber and an eddy-forming zone between each successive pair of baffles.



2,002,526
CONCRETE FORM HOLDING MEANS
Samuel S. Colt, Orange, N. J.
Application February 6, 1934, Serial No. 709,942
10 Claims. (Cl. 25—131)

1. In concrete form holding means, an internal tie-rod, an exteriorly projecting bolt-rod, a coupler means to join said tie-rod and bolt-rod, and a sleeve loosely slidable over said bolt-rod, said sleeve being adapted to penetrate a form wall from the exterior thereof to cover the inner end portion of said bolt-rod between the form wall and said coupler means.

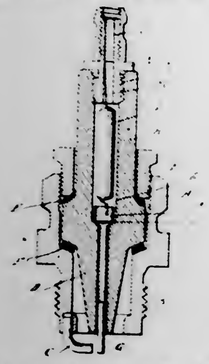


2,002,527
METHOD OF SECURING A PREFORMED AND CONTINUOUS SHEET OF UNVULCANIZED RUBBER TO A PORTION OF A FABRIC UPPER
István Dorogi and Lajos Dorogi, Budapest, Hungary, assignors to Magyar Ruggyantaarugyár Részvénytársaság, Budapest, Hungary
Application May 25, 1933, Serial No. 672,853
In Austria January 31, 1933
4 Claims. (Cl. 18—59)

3. A method of securing a preformed and continuous sheet of unvulcanized rubber to a portion of the fabric upper of a shoe so that part of said upper remains exposed, which consists in pressing the rubber sheet substantially in a single direction which is perpendicular to the fabric sheet of which the upper is made and while said sheets are substantially flat, and while the rubber is heated, the pressure being directly applied to the rubber along and within a line which follows the margin of the part of the upper which is to be exposed, the heat and pressure being sufficient to drive the rubber into the fabric, the fabric remaining uncut at the margin of its exposed part, and simultaneously cutting the rubber and fabric at their outer margins, and removing the waste rubber which

corresponds to the part of the upper which is to be exposed.

2,002,528
AEROPLANE STEERING MECHANISM
Harry A. Douglas, Bronson, Mich.
Application October 5, 1931, Serial No. 566,933
5 Claims. (Cl. 244—25)



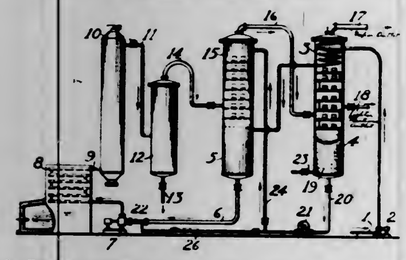
1. An aeroplane steering mechanism, comprising: rudder means; a plurality of propeller means, each movable in a definite path; and interconnected control means connected with said propeller means and with said rudder means, said control means being operable to adjust said rudder means, and also operable to move said propeller means in opposite directions in said paths and simultaneously operable to move said propeller means in the same direction in the same paths, said control means also having mechanism operable to independently change the relative positions of said propeller means in any position of adjustment.

2,002,529
SPARK PLUG
Rex J. L. Dutterer, Toledo, Ohio, assignor to Defiance Spark Plugs, Inc., Toledo, Ohio, a corporation of Ohio
Application March 12, 1934, Serial No. 715,242
3 Claims. (Cl. 123—169)

1. In a spark plug, an insulator provided with a recess in the upper portion thereof, an electrode secured in the lower portion of said insulator and having its end projecting into said recess, a terminal post at the upper end of said insulator, a suppressor unit suspended within said recess and spaced from the walls thereof

to be out of heat conducting contact therewith, and an electrical connection of small thermal

conductivity between said unit and said electrode.



2,002,530

RECYCLING PROCESS FOR CRACKING OIL

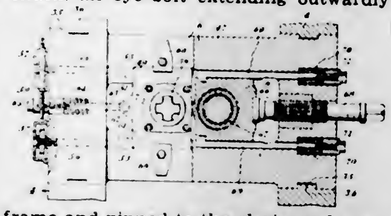
Frank H. Edson, Westfield, N. J., assignor to Standard Oil Development Company, a corporation of Delaware

Application April 29, 1931, Serial No. 533,607

2 Claims. (Cl. 196—48)

1. In a continuous recycling process for cracking hydrocarbon oil, the steps which comprise cracking the oil at elevated temperature and under elevated pressure, vaporizing a portion of the thus cracked oil under reduced pressure, partially fractionating the vapors to produce a first condensate, recycling the condensate through a pump to the cracking step, condensing fractions of the remaining vapors to produce a second condensate and a desired vapor, and recycling the second condensate under greater pressure than the pressure on the first condensate directly to the intake of the pump at a velocity directed in the direction of said first condensate entering the intake of said first pump and high enough to cause the combined oils in the intake side of the pump to closely follow the pump plunger upon its suction stroke without substantial vaporization.

2,002,531



ROLLING MILL

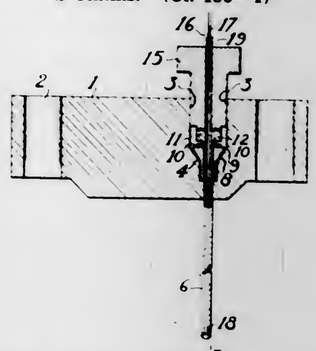
Gustaf L. Fisk, Pittsburgh, Pa., assignor to Mesta Machine Company, Homestead, Pa., a corporation of Pennsylvania

Application May 5, 1931, Serial No. 535,169

1 Claim. (Cl. 80—55)

In a rolling mill, a housing, a frame adjustable therein, a bearing chuck seated in said frame, and means for yieldingly holding the chuck in its seat comprising a clevis formed on the chuck, an eye-bolt extending outwardly of

the frame and pinned to the clevis, and a spring for urging said eye-bolt longitudinally.



2,002,532

THERMOCOUPLE

Richard E. Flatley, Elizabeth, N. J., assignor to Standard Oil Development Company, a corporation of Delaware

Application September 24, 1931, Serial No. 564,857

2 Claims. (Cl. 136—4)

1. A thermocouple comprising a tube having an open end with a tapered seat, a closure secured to the end with a cooperating tapered seat, and a pair of elements of dissimilar metal extending through the tube and secured to the closure to form a thermo-electric junction.

2,002,533

PROCESS FOR SEPARATION OF HYDROCARBONS AND THEIR OXYGEN-CONTAINING DERIVATIVES

Per K. Frolich, Cambridge, Mass., and James W. Pugh, Breckenridge, Tex., assignors to Standard Oil Development Company, a corporation of Delaware

No Drawing. Application May 21, 1928, Serial No. 279,600

6 Claims. (Cl. 260—116)

1. The process of extracting aliphatic oxygen-containing compounds from their mixtures with normally fluid hydrocarbons comprising treating the mixture at superatmospheric pressure with an extraction agent comprising a major quantity of methyl alcohol.

6. The process of obtaining aliphatic oxygen-containing derivatives of hydrocarbons from their mixtures with normally fluid hydrocarbons, comprising suitably contacting the mixture under a pressure between 1000 and 3000 pounds per square inch with a solvent comprising a major quantity of methyl alcohol, separating the two phases and washing the hydrocarbon phase with any suitable solvent adapted to remove the extracting agent.

2,002,534

METHOD FOR THE PRODUCTION OF NORMALLY LIQUID HYDROCARBONS FROM GASEOUS OR LOWER BOILING HYDROCARBON MATERIALS

Per K. Frolich, Elizabeth, N. J., assignor to Standard Oil Development Company

No Drawing. Application September 10, 1930, Serial No. 481,070

10 Claims. (Cl. 196—10)

1. An improved process for obtaining valuable higher boiling hydrocarbons from gases containing large amounts of lower boiling saturated hydrocarbons containing more than one carbon atom which comprises cracking the lower boiling materials whereby a substantial proportion of unsaturates is formed together with free hydrogen, subsequently adding to the mixture a gas rich in an oxide of carbon, causing the oxide of carbon and hydrogen to react and then polymerizing the unsaturated hydrocarbons.

2,002,535

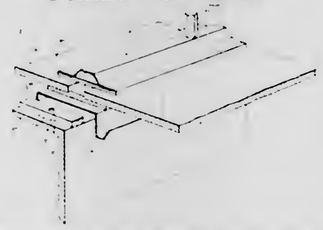
GRIP FOR HANDLES

George E. Gagnier, Detroit, Mich.

Application September 14, 1932, Serial No. 633,147

3 Claims. (Cl. 273—81)

1. A handle for operation by the hands comprising a centrally disposed support, a pile fabric covering for said support, said covering being disposed on said support with the pile of said fabric extending outwardly and said fabric and outwardly extending pile being impregnated with a tenacious rubber-like substance.



2,002,536

GLAZING CONSTRUCTION

Sanford K. Huston, Jr., Chicago, Ill.

Application September 10, 1934, Serial No. 743,397

4 Claims. (Cl. 108—16)

1. A support for a glazing construction comprising a rafter bar providing a plurality of holes in its upper edge, a plurality of apertured spacer members respectively overlying said holes and each providing detent means extending through the adjacent holes in operative engagement with the bar, a longitudinally extending supporting member resting upon the spacer members and providing a plurality of apertures respectively in register with the apertures in the spacer members, a plurality of bolts having their lower ends respectively extending through said registering apertures and each providing a shoulder in engagement with the supporting member, and a nut threaded on the lower end of each bolt to clamp the shoulder into close fitting engagement with the supporting member.

2,002,537

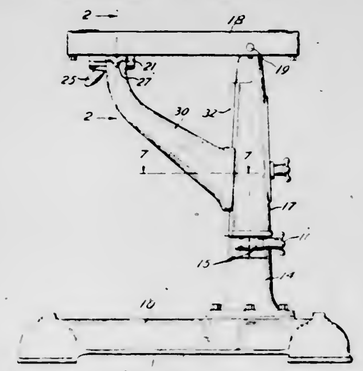
PRINTING INK

Eugene J. Kelly, Kalamazoo, Mich.

No Drawing. Application February 14, 1934, Serial No. 711,229

8 Claims. (Cl. 134—35)

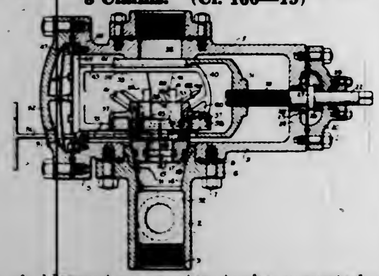
1. A printing ink which is quick drying at a temperature range between 300° and 400° F., consisting by weight of from 5% to 65% of dry pigment, 2% to 10% of a high melting point wax, of the class of organic waxes consisting of carnauba, japan, bayberry and Montan waxes, 3% to 18% of low viscosity nitro-cellulose, 30% to 70% of volatile solvent thinner, and 10% to 40% of plasticizer.



2,002,538

SUPPORTING PEDESTAL

Albert Kindelmann, Floral Park, and Charles L. Ragot, New York, N. Y., assignors to International Projector Corporation, New York, N. Y., a corporation of Delaware

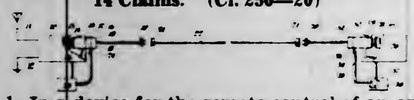


Application July 30, 1932, Serial No. 626,580

8 Claims. (Cl. 248—41)

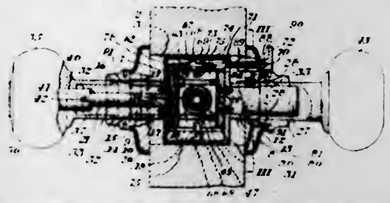
6. A pedestal construction for motion picture projectors which comprises a base plate, a column for supporting said base plate, said base plate being pivotally connected at one end to the aforementioned supporting column, an arm extending from said column to the other end of the base plate, a slotted member on the plate, a cam mounted in said slot, means supporting the cam and mounted on the end of said arm, means for turning the cam to adjust the end of the plate around its pivot point, said column having downwardly diverging front and rear surfaces, and clamping means connected to the arm and engaging said divergent surfaces, the loosening of the clamping means causing a gravity drop of the arm along the column proportionate to the amount the clamping means is released.

2,002,539
CONTROL HEAD
Walter E. King, Houston, Tex., assignor to Reuben L. Waxler and Jess Hardcastle, Houston, Tex.
Application July 11, 1932, Serial No. 621,874
8 Claims. (Cl. 166—15)



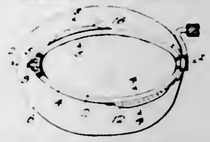
1. A blowout preventer to be mounted on a casing head including a housing, a pair of sealing elements therein to seal about a pipe and within the casing head, means to operate said elements from sealing to non-sealing position, and means to detach said elements from said blowout preventer whereby a seal may be maintained by said elements about the pipe while said blowout preventer housing is removed.

2,002,540
PLASTIC MASSES AND PROCESS OF MAKING SAME
Wilhelm Kraus, Vienna, Austria, assignor, by mesne assignments, to American Cyanamid Company, a corporation of Maine
No Drawing. Application June 16, 1930, Serial No. 461,646. In Austria December 21, 1929
3 Claims. (Cl. 260—3)



1. The process which comprises reacting thiodicyandiamidine with formaldehyde to produce a condensation product suitable for use as a heat-setting plastic material.

2,002,541
REMOTE CONTROL OF ELECTRICAL DEVICES
Henry Rogers Mallory, Rye, and Samuel Ruben, New Rochelle, N. Y., said Ruben assignor to said Mallory
Application October 12, 1933, Serial No. 693,251
14 Claims. (Cl. 250—20)



1. In a device for the remote control of an amplifier and associated speaker unit of a radio receiver, the combination with residence lighting conductors, a tuner unit, low impedance coupling connecting said tuner unit to the residence lighting conductors, an amplifier and associated speaker unit, low impedance coupling connecting said amplifier and associated speaker unit to the residence lighting conductors, of a switch between one side of the circuit of said amplifier and speaker unit and one of said residence lighting conductors, a selective responder unit connected to the residence lighting conductors and associated with said switch mechanically to operate the same, and a selective energizer connected to the residence lighting conductors remote from said selective responder unit for supplying a control current to said residence lighting conductors to be carried thereby to said selective responder unit for initiating operation thereof.

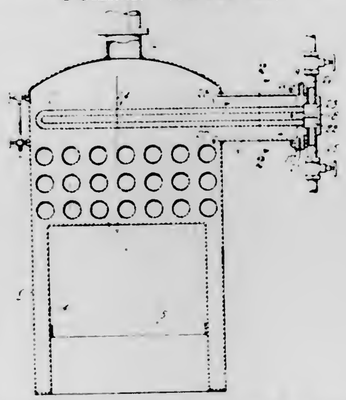
2,002,542
LATCH AND LOCK MECHANISM
James P. McKinney, Jr., Pittsburgh, Pa., assignor, by mesne assignments, to The American Hardware Corporation, New Britain, Conn.
Application July 15, 1932, Serial No. 622,578
31 Claims. (Cl. 70—91)

3. Lock structure, comprising a bolt, a retractor therefor, manually operable means for operating the retractor, means for holding the retractor against movement in one direction, means at the periphery of a portion of said manually operable means for operating said holding means, and key operable means for operating said last mentioned means.

2,002,543
GOGGLES
Emil B. Meyrowitz, New York, N. Y., assignor to E. B. Meyrowitz, Inc., a corporation of New York
Application January 15, 1930, Serial No. 420,830
7 Claims. (Cl. 2—14)

1. In a goggle, in combination, an annular eyecup including a cushion receiving rim portion, an annular cushion having an axially extending circumferential attaching lip, and a metallic reinforcing annular band fitting interiorally of the lip and secured thereto, the lip fitting within the rim portion and the rim portion and band having complementary projections and recesses and one of them being deformable so as to permit insertion and removal of the lip.

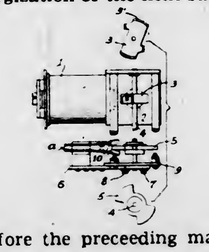
2,002,544
ANNEALING SHEET GLASS
William L. Monro, Pittsburgh, Pa., assignor to American Window Glass Company, Pittsburgh, Pa., a corporation of Pennsylvania
Application September 8, 1934, Serial No. 743,207
14 Claims. (Cl. 49—89)



1. In the method of making sheet glass, the steps consisting in continuously drawing a glass sheet from a bath of molten glass contained in a drawing pit, moving the glass continuously in a vertically extending direction until it has been annealed and cooled, and so controlling the surrounding temperature of the glass that the temperature of the glass is reduced to between substantially 1100° F. and 850° F. while inside the drawing pit.

6. In the method of making sheet glass, the steps consisting in drawing glass in sheet form from a bath, moving it continuously in a vertically extending direction until it has been annealed and cooled and while substantially enclosed from the atmosphere, and injecting a cooling gas into the enclosure substantially at a point

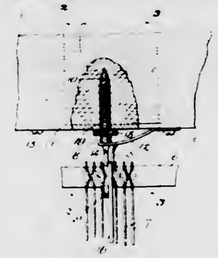
where the temperature of the glass is between 1100° F. and 850° F.



2,002,545
WATER HEATING SYSTEM
Virgil Moray, New York, N. Y.
Application October 6, 1933, Serial No. 692,536
4 Claims. (Cl. 122—32)

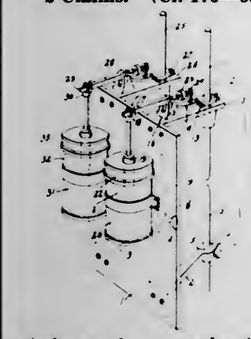
1. In combination, a boiler having walls, including side walls, defining a water space, fire tubes extending through said space substantially parallel to said side walls, a hollow member secured within an opening formed in one of said side walls, and water heating tubes of substantially greater length than the width of said boiler positioned within said hollow member and extending into said water space substantially at right angles to said fire tubes.

2,002,546
ELECTRIC MOTOR AND CONTROL THEREFOR
Konrad Müller, Berlin-Siemensstadt, and Fritz Döring, Berlin-Frohnau, and Josef Wantosch, Berlin-Reinickendorf-O, Germany, assignors to Siemens & Halske Aktiengesellschaft, Berlin-Siemensstadt, Germany, a German company
Application June 16, 1932, Serial No. 617,658
In Germany June 18, 1931
8 Claims. (Cl. 172—36)



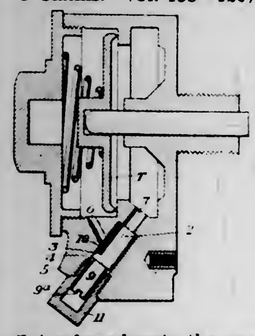
1. In an electric motor comprising stationary magnets having pole pieces and a rotor, switching means operated by the rotor for energizing said magnets in succession, said switching means causing energization of the next succeeding magnet pole before the preceeding magnet is deenergized.

2,002,547
METHOD OF DECOMPOSING RAW PHOSPHATES
Sven Gunnar Nordengren, Landskrona, Sweden, assignor to Aktiebolaget Kemiska Patenter, Landskrona, Sweden, a Swedish joint-stock company
No Drawing. Application September 23, 1931, Serial No. 564,720. In Sweden September 1, 1931
9 Claims. (Cl. 23—165)



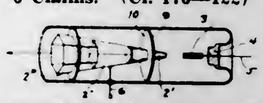
1. The process for decomposing raw materials containing phosphoric acid and calcium, which consists in treating said materials with mineral acid in the presence of sulphuric acid radical to produce decomposition, subjecting the reaction mass at the latest after said inital decomposition to such a solution vapor pressure that the calcium sulphate produced will take up at most ½ mol. of water of crystallization and thereby form stable crystals which may safely be subjected to washing with aqueous liquids and yet retain their content of water of crystallization unaltered in amount, by regulating the concentration of the phosphoric acid present in the mass and the temperature according to the formula $2P+t=$ at least 186 when P = concentration of the phosphoric acid expressed in percentage of weight of P_2O_5 of the mother liquor, and t = the temperature in °C.

2,002,548
SUPPORT FOR HEDDLE BARS
Ralph Ragan, Atlanta, Ga., assignor to Steel Heddle Manufacturing Company, Philadelphia, Pa., a corporation of Pennsylvania
Application December 6, 1932, Serial No. 645,905
6 Claims. (Cl. 139—92)



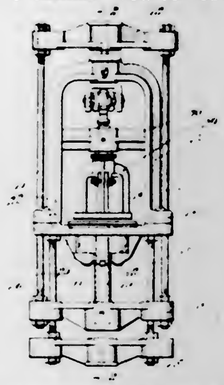
1. The combination with a heddle frame, of a pin mounted on a rail thereof and having a shoulder adapted to receive a heddle bar, a spring mounted on said rail and having its free end forked and straddling the pin and provided with a prong adapted to engage the heddle bar, and a locking nut mounted on the pin and adapted to be turned into binding engagement with the spring.

2,002,549
ARC LAMP
Elmer C. Richardson, Los Angeles, Calif., assignor to Mole-Richardson, Inc., Los Angeles, Calif., a corporation of California
Application September 27, 1933, Serial No. 691,143
2 Claims. (Cl. 176—58)



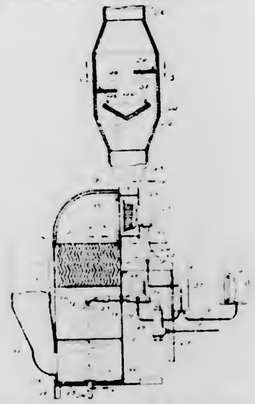
1. In a twin-arc lamp mechanism, a vertical supporting plate, a pair of juxtaposed brackets extending from the lower portion of said plate on one side thereof for supporting a pair of lower carbons, a pair of means also mounted on said plate adjacent the upper end thereof for supporting a pair of upper carbons above said lower carbons, each of said means comprising a lever fulcrumed in front of said plate, means on the forward end of said lever for supporting the associated upper carbon, the rear end of each lever extending to the rear of said plate and having a downwardly extending magnetic core attached thereto, a solenoid surrounding each core and comprising a current coil connected in series with the associated arc and a potential coil connected in shunt to the associated arc and poled to oppose the current coil of that solenoid, and a movable counterweight on each lever means for balancing that lever and its associated carbon and magnetic core to compensate for variations in the potential of the current from which the arc is energized.

2,002,550
VALVE
George A. Robertshaw, Greensburg, Pa., assignor to Robertshaw Thermostat Company, Youngwood, Pa., a corporation of Pennsylvania
Application September 17, 1926, Serial No. 136,039
5 Claims. (Cl. 158—120)



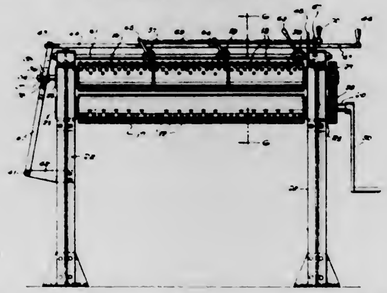
1. In a pilot valve wherein the passage for the gas for the pilot flame is so small as to cause difficulty by the deposition of gum-like material when controlled by a needle valve, a body having a cylindrical bore, a hollow plug having one end closed and fitting tightly therein so as to be slidable axially thereof, a supply passage intersecting said bore, and an axial slot in said plug longer than the diameter of said passage, and means for limiting axial movement of said plug to preclude variation of the flow of fluid therethrough by such movement.

2,002,551
GLOW DISCHARGE DEVICE
Michael Schmierer, Berlin, Germany
Application August 12, 1929, Serial No. 385,314
In Germany August 18, 1928
6 Claims. (Cl. 176—122)



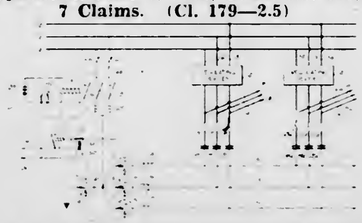
1. In an electric glow lamp for producing light spots of different size and configuration in accordance with input currents of varying intensity, comprising a glass tube filled with an inert gas at reduced pressure, a hollow cathode in said tube of tapering shape with an opening at its apex and having successive variations of its cross-section configuration, an anode arranged outside of said cathode and means to produce electric discharge glow on the inside surface of said cathode, with the direction of vision being in the direction of the longitudinal axis of said cathode.

2,002,552
SPECIMEN SUPPORTING DEVICE
David C. Scott, Providence, R. I., assignor to Henry L. Scott Company, a corporation of Rhode Island
Application January 26, 1932, Serial No. 588,964
8 Claims. (Cl. 73—51)



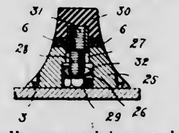
6. A specimen supporting device for a testing machine comprising two relatively movable head members, one of which receives the specimen to be tested, a deck plate on said last-mentioned head member having an opening therethrough, a pair of removable specimen clamp members on said plate having registering openings therein, means carried by the clamp members for centering said clamp members with reference to each other, a yoke member, means for guiding said yoke member toward and from said deck plate, a spring for raising said yoke member, and cam means for moving said yoke member toward said plate for binding action.

2,002,553
HUMIDIFIER AND AIR WASHER
Herbert J. Somers, Detroit, Mich.
Application March 2, 1932, Serial No. 596,195
4 Claims. (Cl. 183—25)



1. In an air conditioner of the class described, a housing having an air inlet and an air outlet, said inlet and said outlet being spaced apart; a humidifying unit located between said inlet and said outlet in the path of travel of the air; means for causing air to enter said housing at said inlet and pass therefrom through said outlet; spray delivery means for delivering a spray of moistening medium on to said unit and against the direction of travel of the air through said housing; a hood for said housing; and a layer of sound deadening and moisture absorbing material covering the inner surface of said hood and exposed to the air traveling therethrough.

2,002,554
APPARATUS FOR SPLICING STRIPS OF PAPER
William Townley, Fort Dodge, Iowa, assignor to United States Gypsum Company, Chicago, Ill., a corporation of Illinois
Application June 25, 1931, Serial No. 546,718
18 Claims. (Cl. 164—99)

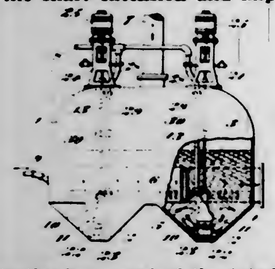


1. In an apparatus for splicing moving strips of paper, a plurality of punches mounted for independent rotation and arranged adjacent one side of a moving strip of paper, and a rotatably mounted die member positioned adjacent the opposite side of said strip of paper, said die member registering and rotating in unison with said punches to form slits and tongues in said strip and a second superposed strip, for splicing said strips together.

2,002,555
PROTECTIVE SYSTEM
Arthur M. Trogner, Maplewood, N. J., assignor to Wired Radio, Inc., New York, N. Y., a corporation of Delaware
Application June 4, 1932, Serial No. 615,365
7 Claims. (Cl. 179—2.5)

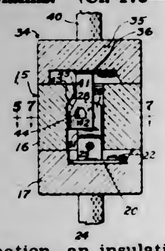
3. A protective system comprising the combination with a multi-phase commercial alternating current transmission system including a number of different phase lines, a multi-phase carrier frequency energy supply system including a plurality of phase lines corresponding to the phase lines of said commercial alternating current transmission system, and a coupling device and current limiting device in series therewith connected between each of the corresponding phase lines of said transmission system and said supply system, of a group of relays each of which includes an operating electromagnet connected in one of the phase lines of said supply system, a separate relay having an operating electromagnet common to all of said phase lines of said supply system, a circuit from at least two phase lines of said transmission system to all of the phase lines of said supply system for directing commercial alternating current thereto, and an electromagnetically operated contactor for controlling said circuit, said contactor being operated under the collective control of said group of relays and said separate relay when short-circuiting of said coupling device in any of said phase lines occurs.

2,002,556
SHOE CLEAT
Ira Irl Tubbs, Superior, Wis.
Application April 4, 1931, Serial No. 527,637
7 Claims. (Cl. 36—59)



1. A shoe calk comprising a base attachable to the wearing surface of a shoe sole, a tip, and means carried by the base for screw threadedly receiving the tip, said means comprising a bolt reciprocable within the base, but non-rotatable therein.

2,002,557
EJECTOR FOR SATURATORS
Charles E. Underwood, Bethlehem, Pa., assignor to Bethlehem Steel Company, a corporation of Pennsylvania
Application April 2, 1932, Serial No. 602,661
26 Claims. (Cl. 23—273)



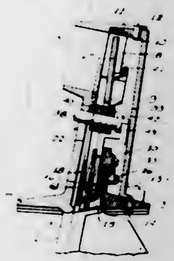
8. In an ejector for saturators or the like comprising a tubular structure, a pump shaft having its lower end journaled in the tubular structure, a pump mounted in the lower end of the tubular structure and secured to the pump shaft adapted to discharge material from the saturator, a shaft

projection secured to the lower end of the pump shaft, an impeller secured to the lower end of the shaft extension, a sleeve perforated at intermediate points and open at its lower end surrounding the shaft extension and impeller and

attached to the lower end of the tubular structure, said impeller adapted to circulate material contained in the saturator through the lower open end and perforations and around the inner and outer side walls of the sleeve, and means for simultaneously rotating the pump and impeller.

2,002,558
INTERLOCKING CONNECTION
Charles Theodore Von Holtz, Bridgeport, Conn., assignor to Harvey Hubbell, Incorporated, Bridgeport, Conn., a corporation of Connecticut
Application December 24, 1931, Serial No. 582,950
5 Claims. (Cl. 173—328)

5. In combination, an insulating body having spaced recesses and spaced openings leading to said recesses, contacts in said recesses, a cap carrying spaced contacts to be inserted through said openings to engage the body contacts on relative longitudinal movement of the cap and body, said recesses and openings being of a size to permit relative lateral sliding movement of the contacts of the cap and body on one another on relative rotary movement between the cap and body, said body contacts each including a yieldable member having a laterally curved lug pressed therefrom to form a shoulder, the cap contacts each having an opening to receive said lugs and cooperate with the shoulders to lock the cap and body against casual separation, and sides of the openings engaging the rounded sides of the lugs to force them from the openings on relative lateral sliding movement of the contacts transversely of and on one another on relative rotary movement between the cap and body.

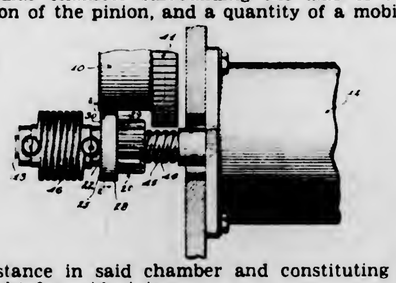


2,002,559
MEANS FOR SURGICAL RESECTION
Frederick Charles Wappler, New York, N. Y.
Application April 13, 1932, Serial No. 604,934
5 Claims. (Cl. 174—89)

1. In an instrument of the character described, a fenestrated endoscopic tube insertable into a body cavity, a wire electrode substantially parallel to the tube axis and arranged adjacent to said fenestra in normally retracted position within the confines of said tube, and means for moving said electrode laterally out of said fenestra; said means comprising a pair of parallel links pivoted

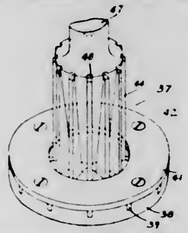
to opposite ends of the electrode respectively, the other ends of said links being pivoted to the tube, and control means extending rearwardly along the tube and adapted to rock at least one of said links.

2,002,560
COIN CHUTE
Thomas W. B. Watling, Chicago, Ill., assignor to Watling Manufacturing Company, Chicago, Ill., a corporation of Illinois
Application June 14, 1934, Serial No. 730,564
1 Claim. (Cl. 194—97)



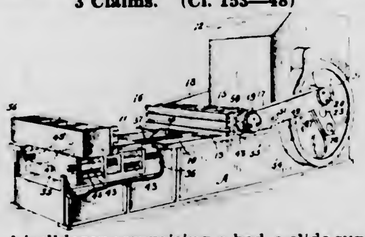
In a coin chute, a guideway having a stationary portion and a movable portion normally alined with each other to permit coins to travel edgewise from the movable portion into the stationary portion, said stationary portion comprising a front plate and a rear plate defining a coin channel, said front plate having a coin inlet therein, the inner face of said front plate having a recess below said inlet, said movable portion comprising a pair of relatively shiftable walls hinged to said rear plate, means for normally retaining said walls in definite spaced relation to each other, the upper edge of one of said walls normally extending into said recess, a spring normally urging said movable portion into alinement with said stationary portion, a manually operable pin extending through said front plate adjacent said inlet and engaging the other of said walls for shifting said movable portion out of alinement with said stationary portion, and a stop on a stationary portion of the chute for limiting the movement of said one wall whereby said pin is operable to shift said other wall a greater distance than said one wall to expand said movable member for releasing any coin which may be wedged in said movable portion.

2,002,561
STARTER CONSTRUCTION
Reginald E. Wike, Detroit, Mich.
Application November 7, 1932, Serial No. 641,670
5 Claims. (Cl. 74—7)



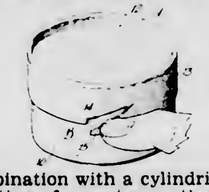
1. In a starter construction, the combination with a threaded shaft, a threaded pinion thereon, and a gear to be started by the pinion, of means carried by said pinion providing a sealed

annular chamber surrounding the axis of rotation of the pinion, and a quantity of a mobile



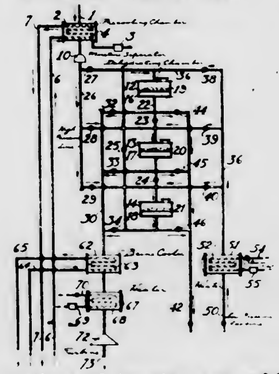
substance in said chamber and constituting a weight for said pinion.

2,002,562
TOOL FOR MAKING DYNAMO ELECTRIC MACHINE ELEMENTS
Vincent G. Apple, deceased, late of Dayton, Ohio, by Herbert F. Apple, Edward M. Apple, and Gourley Darroch, executors, Dayton, Ohio
Original application June 10, 1929, Serial No. 369,564. Patent No. 1,934,903, dated November 14, 1933. Divided and this application November 1, 1933, Serial No. 696,288
1 Claim. (Cl. 29—84)



A coil seating tool of the character described comprising a base, a plurality of horizontally disposed radial grooves in said base, a plurality of radially movable jaws slidably secured in said grooves, said jaws having vertically extending parts at their inner ends arranged in the form of a cylindrical cage, said vertically extending parts being wider at the base than at the upper end the outer edges of said parts all being parallel to the axis and the inner edges at an angle thereto, and a downwardly movable center plug having grooves on its outer face fitted to the inner tapered edges of the said vertically extending jaw portions.

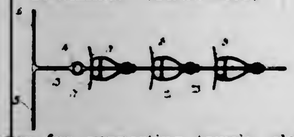
2,002,563
BULLDOZER
Cyril J. Bath, Shaker Heights, Ohio
Application April 8, 1932, Serial No. 604,000
3 Claims. (Cl. 153—48)



1. A bulldozer comprising a bed, a slide supported by said bed adjacent one end thereof, a nut carried by said slide, a screw shaft engaging said nut and extending longitudinally of said bed, means adjacent the end of said bed remote from said slide for preventing longitudinal movement of said screw shaft, a worm wheel keyed to said screw shaft, a shaft supported adjacent said worm wheel, a worm on said shaft engaging said worm wheel, and a reversible electric motor for rotating said shaft.

2,002,564
QUICK-OPENING CAN TOP
Renold Bergman, Wausau, Wis., assignor to Marathon Paper Mills Company, Rothschild, Wis., a corporation of Wisconsin
Application July 7, 1934, Serial No. 734,151
2 Claims. (Cl. 229—51)

2. In combination with a cylindrical container, a cap consisting of a center portion and a cylindrical flange depending therefrom and formed of fibrous material with the grain running diagonally from the rim of the cap flange and upwardly toward the line of juncture of the flange with the center, the flange having formed therein a diagonally extending slot-like aperture running with the grain from a point near but inside of the rim of the flange to a point below the said line of juncture and below the upper edge of the container with which the cap is associated, the slot-like aperture affording a tapering end portion adjacent thereto adapted to have its tip broken free from the rim of the cap flange to afford a grasping tab adapted to facilitate the tearing of the grain beyond the slot-like aperture to loosen the cap for removal.



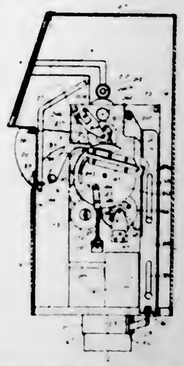
2,002,565
UTILIZATION OF HIGH PRESSURE GAS
Ralph D. Booth, Brookline, Mass., assignor of one-half to Jackson & Moreland, a partnership and one-half to Standard Oil Development Company, a corporation of Delaware
Application September 13, 1932, Serial No. 632,946
6 Claims. (Cl. 62—136)

1. The method of treating gas, which comprises partially expanding the gas to perform

work whereby the gas is chilled, dehydrating the thus treated gas, passing the dehydrated gas in heat exchange with a warmer substance, and further expanding the thus treated gas to perform additional work.

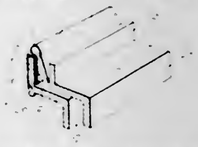
2,002,566
HANGER FOR SUPPORTING TOWELS, CLOTHS, AND OTHER ARTICLES
Mostyn Reeve Conigrave, Subiaco, Western Australia, Australia
Application October 13, 1933, Serial No. 693,422
In Australia August 21, 1933
10 Claims. (Cl. 24—248)

1. Hanger for supporting towels, cloths and other articles comprising a body having a vertical opening therein and a looped trip catch having two legs pivoted to the body at one side of the opening to engage the body at the other side of the opening so that under gravitational influence it will rest against the back part of the opening.



2,002,567
HONING TOOL
Kirke W. Connor, Detroit, Mich., assignor to Micromatic Hone Corporation, Detroit, Mich., a corporation of Michigan
Application January 8, 1934, Serial No. 705,664
7 Claims. (Cl. 51—184.2)

1. A honing tool including, in combination, a spindle, spiders mounted on said spindle for movement to and away from each other, abrading elements carried by said spiders for rotating said elements therewith, and means movable laterally of said spiders for effecting the radial movement of the abrading elements when the spiders are relatively moved toward and away from each other, and means for relatively moving said spiders.

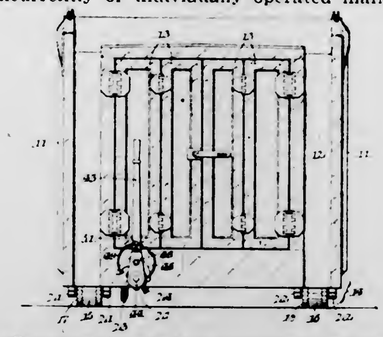


2,002,568
TOWEL VENDING CABINET
Joseph Darman, Utica, N. Y., assignor to Utica Towel Cabinet Corp., Utica, N. Y., a corporation of New York
Refiled for abandoned application Serial No. 232,148, November 9, 1927. This application January 24, 1934, Serial No. 708,144
2 Claims. (Cl. 194—75)

1. In a towel vending cabinet, means for exposing a towel, a gear for controlling the operation of said means, a coin chute on said gear to support a coin and a vertically movable member having means to engage a coin for actuating said

gear, said chute being arranged to permit the coin to rest against the vertically movable member while supported in said chute in the path of the means on the said vertically movable member.

2,002,569
WEATHER STRIP
William J. Dennis, Chicago, Ill.
Application October 2, 1933, Serial No. 691,801
2 Claims. (Cl. 189—65)

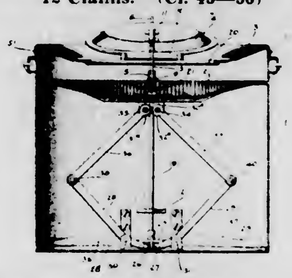


1. A casement window weather stop of the kind described consisting of a sheet of spring metal rolled over lengthwise at a spaced distance from one free edge to provide a cooperating strip, the free edge of the cooperating strip being bent back upon itself and thence laterally back and inwardly toward the cooperating strip to form a channel, the last mentioned extending part being operative to frictionally engage a stop which is seated within the channel whereby the channel portion is retained on the stop.

2,002,570
SHIPPING CONTAINER
Robert Faries, St. Davids, and James B. McWilliams, Pittsburgh, Pa.
Application October 24, 1933, Serial No. 694,994
7 Claims. (Cl. 280—3)

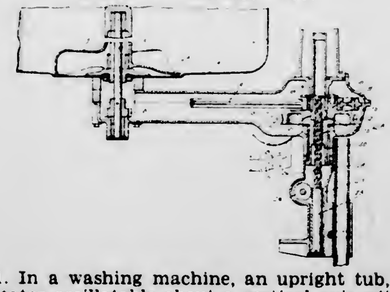
1. In a shipping container of the character described, a supporting chassis with laterally-spaced endless traction belts; a divided drive shaft composed of sections with sprockets for the respective traction belts; opposing bevel gear wheels on the contiguous ends of the sprocket shaft sections; an actuating shaft with a polygonel end accessible at one side of the container; a bevel pinion on said actuating shaft in mesh with one of the bevel gear wheels; a sleeve free on the actuating shaft terminating in a polygonal end somewhat inward of the polygonal end of the actuating shaft and carrying a bevel pinion in mesh with the other of the aforesaid gear wheels; and means attachable to the squared ends respectively of the actuating shaft and

sleeve whereby the traction belts may be either concurrently or individually operated manually



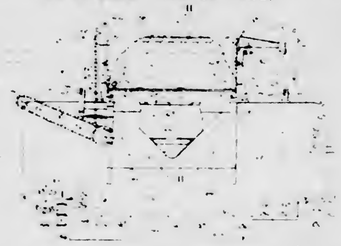
to effect straight-away or curvilinear progression of the container.

2,002,571
ADVERTISING BOOK MATCHES AND THE LIKE
Joseph Farrelly, Pelham, N. Y., assignor to The Diamond Match Company, New York, N. Y., a corporation of Maryland
Application October 11, 1933, Serial No. 693,073
4 Claims. (Cl. 40—126)



1. As a new article of manufacture an advertising packet comprising a cover of flexible material and a plurality of individually removable splints, said cover including a flap portion foldable over the free upper ends of and upon the front of the splints and having a tab portion in hinged relation to the body of the cover at the fold thereof adjacent the free ends of the splints thereby projecting upwardly beyond the splints when the flap is thus folded, the outer faces of said flap and tab portions bearing a pictorial representation of the article to be advertised.

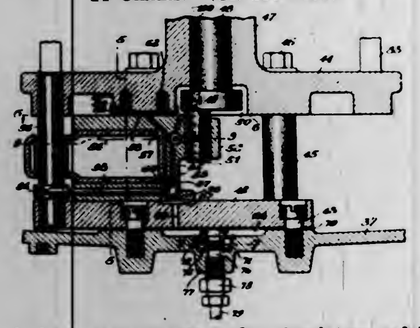
2,002,572
MINNOW PAIL
Thomas C. Forbes, Hopkins, and Oscar R. Hedberg, Minneapolis, Minn.
Application July 10, 1930, Serial No. 467,032
12 Claims. (Cl. 43—56)



1. A live fish enclosure having a perforate bottom vertically movable therein, and having a hinged lid, and toggle and lever means connected to the enclosure and to the lid to cause the bottom to move toward the lid when the lid is opened.

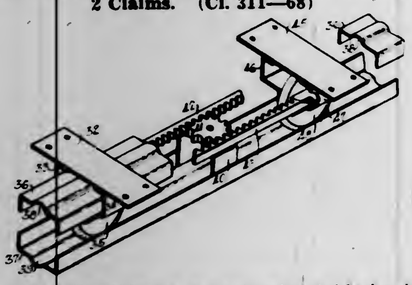
2,002,573
CONTROL FOR GYRATOR-TYPE WASHING MACHINES
Lee B. Green, Lakewood, Ohio, assignor to The Borden Company, Warren, Ohio, a corporation of Ohio
Application July 26, 1932, Serial No. 624,782
3 Claims. (Cl. 259—101)

1. In a washing machine, an upright tub, an agitator oscillatable about a vertical axis within the tub, a continuously rotating member; instrumentalities operatively connecting the agitator with the rotating member whereby the rotation of that member oscillates the agitator, an adjusting mechanism whereby the stroke of the agitator effected by the said instrumentalities can be varied without halting the rotating member, the said mechanism comprising a plurality of movable elements, and a stop element in the path of movement of a certain one of the said movable elements of the adjusting mechanism, the stop element being positioned for engagement by the said certain one of the movable elements for positively preventing the actuation of the adjusting mechanism in the stroke-reducing direction beyond a point where the oscillation of the agitator is only slightly greater than the minimum required for continually urging water within the tub radially outward along the bottom of the tub from under the agitator; and a stationary casing supporting the said movable elements, the said stop element being fast with respect to the casing and the said one of the movable elements being movable respectively toward and away from the said stop element by relatively opposite actuations of the adjusting mechanism.



2,002,574
AREA MEASURING MACHINE
George T. Hart, Jr., and Erastus E. Winkley, Lynn, Mass., assignors to United Shoe Machinery Corporation, Paterson, N. J., a corporation of New Jersey
Application December 14, 1933, Serial No. 702,372
16 Claims. (Cl. 33—121)

1. In an apparatus for measuring pieces of work, a photo-electric cell, a source of light spaced with respect to said cell, means arranged

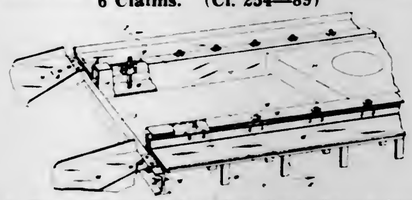


to feed a piece of work into position between said source of light and sail cell, an indicator calibrated to measure in units of area, arranged in circuit with the photo-electric cell and responsive to variations in said circuit induced by variations in the light reaching said cell, and means controlled by the work to hold the indicator in its position corresponding to the area of the work piece when the piece of work has been measured.

2,002,575
COMPRESSOR UNIT
Frederick J. Heideman, Rochester, N. Y.
Application June 4, 1931, Serial No. 542,181
14 Claims. (Cl. 230—175)

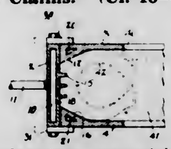
1. In a gas compressor for circulatory refrigerating systems, the combination with an oscillatory piston, and a reciprocatory and oscillatory cylinder cooperating therewith and provided with an exhaust port and an intake port, of means in direct relative sliding contact with the cylinder for opening and closing the intake port embodying a passage having a form substantially coincident with the path of the intake port as a result of the combined movements of the cylinder.

2,002,576
EXTENSION TABLE
Robert A. Holland and Alfred H. Holland, Winston-Salem, N. C.
Application September 5, 1933, Serial No. 688,202
2 Claims. (Cl. 311—68)



1. A table slide for an extension table having two slidable top sections comprising two, spaced parallel members adapted to be rigidly mounted on said table, each of said members comprising upper and lower bars spaced from each other and forming a guideway therebetween, a plurality of rollers positioned in each guideway, each roller being carried by a bracket which is adapted to be secured to the lower surface of one of the top sections, each of said brackets comprising a pair of depending arms positioned on each side of said upper bar to limit lateral movement of the bracket, there being at least two of said brackets associated with each top section and adapted to be positioned near the meeting edge of each top section, the brackets of one top section confronting those associated with the other section, and equalizer means associated with each of the confronting brackets and said parallel members.

2,002,577
HYDRAULIC SAFETY PIPE LINE REPAIR DEVICE
Herbert H. Ice, Muskogee, Okla.
Application February 4, 1931, Serial No. 513,372
1 Claim. (Cl. 137—99)



The method of repairing a broken pipe-line having an interior pressure greater than atmospheric pressure comprising disposing a flexible tubing over the broken portion of the pipe, disposing an enclosing ring over the tubing, applying clamping means to said ring, inflating said tubing with pressure higher than the pressure of the pipe, and welding the edges of said ring to the wall of the pipe.

2,002,578
WHEEL FREEING ATTACHMENT FOR AUTOMOBILE LIFTS
Frank R. Johnston, Des Moines, Iowa, assignor to Globe Machinery & Supply Company, Des Moines, Iowa, a corporation of Iowa
Application August 20, 1934, Serial No. 740,598
6 Claims. (Cl. 254—89)

6. In a lift of the class described, the combination of a main frame, means for elevating and lowering it, wheel supporting members carried by the main frame, means for permitting a limited up and down movement of the wheel supporting members relative to the main frame, and a wheel stop device fixed to the main frame and extended across the wheel supporting members, said wheel stop device being so positioned on the main frame as to be substantially flush with the wheel supporting members when the latter are in an elevated position relative to the frame, and to move above the wheel supporting members as the main frame moves upwardly relative to the wheel supporting members.

2,002,579
TIRE RETREAD VULCANIZER
William G. Lerch, Akron, and Arthur W. Stoner, Findlay, Ohio; said Lerch assignor of one-half of his entire right, and said Stoner assignor of his entire right to Master Tire and Rubber Corporation, Akron, Ohio, a corporation of Delaware
Application March 22, 1933, Serial No. 662,060
3 Claims. (Cl. 18—18)

1. A tire vulcanizer comprising a circumferential curing mold having a heating cavity therein, annular side plates fitting slidably within said mold and also having internal heating cavities, sloping shoulders on said side plates adapted to form the shoulders of a tire, the radially inner parts of said side plates being spaced from a tire in operation and means for holding said side plates in said circumferential curing mold around a tire being vulcanized.

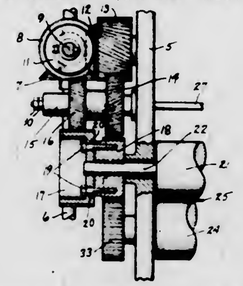
2,002,580
MAKING LASTS
Clifford K. MacDonald, Brockton, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a corporation of New Jersey
Application August 8, 1932, Serial No. 627,870
37 Claims. (Cl. 12—142)

1. That improvement in methods of making lasts which consists in making a cast of a foot, adding material to the lower portion only of said cast, and shaping the cast to the form of a last.

2,002,581
GOLF BAG
Joseph W. Osten, Chicago, Ill.
Application December 8, 1932, Serial No. 646,262
6 Claims. (Cl. 150—1.5)

1. A golf bag, a handle thereon, and stays on each side of the handle portion extending partially of the length of the golf bag and terminating near the longitudinal center of the bag.

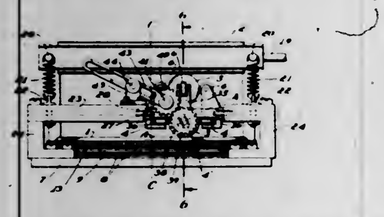
2,002,582
KNOCK-DOWN BASKET
Howard M. Potter, Youngstown, Ohio
Application November 3, 1933, Serial No. 696,560
14 Claims. (Cl. 220—4)



1. A floral basket comprising a container having a bottom and sides, a loop handle formed of strip material having inwardly extending lower ends, means beneath the container for releasably joining said ends, and means along opposite sides of the container adapted to receive opposite portions of the handle and thereby prevent relative lateral movement between the container and handle.

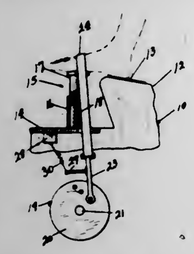
2,002,583
OZONIZATION PRODUCTS OF TERPENE ALCOHOLS AND METHOD OF PRODUCING
Lanning Parke Rankin, Norton, Kans., assignor to Hercules Powder Company, Wilmington, Del., a corporation of Delaware
No Drawing. Original application February 24, 1928, Serial No. 256,802. Divided and this application October 18, 1933, Serial No. 694,114
12 Claims. (Cl. 260—167)

1. The products of a terpene alcohol having one double bond which has been ozonized, heat-treated to effect decomposition and then chemically dehydrated.



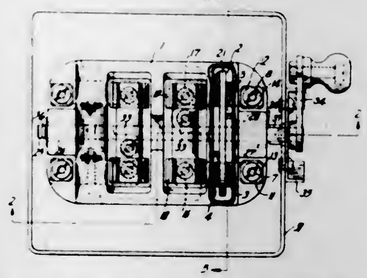
2,002,584
PRINTING PRESS ROLL SHIFTING MEANS
Harry H. Rawson, Spokane, Wash., assignor to Washington Machinery and Supply Company, Spokane, Wash.
Application November 17, 1933, Serial No. 698,451
2 Claims. (Cl. 101—248)

1. In a printing press comprising a frame having a pair of printing rolls mounted thereon, the combination with a system of driving gears one of which is a helical gear, and a system of driven gears arranged to rotate the printing rolls, of adjusting means for the rolls comprising a hollow hub having a pair of gears formed thereon in spaced apart relation, a rod slidably and revolubly mounted through the frame, said hub revolubly mounted on said rod and arranged to slidably move therewith, a threaded connection between the rod and frame, means for manually



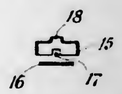
revolving the rod, one of the gears on the hollow hub having helical teeth meshing with the teeth of the helical gear of the driving gear system, the other gear meshing with one of the gears in the system of driven gears and said driven gears inter-meshed and connected to the printing rolls whereby the rotative position of both rolls is adjusted when the rod and hub is revolved.

2,002,585
VARIABLE SPEED MECHANISM
John J. Rothwell, Jr., Flushing, and Lemuel M. Stuart, Brooklyn, N. Y., assignors to Ford Instrument Company, Inc., Long Island City, N. Y., a corporation of New York
Application August 16, 1933, Serial No. 685,312
12 Claims. (Cl. 74—198)



1. In a variable speed mechanism including driving and driven rotary members and a spherical transmitting member between them having rolling contact with the driving member, a shifting device with which the transmitting member is adjustable radially of the driving member, antifriction retainers for the transmitting member displaceable with the shifting device and comprising two opposing rollers contacting with the transmitting member, and means operable upon displacement of the shifting device to alter the angular relation of the axes of the rollers to said device to maintain the axes of the rollers in a plane with the axis of rotation of the transmitting member in all positions of the transmitting member.

2,002,586
MYOGENIC FOOT MANIPULATOR
Harry Ryberg, Jr., San Francisco, Calif.
Application December 12, 1934, Serial No. 757,139
1 Claim. (Cl. 174—89)

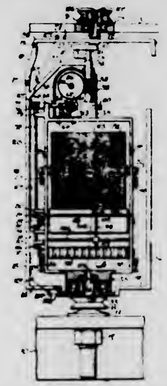


In a device of the class described for the treatment and manipulation of the feet, embodying compressible telescopic electrodes and a fixed heel electrode, crank mechanism carrying loops adapted to encircle the foot when placed on said electrodes and adapted to actuate said telescopic electrodes, and means for intermittently energizing said electrodes to cause current to flow from the ball of the foot to the heel thereof.

2,002,587
ELECTRIC CIRCUIT CONTROLLING MECHANISM
Joseph Sachs, West Hartford, Conn.
Application May 20, 1931, Serial No. 538,687
Renewed March 12, 1935
17 Claims. (Cl. 200—114)

7. In an electric switch, the combination of an insulating base having therein a relatively narrow recess open at the back and closed at its sides and ends, the said base also comprising a forward extending integral portion which at least partly closes the said recess at the front and constitutes a barrier at one side thereof, a pair of fuse contacts at the front of the base and separated from the said recess by the said barrier, a pair of opposed stationary switch contacts carried by the base and respectively positioned adjacent the opposite sides of the recess, a switching member positioned in the recess and movable between the switch contacts, the said switching member including a conducting contact element having contact faces adapted to engage the stationary switch contacts, means for supporting the switching member in the recess so as to permit movement thereof about a transverse axis perpendicular to the side walls of the recess, and means for moving the switching member about the said axis to cause the movable contact element thereof to engage or disengage the stationary switch contacts.

2,002,588
MACHINE FOR AFFIXING TWO-PART SEALS TO STRING
Oscar Schreyer, Horn, Thurgau, Switzerland, assignor to Hans Stoffel and Franz Leo Stoffel, Horn, Thurgau, Switzerland, trading as Stoffel & Sohn
Application September 25, 1933, Serial No. 690,960
In Switzerland October 25, 1932
19 Claims. (Cl. 153—1)



1. An automatic machine for affixing the capsule and disc of a seal to a spring placed in the machine, comprising a fixed affixing die having a cavity for the disc and slots for the string, a movable affixing die cooperating with the first named affixing die, the said dies being situated in a freely accessible space, capsule holding means on the movable affixing die for holding the capsule in position on the second named die, a feed member for inserting the capsule into the second named affixing die and a feed member for depositing the disc in the cavity of the first named die.

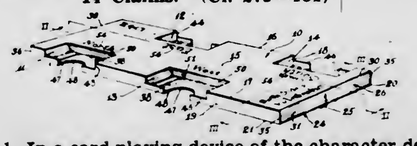
2,002,589
FRUIT TREATING COMPOSITION AND PROCESS OF TREATING FRUIT
Jagan N. Sharma, Berkeley, Calif., assignor to Food Machinery Corporation, San Jose, Calif., a corporation of Delaware
No Drawing. Application October 12, 1932, Serial No. 637,549
8 Claims. (Cl. 99—8)

4. A process of treating fruit to retard decay from mold spores, which process comprises applying to the fruit a composition including a plastic waxy material having dissolved therein a chloramine, whereby the composition retains its chlorine content except as the compound is decomposed due to the liberation of chlorine as moisture is received by the coating.

2,002,590
TWISTING AND WINDING APPARATUS
Franklin H. Shinn, Norwood, N. C.
Application September 21, 1934, Serial No. 744,946
11 Claims. (Cl. 117—10)

1. In a twisting and winding apparatus comprising a pair of rotary eccentric fliers driven in timed relation to each other, a spooling frame mounted within said fliers and having one end supported by one of said fliers, a driven yarn receiving package mounted in the spooling frame, means connected to said spooling frame and engaging the other flier for holding the spooling frame stationary, and means for driving the yarn receiving package.

2,002,591
BOX OPENING DEVICE
Stephen P. F. Sneed, Atlanta, Ga.
Application May 27, 1932, Serial No. 613,854
4 Claims. (Cl. 220—43)

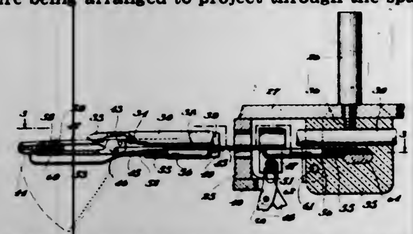


1. A box opening device of the class described, comprising a box, a filler loosely inserted in said box and having sidewardly projecting tabs bent over the edges of the box and held between the rims of the box and its cover; the ends of said tabs extending sufficiently beyond the rim of the cover to permit them to be grasped by the fingers of the user.

2,002,592
DISPENSING DEVICE
Joseph Stremel, Spokane, Wash., assignor of two-thirds to Nellie Stremel and one-third to Glen E. Syp, Spokane, Wash.
Application May 9, 1934, Serial No. 724,725
2 Claims. (Cl. 226—119)

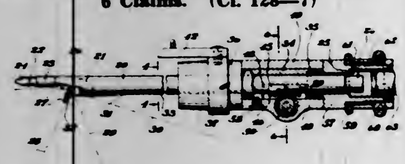
1. A dispensing device comprising a flexible tube having an enlarged expansible mouth, a stopper formed integrally around said tube, said stopper having a vent hole therethrough, and an expansible bulb formed around said tube with its lower end fixed to the stopper and communicating with the vent hole therein, and its upper end having a vent hole therethrough.

2,002,593
CARD PLAYING DEVICE
Charles R. Walgreen, Jr., Chicago, Ill., assignor to Walgreen Co., Chicago, Ill., a corporation of Illinois
Application January 20, 1934, Serial No. 707,518
14 Claims. (Cl. 273—151)



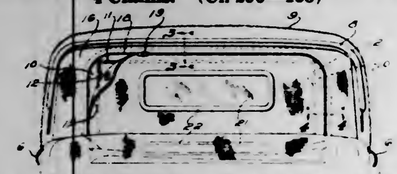
1. In a card playing device of the character described, the combination with a substantially rectangular body member, of a plurality of rectangular receptacles adjacently disposed transversely in the same plane for confinement by said body member, said receptacles having end openings for communication with one or the other sides of the body member for receiving and retaining the cards of each player in stacked relation in accordance with their original distribution, and means for differentiating each receptacle from the other to distinguish and designate the cards for each original player.

2,002,594
INSTRUMENT FOR ELECTRO-SURGICAL TREATMENT OF TISSUE
Reinhold H. Wappler, Yonkers, and Frederick Charles Wappler, New York, N. Y.; Frederick C. Wappler executor of said Reinhold H. Wappler, deceased
Application March 24, 1933, Serial No. 662,432
11 Claims. (Cl. 174—89)



1. In an instrument of the character described, a pair of complementary U-shaped jaws pivoted to each other at the ends of the U's, means for pivoting said jaws relative to each other, an elec-

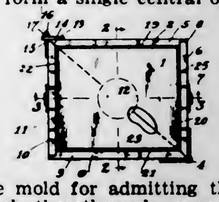
trode wire carried in insulated relation by one of said jaws in the plane of the axis of said jaw, said wire being arranged to project through the space



between the arms of the other jaw when the jaws are closed, and means insulated from the jaws for conducting a high-frequency current to said wire.

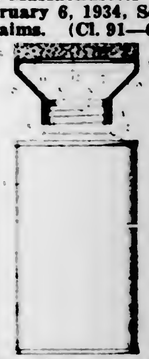
2,002,595
TELESCOPIC INSTRUMENT
Frederick Charles Wappler, New York, N. Y.
Application December 6, 1933, Serial No. 701,096
6 Claims. (Cl. 128—7)

1. In an instrument of the character described, the combination with a telescopic tube, a movable member at the forward end thereof, and a control rod extending rearwardly from said member; of a recessed sleeve around the rear end of the telescopic tube, a rack slidably mounted in said recess and connected to the rear end of said rod, and a tubular housing completely enclosing said sleeve and rack and carrying within it a pinion which meshes with said rack.



2,002,596
VEHICLE BODY
Fred J. Westrope, Detroit, Mich., assignor to The Murray Corporation of America, a corporation of Delaware
Application December 27, 1932, Serial No. 648,833
4 Claims. (Cl. 296—138)

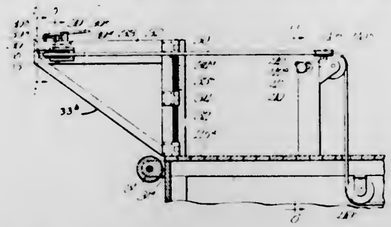
4. A panel having an opening therein, a second panel having a larger opening therein and sealed outwardly of its opening with said first panel, a third panel of the size and shape of the opening in said second panel, and a single zipper element joining the third panel to said second panel and invisible through the opening in said first panel.



2,002,597
APPARATUS FOR MAKING CHEESE
William D. Williams, Atwood, Ontario, Canada
Application June 20, 1932, Serial No. 620,215
In Canada July 4, 1931
3 Claims. (Cl. 31—46)

1. In a mold for making cheese, an open-ended box-like mold comprising two similar parts, hingedly connected at one corner of the mold, and lockingly connected at the diagonally opposite corner of the mold, a pair of side walls on each part of the mold rigidly connected to each other, a rigidly mounted triangular bottom for one part of the mold having a recess therein, a second rigidly mounted triangular bottom for the other part of the mold having a recess therein, adapted to cooperate with the first-named recess, and form a single central opening in the

base of the mold for admitting the head of a pressure jack therethrough, a removable false bottom plate, within the mold, a removable and slidably mounted side plate on each side of the interior of said mold, and a top plate adapted to slidably operate within the removable side plates for compressing curd used in making cheese, when pressure is applied to the top and false bottom plates of the mold.



2,002,598
APPLICATOR FOR LIQUIDS
Allen Howland Wood, Jr., Winchester, Mass., assignor to C. M. Kimball Co., Everett, Mass., a corporation of Massachusetts
Application February 6, 1934, Serial No. 710,022
4 Claims. (Cl. 91—67.4)

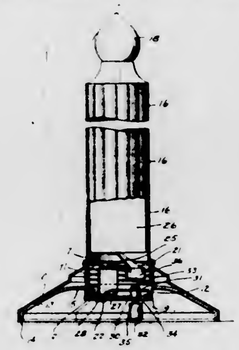
1. A frictional applicator head for liquid containers, comprising a hollow molded rubber structure having a neck constructed and arranged for attachment to the open end of a container; a flexible flared body of materially greater cross sectional area than said neck and terminating in an enlarged portion surrounded by a laterally and inwardly extending flage, said flange cooperating with said flared body to form a liquid-retaining reservoir when the container is held in a substantially horizontal position; and a broad flat sponge rubber portion of substantially the same dimensions as the enlarged portion of the flared body, said sponge rubber portion being in contact with and secured to said flange and covering the opening formed by the inner marginal portions of the inwardly projecting flange.

2,002,599
DREDGE HOISTING APPARATUS
John M. Bennett, Joliet, Ill.
Application March 20, 1933, Serial No. 661,813
10 Claims. (Cl. 37—55)

1. A dredge hoisting apparatus for fishing vessels comprising a support projected from the side of the vessel, a dredge-dragging cable associated with the support and projecting from the same, means for hauling in the dredge to a position adjacent the support, means for pivoting the latter

whereby to carry the dredge to a position over the deck, a post on the latter, and a resilient bumper to receive the support and cushion its impact.

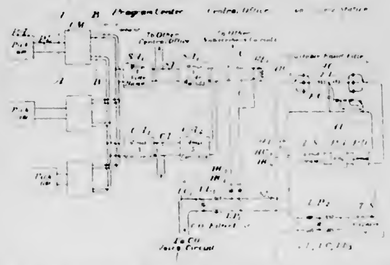
2,002,600
TARGET
James P. Bull, San Diego, Calif.
Application April 11, 1934, Serial No. 720,135
2 Claims. (Cl. 124—15)



2. In an apparatus of the class described, a pair of shafts crossing each other intermediate their ends, means in which the ends of the shaft are journalled, target elements one secured to each shaft, panels on each shaft, the panel on one shaft being disposed adjacent the target element on the other shaft, the panels being disposed at an angle to the target element so that when a target element is hit and swung down the panel on its shaft will swing up in front of the other target element, and a scoring panel on each shaft at right angles to its target element.

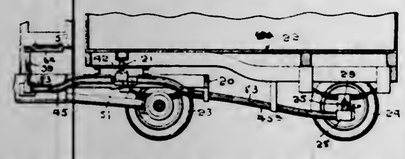
2,002,601
SYNTHETIC RESINS AND PROCESS OF MAKING SAME
Alphonse Gams and Karl Frey, Basel, Switzerland, assignors, by mesne assignments, to the firm of Ciba Products Corporation, Dover, Del.
No Drawing. Application October 16, 1929, Serial No. 400,153. In Switzerland November 6, 1928
6 Claims. (Cl. 260—130)

3. A molding composition comprising a mixture of an infusible but thermosplastic condensation product of a primary aromatic amine and a formaldehyde yielding compound with a minor portion of a fusible aldehyde condensation product.



2,002,602
FLASH LIGHT OF CANDLE TYPE
Herman G. Graubner, New York, N. Y., assignor to National Carbon Company, Inc., a corporation of New York
Application April 4, 1932, Serial No. 603,187
5 Claims. (Cl. 240—10.64)

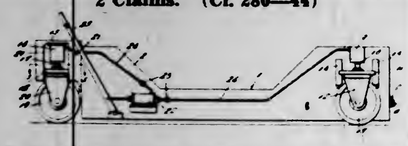
1. In a flashlight of the candle type having a base provided with a flange, a battery casing carried by said base, a battery within said casing, and a bulb mounted upon said casing; a dielectric plate carried by said flange and provided with an armed opening therein; a battery support secured to said plate; a switch spring having a keyhole-shaped slot therein secured to said plate in electrical contact with said battery support and adapted to make electrical contact with said flange to complete the electric circuit through said battery and bulb; a switch operating member having a groove therein by which it is held in said key hole slot and a collar thereon adapted



to pass through the center of said armed opening to rest on the top of said switch plate in one of said arms to hold said switch open, and to rest on said flange in the other of said arms to complete the electric circuit; said member extending below the bottom of said base when in the center of said opening so that said switch is open when the candle is resting on a flat surface.

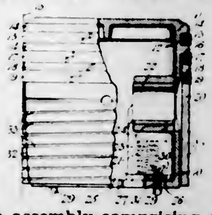
2,002,603
PROGRAM DISTRIBUTION SYSTEM
Estill I. Green, East Orange, N. J., assignor to American Telephone and Telegraph Company, a corporation of New York
Application March 10, 1933, Serial No. 660,321
5 Claims. (Cl. 179—15)

4. In a system for the distribution of intelligence, the method of carrier transmission which consists in producing a plurality of carrier frequencies, separately producing side bands of each of said carrier frequencies, segregating said carrier frequencies from said side bands, transmitting all the carrier frequencies over one transmission line, transmitting all the side band frequencies over another transmission line, amplifying the carrier frequencies at a plurality of locations along said transmission line, separately amplifying the side band frequencies at the same locations, combining the carrier and side band frequencies, transmitting the combined frequencies over a common transmission line and utilizing the received frequencies.



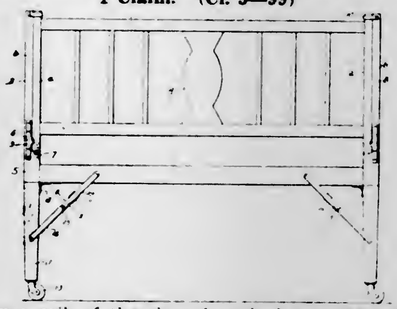
2,002,604
STEERING DEVICE FOR TRAILERS
Louis H. Johnson, San Antonio, Tex., assignor to Southern Equipment Company, San Antonio, Tex., a corporation of Texas
Application September 21, 1934, Serial No. 744,979
19 Claims. (Cl. 280—33.55)

2. In combination, a trailer chassis, supporting wheels for said chassis mounted for steering movements, a rotatable shaft carried by said chassis, means for imparting movement of said shaft to said wheels for effecting steering movement thereof, and releasable means to lock said shaft against rotation, a motor vehicle, a draft coupling between the trailer chassis and said motor vehicle, a manually operable steering member mounted on said motor vehicle, and separable coupling members connecting the manually operable member with said shaft.



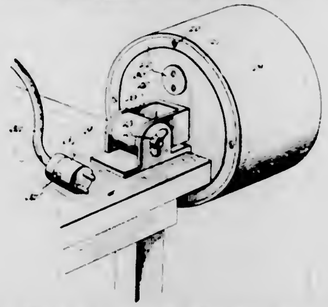
15. In combination, a motor vehicle, a trailer coupled with said motor vehicle, said trailer including a chassis and supporting wheels therefor mounted for steering movements, a shaft carried by said chassis, means for imparting movement of said shaft to said wheels for effecting steering movement thereof, and a steering device mounted on said motor car and coupled with said shaft, said steering device including a column, a shaft mounted therein, a steering lever mounted for pivotal movement about two axes, and a manually operable member for coupling said lever with said shaft for imparting rotary movement to the latter.

2,002,605
TRUCK
Thomas C. Kincaid, Jr., Steubenville, Ohio
Application August 11, 1934, Serial No. 739,489
2 Claims. (Cl. 280—44)



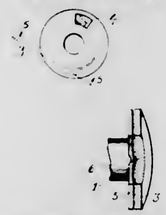
2. In a truck of the class described, a unit comprising a load engaging and elevating member, supporting flanges on said member adapted to engage a load, a cylinder secured to the front portion of said member, a reciprocating piston in said cylinder having a piston rod depending therefrom, a plate secured to the free end of said piston rod and being provided on its end with guide slots, a yoke depending from said plate, a wheel mounted in said yoke, angularly shaped guides secured to said member on each side of said plate and being receivable in said slot, an inverted U-shaped support and guide secured to the other end of said member, a cylinder depending from the bight portion of said support, a reciprocating piston in said cylinder having a depending piston rod, a plate secured to said piston rod having grooves in the end thereof for receiving the guides of said support, a yoke depending from said plate, a wheel mounted in said yoke, and hydraulic means for simultaneously actuating the pistons in said cylinders.

2,002,606
PISTON
Herman H. Kistner, Baltimore, Md.
Application June 3, 1932, Serial No. 615,189
16 Claims. (Cl. 309—15)



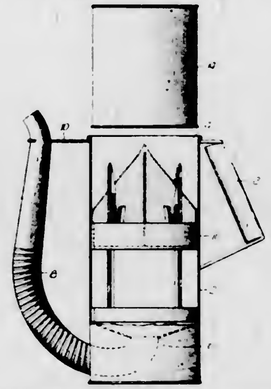
1. A piston assembly comprising a piston body having a head, a plurality of spaced sealing and guiding rings completely surrounding the body portion of said piston means for resiliently connecting the rings to the piston body and for maintaining each of said rings under uniform predetermined tensions, and shock absorbing ring means carried by said piston body and independent of said sealing and guiding rings for absorbing the explosive or compressive force of the charge.

2,002,607
FOLDING CRIB
Henry McDaniel, New London, Wis.
Application January 3, 1934, Serial No. 705,103
1 Claim. (Cl. 5—99)



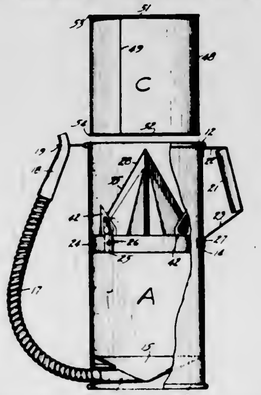
In a crib of the class described, a rectangular shaped frame including corner posts having their lower ends flush with the lower edge of the frame and their upper ends extending above the upper edge of the frame, each post having a notch in its upper end opening out through the inner edge of the post, the bottom wall of the notch forming a low shoulder and the upper end of the post forming a high shoulder, the low shoulder being located above the plane of the upper edge of the frame, a pair of side members, each including end posts, said end posts having their lower ends seated in the notches when the side member is in raised position with the lower ends resting upon the low shoulders and their outer edges, at the lower end thereof, resting against the vertical walls of the notches, hinges connecting the end posts to the corner posts, each hinge contacting a part of the inner face of an end post and of a corner post, whereby the side members can be swung inwardly upon a mattress and bed clothing supported by the frame, a pair of end members, each including a pair of end posts for resting upon the high shoulders when the end members are in raised position, a strap hinge connecting each of the last mentioned end posts with a corner post, said hinges contacting portions of the outer faces of the last mentioned end members and of the corner post, whereby said end members can be swung inwardly and downwardly upon the side members, the combined widths and thicknesses of the two end posts which are connected to each corner post being the same as the corner post, means for detachably connecting the upper end of each end post of each end member with the adjacent end post of a side member to hold the side and end members in upright position, and legs hingedly connected to the ends of the side members of the frame on the under edges thereof and engaging the lower ends of the corner posts when in upright position.

2,002,608
COMBINED ELECTRIC STOVE AND IRONING DEVICE
Ada A. MacDonald, Ithaca, N. Y.
Application March 2, 1934, Serial No. 713,723
11 Claims. (Cl. 219—19)



1. A device of the class described comprising a supporting bracket, a base pivotally connected with the bracket, a rod connected with the base and provided at one end thereof with a socket, a core mounted on the rod and provided with grooves, heating elements seated in the grooves in the core and operatively connected with a source of electric current, and a casing rotatably mounted on the core and provided with an inwardly extending centering stud seated in said socket, said casing constituting an ironing surface.

2,002,609
RING SHUTTLE REEL FOR SEWING MACHINES
Arne Mygland, Fjotland, near Flekkefjord, Norway
Application June 20, 1934, Serial No. 731,545
In Norway November 9, 1932
2 Claims. (Cl. 40—70)



1. The combination with a ring shuttle reel having a flange with a window therein of a disc bearing numerals designating thread thickness and rotatably mounted on the hub of said shuttle, said numerals being adapted, one at a time, to cooperate with said window.

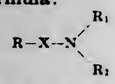
2,002,610
FLUID DISPENSING DEVICE
Elmer L. Nall, Chicago, Ill.
Application September 18, 1931, Serial No. 563,484
23 Claims. (Cl. 221—23)

1. A fluid dispensing device comprising in combination, a fluid holder adapted to receive and support a sealed receptacle containing fluid to be dispensed, means for opening a single wall of said receptacle, said means including central cutting and peripheral puncturing elements, and means associated with said elements for causing displacement of the cut portions of said receptacle to effect a complete draining of the fluid from said receptacle into said holder.

2,002,611
LIQUID DISPENSING DEVICE
Elmer L. Nall, Chicago, Ill.
Application July 30, 1932, Serial No. 626,565
14 Claims. (Cl. 221—23)

1. A container opening device, comprising a plurality of cutting elements adapted to produce a plurality of discharge openings in a single wall of a container and means associated with said elements to instantaneously vent said container through said openings simultaneously with the cutting, a dispensing vessel having a closable bottom and containing said cutting elements, and a support for the container arranged at a distance above the bottom of the vessel substantially equal to the height of the container.

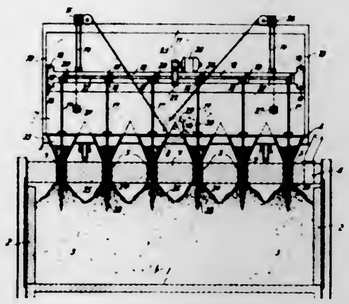
2,002,612
N-SUBSTITUTED DERIVATIVE OF SULPHOANILINES
Wilhelm Neelmeier and Wilhelm Meiser, Leverkusen-I. G.-Werk, Germany, assignors to General Aniline Works, Inc., New York, N. Y., a corporation of Delaware
No Drawing. Application September 21, 1933, Serial No. 690,497. In Germany September 29, 1932
5 Claims. (Cl. 260—109)



1. Compounds of the general formula:

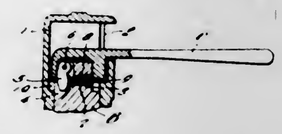
wherein R stands for alkyl, a radical of the cyclohexyl or benzyl series, one x stands for a sulphonic acid group and the other x stands for a sulphonic or for a carboxylic acid group, being generally colorless substances, forming easily water soluble alkali metal salts and being valuable intermediate products in the manufacture of dyestuffs and synthetic drugs.

2,002,613
REACTION PRODUCT OF AN ORGANIC ACID AMIDE AND AN ALKYLENE OXIDE
Ludwig Orthner, Leverkusen I. G. Werk, and Helmut Keppler, Leverkusen-Schlebusch, Germany, assignors to General Aniline Works, Inc., New York, N. Y., a corporation of Delaware
No Drawing. Application February 23, 1933, Serial No. 658,267. In Germany February 29, 1932
12 Claims. (Cl. 260—124)



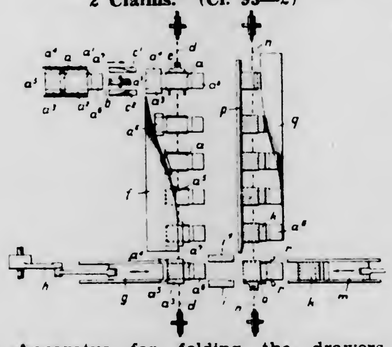
6. The composition of matter obtainable by reacting one molecular proportion of a compound of the general formula:

in which R denotes a radicle of an organic compound containing at least 8 carbon atoms directly connected to each other, X stands for —CO— or —SO_2—, R_1 denotes hydrogen or an alkyl, hydroxyalkyl, aralkyl, aryl or a cycloalkyl radicle, and R_2 denotes hydrogen or a hydroxyalkyl radicle, with at the most 3 molecular proportions of an alkylene oxide per each reactive hydrogen atom of R_1 and R_2; said products being wax-like, pasty, salvy or oily substances and having good properties as auxiliary substances for the textile-, leather-, paper-, caoutchouc-, lacquer industries.



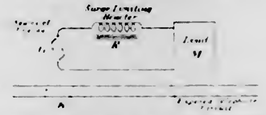
2,002,614
PROCESS AND APPARATUS FOR COMPRESSING COAL IN A CHAMBER OVEN; RETORTS AND THE LIKE
Hermann Petsch, Recklinghausen, Germany, assignor to the Firm Carl Still, Recklinghausen, Germany
Application September 18, 1931, Serial No. 563,648 In Germany September 23, 1930
8 Claims. (Cl. 202—36)

5. In the process of carbonizing coal, the step of compressing a charge of coal for carbonization which consists in charging coal loosely into a chamber with rigid walls and bottom, simultaneously moving spirally formed compressing elements into the chamber and into contact with said coal at a plurality of spaced points and then rotating said elements in substantially the same horizontal plane to apply a compressive force to



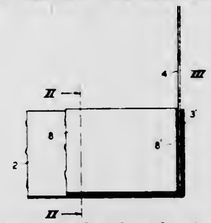
said coal which distributes pressure in both a vertical and substantially horizontal direction to obtain a uniform compression of the entire charge.

2,002,615
LOCKING MEANS FOR VALVES
Curran M. Potts and Paul B. Ellington, Winter Haven, Fla.
Application August 8, 1933, Serial No. 684,278
1 Claim. (Cl. 251—100)



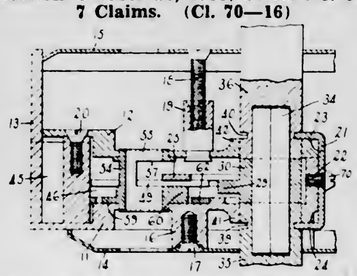
In combination with a valve casing and a plug, a housing integrally connected to the upper end of the casing and into the lower part of which the upper end of the plug extends, said housing having an opening in a side part thereof the bottom wall of which is located above the plane of the upper end of the plug and said housing being internally reduced at its point of juncture with the casing, said reduced part forming an opening through which the upper end of the plug passes and said reduced part forming an annular interior shoulder in the bottom part of the housing, said shoulder having a pair of spaced depending recesses therein, the space between the internal wall of the housing and the upper part of the plug being narrow the upper end of the plug being of irregular shape in cross section and having a recess therein opening out through a side part thereof, a dog pivoted in the recess in the plug, a spring for forcing the dog into one of said recesses in the shoulder when the plug has been moved to a position where the dog is opposite said recess, whereby said dog prevents turning movement of the plug and also prevents withdrawal of the plug from the bottom of the casing, and a wrench having a depending socketed part on its head for receiving said upper end of the plug, a portion of the wall of the socket moving the dog into the recess in the upper end of the plug, the handle of the wrench having a portion resting on the bottom wall of the side opening of the housing when the socket engages the upper end of the plug.

2,002,616
DEVICE FOR INTRODUCING CIGARETTES OR SIMILAR ARTICLES INTO POCKET-LIKE PACKAGES
Friedrich Arthur Ritscher, Dresden, Germany, assignor to "Universelle" Cigarettenmaschinen-Fabrik J. C. Muller & Co., Dresden, Germany
Application January 6, 1933, Serial No. 650,561 In Germany January 13, 1932
2 Claims. (Cl. 93—2)



1. Apparatus for folding the drawers of drawer-and-shell boxes and for inserting cigarettes or like articles therein, comprising a track associated with folding devices adapted to bend-up the side flaps of the front and back panels of the drawer, a conveyor device extending at right angles to and from the delivery end of the said track and adapted to hold the side flaps of the back panel in their bent-up position, the side flaps of the front panel being allowed to spring back, a folding device adjacent said conveyor device and adapted to fold over the front panel and the end wall situated between the front and back panels, a second track extending at right angles to and from the delivery end of the conveyor device and in the same direction as the first-mentioned track and associated with folding devices adapted to fold over the still open side flaps of the front panel, means adjacent the end of the second-mentioned track for inserting the cigarettes or like articles into the partly-folded drawer, and a second conveyor device extending at right angles to the second-mentioned track and associated with a folding device adapted to fold over the closure flap and the end wall situated between this flap and the back panel.

2,002,617
SURGE LIMITING CIRCUIT
William Werner Sturdy, Tarrytown, N. Y., assignor to American Telephone and Telegraph Company, a corporation of New York
Application March 2, 1933, Serial No. 659,413
5 Claims. (Cl. 171—97)



5. The combination of a power circuit transmitting large currents, a circuit transmitting signals which is exposed to the power circuit, and means for preventing excessive voltages from being induced from the power circuit into the circuit transmitting signals at such times as the power circuit becomes shorted, said means comprising a reactor having a winding wound about a magnetic core, the magnetic properties of the core of the reactor being such that the flux produced in the core by increasing currents will increase at a greater rate than the magnetomotive force.

2,002,618
DISPLAY BOX
Louis M. Sutter, Oakland, Calif.
Application May 24, 1933, Serial No. 672,544
3 Claims. (Cl. 206—44)

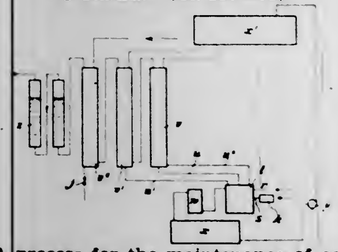
1. A two-piece display box having a tray portion and an inverted telescoping cover, a display card severed from the top plane of the cover and hinged to an end thereof and extending upward between the ends of the cover and tray portions respectively.

2,002,619
DOORLOCK
Henry G. Voight, New Haven, Conn., assignor to Sargent & Company, New Haven, Conn., a corporation of Connecticut
Application October 27, 1933, Serial No. 695,448
7 Claims. (Cl. 70—16)

1. A door lock comprising a case having a detachable cover, a knob shank rotatably mounted in the case, and common means for securing the cover to the case and preventing longitudinal movement of the shank relatively to the case.

2,002,620
PHOTOGRAPHIC SOUND RECORD
Alfred Whitaker, West Drayton, England, assignor, by mesne assignments, to Radio Corporation of America, New York, N. Y., a corporation of Delaware
Application March 5, 1929, Serial No. 344,556 In Great Britain March 19, 1928
8 Claims. (Cl. 274—41.6)

7. In the method of preparing a photographic sound record, the step which consists in optically smoothing the recorded surface thereof.



8. A photographic sound record comprising a developed film having an optically smooth surface.

2,002,621

METHOD FOR THE GENERATION AND MAINTENANCE OF CONSTANT GAS PRESSURE IN CLOSED SYSTEMS

Karl Wiesler, Constance Badenia, Germany, assignor to Deutsche Gold- und Silber-Scheideanstalt vormals Roessler, Frankfort-on-the-Main, Germany, a corporation of Germany

Application July 17, 1931, Serial No. 551,446
In Germany July 22, 1930
3 Claims. (Cl. 137—78)

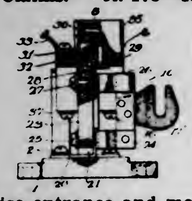
1. A process for the maintenance of constant gas pressure in a closed distillation system which comprises establishing a closed distillation system generating a pressure and containing a gas and a non-gaseous substance in which system a constant pre-determined pressure is to be maintained, connecting a second independent system to said closed system, continuously passing an uninterrupted gas stream through said second system at a pressure higher than the aforesaid pre-determined constant pressure whereby any deficiency in pressure in the closed system is compensated, and venting said second system at the aforesaid pre-determined pressure thereby releasing excess pressure in said closed system.

2,002,622

NATURAL AND ARTIFICIAL RUBBER LATEX

Ira Williams, Woodstown, N. J., and Benton Dales, Chadds Ford, Pa., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware

No Drawing. Application May 20, 1933, Serial No. 672,040
19 Claims. (Cl. 18—50)



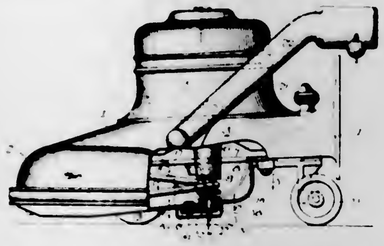
1. The process of stabilizing artificial and natural latex which comprises incorporating, in the latex, a member of the group consisting of sulfonated abietane, sulfonated abietene and sulfonated abietine in an amount sufficient to materially increase the stability of the latex.

2,002,623

ELECTRICAL SWITCH

Albert P. Ball, Detroit, Mich., assignor to Square D Company, Detroit, Mich., a corporation of Michigan

Application May 13, 1925, Serial No. 29,869
Renewed July 1, 1932
15 Claims. (Cl. 175—183)



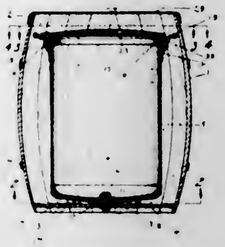
1. In a service entrance and meter test apparatus, the combination of a base, a platform extended from said base, a wall between said base and said platform, electrical connections on said base and said platform for establishing a meter test condition, and a service switch carried by said wall.

2,002,624

SUCTION CLEANER

Bernard C. Becker, York, Pa., assignor to The Hoover Company, North Canton, Ohio, a corporation of Ohio

Application February 6, 1931, Serial No. 514,009
8 Claims. (Cl. 15—9)



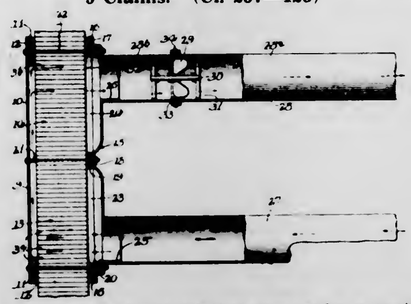
1. In a suction cleaner, a body including a nozzle, a fan chamber and an air passageway therebetween, said passageway being formed as a valve chamber at one point, a conduit open to said air passageway at said valve chamber, an agitator in said nozzle, power-transmitting means in said passageway extending from the junction of said passageway and said fan chamber to said agitator, a valve comprising a plurality of elements rotatable about a common axis at an angle to said power-transmitting means at the junction of said air passageway and said conduit, means to rotate manually said elements in opposite directions that is towards and from said power-transmitting means, said means comprising an adjustable handle directly connected to one of said elements, and a series of gears connecting said handle to the remaining element.

2,002,625

RETURNABLE SHIPPING CONTAINER

Robert C. Bender, Davenport, Iowa

Application September 29, 1934, Serial No. 746,069
2 Claims. (Cl. 217—72)



1. A shipping package for the purpose named, comprising an outer container, an inner container having a fabric body portion, a dish-shaped metal bottom connected detachably with the lower part of the body portion, a ring member connected removably with the upper part of said body portion, means connecting said ring member with the outer container, and means connecting the bottom of the inner container with the bottom of the outer container.

2,002,626

HEAT CIRCULATOR FOR MOTOR VEHICLES

Joseph B. Brennan, Fort Wayne, Ind., assignor to The Magnavox Company, Chicago, Ill., a corporation of Arizona

Application January 2, 1932, Serial No. 584,506
5 Claims. (Cl. 257—125)

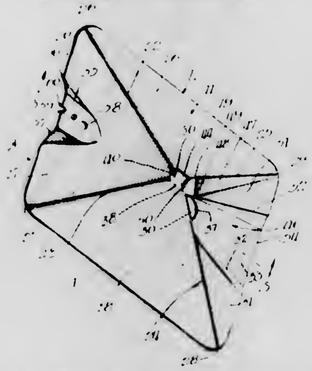
1. A heated air circulating means for a motor vehicle having a radiator, a fan, and a compartment for occupants, comprising a circuitous duct communicating with said compartment and including as part thereof portions of said radiator for heating the air passing through said duct and said radiator portions, a blower contained in said duct and forming a part thereof, and means for driving said blower from the fan.

2,002,627

OXIDATION PROCESS

Frank A. Canon, New Brunswick, N. J., assignor to E. I. du Pont de Nemours and Company, Inc., Wilmington, Del., a corporation of Delaware

No Drawing. Application December 1, 1933, Serial No. 700,623
5 Claims. (Cl. 260—154)



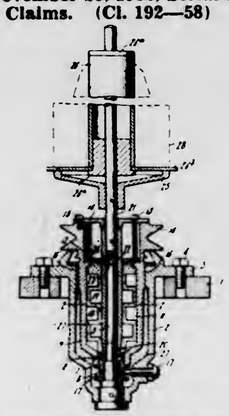
1. An oxidation process which comprises treating the compounds to be oxidized with a suspension of wet-ground manganese-dioxide-containing material.

2,002,628

EARTH ANCHOR

Albert B. Chance, Centralia, Mo.

Application June 17, 1932, Serial No. 617,811
4 Claims. (Cl. 189—90)



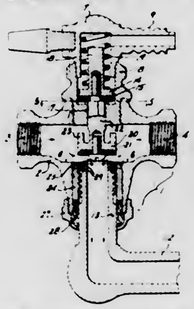
1. In an earth anchor, an anchor plate of substantially oblong shape in plan, said anchor plate being formed with a plurality of substantially triangular side plates joined together along hips and said anchor plate being formed with a centrally located aperture shaped to pass the head of a guy rod member and having a socket for receiving said head on the lower side of said plate, one of said triangular plates being formed with a flat surface disposed substantially parallel to the plane of the periphery of said anchor and having interlocking formations adapted to engage a removable handle for placing the anchor.

2,002,629

SPINDLE DRIVE MECHANISM

Henry Z. Cobb, Providence, and Raymond S. Francis, Rumford, R. I., assignors, by mesne assignments, to United States Rubber Company, New York, N. Y., a corporation of New Jersey

Application November 26, 1932, Serial No. 644,426
5 Claims. (Cl. 192—58)



1. A drive mechanism comprising a fixed bearing spindle, a hollow driving member surrounding and having a bearing thereon, a hollow driven member surrounding and having a bearing on said spindle, said members providing between them a space for a driving fluid, and interfitting fluid driving and driven elements carried by said members and disposed in said space.

2,002,630

SHAMPOO FIXTURE

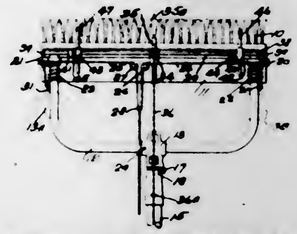
Edgar A. Eckhouse, Cleveland Heights, Ohio

Application February 9, 1934, Serial No. 710,480
4 Claims. (Cl. 277—8)

1. In a diverter faucet appliance, a chambered body having openings providing inlet and a pair of outlets, one of the outlets being adapted for connection to a spray head, a nozzle member for the other outlet, threadedly mounted in said body for adjustment relative thereto, and valve means

for said outlets and arranged to alternately close the latter selectively dependent upon said nozzle adjustment, and comprising a stationary seating member secured with said body, a seating member concentric therewith carried by said nozzle, and a valve yieldably mounted in said nozzle to yieldably seat against both said seating members, and to be unseated from either by the other.

2,002,631
GAME
Jean A. Fiondella, East Haven, Conn.
Application May 24, 1932, Serial No. 613,185
2 Claims. (Cl. 273—95)

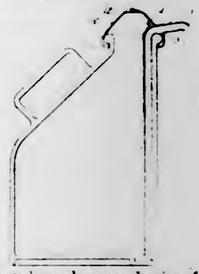


1. A game apparatus comprising: a game-piece having a plurality of bulbous members spaced from each other and interconnected to form a unitary structure by means of a connecting-member extending therebetween and of relatively-smaller size; and a flipping-stick having a terminal flipping-flange at its lower end of a thickness not greater than one-half the difference between the diameter of the connecting-member and the diameter of a bulbous member and designed and constructed to be engaged under the lowest part of said connecting-member when said game-piece is resting on a surface, and flip said game-piece.

2,002,632
BUFFER SPRING FOR RAILWAY PASSENGER CARS
Garth G. Gilpin, Riverside, Ill., assignor to Union Metal Products Company, Chicago, Ill., a corporation of Delaware
Application March 20, 1933, Serial No. 661,646
23 Claims. (Cl. 105—14)

1. In a buffer mechanism for a railway car diaphragm face plate, the combination of brackets mounted upon the car in spaced relation, each comprising a web forming a bearing and spaced apart flanges forming guideways, a shoe slidably engaging the web of each bracket between the respective guideways, each bracket provided with a pin passing through apertures in said flanges, and a leaf spring having each end loosely attached to one of said shoes, said elements associated and arranged so that the pins retain the spring in engagement with the shoe.

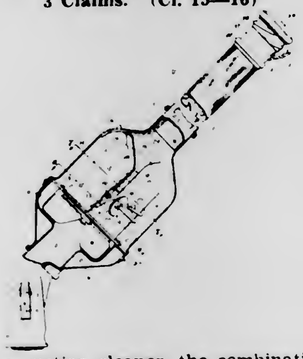
2,002,633
MACHINE FOR PAPERING HOUSES, ETC., AND FOR WASHING WINDOWS
Thomas P. Greene, Obion, Tenn.
Application December 15, 1933, Serial No. 702,462
15 Claims. (Cl. 216—7)



1. In a device of the character described, a brush, paper clamping means associated therewith, a handle for said brush, a base for supporting such handle and brush, a pivot pin, positioned adjacent a side of said brush, and means for advancing and releasably holding said pin beyond the level of said brush.

2,002,634
VULCANIZED ASPHALT OIL AND PRODUCT CONTAINING IT
Harold S. Holt, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application March 7, 1930, Serial No. 434,162
15 Claims. (Cl. 134—51)

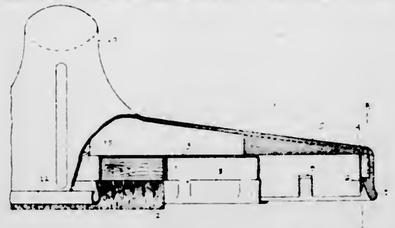
2. A coating composition comprising a pigment, a bituminous material, a drying oil, and the reaction product obtained by heating a mixture consisting of asphalt oil and sulfur until the viscosity is increased to at least eighty.



4. A coating composition comprising the reaction product obtained by heating a mixture consisting of asphalt oil and sulfur, the sulfur being in an amount which is 1% to 3% by weight of the asphalt oil, until the mixture loses approximately 22% to 25% of its weight.

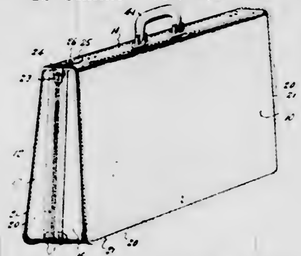
2,002,635
DISPENSING DEVICE
Brewster P. Kinney, Cleveland Heights, Ohio
Application May 17, 1933, Serial No. 671,532
1 Claim. (Cl. 221—76)

A liquid dispensing closure device for the mouth of a portable, liquid-receiving bottle or the like, said device comprising a generally dome-shaped member of flexible material and having a generally cylindrical skirt portion for removable securement about the neck of such a bottle or the like in closing relation with the mouth thereof, the generally dome-shape of said member providing an air chamber above the mouth of said bottle or the like and the upper portion of said member being provided with a through air port, a part of the skirt portion of said member being reinforced by increasing the thickness thereof and such reinforced part having a liquid-dispensing tubular element extending therethrough, said tubular element having an inner portion adapted to extend downwardly into the liquid in such a bottle or the like and also having an outer spout portion for dispensing such liquid, said outer spout portion terminating at a level above that of the lower end of the skirt portion of said member.



2,002,636
VACUUM-BROOM
Ward Leathers, Haworth, N. J., assignor to The Quadrex Corporation, a corporation of Connecticut
Application September 12, 1930, Serial No. 481,407
Renewed April 24, 1934
3 Claims. (Cl. 15—16)

1. In a suction cleaner, the combination of a main housing having a top, sides and a bottom, a tubular handle extending from the top of said housing in communication with its interior, a filter connected with said handle arranged to filter dirt-laden air received into said handle, said handle having a closure-controlled dirt-discharge opening, a motor, a housing for said motor within and spaced at the sides and top from the main housing and having its bottom at the bottom of the main housing, a fan-chamber below the main housing adjacent the bottom thereof, a fan in said chamber driven from the aforesaid motor, a suction cleaner nozzle operatively connected with the fan-chamber, partition means in the space between the main and motor housings extending lengthwise of said housings between the sides thereof and dividing said space into compartments which may be termed upper and lower in view of the inclined position of said compartments when the cleaner is in use, said compartments communicating with each other at the top, and the upper compartment being in communication with the fan-chamber through an opening in the bottom of the main housing.



2,002,637
SUCTION CLEANER
Ward Leathers, Haworth, N. J., assignor to The Quadrex Corporation, a corporation of Connecticut
Application July 14, 1931, Serial No. 550,635
12 Claims. (Cl. 15—158)

1. In combination, a suction-cleaner body-portion; and a mouth piece flexibly communicating therewith; the body-portion being off the floor and the mouth-piece on the floor when the cleaner is in use; and a strip of springy material

supporting the body-portion from the mouth-piece and disposed to permit a fore and aft yielding between said parts.

2,002,638
TRAVELING BAG
Martin L. Lee, Brooklyn, N. Y., and Ary Kaufmann, South Orange, N. J., assignors to K. Kaufmann & Co., Inc., Newark, N. J., a corporation of New Jersey
Application August 9, 1934, Serial No. 739,084
12 Claims. (Cl. 190—41)

1. A traveling bag, comprising a unitary main body consisting of hingedly interjoined side and top sections adapted when the bag is opened to extend in a common plane, but wherein said side sections are folded relative to said top section and toward one another to close the bag, said side sections having marginal portions to form bottom and end walls of the bag when closed, said marginal portions having releasable cooperable means to fasten the bag closed, garment supporting means, means within and adjacent to the free end of one side section for detachably mounting said garment supporting means whereby garments suspended therefrom will extend along and contiguous to the interior surfaces of said side and top sections, a detachable folding means adapted to be mounted across the portions of the suspended garments contiguous to said top section and over which the garments will fold so as to depend therefrom when the side sections are turned to bag closing relation, and retaining means affixed to said top section to receive and support said folding means.

2,002,639
VULCANIZATION OF RUBBER
Herbert A. Lubs, Wilmington, Del., and Ira Williams, Woodstown, N. J., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application August 23, 1933, Serial No. 686,438
21 Claims. (Cl. 18—53)

1. The method of treating rubber which comprises incorporating therein prior to vulcaniza-

tion products obtainable by hydrogenating carbazole until at least part of the hydrogenated carbazole is soluble in acetic acid of 10% strength.

2,002,640

PROCESS FOR MAKING RUBBER THREAD

Norman G. Madge, Providence, R. I., assignor, by mesne assignments, to United States Rubber Company, New York, N. Y., a corporation of New Jersey

No Drawing. Application May 4, 1932, Serial No. 609,335
3 Claims. (Cl. 18—54)

1. A process for making rubber thread comprising passing a stream of aqueous dispersion of rubber into a coagulant for the rubber dispersion through a nozzle cooled sufficiently to freeze the dispersion.

2,002,641

TWO MATERIAL EXTRUDED VALVE AND METHOD OF MAKING THE SAME

Eugene A. McBride, Cleveland, Ohio, assignor to Thompson Products, Incorporated, Cleveland, Ohio, a corporation of Ohio

Application February 13, 1931, Serial No. 515,536
13 Claims. (Cl. 29—156.7)

13. A composite metal valve having a stem portion of one metal integrally united to a head portion of another metal characterized by the head portion welded to the stem over an enlarged curved area lying within the stem portion to impart strength to the connection between the head and stem.

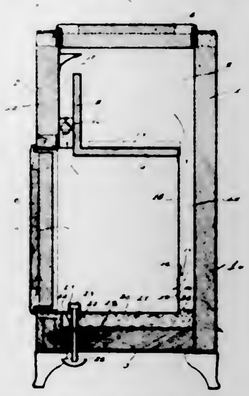
2,002,642

REACTION PRODUCT OF KETONES AND AMINES

Ludwig Meuser and Percy Joshua Leaper, Naugatuck, Conn., assignors, by mesne assignments, to United States Rubber Company, New York, N. Y., a corporation of New Jersey

No Drawing. Application April 28, 1932, Serial No. 608,129
52 Claims. (Cl. 260—130)

2. A process which comprises bringing hydrogen halide the halogen portion of which has an atomic weight of at least approximately 79.9 into contact with a ketone and an aromatic amine containing only secondary amino groups and heating the materials at temperatures not substantially higher than 100° C., the amount of halide being such as to enable it to function as a catalyzer.



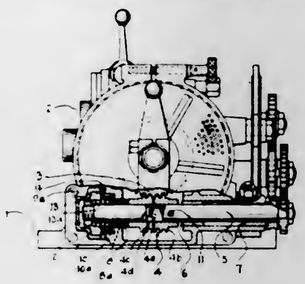
2,002,643

REFRIGERATOR

Charles L. Moorman, Chicago, Ill.

Application July 7, 1932, Serial No. 621,133
4 Claims. (Cl. 62—72)

1. A refrigerator comprising an upper compartment for ice and a lower compartment for food, a shaft through which warm air ascends to said compartment for ice and a shaft through which cold air descends to said compartment for food, said last named shaft comprising the space between a side of said refrigerator and a partition forming a side of said compartment for food, said partition being so placed with respect to said upper compartment for ice that water



resulting from the melting of ice in said upper compartment will flow down said partition, and a container adapted to collect the water flowing down said partition and hold it in intimate contact with the underside of the bottom member of said lower compartment for food.

2,002,644

ADJUSTABLE WORM GEARING

Walter M. Pohl, Wauwatosa, Wis., assignor to Kearney & Trecker Corporation, West Allis, Wis.

Application July 8, 1933, Serial No. 679,454
5 Claims. (Cl. 74—400)

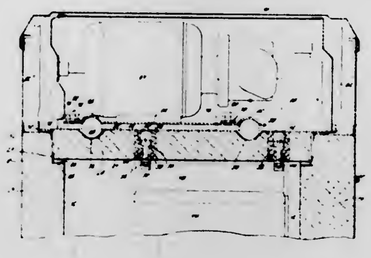
1. In a worm and wheel gearing, the combination of a worm having threads of substantially equal diameter along its axis, whereby the pitch plane thereof is tangent to a cylinder and the tops and roots of worm threads of equal depth coincide respectively with two cylinders of unequal diameter, said worm being constructed in two relatively adjustable portions differently spaced along said axis, and means for relative adjustment of said portions, said gearing being formed with said pitch plane cylinder substantially corresponding with one of said unequal diameter cylinders, whereby the driving contact in one thrust direction is substantially wholly in one of said worm portions and in the other thrust direction is substantially wholly in the other of said worm portions and the adjustment of said portions does not materially reduce the working thrust bearing surface between said worm and wheel.

2,002,645

DISTILLATE PETROLEUM PRODUCT AND METHOD OF TREATING SAME

James B. Rather and Leslie C. Beard, Jr., Brooklyn, and Orland M. Reiff, Jackson Heights, N. Y., assignors to Socony-Vacuum Oil Company, Incorporated, New York, N. Y., a corporation of New York

No Drawing. Original application November 26, 1926, Serial No. 151,005. Divided and this application May 23, 1933, Serial No. 672,514
5 Claims. (Cl. 44—9)



1. The method of stabilizing the characteristics of a low boiling light colored distillate petroleum product of the class of gasoline or kerosene that normally tends to develop objectionable products of oxidation during storage, which may be evidenced generally by discoloration of the product which comprises adding to the product and substantially completely dissolving therein a small quantity of urea sufficient substantially to retard the formation of said objectionable products of oxidation, but not more than 0.02%.

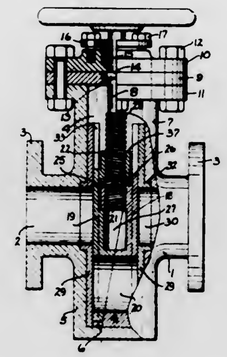
2,002,646

MOUNTING OF MOTORS

Russell T. Smith, Greenville, Mich., assignor to Gibson Refrigerator Company, Greenville, Mich., a corporation of Michigan

Application June 26, 1931, Serial No. 547,161
9 Claims. (Cl. 62—116)

1. In a refrigerator having an open top cabinet, a unit closure for the open top comprising a horizontal insulating support, an evaporator under, secured to, and supported by said support, and a refrigerator power plant floatingly resting on said support, the support including two spaced sheet metal plates, separated by wooden blocks, means fastening the blocks to the uppermost plate, and means passing thru the block for supporting the evaporator.



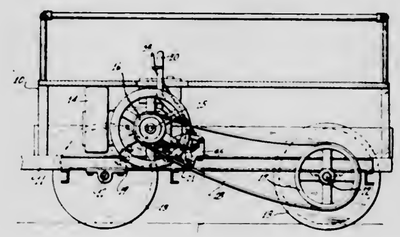
2,002,647

VALVE

Sam Sorensen, Houston, Tex.

Application June 26, 1933, Serial No. 677,577
10 Claims. (Cl. 251—68)

1. A valve housing having a transverse fluid passage, a valve chamber formed transversely of said passage, a valve member in said chamber, said valve being of approximately rectangular shape and divided longitudinally on an inclined plane into two sections, said sections being separately movable and having openings adapted to be registered into and out of alignment with said passage, a valve stem threaded to engage



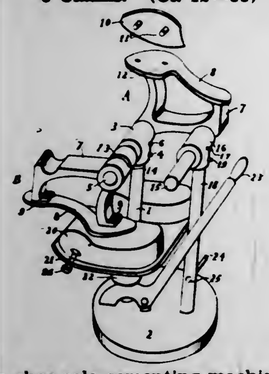
said sections, a threaded socket on each of said sections to engage said stem, said stem being movable into and out of one of said sockets, whereby one section may be moved before the other in releasing said sections from closed position.

2,002,648

CONTROL MECHANISM FOR BELT DRIVEN APPARATUS

Raymond C. Straube, Three Rivers, Mich., assignor to Fairbanks, Morse & Co., Chicago, Ill., a corporation of Illinois

Application October 28, 1932, Serial No. 639,989
6 Claims. (Cl. 105—107)



1. In combination with a railway motor car and engine, a sliding base for said engine, a guide arm pivotally secured to said engine, a member slidably carried by said arm, and provided with a series of notches, a lever provided with a pin adapted to be seated selectively in said notches, for actuation of the notched member, an abutment on said arm, adjacent its pivoted connection to said engine, and a spring, disposed about said arm, between the abutment and a portion of said notched member, for transmitting a movement of the lever, to effect sliding movement of the engine.

2,002,649
GRINDING MACHINE GUIDE BLOCK
Joseph Sunnen, Kirkwood, Mo.
Application May 7, 1934, Serial No. 724,232
9 Claims. (Cl. 51—184.1)

1. A guide element for cylinder grinding machines comprising a guide block adapted for contact with the cylinder, supporting elements for said block, and a wiper fixed to the block.

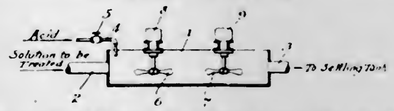
2,002,650
SHOE SOLE-CEMENTING MACHINE
Keith L. Venters, Eugene, Oreg.
Application December 12, 1932, Serial No. 646,831
6 Claims. (Cl. 12—33)

5. In a shoe sole-cementing machine the combination, of a base, a vertical member fastened securely to said base, a slidable table mounted on the said vertical member, a plurality of hollow air filled rubber pads resting on the said slidable table, means for raising and lowering the said table, a horizontal member fastened to the top of the aforesaid vertical member, a plurality of last supports mounted on the said horizontal member, and a plurality of lasts with means for fastening said lasts to said supports, the said last supports being turnable on the said horizontal member.

2,002,651
METHOD OF PREPARING ACTIVATED VEGETABLE CARBONS
Leonard Wickenden, Manhasset, and John Jay Naugle, New York, N. Y.
No Drawing. Application December 27, 1933, Serial No. 704,132
5 Claims. (Cl. 252—3)

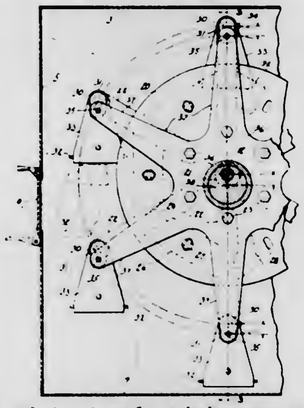
1. The method of preparing a subdivided purifying and filtering medium, which comprises blending a plurality of fractions of subdivided purifying and filtering material of different degrees of fineness of subdivision, said fractions being characterized by different purifying characteristics in such proportions as to yield a subdivided purifying and filtering medium having predetermined purifying characteristics which are dependent upon the different purifying characteristics of said fractions.

2,002,652
ROAD OIL AND METHOD OF PREPARING THE SAME
Peter Alexandroff, London, England, assignor to Shell Development Company, San Francisco, Calif.
No Drawing. Application December 15, 1932, Serial No. 647,410. In Great Britain December 22, 1931
5 Claims. (Cl. 106—31)



1. A road oil having the property of preferential wetting of road aggregates in the presence of water, comprising a mixture of undeteriorated asphaltic bitumen and a relatively small quantity of material selected from the group: a high-boiling viscous substantially odorless residue from the distillation of creosote, benzol-soluble constituents of coal tar pitch, and a high-boiling cracked petroleum distillate.

2,002,653
ELECTRON DISCHARGE DEVICE
Victor O. Allen, Madison, N. J., assignor, by mesne assignments, to Radio Corporation of America, a corporation of Delaware
Application May 24, 1930, Serial No. 455,297
6 Claims. (Cl. 250—27.5)



3. A mixture for preparing an electron emissive member comprising metallic chromium and cæsium dichromate.

2,002,654
METHOD OF PURIFICATION OF HALOGEN-CONTAINING SOLUTIONS
Harry E. Bierbaum, Long Beach, Calif., assignor to General Salt Company, Ltd., Los Angeles, Calif., a corporation of California
Application July 15, 1932, Serial No. 622,676
1 Claim. (Cl. 23—39)

In a process for recovering a halogen wherein a solution, containing chemically combined halogen and also containing sulphide impurities and finely divided suspended impurities whose presence interferes with the recovery of halogen in pure condition, is to be subjected to treatment to recover said halogen from the solution, the method of preliminary purification of the solution which comprises adding acid to the solution in sufficient amount to decompose sulphide impurities present in said solution and render the solution slightly acid, then agitating and aerating the acidified solution to remove therefrom hydrogen sulphide resulting from such decomposition, and then subjecting the acidified solution to a settling operation to remove suspended impurities therefrom, prior to the treatment of said solution to recover the halogen therefrom.

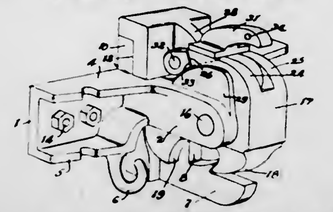
2,002,655
BAKE OVEN
Robert Philip Bolling, Detroit, Mich.
Application October 13, 1934, Serial No. 748,168
4 Claims. (Cl. 107—59)

1. A reel structure for a bake oven comprising, a center driving shaft, end plates keyed to the shaft, outwardly extending supporting arms carried by the end plates, shelves swung from the ends of the supporting arms, and means adjustably mounting the supporting arms to one of the end plates whereby the supporting arms may be brought into correct alignment with the supporting arms on the other end plate.

2,002,656
PROCESS FOR THE PRODUCTION OF CALCIUM CARBAMATE
Nikodem Caro, Berlin-Dahlem, Albert Rudolph Frank, Berlin-Halensee, and Hans Heinrich Franck, Berlin-Charlottenburg, Germany
No Drawing. Application August 22, 1931, Serial No. 558,848. In Germany February 8, 1929
8 Claims. (Cl. 260—112)

1. A process for producing calcium carbamate which consists in treating saturated aqueous ammoniacal solutions of ammonium carbamate at temperatures between 40° C. and about —20° C. with calcium compounds soluble in the liquid phase, in cooling the solutions and removing calcium carbamate.

6. In the production of carbamate of calcium the improvement which comprises causing ammonium carbamate to react with a calcium compound in an aqueous ammoniacal solution, and precipitating the carbamate of calcium by cooling the solution to a temperature below about 10° C.

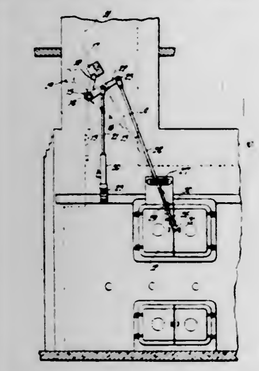


2,002,657
WINDSHIELD WIPER
William K. Correll, Jackson, Miss.
Application February 8, 1934, Serial No. 710,206
1 Claim. (Cl. 74—57)

In a device of the character described, parallel tracks extending longitudinally across the top of a windshield, a shaft disposed parallel to said bars and adjacent thereto, said shaft having disposed on the surface thereof cross-circular spiral grooves, a housing disposed about said shaft and having extending centrally through the front thereof a circular opening, a key rotatably mounted within said opening of the housing and having disposed on the inner face thereof a tongue adapted to fit within the spiral grooves

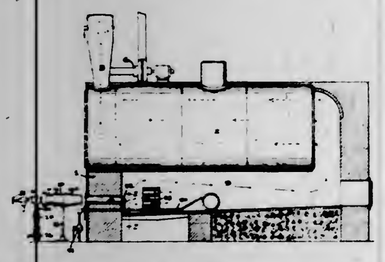
of said shaft, and a plate disposed on the outer side of said housing and adapted to retain the key within the circular opening of the housing, and longitudinal parallel grooves disposed on the upper and under surfaces of the housing, the longitudinal parallel tracks adapted to fit within said parallel grooves, the housing adapted to travel along the parallel tracks on revolution of the spiral shaft.

2,002,658
COUPLER
Joseph Elliott and James Chalmers, Winnipeg, Manitoba, Canada
Application December 1, 1933, Serial No. 700,581
4 Claims. (Cl. 280—33.15)



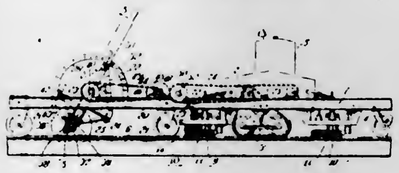
4. In a coupler, in combination, a stationary body member having a lower, centrally positioned, forwardly extending, stationary jaw and a pair of shoulders at the sides of the jaw and the jaw provided with a vertical shoulder and a pair of forwardly extending spaced arms above the jaw and a rotary coupling member positioned between the forward ends of the arms and pivotally carried thereby, said coupling member being provided at the front side with a forwardly extending upper jaw and a pair of spaced lower jaws underlying the same, said lower jaws spanning the stationary jaw aforesaid and being adapted when rotated in a clockwise direction to engage the pair of shoulders aforesaid and said upper jaw being adapted to take a substantially vertical position adjacent to and overlying the stationary jaw and opposing the shoulder of the stationary jaw when the lower jaws are engaging the pair of shoulders.

2,002,659
INCINERATOR CONTROL
Hugh W. Ewing, Chicago, Ill.
Application October 29, 1932. Serial No. 640,215
9 Claims. (Cl. 110—18)



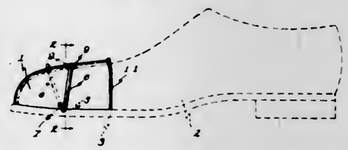
8. A flue fed incinerator of the character described comprising in combination a charging door, a flue serving both as a smoke flue and for feeding refuse to the incinerator, a damper plate in said flue adapted substantially to close the incinerator flue and pivotally supported adjacent one edge on an axis at one side of the flue so that

the damper will swing open by gravity when released and when open will hang closely adjacent a wall of the flue to leave the latter unobstructed for the passage of refuse, said damper having substantial weight and being adapted to support a load of refuse thereon, damper actuating means for swinging and holding the damper across the flue so that the same may be closed when the



door is opened to prevent strong drafts from entering through the door and carrying refuse up the flue, said means being releasable to allow the damper to swing open by gravity, and an automatic brake connected with the damper for retarding the opening motion of the damper and preventing the damper plate from striking the said wall of the flue with full force when released to swing open.

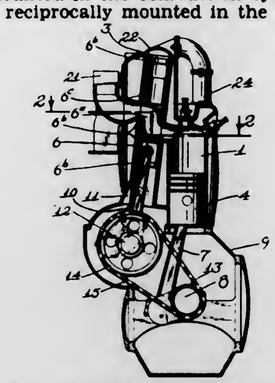
2,002,660
BURNER
Benjamin Q. P. Foss, deceased, late of San Francisco, Calif., by Clarinda G. Foss, executrix, San Francisco, Calif.; said Benjamin Q. P. Foss assignor of sixty per cent to Lester McDonald, Bakersfield, Calif.
Refiled for abandoned application Serial No. 526,540, January 3, 1922. This application September 5, 1930, Serial No. 479,986
2 Claims. (Cl. 158—7)



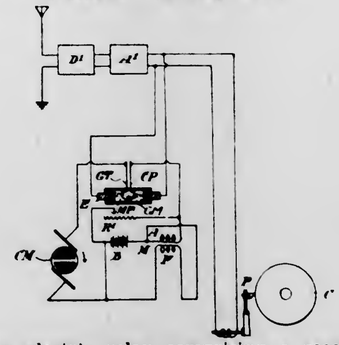
1. In a gas burning apparatus a mixing conduit, a burner comprising a casting, having a series of conical chambers therein having discharge ends of progressively smaller diameter, a burner head fitted to the inlet end of the foremost chamber having air admission openings, a gas supply conduit centrally connected to said head, a perforated web arranged between adjacent conical chambers, the constricted burner orifice of the final conical chamber of the series being arranged in axial alignment with the mixing conduit, there being a space or gap between the burner orifice and said conduit.

2,002,661
MACHINE FOR PAVING HIGHWAYS
Alfred W. French, Chicago, Ill., assignor, by mesne assignments, to Blaw-Knox Company, Pittsburgh, Pa., a corporation of New Jersey
Application May 14, 1928, Serial No. 277,613
8 Claims. (Cl. 94—45)

1. A machine of the kind specified including a carriage equipped with drive wheels for travel on the side forms of a road bed, a rake rotatable on a horizontal axis disposed at the front of the carriage and having its rake teeth disposed substantially helically about the axis and arranged to cause a substantially uniform number of said teeth at all times engaged in plastic paving material disposed in advance of said carriage, said teeth rotatable in a direction to cause the same to exert propelling force on the carriage, and an engine on the latter geared to said rake and said drive wheels for propelling the latter at less than the speed of propulsion exerted by said rake to thereby retard travel of the carriage under the influence of said rake.



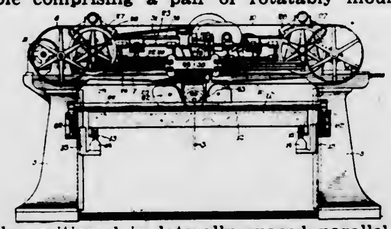
2,002,662
TOE PROTECTOR
Arthur W. Haner, Cicero, Ill.
Application April 30, 1934, Serial No. 723,073
5 Claims. (Cl. 36—72)



1. A toe protector for shoes comprising a rigid cap shaped to fit over and enclose the toe portion of a shoe, an inwardly projecting marginal flange on said cap arranged to engage said shoe, and a shiftable prong mounted on said cap and arranged to be projected into the margin of the shoe sole to lock said cap against shifting thereupon.

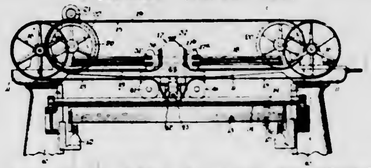
2,002,663
INTERNAL COMBUSTION ENGINE
Henri J. Hickey, Los Angeles, Calif.
Application August 12, 1930, Serial No. 474,688
Renewed October 29, 1934
9 Claims. (Cl. 123—188)

1. In an internal combustion engine, a combustion cylinder, an intake valve cylinder, an exhaust valve cylinder, said valve cylinders being arranged adjacent each other and adjacent the combustion cylinder, said valve cylinders being connected by intake and exhaust passages to the combustion cylinder, a working piston reciprocally mounted in the combustion cylinder, valve pistons reciprocally mounted in the valve cylinders, and a manifold connecting the outer ends of all of the valve cylinders.



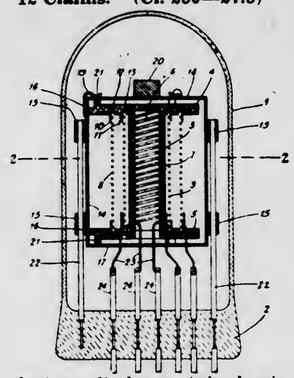
2,002,664
RELAY FOR SYNCHRONIZING SYSTEMS
Charles Francis Jenkins, Washington, D. C., assignor, by mesne assignments, to Radio Corporation of America, a corporation of Delaware
Original application July 21, 1927, Serial No. 207,515, now Patent No. 1,766,644, dated June 24, 1930. Divided and this application May 22, 1930, Serial No. 454,590
3 Claims. (Cl. 200—11.3)

2. An electric relay comprising a receptacle containing an acidulated solution, a pair of spaced input terminals having electrical contact with the solution, a body of mercury immersed in said solution and located between the input terminals, and a pair of spaced contacts so positioned as to be normally bridged by said mercury but disconnected upon flow of current between the input terminals.



2,002,665
ABRADING MACHINE
Charles Johnson, Rockford, Ill., assignor to Mattison Machine Works, Rockford, Ill., a corporation of Illinois
Application August 15, 1930, Serial No. 475,569
Renewed February 15, 1934
20 Claims. (Cl. 51—135)

8. A machine of the character described having, in combination, a frame, an abrasive belt, means for supporting and driving the belt, a work table movable transversely of the belt, and means for holding a work sheet down on said table comprising a pair of rotatably mounted



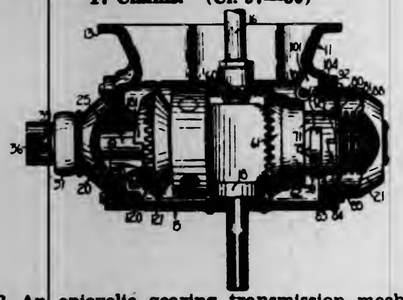
rolls positioned in laterally spaced parallel relation and contacting the work sheet along opposite edges of said belt.

2,002,666
ABRADING OR POLISHING MACHINE
Charles Johnson and Carl Lawrence Mattison, Rockford, Ill., assignors to Mattison Machine Works, Rockford, Ill., a corporation of Illinois
Application June 29, 1932, Serial No. 619,836
10 Claims. (Cl. 51—135)

9. A machine of the character described having, in combination an endless abrading or polishing belt, a carriage mounted to reciprocate along the active run of said belt, a roll mounted on said carriage over which the active run of the belt passes and by which the belt is pressed against the work, and power means on said carriage for driving the last mentioned roll and thereby driving said belt.

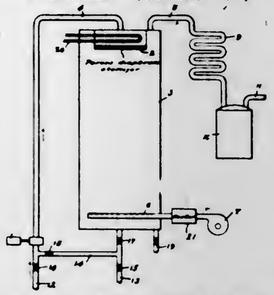
2,002,667
ELECTRON DISCHARGE DEVICE
Max Knoll, Berlin, Germany, assignor to Telefunken Gesellschaft für Drahtlose Telegraphie m. b. H., Berlin, Germany, a corporation of Germany
Application June 23, 1934, Serial No. 732,045
In Germany June 29, 1933
12 Claims. (Cl. 250—27.5)

12. An electron discharge tube having an envelope, a unitary electrode system within said envelope and including a ceramic base for sup-



porting a heater, a cathode and at least one other electrode in spaced relationship, lugs on said ceramic base, an outer electrode surrounding said heater, cathode and other electrode and supported on said lugs and means for supporting said electrode system within the envelope.

2,002,668
INTERNAL COMBUSTION ENGINE
Arnold S. Lack, Beloit, Wis., assignor to Fairbanks, Morse & Co., Chicago, Ill., a corporation of Illinois
Application November 16, 1929, Serial No. 407,734
7 Claims. (Cl. 123—65)

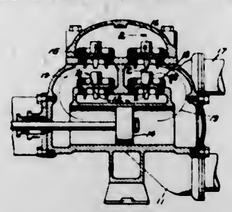


7. In an internal combustion engine, a cylinder, a piston adapted to operate therein, a plurality of intake fluid ports and exhaust ports at right angles to the intake ports, the ports being also symmetrically disposed with respect to a plane including the axis of the cylinder, said intake ports each being disposed substantially in a plane at a right angle to said plane of symmetry, and of a trend adapted to conduct the intake fluid in opposite directions across and in close adjacence to the piston face, said intake ports being formed to project all of said intake fluid toward a common point adjacent the piston and in the plane of symmetry, to effect a resultant fluid stream proceeding from the piston along the axis of the cylinder to the head end thereof, and baffles on the piston, one being of a trend along said resultant stream, and a second baffle at a right angle to the first.

2,002,669
TRACTOR
Nathan Lesser, Moline, Ill., assignor to John Deere Tractor Company, Waterloo, Iowa, a corporation of Iowa
Application January 17, 1934, Serial No. 706,935
17 Claims. (Cl. 97—50)

2. An epicyclic gearing transmission mechanism comprising, in combination, an external bevel gear, a member including an internal bevel gear having a greater number of teeth than said external bevel gear, means supporting said member to position said internal bevel gear to engage said external bevel gear with the apex of the pitch cone of the internal bevel gear coincident with the apex of the pitch cone of the external bevel gear, and holding said member against rotation about its own axis, said supporting and holding means comprising a gyratory member to which said internal bevel gear is secured, a ring member mounted for rocking movement about a generally transverse axis, and means supporting said gyratory member on said ring member for rocking movement about an axis disposed 90 degrees in a transverse direction from said first axis, and means for causing said gyratory member to move so that the axis of said internal bevel gear generates a right circular cone the axis of which cone coincides with the axis of said external bevel gear and the apex of which coincides with the apices of the pitch cones of said bevel gear.

2,002,670
PROCESS OF MAKING ASPHALT
Elliott B. McConnell, Cleveland, Ohio, assignor to The Standard Oil Company, Cleveland, Ohio, a corporation of Ohio
Original application July 3, 1931, Serial No. 548,601. Divided and this application June 30, 1934, Serial No. 733,252
2 Claims. (Cl. 196—74)



2. A process of making oxidized asphalt, which comprises forcing petroleum residuum through capillary ceramic openings, projecting the finely divided residuum therefrom in counter-current flow to air, and withdrawing the oxidized asphaltic product.

2,002,671
SCREW AND TRUNNION NUT DEVICE AND METHOD OF MAKING IT
John J. McLaughlin, North Tonawanda, N. Y., assignor to Buffalo Bolt Company, North Tonawanda, N. Y., a corporation of New York
Application February 21, 1935, Serial No. 7,509
14 Claims. (Cl. 10—86)

1. A method of making screw-threaded nuts having integral oppositely extending trunnions including a substantially circular portion adjacent the nut and an end portion flattened and expanded to retain bearings from slipping off the end thereof, which method includes flattening approximately cylindrical stock having approximately the diameter of said rounded portions of the trunnion, said flattening being at intervals corresponding to the over-all length of the trunnioned nut, the flattening including punch-flattening an area between the trunnions to expand the metal to the diameter desired for the body of the nut to form a depression through the bottom of which a screw hole may be formed; and on either side of said nut at intervals approximately equalling the desired length of the circular portion of the trunnion, flattening the stock across the width thereof for a length equal to that of two end portions of two adjacent blanks and to a depth necessary to spread the metal laterally to a diameter substantially greater than that of said circular portion of the adjacent trunnions; and while punching flattening the screw depression for one nut and a flat for the ends of two adjacent trunnions, punching a hole for a screw-thread through the punch-flattened nut portion of a previously shaped blank, and finally severing the blanks by successive cuts approximately midway of said laterally-spread end portions.

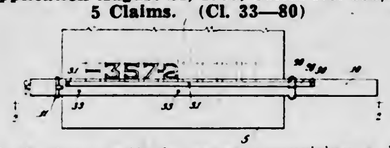
2,002,672
VALVE FOR SLUSH PUMPS
John M. Melott, Los Angeles, Calif., assignor to Charles E. Brown, Los Angeles, Calif.
Application December 28, 1927, Serial No. 243,057
14 Claims. (Cl. 251—127)

1. In the art described, the combination of a valve housing having a valve seat therein, the seat having a conical shaped bearing surface with the apex down, a valve having a conical shaped bearing surface to form a metal to metal engagement with the seat, said valve having a cylindrical part extending upwardly above the conical part of the bearing surface and with an annular shoulder at the upper end of the cylindrical part, a resilient ring mounted on the cylindrical part and engaging the shoulder, said seat having a peripheral part at the top with a convex curve upwardly considered in a radial direction, said ring bearing on said curved part.

2,002,673
BODY TREATING BAND OR ARTICLE
Oscar L. Mills, Los Angeles, Calif.
Application June 6, 1931, Serial No. 542,515
5 Claims. (Cl. 128—163)

1. A therapeutic article comprising a flexible structure formed of unglazed ceramic disks and an interconnecting wire truss, said disks being arranged in three respective rows, with the disks in the outer rows diametrically opposite to each other, and the disks in the central row offset from the disks in the other rows, said wire truss comprising three endless wires which substantially entirely withstand all strains on the structure, one of said wires extending through the disks of the outer rows, another of said wires extending through the central row of disks, and the third wire extending back and forth in criss-cross fashion between the disks of all the rows.

2,002,674
METHOD OF TREATING CELLULOSE ACETATE
Richard Müller and Martin Schenck, Mannheim, and Wilhelm Wirbatz, Mannheim-Waldhof, Germany, assignors to C. F. Boehringer & Soehne G. m. b. H., Mannheim-Waldhof, Germany
No Drawing. Application June 16, 1930, Serial No. 461,636. In Austria June 21, 1929
9 Claims. (Cl. 260—102)

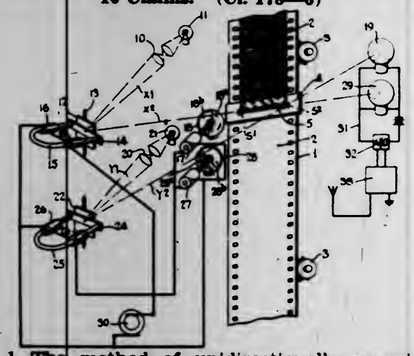


1. The method of treating fibriform cellulose acetate soluble in chloroform but insoluble in acetone to render it soluble in acetone and yet preserve its fibrous structure, which comprises subjecting said acetate in solid fibrous form to a conversion bath of a concentrated mineral acid substantially saturated with a highly soluble buffer substance inert towards both the acid and the acetate but producing a precipitating effect on the acetate and acting to prevent the dissolving of said acetate by said bath, the action of the bath being continued until the acetate has been rendered soluble in acetone.

2,002,675
ADVERTISING DEVICE
Richard F. Outcault, Flossmoor, Ill.
Application January 19, 1933, Serial No. 652,440
6 Claims. (Cl. 40—138)

3. An advertising device of the character described, including a wall, a laterally extending spring located on one side of said wall and adapted to transmit motion, an element connected to said spring and adapted to be moved by said spring, a weight slidably connected to said spring, and a pin adapted to extend through a longitudinal slot in said element.

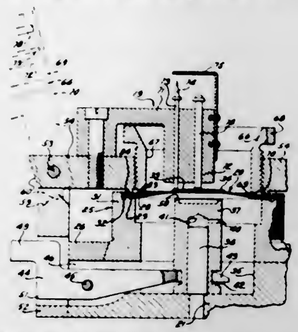
2,002,676
STONE CUTTER GAUGE
William B. Owens, Santa Monica, Calif., assignor of one-half to John C. Steele, Santa Monica, Calif.
Application August 21, 1933, Serial No. 686,044
5 Claims. (Cl. 33—80)



1. A stone cutter's gauge comprising a bar, a jaw slidably mounted on the bar for engaging one side of a block of stone, and a spring pressed jaw for engaging the opposite side, means operative when the slidable jaw is moved against the side of the block of stone for clamping the slidable jaw on the bar, and means for moving the spring pressed jaw against the pressure of the spring and away from the stone to release the gauge therefrom.

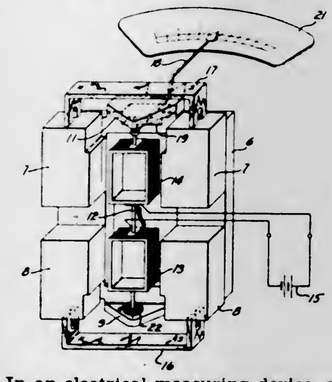
2,002,677
DRIP CATCHER FOR CONTAINERS
Roy Robinson, Portland, Oreg.
Application April 17, 1934, Serial No. 720,967
3 Claims. (Cl. 65—31)

2. A device of the class described comprising a body member made of resilient material and having a drip receiving pocket disposed within its upper surface, a return lip integral with the body member and extending downwardly into the drip receiving pocket, and a vacuum forming cup disposed upon a wall of the body member.



2,002,678
METHOD OF SCANNING AND APPARATUS THEREFOR
Oscar A. Ross, New York, N. Y.
Application December 9, 1930, Serial No. 501,026
10 Claims. (Cl. 178—6)

1. The method of unidirectionally scanning motion pictures recorded onto motion picture film advanced relatively to a light sensitive cell associated with television broadcasting apparatus which comprises, optically projecting two beams of light through the motion pictures onto the light sensitive cell, and during the projection reciprocating the beams from one margin of the pictures to the other for the scanning thereof, the light beams traveling in opposite direction during their movement from one margin to the other, and during the reciprocal movement of the beams annulling the scanning effect thereof during the movement in one direction thereof without annulling the scanning effect when moving in the opposite direction between the margins whereby the pictures will be unidirectionally scanned without interruption as the film is advanced.



2,002,679
APPARATUS FOR GAUGING AND ADJUSTING ARTICLES
Arthur W. Schoof, Riverside, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York
Application June 23, 1931, Serial No. 546,229
9 Claims. (Cl. 33—174)

1. A gauge comprising rotatable means for supporting an article to be gauged, an elongated gauge member slidably mounted in position for one end therof to engage the article to be gauged at a point spaced from the center of rotation,

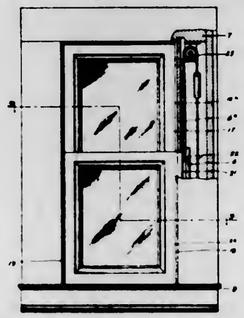
and an element having a predetermined weight slidably mounted and arranged to axially engage the article for exerting a predetermined pressure thereagainst during gauging.

2,002,680
APPARATUS FOR MEASURING ELECTRICAL QUANTITIES
Kenneth L. Scott, Western Springs, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York
Application March 8, 1932, Serial No. 597,497
9 Claims. (Cl. 175—183)

3. In an electrical measuring device, a pair of pole pieces adapted to be associated with a standard magnet, a second pair of pole pieces adapted to be associated with a magnet to be tested, a coil between each of said pair of pole pieces, means for serially energizing said coils, a common shaft for said coils, and an indicating device actuated by said shaft.

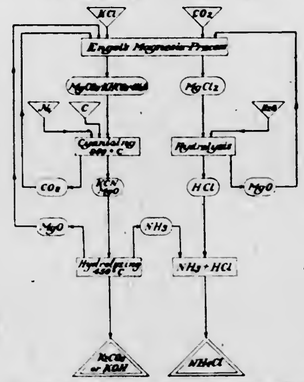
2,002,681
PROCESS FOR THE PRODUCTION OF POTASSIUM CARBAMATE
Carl Theodor Thorssell and August Kristensson, Cassel, Germany
No Drawing. Application October 24, 1928, Serial No. 314,842. In Germany November 18, 1927
5 Claims. (Cl. 260—112)

1. The process of producing potassium carbamate which comprises acting on potassium chloride, dissolved in a substantially anhydrous solvent comprising liquid ammonia, with carbon dioxide.



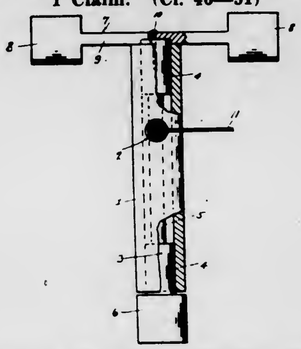
5. The process of producing potassium carbamate, which comprises acting with ammonium carbamate on a potassium salt in anhydrous liquid ammonia.

2,002,682
COMBINED SAFETY RAZOR AND SHARPENER
Edward Holbrook Wyman, Aiken, S. C.
Application October 7, 1933, Serial No. 692,647
2 Claims. (Cl. 30—12)



1. A safety razor comprising a cap having a screw-threaded stud disposed upon the rear side of the same and permanently attached thereto, a stem provided at its forward end with a screw-threaded socket for detachably receiving the stud, said socket being adapted to hold a blade upon the rear side of the cap, the rear end of the stem being screw-threaded, a tubular handle for insertion upon the stem, a guard rigidly mounted upon the tubular handle and adapted to be arranged at the rear of the cap, a plurality of blade sharpening strips mounted upon the forward side of the guard upon opposite sides of the central axis of the guard and rigidly connected therewith throughout substantially the entire areas of the strips, and a nut having screw-threaded engagement with the rear end of the stem and constituting the sole connection between the stem and the tubular handle for regulating the relative longitudinal movement between these parts.

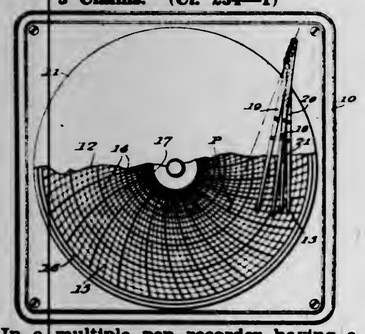
2,002,683
WINDOW
Torval J. Anderson, Chicago, Ill.
Application October 29, 1931, Serial No. 571,793
6 Claims. (Cl. 20—11)



1. In a window frame construction, a lintel on said frame, sash pulleys mounted on said lintel sash cords mounted on said pulleys, side stiles provided with sash cord grooves on said frame, pockets extending from the top of said side stiles to said lintel, removable side stiles adapted to cover said pockets, said removable side stiles provided with passages on the back side thereof and adjoining the top of said grooves to form continuous passages to said pulleys.

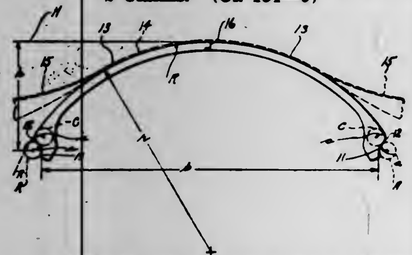
2,002,684
METHOD OF PREPARING POTASSIUM CARBONATE OR POTASSIUM HYDROXIDE
Friedrich Bartling, Huglfing, and Hermann Fricke, Munich, Germany; Jenny Bartling, Huglfing, Germany, executrix of said Friedrich Bartling, deceased, assignors to Alterum Kredit-Aktien-Gesellschaft, Berlin, Germany, a company of Germany
Application October 12, 1931, Serial No. 568,520
In Germany October 24, 1930
2 Claims. (Cl. 23—63)

2. A process for the manufacture of potassium hydroxide or carbonate which comprises mixing the double salt $MgCO_3KHCO_3.4H_2O$ with carbon and heating the mixture to a temperature of substantially 950 degrees C. in the presence of nitrogen whereby to produce a mixture containing potassium cyanide and magnesium oxide, treating the mixture with steam at a temperature between 350 and 500 degrees C. to produce the potassium hydroxide and carbonate from the cyanide, separating the magnesium oxide from the mixture and reacting it with potassium chloride in the presence of carbon dioxide for producing a further quantity of double salt.



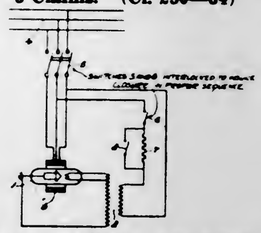
2,002,685
"NIDES" TWIN TOY
Leonides S. Bautista, San Francisco, Calif.
Application January 15, 1935, Serial No. 1,960
1 Claim. (Cl. 46—51)

A toy of the class described comprising an elongated tubular member having a hole in its intermediate part, a rotary member including a pair of cylindrical enlargements and a stem connecting the two enlargements together, the



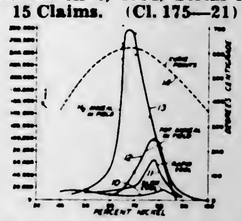
rotary member fitting in the tubular member with the enlargements located in and slightly projecting from the end parts of the tubular member, a string connected to the stem and passing through the hole, a propeller including a stem and enlargements at the end thereof, means for connecting the central part of the last-mentioned stem to the projecting end of one of the enlargements of the rotary member and a cylindrical part connected to the projecting end of the other enlargement of the rotary member.

2,002,686
MULTIPLE PEN RECORDER
Nikolai Belaef, Boston, Mass., assignor to Eldon Macleod, Frank A. Morrison, Cameron Macleod, Leslie Soule, and Sullivan A. Sargent, Jr., trustees, doing business as Mason-Neilan Regulator Company, Boston, Mass.
Application July 30, 1934, Serial No. 737,545
3 Claims. (Cl. 234—1)



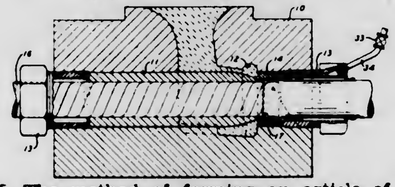
1. In a multiple pen recorder having a circular chart, and means for rotating the chart about its center, said chart having a plurality of time curves of equal radius subscribed about centers equidistant from the center of the chart, in combination therewith a plurality of pen arms each pivotally mounted at one end and carrying a pen point at the other end, said pen arms being arranged in straddled relation and pivotally mounted on a line extending radially from a given point on one of said curves.

2,002,687
TIRE BUILDING DRUM
Arthur E. Benson, Indian Orchard, Mass., assignor to The Fisk Rubber Corporation, Chicopee Falls, Mass., a corporation of Delaware
Application October 11, 1933, Serial No. 693,185
2 Claims. (Cl. 154—9)



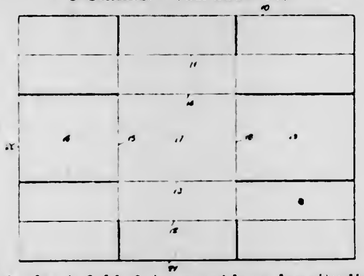
1. An annular tire building drum of the semi-flat type having widely spaced bead receiving grooves, curved shoulder portions positioned above the bead receiving grooves for shaping the tire carcass adjacent the bead hinges, and an intermediate portion extending between said shoulder portions in a single circular arc tangent to the curve of the shoulder portions and tangent to the line defining the maximum crown height of the drum.

2,002,688
HIGH TENSION CONTACT PROTECTION
Albert Bouwers, Eindhoven, Netherlands, assignor to N. V. Philips' Gloeilampenfabrieken, Eindhoven, Netherlands
Application August 21, 1931, Serial No. 558,578
In the Netherlands August 28, 1930
3 Claims. (Cl. 250—34)



1. An X-ray installation comprising an X-ray tube having a cathode and an anode, said anode being adapted to be moved during the operation of the tube, an electro-magnetic stator for imparting motion to the anode, a source of high tension, an output circuit and an input circuit therefor, said output circuit including said X-ray tube, and a switching device in said input circuit, a stator circuit for energizing said stator, and a switching device in said stator circuit, said second switching device having two positions, in one position closing the stator circuit and in the second position interrupting both the stator circuit and the said input circuit, said stator circuit including a continuous conductive connection, between said second switching device and said stator.

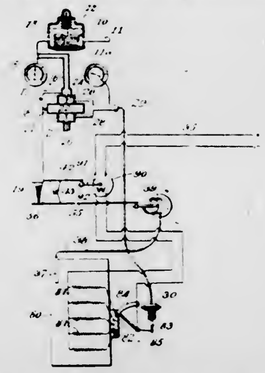
2,002,689
MAGNETIC MATERIAL AND METHOD OF TREATING MAGNETIC MATERIALS
Richard M. Bozorth, Short Hills, and Joy F. Dillinger, East Orange, N. J., assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application March 2, 1934, Serial No. 713,674
15 Claims. (Cl. 175—21)



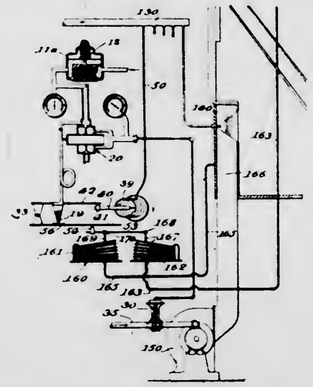
5. A method of heat treating nickel-iron alloys which comprises heating the alloy to a temperature above about 1000° C. in an atmosphere of hydrogen for some time, slowly cooling the alloy to room temperature, reheating it to a temperature near the non-magnetic temperature of the alloy in a magnetic field, maintaining the alloy in said magnetic field for a time and then cooling the alloy in the magnetic field to room temperature.

2,002,690
METHOD OF AND APPARATUS FOR TREATING MOVING MATTER
Herbert F. Carter, Roselle Park, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York
Application June 1, 1933, Serial No. 673,834
6 Claims. (Cl. 207—10)

5. The method of forming an article of an alloy containing lead and antimony being maintained at a temperature exceeding 350° F. which consists in extruding the alloy through a die, maintaining the die at a temperature below 250° F., and simultaneously submerging the article in a fluid maintained under non-oxidizing conditions of temperature and pressure and a velocity greater than 1000 feet per second.



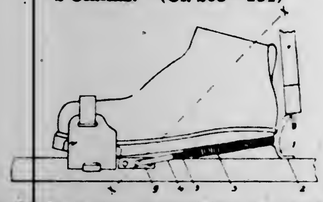
2,002,691
FOLDED NAPKIN
Austin E. Cofrin, Green Bay, Wis.
Application January 16, 1933, Serial No. 652,057
3 Claims. (Cl. 206—57)



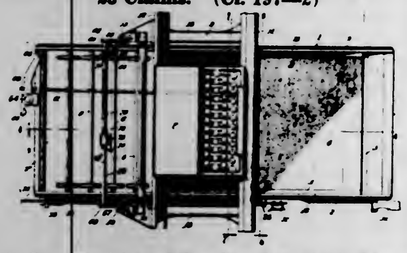
1. A sheet folded to provide a longitudinally elongated body; then folded upon transverse lines substantially one-third of the length of said body from each end thereof to provide a transversely elongated body, and lastly folded upon lines substantially one-fourth of the length of the transversely elongated body from the opposite ends thereof upon lines perpendicular to said transverse lines to provide a final fold presenting tabs superposed on said body with their edges lying closely adjacent the center of said body.

2,002,692
CONTROL MECHANISM
Edward T. Dahl, Randolph, Mass., assignor, by mesne assignments, to Eldon Macleod, Westwood, Mass.; Frank A. Morrison, Newton, Mass.; Cameron Macleod, Berwyn, Pa.; Leslie Soule, Dedham, Mass.; Sullivan A. Sargent, Jr., Needham, Mass., trustees, doing business as Mason-Neilan Regulator Company, Boston, Mass.
Application September 30, 1932, Serial No. 635,566
13 Claims. (Cl. 219—20)

1. An apparatus for controlling the temperature of an electrically heated oven, comprising an electric current supply line for heating the oven, a control device governing the supply of said current, a pilot mechanism utilizing an independent source of pressure for operating said control device and ordinarily exhausting to the atmosphere, an exhaust valve governing the exhaust from said pilot mechanism, and means responsive to the resultant effect of the temperature of the oven and changes in the current supply for actuating said exhaust valve.

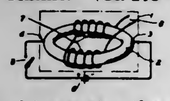


2,002,693
DRAFT CONTROL
Edward T. Dahl, Randolph, Mass., assignor, by mesne assignments, to Eldon Macleod, Westwood, Mass.; Frank A. Morrison, Newton, Mass.; Cameron Macleod, Berwyn, Pa.; Leslie Soule; Dedham, Mass.; Sullivan A. Sargent, Jr., Needham, Mass., trustees, doing business as Mason-Neilan Regulator Company, Boston, Mass.
Application October 7, 1932, Serial No. 636,709
22 Claims. (Cl. 236—14)



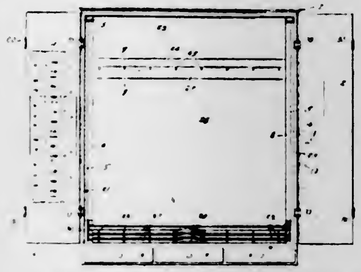
10. In a draft control system for a furnace, means for supplying air to the furnace, a control valve governing said air supplying means, an independent pressure system for operating said valve, means for supplying fuel to the furnace, an instrument responsive to the rate of fuel supply, an instrument responsive to the difference in pressure in said furnace at the air intake duct and in the stack, and means operated by the resultant action of said instruments controlling the independent pressure system and hence the air supplying means.

2,002,694
AUTOMATICALLY ACTING SKI FASTENING
Ernst Elster, Vienna, Austria
Application October 18, 1933, Serial No. 694,165
In Finland April 3, 1933
2 Claims. (Cl. 208—184)



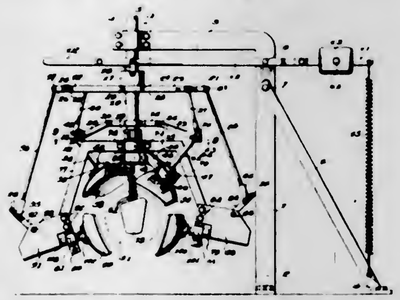
1. A ski fastening comprising, in combination, a slidable heel part engaging said ski in slidable bearing relation and forming a steadying support for said part, elastic members extending forwardly from said heel part, rigid members secured to the elastic members, bearing plates adapted for attachment to the ski, journal portions integral with the rigid members to engage bearing holes in the plates, and noses integral with the journal portions to engage the plates behind said holes upon turning movement of the rigid members.

2,002,695
CONTROL MECHANISM FOR TYPEWRITING MACHINES
Harry A. Foothorap, Harrisburg, Pa., assignor, by mesne assignments, to Underwood Elliott Fisher Company, New York, N. Y., a corporation of Delaware
Application July 24, 1930, Serial No. 470,519
23 Claims. (Cl. 197—2)



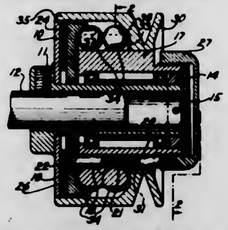
1. In a machine of the class described, the combination with a platen movable toward and from the writing plane to clamp, and to release the work, respectively, and a travelling carriage, movable in line and letter spacing-directions relatively to the platen; of carriage-operated mechanism for moving the platen in one of its said directions of movement, and means for selectively controlling operation of said mechanism in timed relation to travel of the carriage to different positions.

2,002,696
MAGNETIC MATERIAL
George A. Kelsall, Belleville, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application November 11, 1933, Serial No. 697,576
21 Claims. (Cl. 175—21)



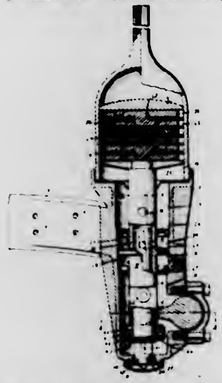
1. A method of increasing the magnetic permeability of irregularly shaped magnetic bodies made of magnetic alloys, the permeability of which is increased by rapidly cooling them through the magnetic transformation temperature region, characterized in that said magnetic bodies are slowly cooled through the magnetic transformation region in a magnetic field directed in the direction in which the high permeability is desired.

2,002,697
SCROLL
Gustav C. Groth, Watertown, Wis.
Application January 18, 1934, Serial No. 707,168
2 Claims. (Cl. 35—9)



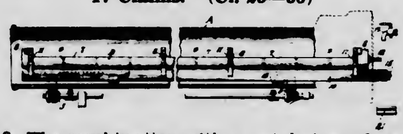
1. In a device for preserving and filing school exercises and the like, a support, a backing plate carried by the support, a plurality of idlers on the support at the lower end of the backing plate, a first receiving roll journaled on the support to the rear of the backing plate, second receiving rolls journaled on the support to the rear of the backing plate, means for rotating any one of the receiving rolls, a sheet wound about the first receiving roll and extended upwardly, and then downwardly in front of the backing plate, record strips wound about the second receiving rolls, the record strips extending about the idlers, and means for connecting the exposed end of any record strip detachably with the exposed end of the sheet.

2,002,698
PRINTING DEVICE
Andrew B. Kruczek, Detroit, Mich.
Application January 18, 1930, Serial No. 421,753
5 Claims. (Cl. 101—35)



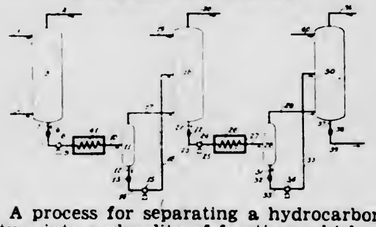
1. A printing device of the character described including a standard, a rod carried by and depending from the standard, means carried by the rod for supporting a plurality of printing elements, arms carried by the rod, connecting means between the arms and printing elements, and means for operating the arms to in turn operate the printing elements.

2,002,699
CLUTCH
Einer W. Larsen, Chicago, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York
Application January 13, 1933, Serial No. 651,483
4 Claims. (Cl. 192—103)



1. A clutch comprising driving and driven members normally in yieldable frictional driving engagement, said driven member including an element slidable towards said driving member to effect a driving engagement between said members and an axially fixed element having axially extending grooves on its periphery, said elements having spaced opposed inclined surfaces, and a plurality of pairs of balls movable radially by centrifugal force in said grooves and having rolling engagement with each other and with the inclined surfaces during their radial movement in response to an increasing speed of said driven member for forcing said members into a more positive driving engagement.

2,002,700
SHOCK ABSORBER
Louis L. Lomar, Houston, Tex.
Application November 21, 1932, Serial No. 643,582
6 Claims. (Cl. 267—35)

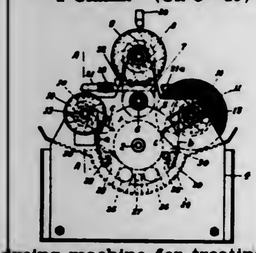


1. The combination with a vehicle having a body and an axle, of a unitary shock absorber comprising a casing mounted on said body, said casing having four chambers; a piston rod reciprocable in said chambers; an abutment in the first of said chambers; resilient means to resist the movement of said rod toward said abutment, said means comprising a plurality of resilient rubber pads and a plurality of rigid discs between said pads, said pads and discs being between said rod and said abutment; the second, third and fourth of said chambers being adapted to contain a fluid; a piston carried by said rod in the third of said chambers; said piston having therein a valve opening toward said pads; a valve between the second and third of said chambers to permit the flow of fluid only from the second of said chambers into the third of said chambers; a valve between the third and fourth of said chambers to permit the flow of fluid only from the fourth of said chambers into the third of said chambers; said rod being hollow and having openings communicating with the second, third and fourth of said chambers; means whereby the flow of fluid through said openings may be controlled; and a lever pivoted in said casing, operatively associated with said rod and connected to said axle.

2,002,701
METHOD OF AND APPARATUS FOR LINING METAL PIPES
James R. McWane, Birmingham, Ala.; A. T. McWane, William McWane, and Jelks H. Cabaniss, executors of said James R. McWane, deceased, assignors to McWane Cast Iron Pipe Co., Birmingham, Ala.
Application May 25, 1933, Serial No. 672,887
17 Claims. (Cl. 25—38)

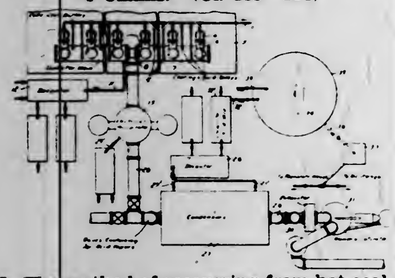
3. The combination with a metal pipe; of means for supporting and rotating the pipe about its longitudinal axis; and means operable during the rotation of the pipe for coating the inner surface of said pipe with a liquid, said coating means comprising a carriage movable longitudinally within the pipe, a liquid-containing trough having an open top and mounted on the carriage for oscillatory movements, and anti-friction balls mounted on the bottom of the carriage for rolling contact with the pipe.

2,002,702
EXTRACTION PROCESS
David R. Merrill, Long Beach, and Philip Subkow, Los Angeles, Calif., assignors to Union Oil Company of California, Los Angeles, Calif., a corporation of California
Application October 24, 1932, Serial No. 639,343
14 Claims. (Cl. 196—13)



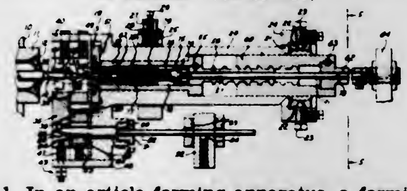
1. A process for separating a hydrocarbon oil mixture into a plurality of fractions which comprises extracting said oil with a solvent into an insoluble fraction and fractions dissolved in said solvent, separating the insoluble fraction from the fractions dissolved in said solvent, cooling said solvent containing dissolved fractions to separate a fraction insoluble in said cooled solvent, removing said insoluble fraction from said cooled solvent containing the remaining dissolved fractions, subsequently passing said cooled solvent containing dissolved fractions and said cooled fraction insoluble in said cooled solvent to a later extraction stage and extracting said cooled insoluble fraction with said cooled solvent containing dissolved fractions into a plurality of fractions.

13. A process for separating a hydrocarbon oil mixture into a plurality of fractions which com-



prises extracting said oil with a selective solvent, separating a fraction insoluble in said solvent from the selective solvent and dissolved fractions, commingling said selective solvent and dissolved fractions with a wash oil and removing the wash oil containing dissolved fractions from said solvent and fractions remaining dissolved therein.

2,002,703
JIGGER
Hans Willi Mettler, Geneva, Switzerland
Application April 11, 1932, Serial No. 604,489
In Switzerland April 15, 1931
1 Claim. (Cl. 8—19)



In a dyeing machine for treating textile fabrics with liquids, comprising a container adapted to receive the liquid to treat the fabric, a positively driven feed drum arranged to immerse in the liquid in said container, two rollers disposed at both sides of said feed drum, separate and resilient means to drive said feed drum and each of said rollers, means to adjust the driving torque of said drum and of each of said rollers not to exceed a predetermined tension on the fabric, two buoyant cylinders within said container and disposed below and on both sides of the said feed drum, a frame, guide ways in said frame for said cylinders, the guide ways running in radial direction to said drum, an idle roller arranged between said cylinders at a distance from the mantle of the feed drum, means to reverse the direction of rotation of each of said rollers and of said drum, the said rollers being arranged to be close to but out of the liquid when fully wound, and a spreading device for the fabric arranged intermediate the drum and each of the rollers.

2,002,704
RECOVERY OF TAR ACIDS, ETC.
Stuart Parmelee Miller, Englewood, N. J., assignor to The Barrett Company, New York, N. Y., a corporation of New Jersey
Application September 26, 1931, Serial No. 565,270
6 Claims. (Cl. 183—114)

5. The method of recovering from hot coal distillation gases a tar acid oil readily extractable with aqueous caustic soda for removal of tar acids therefrom, which comprises cleaning the gases by electrical precipitation while yet at a temperature above their dew point for water and below about 150° C. to remove suspended matter from the gases and leave in the gases not more than .5% of free carbon based on the weight of oil vapors retained in the gases, and cooling the resultant clean gases to separate therefrom a caustic extractable tar acid oil containing not more than about .5% of free carbon.

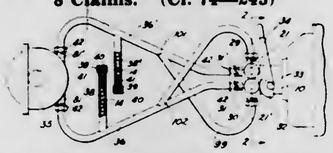
2,002,705
APPARATUS FOR FORMING ARTICLES
Kasper F. Moller, Cicero, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York
Application October 28, 1932, Serial No. 640,043
16 Claims. (Cl. 29—57)

1. In an article forming apparatus, a forming tool, means for moving an article into operative relation with respect to said tool, and means including spaced members between which said article is moved positioned in advance of said tool and under the control of said article during its movement towards said tool for controlling the operation of said tool.

2,002,706
ICE CREEPER
Fern Mong, Greenville, Ohio
Application March 24, 1934, Serial No. 717,207
4 Claims. (Cl. 36—7.6)

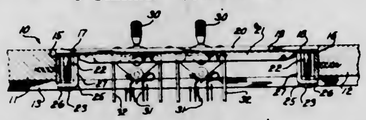
1. In an ice creeper, a heel section having an elongated opening and having teeth formed on the lower side thereof, a toe section embodying laterally adjustable members, a bolt pivotally connecting the members, a washer on the bolt and having teeth adapted to engage the teeth of the heel section when the bolt is secured in position, holding the heel and toe sections in their positions of adjustment.

2,002,707
SHOE SHANK STIFFENER
Chester M. Moore, Wakefield, Mass.
Application September 5, 1934, Serial No. 742,772
3 Claims. (Cl. 36—76)



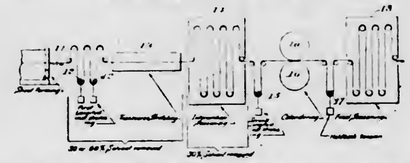
1. As an article of manufacture, a resilient metal shank stiffener enveloped by a film adhering and conforming closely to its surface without adding materially to its bulk, said film being composed of an air drying fluid composition solidified on the stiffener, and adapted to have a non-squeaking contact with shoe parts between which the stiffener is interposed.

2,002,708
RAIL STABILIZING DEVICE FOR RAILWAY TRACKS
John G. Mueller, Dayton, Ohio; Emilie P. Mueller, administratrix of said John G. Mueller, deceased
Application June 1, 1931, Serial No. 541,228
12 Claims. (Cl. 238—53)



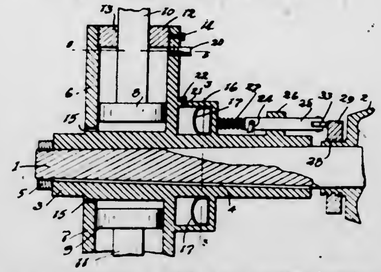
1. In a rail stabilizing device, a single unit having at its lower end an elongated opening, the upper end of the unit adapted to engage the ball of a rail, and an intermediate convex surface to engage the upper surface of the rail base.

2,002,709
TRANSMISSION MECHANISM
Jakob Niederhauser, Wettingen, Switzerland, assignor of one-half to Richard Suter, Cleveland, Ohio
Application September 1, 1931, Serial No. 560,575
8 Claims. (Cl. 74—245)



1. In a power transmission mechanism, a primary and secondary unit, a gear rotatable within said primary unit engageable with a plurality of spheroidal bodies and capable of imparting thereto a force affording the circulation of said bodies from said primary unit to said secondary unit, guides or conduits for said bodies, a second gear within said secondary unit adapted to receive said bodies, said second gear being rotatable and axially movable by the forces imparted thereto by said pressure bodies, and means within said secondary unit capable of varying the transmission ratio between said units, said means comprising a load receiving mechanism associated with said second gear and actuable upon variations of load applied thereto for causing the axial movement of said second gear and the consequential variation of said transmission ratio.

2,002,710
FASTENER
Edward A. Otto, Chicago, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York
Application October 12, 1932, Serial No. 637,416
9 Claims. (Cl. 179—91)

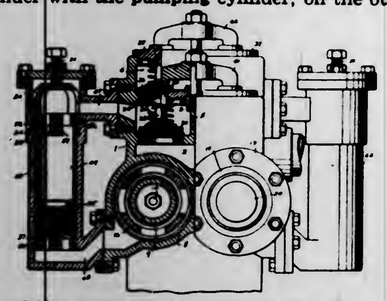


1. A fastener for switchboard keys or the like, comprising a stud carried by a key, a fixed rail for supporting the key, a fastening member having one end arranged to engage said rail, a lug positioned between the other end of said fastening member and the key for limiting the movement of the fastening member, and means carried by said stud for moving said fastening member and said key into intimate engagement with said rail.

2,002,711
MANUFACTURE OF THIN SHEETS OF CELLULOSE
Frederic A. Parkhurst, Bethesda, Md., and Gustavus J. Esselen, Swampscott, Mass., assignors to The Fiberloid Corporation, Indian Orchard, Mass., a corporation of Massachusetts
Application May 2, 1932, Serial No. 608,648
6 Claims. (Cl. 18—57)

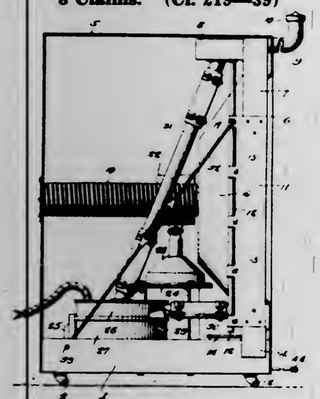
1. The method of producing a continuous web of cellulose ester plastic of uniform thickness which consists in simultaneously subjecting to longitudinal stretching and calendering a web from which sufficient solvent has been removed to give necessary tensile strength and then seasoning the web.

2,002,712
VARIABLE DIAMETER PROPELLER
Valance H. Patriarche, Winnipeg, Manitoba, Canada
Application September 12, 1933, Serial No. 689,152
10 Claims. (Cl. 170—163)



1. In combination with a propeller having the blades thereof mounted for out movement in a radial direction under the action of centrifugal force a container having a fluid therein displaced by the blades as they move outwardly and a second fluid compressed by the displaced former fluid.

2,002,713
PUMP
Arthur J. Penick and Kirby T. Penick, Houston, Tex.
Application January 24, 1933, Serial No. 653,302
2 Claims. (Cl. 103—44)



1. A pump comprising a casing having an inlet chamber, provided with an inlet, an intermediate chamber and a discharge chamber provided with an outlet, said pump having a valve controlled port connecting said inlet and intermediate chambers and a valve controlled port connecting the intermediate chamber with the discharge chamber and through which chambers and ports the pumped fluid may move from said inlet to said outlet, a pumping cylinder having a removable liner and removable inwardly extended end stops, a piston therein, said pump having a passageway connecting the intermediate chamber with said cylinder, on one side of said piston, an operating cylinder for containing an operating fluid, there

being a passageway connecting the operating cylinder with the pumping cylinder, on the other

side of the piston and a reciprocable plunger in said operating cylinder.

2,002,714
ELECTRIC HEATER
Edward W. Phillips, Flint, Mich.
Application April 2, 1934, Serial No. 718,716
8 Claims. (Cl. 219—39)

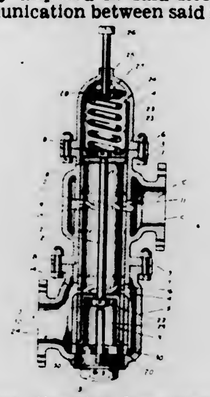
1. A device of the class described, comprising a base, a box-like housing carried by the base, a radiator carried by the base and located within the housing, a tank carried by the base and located within the housing, means for heating the contents of the tank, a grate basket extended forwardly with respect to the housing, a lamp located in the grate basket, light material in the grate basket, about the lamp, and capable of being illuminated by the lamp, to simulate a grate fire, and means for forcing a blast of air across the upper surface of the light material and through the radiator.

2,002,715
BURN GUARD
John F. Raynolds and Fred C. Wilhelm, Minneapolis, Minn., assignors to The Unipress Company, Incorporated, Minneapolis, Minn., a corporation of Minnesota
Application June 4, 1932, Serial No. 615,398
10 Claims. (Cl. 74—614)

2. In combination with a pressing machine having an arm having a heatable pressing head, a stiff heat guard of sheet material and means swingingly pivoting it to the arm so that it can be swung forwardly from a position spaced from the rear of the head into guarding position with the pressing face of the head, and means automatically operable as a result of arm motion to move the guard into and away from guarding

position respectively as the presser head is retracted and advanced.

2,002,716
COSMETIC HOLDER
George F. Richter, Bogota, N. J., assignor to Consolidated Safety Pin Company, Bloomfield, N. J., a corporation
Application March 18, 1933, Serial No. 661,494
6 Claims. (Cl. 206—56)



1. A cosmetic holder comprising an outer and an inner casing, the outer casing formed with openings at the front and back, covers hingedly connected with said outer casing, the inner casing formed with limit fingers coupled with said covers and projecting into the openings of the outer casing, whereby upward movement of the inner casing is limited, said inner and outer casings formed with longitudinal slots, and a container within the inner casing and a finger-piece connected with the container and extending outward through the slots in the inner and outer casings and releasably engaging the inner casing.

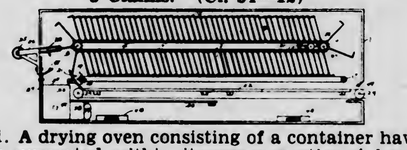
2,002,717
REDUCING VALVE
Braxton L. Robart and Earl P. Buell, Jackson, Mich., assignors to The Robuell Company, a corporation
Application June 20, 1932, Serial No. 618,096
3 Claims. (Cl. 50—35)

1. A fluid pressure regulator comprising a vertical cylindrical sleeve having a flange spaced from the lower end thereof, a horizontal high pressure inlet connection jacketing said sleeve, a housing constituting a horizontal low pressure outlet connection having a flanged portion telescoping with the lower end of said sleeve and removably secured to said first flange, an auxiliary cylindrical sleeve concentric with said first sleeve and located within and spaced from said housing at the sides and from said first sleeve at the upper end to provide a port, a port in said first

sleeve opening into said first jacket, a longitudinally ported hollow piston valve closed at both ends slidably disposed in said sleeves for regulating communication between said inlet and out-

let, a by-pass directing low pressure into said auxiliary sleeve against the piston valve end slidable therein to move the same in one direction, and regulable means for moving said valve in the opposite direction.

2,002,718
COLLAPSIBLE TUBE CONSTRUCTION
Walter A. Roselle, New York, N. Y.
Application December 31, 1934, Serial No. 759,847
3 Claims. (Cl. 221—60)



1. A container comprising a collapsible tubular member formed of soft material, a separately formed neck member of substantially incompressible material, and a seamless uniting ring of material harder than the tubular member, said neck member having an outer wall of larger diameter than the inside diameter of the main part of the tubular member, said tubular member having a mouth portion of larger diameter than the diameter of the main part and seated on the outer wall of the neck member, said ring surrounding the enlarged mouth of the tubular member and being under tension and holding the tubular member tightly on the neck member.

2,002,719
OPHTHALMIC LENS
Nathaniel Singer, New York, N. Y., assignor to Optical Research Corporation, New York, N. Y., a corporation of New York
Application July 18, 1933, Serial No. 681,000
4 Claims. (Cl. 88—54)

1. An ophthalmic lens composed of a single piece of optical glass, said lens having a central portion composed of glass which is transparent and of sufficient area so that direct vision normally occurs therethrough, said central portion being completely surrounded by a border of glass which is transparent and through which vision may accur but which has inherently in the glass thereof higher light-absorptive properties than the glass of the said central portion, the border of glass of higher light-absorptive properties extending through the full thickness of the lens in order to completely protect the said central portion from strong rays of light striking the lens upon or adjacent the edge thereof.

2,002,720
APPARATUS FOR DRYING SHEET MATERIAL
Russell M. Smith, Baltimore, Md.
Application April 13, 1933, Serial No. 666,039
5 Claims. (Cl. 34—12)

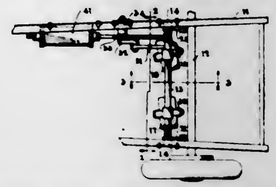
1. A drying oven consisting of a container having supported within its upper portion a horizontal conveyor, said conveyor having means thereon for forming individual pockets on its upper and lower horizontal sections; means at one end of said container for delivering printed sheet material upon said upper pocket forming means, means adjacent the other end for transferring the printed sheets from the upper pockets to the lower pockets, consisting of a rotating member located between the said pockets having means thereon for engaging the said sheet in the upper pocket and releasing them into the lower pockets, means at the forward end of the container for removing the sheets from the lower pockets consisting of a rotating member having means thereon for timing the opening of the said lower pockets, a releasing member rigidly secured to said container and inclined downwardly for disengaging the sheets from the said lower pocket, a second conveyor positioned beneath the upper conveyor and adapted to operate at a relatively lower speed for receiving said sheets from the lower pockets whereby the sheets will be deposited upon the said conveyor in overlapping position, and means for delivering the sheets out of the oven.

2,002,721
SEAT COVER HOLDER
Harry Thomasma, Grand Rapids, Mich.
Application May 2, 1932, Serial No. 608,606
2 Claims. (Cl. 4—242)

1. In combination, a toilet bowl having a horizontal surface, a hinged member therefor including two spaced apart posts each having a shoul-

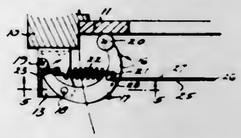
der, a mounting plate having spaced apart openings through which said posts extend, said mounting plate being interposed between said shoulders and said horizontal surface, means acting upon the said post to produce clamping pressure between said shoulders and the horizontal surface of said toilet bowl and a dispensing device attached to and extending upwardly from said mounting plate.

2,002,722
FROST SHIELD
Joel R. Thorp, West Allis, Wis., assignor to The Fulton Company, West Allis, Wis., a corporation of Wisconsin
Application October 27, 1933, Serial No. 695,405
5 Claims. (Cl. 219—19)



1. In combination, a frame comprising a metal band embedded within a rubber seal, a transparent sheet coacting along its entire peripheral edge with said seal within said band, said band being spaced from the peripheral edge of said sheet and biased to press said seal into intimate contact with said sheet edge, and heating means carried by said band and disposed within said frame.

2,002,723
CLOSURE
Carl E. Voke and Clarence E. Denbow, Columbus, Ohio; said Voke assignor of one-tenth to Charles S. Loudenslager, Columbus, Ohio
Application January 27, 1932, Serial No. 589,184
Renewed October 26, 1934
8 Claims. (Cl. 221—60)



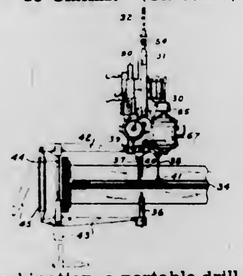
5. A closure unit for collapsible containers or the like comprising a collar member, a hollow plunger mounted in said collar member in such a manner that it may reciprocate therein, said hollow plunger being of greater height than the height of said collar member and having an open lower end and a closed upper end, an opening in the wall of said hollow plunger, said opening being closed by a member forming a part of said closure unit when the plunger is in its lowermost position and open when said plunger is in its uppermost position, means for limiting the lowermost position of said plunger, a compression spring mounted in surrounding relation to said hollow plunger and having its upper end abutting the lower end of said collar and its lower end abutting an outwardly extending flange on the lower end of said plunger, said spring being adapted to normally maintain said plunger in its lowermost position, all of the parts of said closure unit being combined as a separate unit which is placed as a whole into a hollow extension on the upper end of said container, the collar of said closure unit being secured in said hollow extension, said plunger being movable upwardly to allow the contents of said container to discharge from said opening when pressure is applied to said collapsible container and said spring being adapted to return said plunger to its normal position to close said opening when such pressure on the walls of said collapsible container is released.

2,002,724
MOTOR VEHICLE LIFTING AND TRAVERSING DEVICE
Brooks Walker, Piedmont, Calif.
Application May 15, 1931, Serial No. 537,631
2 Claims. (Cl. 180—1)

1. A lifting and traversing device for a vehicle having means for partially raising and lowering said device, including a cylinder with a piston reciprocally mounted therein operatively associated with the intake manifold of the vehicle motor, and additional means including the traction of the wheels at the unelevated end of said vehicle, both said cylinder and said traction coacting to effect the lifting or lowering at one end of said vehicle.

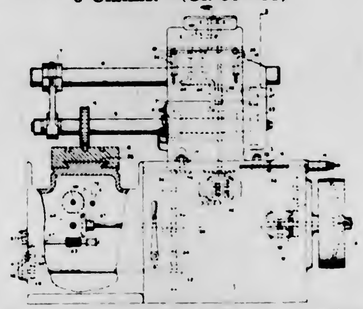
2,002,725
COMBINATION DOORCHECK AND DISPLAY
James W. Wyatt and John H. Pollard, Dallas, Tex., assignors to Screen Advertising, Incorporated, Dallas, Tex., a corporation of Texas
Application July 12, 1934, Serial No. 734,762
7 Claims. (Cl. 40—60)

1. A door check and display device for a swinging door comprising, a swinging member arranged to be swung by the opening and closing of the door, a display having a swinging mounting on said member so as to expose opposite sides each time said member is swung by the door, and means for swinging the display independently of and concurrently with the member when the member is swung by the opening or closing of the door.



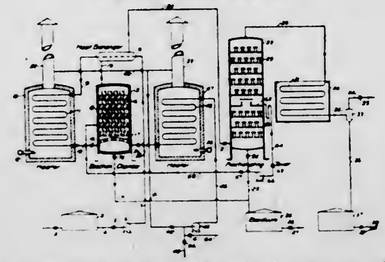
2,002,726
GOLF BALL
Leonard A. Young, Detroit, Mich.
Application July 6, 1932, Serial No. 621,068
1 Claim. (Cl. 273—62)

A golf ball having a series of spaced surface depressions, said depressions each having a rounded bottom and curved sidewalls, said sidewalls continuing on an unbroken curve from said



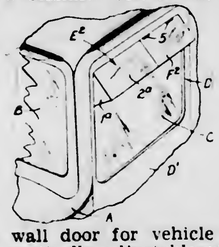
base to the surface of said ball and terminating in a polygonal configuration at said surface.

2,002,727
PORTABLE DRILLING MACHINE
Karl H. Andren, Milwaukee, Wis., assignor to Artos Engineering Company, Milwaukee, Wis., a corporation of Wisconsin
Application April 9, 1932, Serial No. 604,169
16 Claims. (Cl. 77—7)



1. In combination, a portable drill press, means carried by said press for supporting the weight thereof independently of the tool directly upon a piece of work to be drilled, a clamp arm carried by said drill press and cooperable with the work piece in opposition to said supporting means to clamp the work near the point of drilling, and means controllable by the clamping action to automatically actuate the drill spindle.

2,002,728
MACHINE TOOL TRANSMISSION AND CONTROL
William K. Andrew and Joseph B. Armitage, Wauwatosa, Wis., assignors to Kearney & Trecker Corporation, West Allis, Wis., a corporation of Wisconsin
Application June 8, 1931, Serial No. 542,758
6 Claims. (Cl. 90—16)

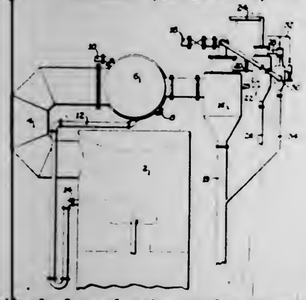


1. In a milling machine, the combination of a first work support table, a support providing a guideway for reciprocatory movement of said table, said guideway having an extended portion, a second work support table guided in said extended portion for reciprocatory movement, a plurality of rotatable tool spindles respectively associated with said first and second work table, and transmission mechanism for movement of said tables including for each table means individually selective of feed or quick traverse rates of table movement, whereby either table may be operated at either rate irrespective of the rate at which the other table is operative.

2,002,729
PROCESS OF PRODUCING MOTOR FUELS FROM HYDROCARBON OILS
Marvin L. Chappell, Watson, Calif.
Application May 28, 1934, Serial No. 727,972
8 Claims. (Cl. 196—65)

6. A method of processing hydrocarbon oil for the production of motor fuel and a Bunker fuel oil, the steps which comprise, heating the oil under superatmospheric pressure to a cracking temperature ranging from approximately 800 to 1300° F., passing the heated oil into a vaporizing zone and separating a vaporized portion of the oil from a primary residual oil; combining with the vaporized portion of the oil an aeriform fluid having a free oxygen content ranging from 5 to approximately 18 per cent by volume, in an amount which will improve the anti-detonating characteristics of the vaporized portion of the oil; passing the combined mixture of vaporized oil and aeriform fluid through a reaction zone at a temperature ranging from approximately 800 to 1300° F., fractionating the reaction products and separating aeriform products, motor fuel and a higher boiling distillate from a secondary residual oil; combining the separated secondary residual oil with the primary residual oil to form Bunker fuel oil.

2,002,730
VENTILATING APPARATUS FOR VEHICLE BODIES
William D. Crowell, St. Louis, Mo., assignor to Automobile Ventilation, Inc., Detroit, Mich., a corporation of Michigan
Application February 1, 1933, Serial No. 654,576
3 Claims. (Cl. 98—2)



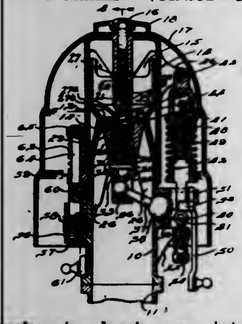
3. A side wall door for vehicle bodies, provided with a vertically-adjustable window that is adapted to be partially lowered so as to produce

a ventilating slot at the top edge of the window, a window pocket in said door, a suction intensifier and rain deflector mounted on the exterior of said door at the upper end of the window opening therein and provided with a portion for enhancing the suction effect on said ventilating slot, and an adjustable means for preventing air from flowing into the vehicle over the rear top edge of the window only when the ventilating slot is in use, comprising a hinged or pivotally mounted member movable from substantially the plane of said deflector and independently thereof into position to close off the rear portion only of said ventilating slot.

2,002,731

METHOD OF CONDENSING PETROLEUM FRACTIONS

George B. Coubrough, Long Beach, Calif., assignor to The Lummus Company, New York, N. Y., a corporation of Delaware
Application March 20, 1933, Serial No. 661,727
1 Claim. (Cl. 196—77)

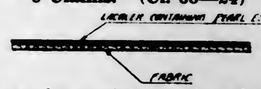


A method of condensing under vacuum hydrocarbon vapors containing some low boiling cracked distillate vapors which consists in first liquefying uncracked vapors by surface condensation, contacting the uncondensed vapors directly with water, absorbing the non-condensable cracked vapors in a heavy hydrocarbon having a negligible vapor pressure, and pumping air from the system.

2,002,732

CARBURETOR

Jay S. Culp, Detroit, Mich., assignor to Monarch Governor Company, Detroit, Mich., a corporation of Michigan
Application July 30, 1932, Serial No. 626,638
15 Claims. (Cl. 261—51)

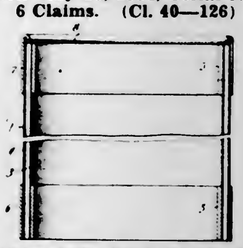


2. A carburetor having a mixture passage, a fuel conduit having an orifice, a throttle valve in said passage at the engine side of said orifice and adapted to be opened as a result of suction effects induced at predetermined operating speeds of the engine and adapted to close said passage at predetermined low speed of the engine, fuel metering means associated with said orifice and movable to vary the fuel supply by the movement of said throttle valve, and vacuum operated means for opening said orifice when said throttle valve is closed and movable independently of the latter.

2,002,733

SCREEN FOR RECEIVING PROJECTED IMAGES

Francis Earle, Montclair, N. J., assignor to The Mearl Corporation, Montclair, N. J., a corporation of New Jersey
Application March 9, 1933, Serial No. 660,115
8 Claims. (Cl. 88—24)



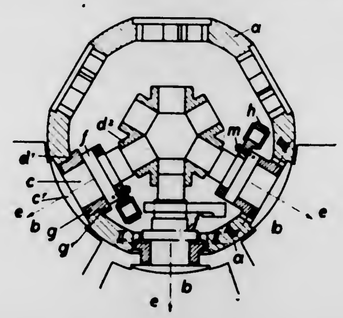
1. A screen for receiving projected images comprising a background and a lacquer surface coating with crystals of pearl essence dispersed therein.

2,002,734

DISPLAY ARTICLE AND METHOD OF PRODUCING THE SAME

Harve Ferrill, Chicago, Ill., assignor to Creative Displays, Inc., Chicago, Ill., a corporation of Illinois
Application May 16, 1934, Serial No. 725,886
6 Claims. (Cl. 40—126)

1. An article of the kind described embodying therein a length of corrugated sheet material formed into a tubular body having a periphery approximating said length, inner members, one for and extending around the inside of each end of the body, and outer members, one for and extending around the outside of each end of the body, said members coacting to retain the body in its tubular form, one of the outer members at one end of the body including means to provide a closure for said end of the body.



6. The steps in the method of producing a display article which consist in providing sheet material of the desired length and forming it into a tubular body having a periphery approximating said length, applying a collar to the outside of the body at a point between its ends, inserting a second collar into an end of the body and moving the first mentioned collar toward said end of the body to coact with the second collar in holding said end of the body in tubular form.

2,002,735

ADJUSTABLE BLADE RUNNER

Carl Fuchs, Mergelstetten, near Heidenheim-on-the-Brenz, Germany
Application November 19, 1931, Serial No. 575,987
In Germany November 24, 1930
9 Claims. (Cl. 253—148)

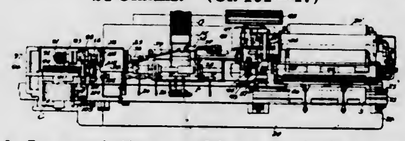
1. A runner including a one-piece hub body, runner blades, each having a trunnion provided with a rigidly fixed collar in spaced relation to the blade and the end of the trunnion, the said hub body having openings in its wall receiving the blade trunnions, bearing means within the hub body for the inner ends of the blade trunnions, split bushings within said openings bearing at their inner ends against one side of said collars and having bayonet joint means seated

against the inner face of the body wall of the hub to transmit axial thrust thereto, each trunnion, with its collar and bushing, being insertable as a unit through one of the hub openings from the exterior thereof and rocker arms for rotatably adjusting the blades rigidly fixed to the opposite side of each collar within the hub body.

2,002,736

WINDSHIELD

William J. Grotenhuis, Chicago, Ill., assignor to The Fulton Company, West Allis, Wis., a corporation of Wisconsin
Application August 4, 1930, Serial No. 473,046
Renewed April 9, 1934
14 Claims. (Cl. 296—84)

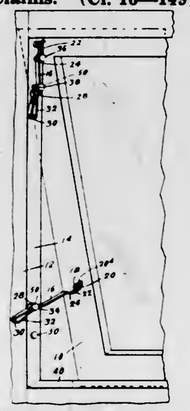


1. In combination, a deflector shield, supporting members secured to opposite edges of said shield, a bracket having its medial portion pivotally associated with one of said members and having portions on opposite sides of said medial portion of greater flexibility than said medial portion and readily distortable to fit various forms of reveals, and an adjustable pivot associated with the opposite side of said shield adapted to pivot within a hole formed directly in an adjacent reveal.

2,002,737

PRINTING MACHINE

Emmett C. Hartley, Oak Park, Ill., assignor to Addressograph Company, Wilmington, Del., a corporation of Delaware
Application May 8, 1931, Serial No. 535,818
24 Claims. (Cl. 101—47)



1. In a printing machine, a printing couple, means for moving a web through said printing couple whereby impressions may be made at spaced intervals on one face thereof, means for severing sheets from the web intermediate the impressions, a platen, means for carrying the severed sheets into printing position below said platen, means for moving printing devices into said printing position whereby impressions may be made on said sheets from said printing devices, and means for rendering said platen, sheet carrying means, severing means, and web moving means inoperative when predetermined of the printing devices move into printing position.

2,002,738

STORM WINDOW AND SCREEN HANGER

Richard J. Haug, Nashua, N. H.
Application January 3, 1933, Serial No. 649,961
4 Claims. (Cl. 16—149)

1. A hanger for storm windows and the like comprising a member adapted to be secured to a window, and a spring lever pivotally connected with said member having longitudinally spaced indented portions providing pin seats on its opposite faces and a third pin seat spaced beyond the other pin seats and a loop beyond said third pin seat having a reflexed pin-engaging end which overlies and is spaced from the entrance of said third pin seat and is arranged to bear resiliently against a pin therein to hold the pin in said pin seat.

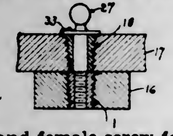
2,002,739

EXTENSIBLE ELECTRIC CONDUCTOR

Karl Herkenberg, Oberbarmen-Heckinghausen, Germany
Application December 11, 1931, Serial No. 580,385
In Germany December 5, 1930
2 Claims. (Cl. 173—264)

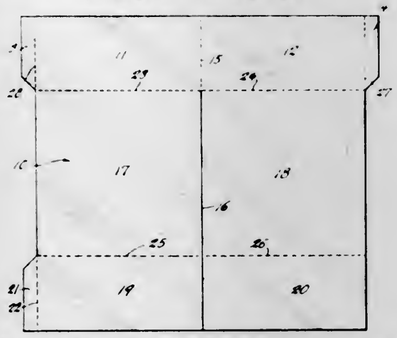
1. A longitudinally expansible electric conductor comprising a core of elastic material and con-

ductor elements loosely braided around said core, each of said elements comprising an in-



sulating thread and a flat metallic band spirally wound around the insulating thread.

2,002,740
AEROPLANE
Jakob Hojnowski, Nekoosa, Wis.
Application July 11, 1934, Serial No. 734,660
3 Claims. (Cl. 244—21)

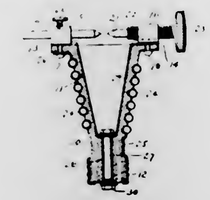


1. In an aeroplane, a fuselage, a wing on the fuselage, dive controlling ailerons at the leading and trailing edges of the wing, an elevator at the rear end of the fuselage, a track in the fuselage, a wheeled weight on the track, a sliding passenger carriage in the fuselage, means forming direct connections between the sliding carriage and ailerons for operation thereof by movements of the carriage, including journalled shafts in the wing to which the ailerons are attached, rack and pinion connections between one end of the carriage and a shaft, link arm connections between the other end of the carriage and the other shaft, cable connections between the wheeled weight and elevator, a parachute casing having hinged covers, connected and tensioned latch rods for holding the covers in closed position, an arm projecting from one latch rod, and a lever for restraining the arm from movement having a cable connection with the wheeled weight for operation of the lever to release the arm.

2,002,741
SCREW FASTENING MEANS
Emma F. Hunt, Brooklyn, N. Y.
Application July 30, 1932, Serial No. 627,059
2 Claims. (Cl. 85—1)

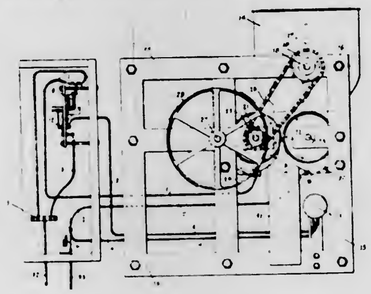
1. A male and female screw for pivotally holding an object, comprised of a female member having an outside wood screw thread, and an inside machine screw thread, a flange with a multiple of downwardly upset portions adjacent its periphery and a slot on the flange of less length than the diameter of the flange, a bearing member having on outside wood screw thread, an inside through hole, a flange with a multiple of downwardly upset portions thereon and a screw slot in the flange and a male member provided with machine screw threads engageable with the machine screw threads of the female member, a head with a handle, said head provided with a flange holding an adjustable locking pin.

2,002,742
CONTAINER
Samuel Karasik, Oak Park, Ill., assignor to The Curtiss Candy Company, Chicago, Ill., a corporation of Illinois
Application August 18, 1934, Serial No. 740,396
1 Claim. (Cl. 229—30)



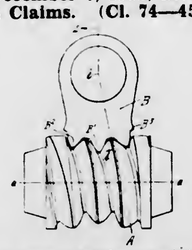
A blank for forming a box and comprising opposed members divided in part by a slit and in part by a score, each member having a main body and opposed extensions, one extension from each member being integral with an extension from the other member and separated by such score, and the main bodies and the other extensions being separated by such slit, there being tabs upon three of said extensions and the fourth being without a tab.

2,002,743
MINING MACHINE
Frank A. Lindgren, Western Springs, Ill., assignor to Goodman Manufacturing Company, Chicago, Ill., a corporation of Illinois
Application December 5, 1932, Serial No. 645,648
25 Claims. (Cl. 262—30)



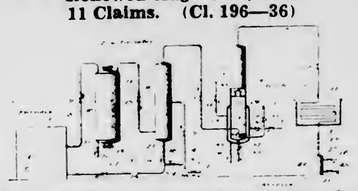
7. In a mining machine, a motor, cutting mechanism disposed forwardly of said motor including a horizontal plane chain carrying cutter bar pivotally movable about a vertical axis, feeding mechanism disposed rearwardly of said motor including a feed drum and a transversely extending shaft operably connected with said feed drum adjacent its outer end selectively driven by said motor, and other means driven from said shaft independently of said feed drum for pivotally moving said cutter bar about a vertical axis comprising a rack adapted to have connection with said cutter bar, a pinion meshing therewith, and a drive connection from said shaft to said pinion.

2,002,744
ELECTROTHERAPEUTIC ELEMENT
Louis Ludwig, Brooklyn, N. Y.
Application January 20, 1933, Serial No. 652,660
2 Claims. (Cl. 174—177)



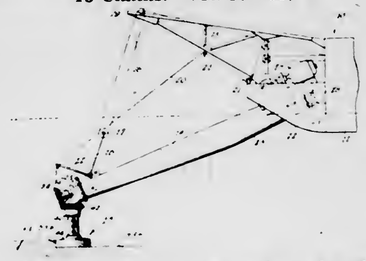
1. An element of the class described comprising an insulating and heating resisting cup-shaped body member having a rear extension, a threaded contact shell secured on said rear extension, a pair of oppositely-disposed and sidewardly-extending lugs formed on the outer end of the body member, a pair of electrode supports secured on said lugs, a pair of electrodes mounted in said supports, a resistance element spirally wound on the outside of the cup-shaped part of the body member, an opening formed centrally in the rear extension of the body member, a center contact secured in said opening, and the resistance element connected in series with the electrodes and with the threaded shell and the center contact.

2,002,745
MACHINE AND METHOD FOR DETECTING PINK BOLLWORM IN COTTON SEED
Robert E. McDonald, San Antonio, Tex.; dedicated to the free use of the Public
Application October 14, 1932, Serial No. 637,802
2 Claims. (Cl. 177—311)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



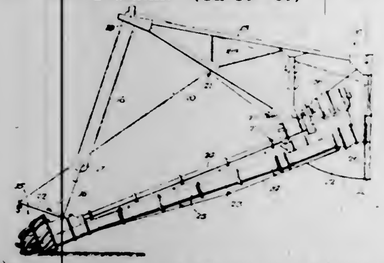
1. In a device for detecting the presence of bollworms in cotton seed, the combination of a pair of electric current conducting empaling means, means for moving said empaling means into opposed registering relation out of contact but spaced apart less than the diameter of a cotton seed, means for positioning a cotton seed between said empaling means for empalement thereby, an electrically operated indicating device, a source of electric energy electrically connected with said empaling means and indicating device in such a manner as to operate said indicating device upon establishment of an electrical communication between said empaling means.

2,002,746
STEERING GEAR
Edward W. Miller, Springfield, Vt., assignor to The Fellows Gear Shaper Company, Springfield, Vt., a corporation of Vermont
Application December 7, 1932, Serial No. 646,093
14 Claims. (Cl. 74—458)



1. A steering gear couple consisting of an hour glass worm having a thread with bearing portions of which the opposite sides are straight in axial profile, and a complemental gear segment having spur teeth which as a whole are parallel to its axis and are conjugate to the thread convolutions on a pitch circle of smaller radius than the pitch meridian of the worm.

2,002,747
TREATMENT OF HYDROCARBON OILS
Jacque C. Morrell, Chicago, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a corporation of South Dakota
Application January 30, 1931, Serial No. 512,475
Renewed August 23, 1933
11 Claims. (Cl. 196—36)

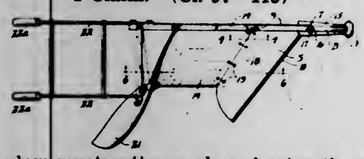


1. In the refining of cracked hydrocarbon vapors, the step which comprises passing the vapors with ammonia gas through molten alkalinous metal.

2,002,748
HYDRAULIC DREDGE
Aloys Neveling, Chicago, Ill.
Application July 9, 1932, Serial No. 621,662
13 Claims. (Cl. 37—65)

1. The combination in a dredge, of a downwardly inclined suction conduit, and a cutter rotatably mounted on the lower end of said conduit, said cutter having a lower cutting blade of general spiral form comprising a series of sections arranged end to end, said sections being of linear form and being relatively inclined to each other.

2,002,749
HYDRAULIC DREDGE
Aloys Neveling, Sr., Chicago, Ill.
Application April 16, 1934, Serial No. 720,722
1 Claim. (Cl. 37—67)

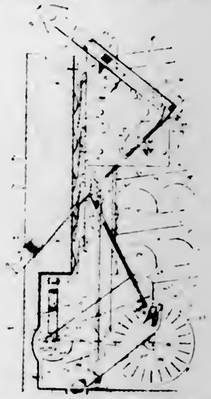


The combination in a dredge, of a suction conduit, a head mounted at the end of said conduit and comprising a radial disk having a tubular shell extending endwise therefrom, said disk having a passage leading therethrough into said conduit, said shell having another passage leading therethrough into said conduit, said shell being closed at its outer end except for said last named passage, and a rotary cutter mounted to revolve about said head, two annular series of cutting blades, one series of cutting blades being located around said shell and arranged to discharge into said first named passage, the other series of cutting blades being located beyond the end of said shell and being adapted to discharge into said last named passage.

2,002,750
JIG SAW PUZZLE
Minnie E. Noble, Berkeley, Calif.
Application September 28, 1932, Serial No. 635,164
3 Claims. (Cl. 273—157)

1. In a puzzle of the character described, a blank of soft compressible rubber or the like arranged for cutting into a plurality of odd-shaped sections for assembly, and a figured cover of substantially inelastic material secured to one side of said blank and serving to hold the blank fibers adjacent the cover against transverse distortion for cutting of the blank and as an inelastic base against which the blank may be cut.

2,002,751
PLOW
Nels F. Nordstrom, Minneapolis, Minn.
Application May 1, 1933, Serial No. 668,789
1 Claim. (Cl. 97—115)



In plow construction, a share having the usual point, landside and cutting edge, a mold board, the lower or forward edge of which is contoured to in effect form a continuation of the coutour of the rear edge of said share, the working surface of said mold board being curved convexly in horizontal cross section and being concave rearwardly and upwardly throughout its entire length and having a wing at its upper end opposite to said landside, said wing being shaped as a continuation of the contour of the body of said mold board and being also curved convexly in horizontal cross section and being curved concavely in a longitudinal direction.

2,002,752
APPLICATOR CAP
John J. Pahls, St. Louis, Mo., assignor to Anchor Cap & Closure Corporation, Long Island City, N. Y., a corporation of New York
Application May 17, 1932, Serial No. 611,784
8 Claims. (Cl. 91—67.2)

1. In a device of the class described, the combination of a closure cap having a well extending downwardly from the underside thereof, a peg member extending into and secured to said well, and a quill adapted to be used as an applicator, said quill being telescoped over said peg member and secured thereto, said peg member extending downwardly from said well a substantial distance and extending into said quill a substantial distance to reinforce the quill against transverse bending and splitting when utilized as an applicator.

2,002,753
VENDING MACHINE
Robert D. Parks and Glenn W. Hildenbrand, Lohrville, Iowa, assignors to National Vending Company, Burnside, Pa., a corporation of Delaware
Application February 7, 1931, Serial No. 514,091
7 Claims. (Cl. 194—1)

1. In a vending machine of the character described, a coin chute, electrically actuated means for controlling the discharge of articles from the

machine, a switch for said means, an operator for the switch and disposed to be actuated by the coins passing through the chute, and means actuated by the first named means and associated with the chute for automatically selecting therefrom certain of the coins as a rental charge for the machine.

2,002,754
MACHINE FOR MAKING SPRINGS
Alfons F. Prange, St. Louis County, Mo.
Application October 21, 1933, Serial No. 694,588
17 Claims. (Cl. 153—64)

1. A machine for making springs comprising a base, a rotative spindle supported vertically by said base and having a vertical slot in its upper end adapted to receive the inner ends of bands or tapes to be coiled into springs, a spring ejector mounted in said base and supporting the upper end of said spindle and means supported above said base and engageable with said upper end of said spindle for rotating the same to coil said bands or tapes around said spindle and around each other.

2,002,755
STUNNING TONGS
Richard W. Regensburger, Chicago, Ill., assignor, by mesne assignments, to Institute of American Meat Packers, Chicago, Ill., a corporation of Illinois
Application November 21, 1933, Serial No. 699,029
15 Claims. (Cl. 175—311)

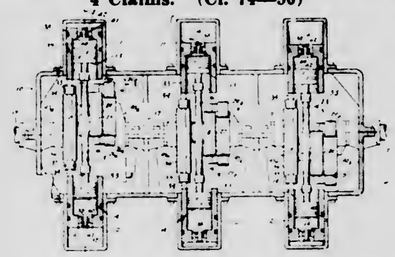
1. An instrument for electrically stunning animals, which instrument comprises a pair of spaced prongs each of which is provided with a flesh engaging electrode, a leading in wire, connected to one of said electrodes, a leading out wire connected to the other electrode, a switch carried by the handle portion for opening and closing at will to control the flow of current from one electrode to the other, and tubular piping for supplying brine to said electrodes.

2,002,756
MARKER
George Segelhorst, Stowe, Ohio
Application January 24, 1934, Serial No. 708,690
11 Claims. (Cl. 40—125)

4. A portable marker comprising a molded rubber deformable base, a weight embedded in the lower portion of said base, said base having a cavity above said weight and deformable staff removably carried by said base, said base

having a plurality of integral radial flanges extending outwardly from the bottom thereof and an integral, outwardly extending circumferential flange disposed above said weight.

2,002,757
LIQUID DISPENSING SYSTEM
Reginald C. Shand, Piedmont, Calif.
Application August 28, 1933, Serial No. 687,038
4 Claims. (Cl. 221—67)



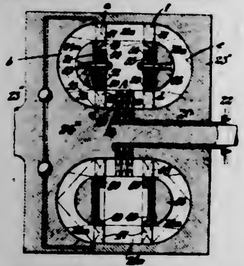
1. In a system of the character described, a motor vehicle carrying a liquid tank, a fluid pressure-operated valve unit for dispensing liquid from said tank, means for applying fluid under pressure to said valve unit to effect opening of the same, and fluid pressure-operated means having a fluid connection with said last named means and serving to preclude operation of the motor of the vehicle when said valve unit is opened.

2,002,758
PROCESS OF MANUFACTURING AN ALUMINUM ALLOY
Ernest W. Westhoff, Detroit, Mich.
No Drawing. Application September 18, 1933, Serial No. 689,956
8 Claims. (Cl. 75—1)

1. The process of making an aluminum and chromium alloy, which comprises reducing the aluminum to a molten state, and adding chromium in the form of an electroplated deposit.

2,002,759
INTERNAL COMBUSTION ENGINE
Esau Workman, Corcoran, Calif.
Application September 26, 1933, Serial No. 691,028
4 Claims. (Cl. 74—50)

1. In an engine, a group of piston cylinders which are arranged in pairs, the cylinders which compose each of said pairs being in a parallel



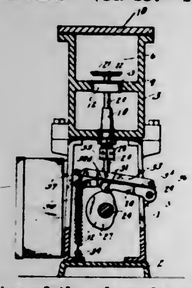
spaced relation to each other, supporting means whereon said cylinders are mounted, a piston rod frame, pistons carried by said frame, a piston being thus provided for each of said cylinders, a crank shaft having a crank portion, a rotor mounted on said crank portion, a frame having a central portion in an operative relation to said rotor, said frame having raceways at opposite sides of said rotor, and means mounted upon said piston rod frame to travel along said raceways and thereby actuate the last recited frame and rotate said shaft, said raceways being elliptical in shape and having their long axes directed at substantially right angles to the direction of the reciprocation of said piston rod frame.

2,002,760

FLUID TRANSMISSION OF POWER

Walter Gordon Wilson, Martyr Worthy, Winchester, England

Application June 11, 1934, Serial No. 730,162
In Great Britain December 14, 1932
22 Claims. (Cl. 60—54)



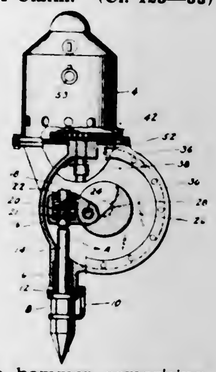
6. A hydraulic transmission comprising driving and driven members having vanes, a fluid circulating between said members and a fluid return passage between said members, sets of rotary vanes in said passage, and means operatively connecting the sets of vanes together whereby the movement of the fluid past one set of vanes rotates the latter in one direction and causing another set to rotate in the opposite direction to impart rotation to the fluid.

2,002,761

AUTOMATICALLY CONTROLLED MULTIPLE VALVE FOR STEAM LINES

Charles E. Armstrong, Corvallis, Oreg., assignor to Armstrong Heat Control Corporation, Corvallis, Oreg., a corporation of Oregon

Application June 21, 1933, Serial No. 676,884
3 Claims. (Cl. 137—145)



1. In a device of the class described, the combination of a base, a mechanism supporting frame superposed on the base, a steam chest superposed on the frame, a diaphragm disposed within the chest, valves disposed in the diaphragm, the stems extending downwardly therefrom, a cam shaft journaled relative to the frame and extending longitudinally thereof, a prime mover disposed upon the base, a speed reducer interposed between the prime mover and the cam shaft and adapted for driving the cam shaft at a reduced speed, a plurality of cams spaced apart and disposed upon the cam shaft, a valve lifter hinged relative to the frame, the valve lifter being adapted for riding the camming surface of the cam, and engaging the lower end of the valve stem for coacting with the depending valve stem to operate the valve, a floating linkage member linked to the body element and pivotally secured to the valve stem and provided at its free end with spring anchorage means and a reactance member secured at its one end to the free end of the floating linkage member and at its other end to the frame.

2,002,762

ELECTRIC HAMMER

Eber Watson Badcon, Seattle, Wash., assignor to Resilent Hammer, Inc., Seattle, Wash., a corporation

Application February 12, 1934, Serial No. 710,963
1 Claim. (Cl. 125—33)

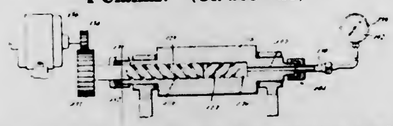
An electric hammer comprising a casing, a hammer base rotatably mounted in the casing, power means associated with the casing for rotating the hammer base, an arm pivotally connected to the hammer base, a striker member carried by said arm and resilient means positioned between said striking member and said arm.

2,002,763

HEATING CONVECTOR

Edward J. Bair, New Hartford, N. Y., assignor to Utica Radiator Corporation, Utica, N. Y., a corporation of New York

Application July 26, 1934, Serial No. 737,020
7 Claims. (Cl. 257—150)



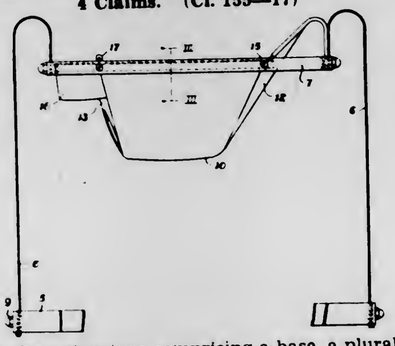
2. A cast metal heater section of the convector type comprising a horizontal tube having a header at each end; a rectangular frame, of substantially the same height as the section, surrounding said tube and said headers; a set of fins formed between the tube and headers and the sides of said frames and extending from the vertical center axis of the section to the top of the section; another set of fins formed between the tube and headers and the sides of the frames but extending from the center axis to the bottom of the section; said sets of fins staggered in relation to each other; openings in the top and bottom of said headers for connecting the sections vertically above each other; and means for connecting the inlet and outlet pipes either to the bottom or the sides of the section.

2,002,764

BRAKE TESTING MACHINE

Frank P. Bucklein, Los Angeles, Calif., assignor to Bucklein Manufacturing Corporation, Ltd.

Application March 13, 1929, Serial No. 346,627
4 Claims. (Cl. 265—25)



3. A brake testing machine comprising a wheel engaging roller having a longitudinally axial bore internally threaded therein, a threaded shaft extending into the bore with its threads meshing with the threads of the bore, said shaft being mounted for rotation and longitudinal movement, means for rotating the shaft, and means resisting longitudinal movement of the shaft with respect to the roller, said means serving to measure forces longitudinally effective upon the shaft.

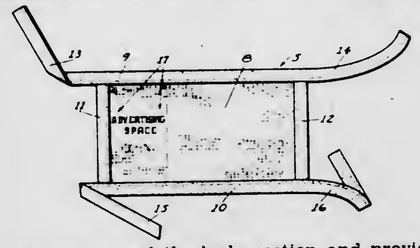
2,002,765

CHAIR

James Waring Carpenter, Pittsburgh, Pa., assignor to The McKay Company, Pittsburgh, Pa., a corporation of Pennsylvania

Application October 30, 1933, Serial No. 695,763
4 Claims. (Cl. 155—17)

2. Seat structure comprising a base, a plurality of bars of spring-like material, secured at their lower ends to the base and extending vertically in straight lines throughout the major portion of their length, the upper portions of the bars being bent inwardly and downwardly, and a seat secured to the downwardly-bent upper extremities of the said bars, the bars being of substantially uniform flexibility throughout their lengths.



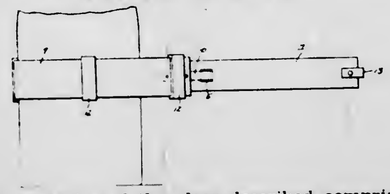
2,002,766

PINCUSHION ADVERTISING DEVICE

Henry F. Carlston, Daly City, Calif.

Application August 16, 1933, Serial No. 685,319
2 Claims. (Cl. 223—60)

1. A combined advertising novelty and pin cushion to be attached to the sewing machine, and embodying a rectangularly shaped cotton fabric body section having all edges bound and stitched, and the side sections of said binding



projecting beyond the body section and providing means for attaching the body section to a portion of the sewing machine.

2,002,767

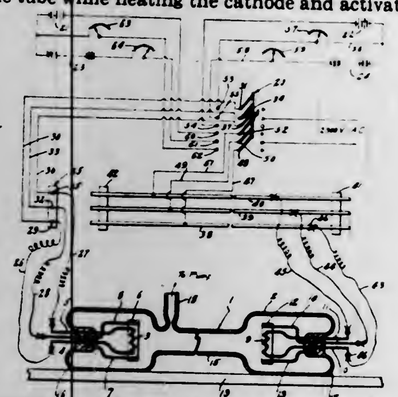
JAR OR BOTTLE HOLDER

Joseph Louis Donovan, Duluth, Minn.

Application June 29, 1934, Serial No. 733,145
2 Claims. (Cl. 81—3.2)

1. A device of the class described comprising a handle of tubular form and having a plurality of spaced openings in one side thereof and an opening in the opposite side adjacent one end thereof, said one end having an eye therein, a flexible band having means at one end for engaging the eye and adapted to pass through the second mentioned opening and having a hook at its free end for engaging any one of the other openings.

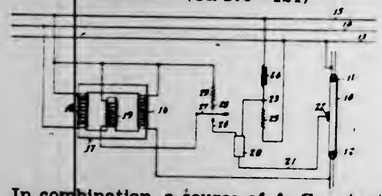
2,002,768



METHOD OF PRODUCING HOT CATHODE TUBES

Ellis Osmon Erickson, Pasadena, Calif., assignor to Claude Neon Electrical Products Corporation, Ltd., Wilmington, Del., a corporation of Delaware

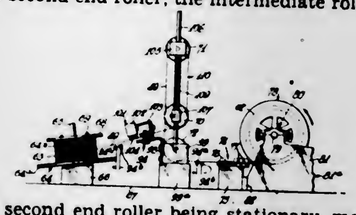
Application May 10, 1932, Serial No. 610,454
3 Claims. (Cl. 176—2)



2. The method of processing hot cathode electrical discharge tubes having a coated cathode and having an activating electrode adjacent the cathode and another electrode at a point remote from the cathode which includes the steps of (1) applying a high potential between the activating electrode and the remote electrode while maintaining sufficient gas pressure in the tube to produce a discharge capable of heating the envelope of the tube to remove gas therefrom; (2) exhausting the tube to a very low pressure while applying potential between the cathode and its adjacent activating electrode to activate the electrode; (3) introducing into the tube at sufficient pressure to support an envelope-heating discharge, a gas which is chemically inactive with respect to the activated cathode and again applying a high potential only between the activating electrode and the remote electrode to remove from the envelope any gas absorbed thereby during the activation of the cathode; (4) exhausting

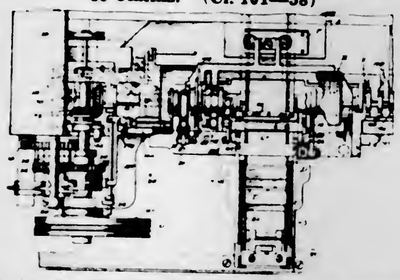
the tube while heating the cathode and activating

electrode, and (5) introducing the desired operating gas and sealing off the tube.



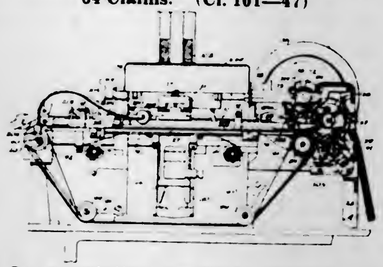
2,002,769
ELECTRICAL CONTROL CIRCUIT
Ellis Osmon Erickson, Pasadena, Calif., assignor to Claude Neon Electrical Products Corporation, Ltd., Wilmington, Del., a corporation of Delaware
Application May 15, 1933, Serial No. 671,055
9 Claims. (Cl. 176—124)

1. In combination, a source of A. C. potential; a non-self-starting gaseous discharge device having high impedance when not operating, a lower impedance when operating, and requiring current in excess of a predetermined value to maintain it in operation; means for supplying operating current from said source to said discharge device comprising a transformer having first and second core sections constituting a closed magnetic circuit of low reluctance, and a third core constituting a magnetic circuit of relatively high reluctance in shunt to said first and second sections, said first core section having a primary winding thereon connected to said source, said second core section having a secondary winding thereon connected to said discharge device, and said third core section having a control winding thereon; and a switch and impedance element connected in series with said control winding for decreasing the current supplied to said discharge device below said predetermined value in response to closure of said switch.



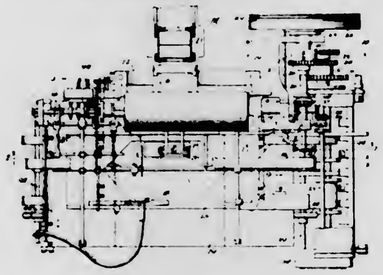
2,002,770
WIRE TESTING MACHINE AND METHOD
Crosby Field, Brooklyn, N. Y., assignor to Brillo Manufacturing Company, Inc., a corporation of New York
Original application June 18, 1927, Serial No. 199,692. Divided and this application August 3, 1928, Serial No. 297,320. In Canada June 11, 1928
14 Claims. (Cl. 265—18)

2. A wire testing device, including an end roller, a second end roller, an intermediate roller, the wire extending from its source around the intermediate roller, then around the first end roller and then around the second end roller, wire traction means to which the wire is conducted from the second end roller, the intermediate roller and



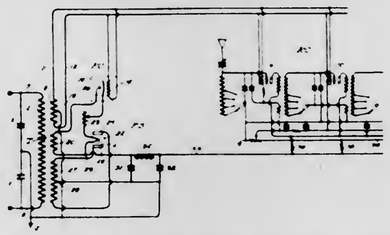
the second end roller being stationary, means to floatingly support the first end roller, a spring against the action of which the first roller may move bodily in accordance with the tension of the wire, all bends of the wire around said rollers being in the same direction.

2,002,771
PRINTING MACHINE
Walter T. Gollwitzer, Chicago, Ill., assignor to Addressograph Company, Chicago, Ill., a corporation of Delaware
Application November 22, 1930, Serial No. 497,438
46 Claims. (Cl. 101—58)



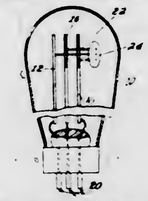
1. In a printing machine, printing means, means for sequentially moving lead and follower printing devices past the printing means, a selector for determining the operation of said printing means, and detecting means including a part cooperating with the lead printing devices to determine the set-up of said selector and another part cooperating with the follower printing devices to maintain the set-up of said selector.

2,002,772
PRINTING MACHINE
Walter T. Gollwitzer, Chicago, Ill., assignor to Addressograph Company, Chicago, Ill., a corporation of Delaware
Application November 22, 1930, Serial No. 497,439
64 Claims. (Cl. 101—47)



1. In a printing machine, printing means, means for moving a sheet across the machine and past said printing means in one direction and for discharging the sheet, means for moving the sheet past the printing means in the opposite direction prior to movement thereof from the machine, and means for moving the sheet transversely to said first-named movements whereby printing operations may be performed on different portions of said sheet.

2,002,773
PRINTING MACHINE
Walter T. Gollwitzer, Chicago, Ill., assignor to Addressograph Company, Chicago, Ill., a corporation of Delaware
Application November 22, 1930, Serial No. 497,440
20 Claims. (Cl. 101—47)



1. In a printing machine which has printing means and means for controlling the operation thereof whereby a variable number of impressions may be made on a sheet fed into the machine, sheet feeding means, and means controlling the operation of said sheet feeding means and including a part which is in operative position when the last impression is being made on a sheet and another part operating in timed relation with the printing means and cooperating with the first part to delay feeding of a new sheet into the machine until the last impression has been made on a previously fed sheet.

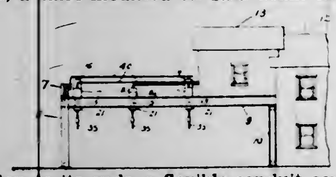
2,002,774
POWER SUPPLY CIRCUIT
Sigwald M. Hammer, Chicago, Ill., assignor to Kellogg Switchboard and Supply Company, Chicago, Ill., a corporation of Illinois
Application February 11, 1929, Serial No. 339,043
20 Claims. (Cl. 250—27)

19. In combination, an electric translating circuit including an electric valve provided with a thermionic cathode and means having thermal characteristics similar to those of said cathode for maintaining said valve non-conducting for a sufficient interval of time after the energization of said circuit for said cathode to reach substantially its normal operating temperature.

2,002,775
CATHODE GLOWLAMP
Andrew F. Henninger, Jr., Chicago, Ill.
Application June 21, 1930, Serial No. 462,744
10 Claims. (Cl. 176—14)

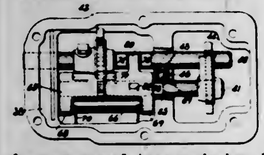
1. A glow lamp, comprising a sealed envelope having a gaseous filling, a plurality of electrodes within the envelope, each electrode formed of a conducting material adapted to glow when connected to a source of potential, one of said electrodes comprising a sheet of wire mesh, said wire mesh having means thereon producing a half-tone lighting effect when the lamp is viewed from the wire mesh side.

2,002,776
SAFETY SYSTEM FOR THERAPEUTIC LAMPS
Ralph C. Hyde, Los Angeles, and Ellis O. Erickson, Pasadena, Calif., assignors to Claude Neon Electrical Products Corporation, Ltd., Wilmington, Del., a corporation of Delaware
Application December 5, 1933, Serial No. 700,978
4 Claims. (Cl. 171—97)



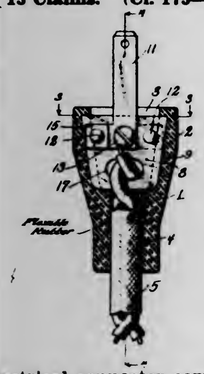
3. In a system of the character described, a transformer, a receptacle having electrical terminals connected to the high potential winding of said transformer, a switch on said receptacle connected to the low potential winding of said transformer, a plug connection having electrical terminals thereon connected to said electrical apparatus for insertion in and engagement with said receptacle terminals, a cover plate on said receptacle having openings therein through which said plug terminals may pass, means mounting said receptacle terminals out of alignment with the openings in said plate whereby said plug terminals must be inserted through said openings and then rotated relative to said receptacle to engage said receptacle terminals, a guide stem on said plug in fixed relation thereto, and means on said guide stem operably responsive to rotation thereof for engaging and closing said switch only when said plug terminals are in engagement with said receptacle terminals.

2,002,777
SERVICE STATION
Henry C. Johnson, Colton, Calif.
Application May 28, 1934, Serial No. 727,991
4 Claims. (Cl. 221—67)



1. In a structure for the purpose stated, a transversely extending beam, means to support

said beam at its end portions in an elevated position, a tank mounted on said beam in spaced

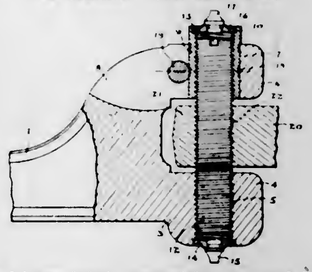


relation to its ends, a flexible conduit communicating with said tank, and means supported by said beam to extensibly support said conduit.

2,002,778
TRANSMISSION
Joseph H. Jones, South Bend, Ind., assignor to The Studebaker Corporation, South Bend, Ind., a corporation of Delaware
Application October 31, 1932, Serial No. 640,411
6 Claims. (Cl. 74—475)

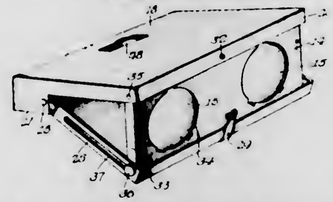
1. In a change-speed transmission having selectively engageable gear elements and a shifter bar for engaging said gear elements in different speed ratios, a locking device for maintaining said gear elements against accidental disengagement comprising, a substantially flat plate pivotally mounted at one side of said shifter bar at substantially the horizontal axis thereof having means thereon to cause disengagement of said plate with said shifter bar during the initial longitudinal movement of said bar, and a tongue on said plate in the horizontal plane thereof engageable with said shifter bar to positively restrain said bar against accidental movement after the said longitudinal movement thereof.

2,002,779
CONNECTER CAP
Francis C. Kollath, Chicago, Ill., assignor, by mesne assignments, to Cutler-Hammer, Inc., Milwaukee, Wis., a corporation of Delaware
Application October 21, 1929, Serial No. 401,049
13 Claims. (Cl. 173—361)



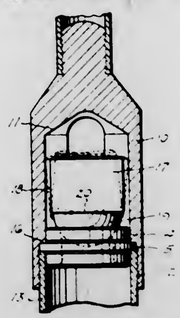
6. An electrical connecter comprising a casing made of elastic material having oppositely disposed longitudinal grooves therein, a relatively thin but relatively rigid insulating base slidingly and removably received in said grooves and longitudinally disposed in said casing, means for holding said base in said grooves, and electrical contacts connected with said base and having portions thereof projecting from said casing.

2,002,780
GATE VALVE
Milton P. Laurent, Houston, Tex., assignor to W-K-M Company, Inc., Houston, Tex., a corporation of Texas
Application October 4, 1930, Serial No. 486,383
1 Claim. (Cl. 251—68)



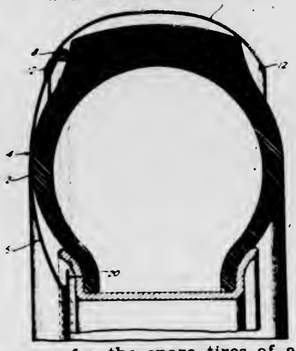
In a valve of the class described, the combination of a valve housing having aligned ports and an interior chamber, parallel valve seats in said housing, a gate valve mechanism having a port for registration with said housing ports and slidable on the seats to move its port into or out of registration, said valve mechanism including two members having outer parallel faces abutting said seats and having inner abutting faces in angular relation to provide a wedge-like action when the members are shifted relatively to each other to expand the gate mechanism with respect to the valve seats, means for sliding the gate mechanism on said seats, means for shifting the members of said gate mechanism relatively longitudinally to each other on their inner abutting faces, means for maintaining said members with their inner abutting faces in contact during the sliding movement of the gate mechanism said means including spring clips disposed at the sides of said gate mechanism and lugs on said gate mechanism engaged by said spring clips, to prevent leakage of fluid between the said members of the gate mechanism, and spring actuated sealing rings in said seats surrounding the ports and yieldingly bearing against the parallel outer faces of the members of the gate mechanism to prevent leakage of fluid between said gate mechanism and the seats.

2,002,781
HINGED JOINT
John Wycliffe Leighton, Port Huron, Mich.
Application September 15, 1934, Serial No. 744,147
4 Claims. (Cl. 287—100)



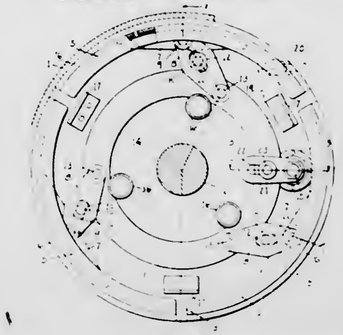
1. A hinge joint comprising spaced lugs having axially aligned orifices, the wall of one orifice having a threaded bearing surface, and a hinge pin threaded externally and having a threaded bearing engagement with the threaded wall of said orifice and having its other end supported in a journal bearing in the other of said lugs.

2,002,782
OPERA GLASS
Robert G. Lester, Chicago, Ill.
Application September 13, 1933, Serial No. 689,174
11 Claims. (Cl. 88—35)



1. An opera glass of the character described, comprising in combination a pair of complemental casing-members arranged in superposed relation and hinged together at the front ends thereof so that they may be swung to and from one another, a plate with objective lenses mounted thereon connected pivotally to the rear end of one of the casing-members and adapted to be swung from a folded position between the two members into an operative position wherein it extends substantially transversely of the members and vice versa, a pin and slot connection between the plate and the other casing-member whereby said other casing-member is caused automatically to be swung away from said one casing-member when the plate is swung into its operative position and is also caused automatically to be swung towards said one casing-member when the plate is swung into its folded position, and eye lenses at the front ends of the casing-members arranged so that they are aligned and centered with the object lenses when the plate is in its operative position.

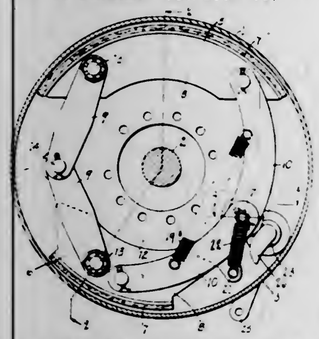
2,002,783
VALVE
Jon R. Long, Fort Worth, Tex.
Application July 31, 1933, Serial No. 682,963
2 Claims. (Cl. 251—127)



1. In a fluid pump valve including a cylindrical valve cage and a valve seat having a spherical seat for a drop, a drop for said valve including a cylindrical guide portion of less diameter than the internal diameter of the valve cage so as to be guided by the cage but permit free vertical and lateral movement, and a semi-spherical ball end for cooperation with the valve seat having a diameter less than that of said cylindrical guide portion so that the cylindrical guide portion will provide a shoulder completely surrounding and overhanging the ball end whereby foreign matter running down the guide will fall off instead of running down the ball and forming a coating thereon and whereby the drop will permit a stream-line flow of fluid through the cage substantially without turbulence.

2,002,784
COVER FOR SPARE TIRES OF AUTOMOBILES
George Albert Lyon, Allenhurst, N. J., assignor to Lyon Incorporated, Asbury Park, N. J., a corporation of Delaware
Application October 25, 1929, Serial No. 402,361
2 Claims. (Cl. 150—54)

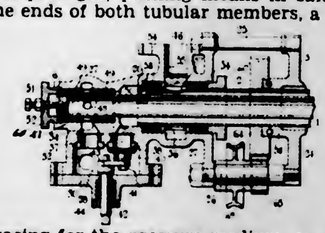
1. A cover for the spare tires of automobiles comprising, in combination, a section of flexible sheet material for covering one side of a tire, and a reinforcing ring of strip material having its outer face inclined to the axis of the ring to which ring the margin of said section is secured to reinforce the same.



2,002,785
CLUTCH OR BRAKE, OR LIKE MECHANISM
Joseph Melling, Jackson, Mich.
Application September 2, 1931, Serial No. 560,730
8 Claims. (Cl. 188—78)

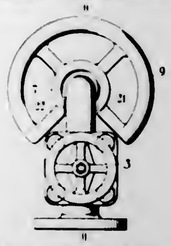
1. In a structure of the class described, the combination of a drum, a plate-like support member, a plurality of segmental shoes of channel cross section provided with centrally disposed webs, an annular actuating member disposed at the side of said support in concentric relation to said drum, said support being provided with rollers coacting with the inner edge of said actuating member for rotatably supporting the same, longitudinally slotted links pivotally connected to said webs on said shoes and to said actuating member, pins on said support engaging said slots in said links, said support being provided with stops disposed at the ends of said shoes in coacting rela-

tion to adjacent pairs of shoes to limit the inward movement thereof, and an actuating rockshaft mounted on said support and provided with a longitudinally slotted arm, said actuating member having a pin engaging said slot whereby rotating movement may be imparted to said actuating member.



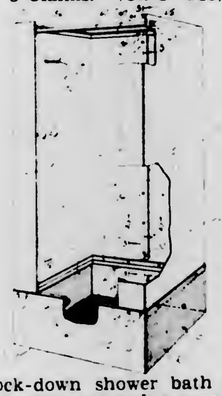
2,002,786
BRAKE
Joseph Melling, Jackson, Mich., assignor of one-half to Charles T. Cline, Jackson, Mich.
Application August 11, 1933, Serial No. 684,644
11 Claims. (Cl. 188—78)

1. In a brake the combination of a drum, a support member, a supporting and guiding plate mounted centrally on said support member and having a transverse pin at one side and a radially disposed slot at the other side, oppositely disposed forward and reverse shoes having centrally disposed webs of channel cross section receiving opposite edges of said plate whereby the plate constitutes a guide for the radial and circumferential movement of the shoes, pairs of links pivotally connecting said pin to said shoes, a journal pin disposed in the said slot for limited radial and circumferential movement relative to the drum, rollers disposed on said journal pin on opposite sides of said plate, pairs of toggle levers pivoted to said shoes and journal pin at the outer sides of said rollers, springs connecting said toggle levers and acting to retract the shoes, springs connecting the ends of said journal pin to said supporting plate and acting to position said journal pin in said slot to center the shoes in retracted position, and a cam shaft journaled in said support member and having a forked cam coacting with said rollers to expand said shoes, the forward direction of rotation of the drum being from the journal pin toward the forward shoe whereby the drum tends to expand the forward shoe and contract the reverse shoe when the cam is actuated to expand the shoes into engagement therewith on the forward rotation of the drum and on the reverse rotation tends to retract the forward shoe and expand the reverse shoe.



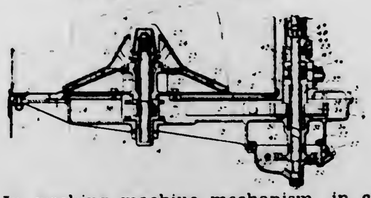
2,002,787
FLUID PRESSURE OPERATED BLOWER FOR CLEANING THE TUBES OF STEAM GENERATORS AND THE LIKE
Richard Ivor Moses, Stockton-on-Tees, England
Application December 27, 1932, Serial No. 648,922
In Great Britain December 30, 1931
2 Claims. (Cl. 122—392)

1. A fluid pressure operated blower for cleaning the tubes of steam generators and the like comprising a casing adapted to be secured to the wall of the steam generator, two tubular members one of which passes through and extends from said casing into the steam generator, the second tubular member also fitting into the casing and being external of the first and in fixed relation thereto to define an annular space therebetween, a plurality of nozzles communicating with the interior of the first tubular member, a plurality of apertures in the wall of the second tubular member, said nozzles passing through said apertures, the first tubular member being adapted to supply pressure medium only to said nozzles, diaphragms interposed between the outer tubular member and the inner tubular member to divide the said annular space into two longitudinal passages, packing means in said casing for the ends of both tubular members, a chest in



said casing for the pressure medium, an inlet for the pressure medium to said chest, two outlets for the pressure medium from said chest, one of which is in communication with the inner tubular member, and the other with one passage in the space between the tubular members, means common to both outlets for selectively admitting pressure medium either to the inner tubular member or to one passage formed by the division of the annular space, an outlet in said casing, said outlet communicating with the second passage in the space between said tubular members whereby the pressure medium may flow continuously from the inlet to the outlet through said passages when admitted thereto by said admitting means, and means for rotating said tubular members in unison.

2,002,788
FLUID PRESSURE OPERATED BLOWER FOR CLEANING THE TUBES OF STEAM GENERATORS AND THE LIKE
Richard Ivor Moses, Langley, England, assignor to Ivor Power Specialty Company, Limited, London, England, a company of Great Britain
Application March 28, 1933, Serial No. 663,196
In Great Britain April 6, 1932
4 Claims. (Cl. 122—391)



1. A fluid pressure operated blower for cleaning the tubes of steam generators and the like, comprising a cleaning fluid supply conduit, a blower tube surrounding the conduit and capable of longitudinal and rotary movement thereon, and a sealing device adapted to maintain a pressure fluid tight condition between the said supply conduit and blower tube, said sealing device comprising an annular member mounted on the said supply conduit and a head mounted on said blower tube and having an annular member cooperating with the first named annular member to form said sealing device when the annular members are brought into abutting relationship by manually controlled means and subsequently maintained in such relationship by reason of the normal operation of the blower.

2,002,789
SHOWER BATH CABINET
Edward F. Niedecken, Milwaukee, Wis.
Application February 13, 1933, Serial No. 656,513
3 Claims. (Cl. 4—146)

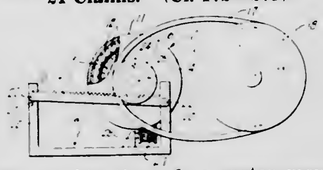
1. A knock-down shower bath cabinet comprising a receptor, a trough secured to the inner wall of the receptor, a plurality of stall forming sections having their lower ends received in and supported by said trough, a filling of packing material in said trough to form a leak-proof joint between the lower ends of said sections and said trough, fastening means for securing the lower ends of said sections in position in said trough, means for connecting adjacent portions of said sections and sealing the joint therebetween, and interengaging means between said trough and said stall forming sections for forcing said section outwardly toward the receptor.

2,002,790
WASHING MACHINE
William V. Orr, Cleveland Heights, Ohio, assignor to The Apex Electrical Manufacturing Company, Cleveland, Ohio, a corporation of Ohio
Application July 15, 1929, Serial No. 378,273
4 Claims. (Cl. 74—78)

1. In washing machine mechanism, in combination, a gear-box, a hollow sleeve traversing the same and journaled in the walls thereof, an eccentric surrounding and fastened to said sleeve, a shaft journaled in said gear-box independently of said sleeve and passing loosely therethrough, a rack operatively connected to said eccentric, a driving element for said shaft, and means for coupling said shaft to said sleeve in rotating relation.

2,002,791
METHOD OF AND MEANS FOR FLOWING OIL WELLS
Herbert C. Otis, Shreveport, La.
Application July 10, 1933, Serial No. 679,755
25 Claims. (Cl. 103—232)

1. A well flowing apparatus comprising, a tubing having an influent inlet, means for introducing and reducing the pressure of a lifting fluid into the tubing for lifting the influent flowing up the tubing, means for controlling the admission of the influent, means for operating the controlling means by the lifting fluid, and means for operating the controlling means by the submergence pressure of the influent in opposition to the lifting fluid.

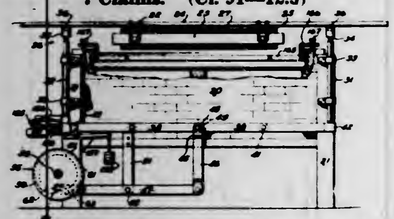


2,002,792
ORNAMENTED LEATHER AND METHOD OF MAKING THE SAME
Gilbert D. Sart, Salem, Mass., assignor of one-half to Agoos Leather Companies, Inc., Boston, Mass., a corporation of Massachusetts
Application April 26, 1935, Serial No. 18,274
13 Claims. (Cl. 41—24)

1. A method of treating leather, which comprises embossing a design on the grain side, buffing off the raised portions of the grain surface, and submerging the leather in a bath of mixed acid and direct dyes.

12. Ornamented dyed leather characterized by suede areas of one color on the grain side and grain areas of a different color contrasting with the suede areas to form a pattern.

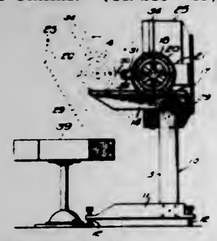
2,002,793
ELECTRIC MOTOR CONSTRUCTION
Robert N. Park, Los Angeles, Calif., assignor to Jess M. Roberts, Wilmar, Calif.
Application April 4, 1934, Serial No. 718,962
21 Claims. (Cl. 172—279)



1. The combination of: a motor mounted to rotate bodily from a de-energized position to an energized position in response to the motor

torque; and means to delay such bodily rotation during a portion of the initial acceleration of the motor.

2,002,794
PROCESS FOR THE PRODUCTION OF KETONES
Wilhelm Querfurth, Constance, Germany, assignor to Deutsche Gold- und Silber-Scheideanstalt vormals Roessler, Frankfort-on-the-Main, Germany, a corporation of Germany
No Drawing. Application May 6, 1932, Serial No. 609,763. In Germany January 29, 1929
18 Claims. (Cl. 260—134)

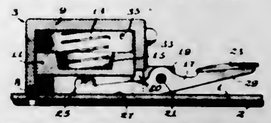


1. In the process for the production of ketones by the action of water-vapor on aliphatic alcohols with at least two carbon atoms joined together, at temperatures up to 500° C., in the presence of catalytically acting metal oxygen compounds; that improvement which consists in using catalysts containing essentially oxygen compounds of nickel in the presence of carriers containing iron, the nickel content not exceeding 20%.

2,002,795
IMMERSING MACHINE
Stanislaus Przyborowski, Buffalo, N. Y., assignor to Fedders Manufacturing Company, Inc., Buffalo, N. Y.
Application August 31, 1932, Serial No. 631,221
7 Claims. (Cl. 91—12.5)

1. A dipping machine comprising a tank containing a treating bath, a frame adapted to receive an article to be treated in position over said tank, movable supporting means for said frame, reciprocating drive means for said supporting means for alternately lowering and raising said supporting means and accompanying frame and article relative to said tank, starting means for said drive means, and means responsive to the weight of an article placed upon said frame for operating said starting means.

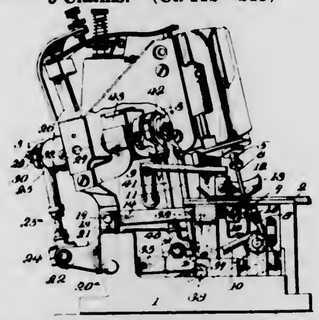
2,002,796
LAUNDRY SHAKE-OUT TUMBLER
Edward D. Purkett, Joplin, Mo., assignor to Purkett Laundry Company, Joplin, Mo.
Application March 22, 1933, Serial No. 662,159
5 Claims. (Cl. 259—29)



1. Apparatus of the character described comprising a supporting frame, a substantially cylindrical tumbler having its axis normally arranged substantially horizontally, said tumbler having an opening in one end, a shaft connected to the other end of said tumbler and journaled in said frame, a motor supported by said frame and having a pulley arranged with its axis parallel to the axis of said tumbler, and an endless belt passing around said pulley and around said tumbler, means for supporting said frame for rotation about a horizontal axis, and means for effecting bodily movement of said frame at right angles to said horizontal axis during rotation of the frame thereabout.

2,002,797
ALKALI METAL COMPOUND RECOVERY FROM WASTE ORGANIC MIXTURES
Gustave T. Reich, Philadelphia, Pa.
No Drawing. Application October 21, 1932, Serial No. 638,993
9 Claims. (Cl. 23—49)

3. Process for separating the valuable constituents of waste organic mixtures containing potassium compounds, such as fermentation residues, which comprises adding to an aqueous solution of such mixtures an ammonium salt of the group consisting of ammonium nitrate and ammonium phosphate, concentrating the solution until the bulk of the inorganic salts is precipitated, separating the potassium and ammonium salts thereby precipitated, and separating the potassium salts from the ammonium salts by selective dissolution in a volatile aliphatic water-soluble solvent in which the potassium salts are substantially more insoluble than the ammonium salts.



5. Process for separating the valuable constituents of waste organic mixtures containing potassium compounds, such as fermentation residues, which comprises adding to an aqueous solution of such mixtures an ammonium salt of the group consisting of ammonium nitrate and ammonium phosphate, precipitating the corresponding potassium salt therefrom by adding a volatile aliphatic water-soluble solvent in which the potassium salts are substantially more insoluble than the ammonium salts and separating the precipitated potassium salt.

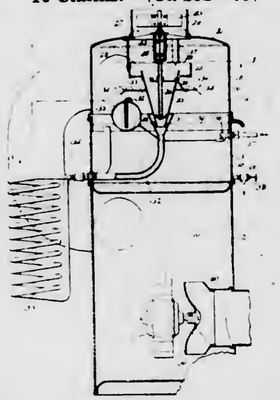
2,002,798
CONTROL DEVICE
John E. Renholdt, Bridgeport, Conn., assignor to Dictaphone Corporation, New York, N. Y., a corporation of New York
Application November 5, 1931, Serial No. 573,133
2 Claims. (Cl. 60—62.6)

1. A compressor unit for pneumatic foot control devices, comprising, in combination, a member having a cylindrical bore of large diameter relatively to the length thereof and open at one end and closed at the other, a piston in said bore, a lug formed on and extending outwardly from the peripheral wall of said member adjacent the plane of said open end, the lug and contiguous wall being slotted radially with respect to the axis of said cylinder, a radially mounted lever having contact with said piston at its inner end disposed in said slot and pivotally supported by the bifurcated parts of said lug, and means tending to hold the piston in contact with said lever.

2,002,799
SEWING MACHINE
Charles F. Rubel, Chicago, Ill., assignor to Union Special Machine Company, Chicago, Ill., a corporation of Illinois
Application February 3, 1934, Serial No. 709,645
9 Claims. (Cl. 112—215)

1. In a sewing machine, a work support, a main actuating shaft located above the work support, driving means for said main actuating shaft connected thereto intermediate the ends thereof, a feed bar, means for imparting endwise movement to said feed bar including a crank pin adjustably mounted at the rear end of said main actuating shaft, means for raising and lowering said feed bar including an eccentric strap cooperating with an eccentric on said main actuating shaft, and devices connecting said eccentric strap to said feed bar adjacent the free end thereof.

2,002,800
PLASTIC MATERIALS
Walther Schrauth, Berlin-Dahlem, Germany, assignor to Deutsche Hydrierwerke Aktiengesellschaft, Berlin-Charlottenburg, Germany, a corporation of Germany
No Drawing. Application May 7, 1932, Serial No. 609,993. In Germany March 28, 1931
3 Claims. (Cl. 106—37)



1. A composition of matter comprising the mixture with a plastic material of a plasticizing and softening agent comprising a mixed ester of an acid of the group consisting of aliphatic, cyclic and hydrocyclic diabasic acids with both an alcohol of the group consisting of methyl, ethyl, propyl and butyl alcohols and a saturated alcohol of the group obtained by hydrogenation of the natural fats and waxes and having 16 or more carbon atoms in the molecule.

2,002,801
FOOD COOKING DEVICE
Clarence Andrew Schroeder, Appleton, Wis.
Application November 27, 1934, Serial No. 755,049
1 Claim. (Cl. 53—4)

In a structure of the class described, a receptacle, a slidable cover for said receptacle, a reach rod connected with the receptacle, an actuating wire connected with said cover, a handle attached to the inner end of said rod and including a stationary section and a relatively movable companion section, the stationary section having a passage through which said wire extends, and said wire being anchored in said movable section to allow said movable section to be actuated for adjusting the cover.

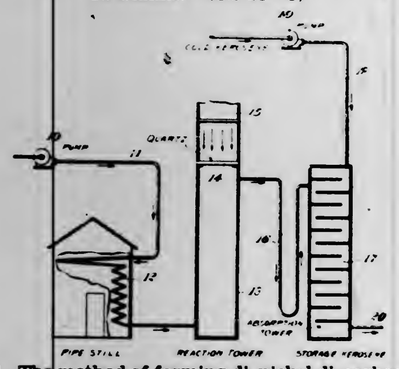
2,002,802
APPARATUS FOR CONDITIONING AIR
Herbert E. Smith and Arthur W. Smith, Gloucester, Mass.
Application February 16, 1932, Serial No. 593,214
10 Claims. (Cl. 261—79)

1. In an apparatus for conditioning air, in combination, a humidifying chamber provided with an air inlet and with an air outlet, said air inlet being eccentrically arranged to impart a rotary motion to the air admitted into said chamber, a centrifugally operating pump within said chamber for admixing water with the rotating body of air, and a windmill in said air outlet for operating said centrifugal pump.

2,002,803
SPARK PLUG
Lewis J. Tetlow, Holyoke, Mass.
Application July 24, 1931, Serial No. 552,975
22 Claims. (Cl. 123—169)

1. A spark plug insulator comprising an inner core of ceramic material having high heat resistance, an outer shell of ceramic material having high resistance to breakage, and a mica tube between the shell and the core, the grain of the mica being parallel with the surface of the core.

2,002,804
CIRCUIT CONTROLLING DEVICE
Charles F. Wallace, Westfield, N. J., assignor to Wallace & Tierman Products, Inc., Belleville, N. J., a corporation of New Jersey
Original application August 29, 1927, Serial No. 216,080. Divided and this application August 11, 1933, Serial No. 684,631
4 Claims. (Cl. 200—30)



1. A circuit controlling device, comprising a normally open switch having a movable member, an oscillating member, and an engaging member

pivotally mounted on the oscillating member and shaped and normally positioned to engage the movable switch member and to turn while in engagement therewith to maintain a fixed point of engagement with the switch member and to move the switch member to close the switch on the

movement of the oscillating member in one direction and on engagement with the switch member on the movement of the oscillating member in the other direction to turn and pass over the switch member without moving it to close the switch.

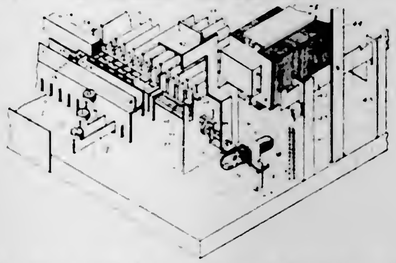
2,002,805
POLYMERIZATION OF NICKEL CARBONYL
Hugh Graham Webster, London, Ontario, Canada, assignor of one-half to John W. G. Winnett, London, Ontario, Canada
Application March 21, 1933, Serial No. 661,902
14 Claims. (Cl. 23—5)

1. The method of forming di-nickel di-carbonyl which consists in vaporizing nickel carbonyl, separating impurities therefrom by distillation, subjecting the purified nickel carbonyl to the action of actinic light rays until a compound having a boiling point of 180° F. is formed and finally drawing off the newly formed material.

14. The process of imparting anti-knock characteristics to a motor fuel which comprises dissolving therein a small proportion of a product produced by subjecting nickel carbonyl to the action of actinic light, the said product having a higher boiling point and a higher specific gravity than nickel carbonyl.

2,002,806
METHOD OF PRODUCING ORNAMENTAL ENAMELED WARE
Andrew C. Weierich, Cleveland, Ohio, assignor to The Vitreous Enameling Company, Cleveland, Ohio, a corporation of Ohio
Application July 30, 1932, Serial No. 626,581
16 Claims. (Cl. 41—24)

10. The process of providing ornamental enameled ware, which comprises applying a ground coating of enamel upon a sheet of metal, drying and burning the ground coating, applying a light colored base coating of enamel over the ground coating, drying the base coating, applying a stencil over the central portion of the sheet, thereby partially covering the base coat, projecting globules or lumps of enamel having a different color through the openings in the stencil to form an embossed design, removing the stencil and spraying a dark colored enamel in a substantial lateral direction against the sides of the design so as to form a dark colored coating on one side of the em-



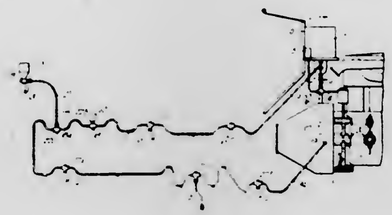
bossed design, a thin dark layer over the base coating between the projections forming the design to produce an illusionary effect, and a substantially smooth coating over the border which has the appearance of being applied in the form of small lumps, and burning the enamel to vitrify the same and produce enamelware having a projecting design.

2,002,807
CARD SELECTING APPARATUS
John W. Whitson, San Francisco, Calif.
Application April 16, 1928, Serial No. 270,475
44 Claims. (Cl. 129—16.1)

1. Card record apparatus comprising a card compartment, a plurality of cards in the compartment of lesser width than the compartment, each of which cards is adapted to be moved by magnetic attraction, electro-magnets on opposite sides of the compartment; means for energizing the magnets in succession; and means for holding a certain card or cards against movement away from the magnet first energized.

20. Card apparatus comprising a card compartment; a plurality of magnetically responsive cards mounted in the compartment, selectively operable means to lock certain cards against movement; and a magnet arranged adjacent an edge of the plurality of cards to attract one or more unlocked cards toward it.

2,002,808
CARD FILING AND SEGREGATING APPARATUS
John W. Whitson, San Francisco, Calif.
Application September 4, 1929, Serial No. 390,373
22 Claims. (Cl. 129—16.1)



4. Card record apparatus including record cards adapted for movement by magnetic attrac-

tion; a frame to hold said cards in stacked relation; means in the frame to select certain cards; magnetic means on the frame to attract the selected cards from the stack of cards; and a guide on the frame to hold the cards in operative relation to the selecting means and magnetic means.

6. Card record apparatus comprising a card compartment; a plurality of cards for the compartment; a plurality of lugs extended from an edge of each of the cards; a plurality of cutters on the apparatus adapted to simultaneously register with the several lugs on the cards; and means to actuate one or more selected cutters to sever one or more selected lugs from a card.

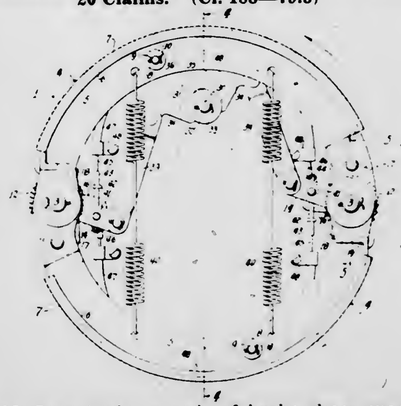
2,002,809
LUBRICATING SYSTEM AND METHOD
Peter Williamson, Jr., Everett, Mass., assignor, by mesne assignments, to Stewart-Warner Corporation, Chicago, Ill., a corporation of Virginia
Application August 19, 1929, Serial No. 386,896
66 Claims. (Cl. 184—7)

1. In a lubricating system, a plurality of bearings, a conduit having spaced openings communicating with said bearings, a restriction in said conduit beyond the communication with the last bearing, means for measuring a body of oil and compressing a charge of air and means for opening the inlet to said conduit to said body of oil and charge of air whereby said oil is driven through said conduit to supply the bearings thru said openings and past said restriction by said air charge.

2,002,810
FLASHING
Leo Friedberg, New Brunswick, N. J.
Application July 31, 1934, Serial No. 737,819
21 Claims. (Cl. 72—127)

1. A flashing composed of at least two sheet metal sections, and an expansion joint connecting said sections with substantial side portions thereof in face to face overlapping relationship, said joint comprising a transverse strip upstanding from each of said flashing sections, and flange means at the upper edge of one of said strips interlocking with the upper edge portion of the other of said strips.

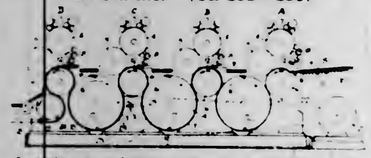
2,002,811
CELLULOSE DERIVATIVES CONTAINING AN INORGANIC SUBSTITUENT
Max Hagedorn, Dessau in Anhalt, Otto Reichert, Dessau-Ziebigk in Anhalt, and Eugen Guhring, Dessau in Anhalt, Germany, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany, a corporation of Germany
No Drawing. Original application April 25, 1927, Serial No. 186,566. Divided and this application October 23, 1929, Serial No. 401,975. In Germany May 1, 1926
6 Claims. (Cl. 260—101)



1. The process which comprises treating cellulose ethyl ether with phosphorous oxychloride in the presence of an organic diluent.

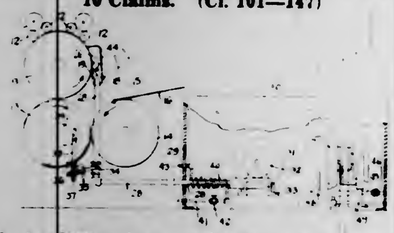
2,002,812
METHOD FOR PRODUCING CUTTER BLADES FOR SLICING MACHINES
John Hansen, Bettendorf, Iowa
Application July 1, 1933, Serial No. 678,631
9 Claims. (Cl. 51—278)

9. The method of forming a resilient cutter blade, which comprises bending the blade to produce a convex surface, holding said blade in its bent shape, abrading one edge of said convex surface in a plane at an angle to the normal plane of said blade completely through said edge to remove metal of gradually increased amounts from spaced points on said edge to a point intermediate said spaced points and form a beveled and curved scallop between said spaced points, and repeating the operation at intervals throughout the length of said blade.



2,002,813
BRAKE FOR AUTOMOTIVE VEHICLES
George W. Harper and Albert R. Catto, Cleveland, Ohio, assignors to The Columbia Axle Company, Cleveland, Ohio, a corporation of Ohio
Application November 5, 1932, Serial No. 641,354
20 Claims. (Cl. 188—79.5)

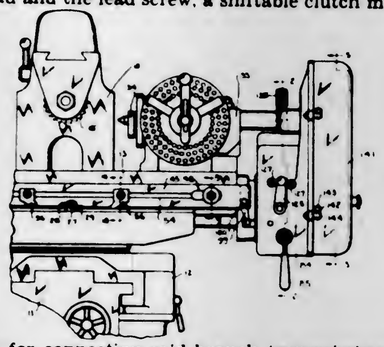
13. In a brake, a pair of brake shoes spaced apart at their ends to provide gaps therebetween, means adjacent each gap for actuating said shoes into operative engagement with an associated



brake drum, and means also adjacent each gap for effecting a take-up of wear in the faces of said shoes, the last mentioned means adjacent one gap being actuated by the first mentioned means adjacent the other gap.

2,002,814
PRINTING-PRESS
Charles W. Harrold, Cleveland, Ohio, assignor to Harris-Seybold-Potter Company, Cleveland, Ohio, a corporation of Delaware
Application January 14, 1932, Serial No. 586,521
16 Claims. (Cl. 101—136)

1. A rotary printing-press comprising a series of printing units, the impression-cylinder of each preceding unit having a smaller diameter than its contacting cylinder and the impression-cylinder in the successive unit.



2,002,815
DAMPENING MECHANISM FOR PRINTING-PRESSES
Charles W. Harrold, Cleveland, Ohio, assignor to Harris-Seybold-Potter Company, Cleveland, Ohio, a corporation of Delaware
Application November 19, 1932, Serial No. 643,404
10 Claims. (Cl. 101—147)

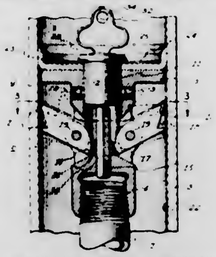
1. A dampening mechanism for printing-presses comprising a printing plate, means for impinging humidified air upon the plate comprising an elongated nozzle extending transversely in proximity to the plate, and a single mechanism transversely adjustable within the nozzle for varying the size of nozzle opening transversely of the plate.

2,002,816
MACHINE TOOL DRIVE
Herman R. Isler, Norwood, Ohio, assignor to The Cincinnati Milling Machine Company, Cincinnati, Ohio, a corporation of Ohio
Application April 5, 1933, Serial No. 664,579
12 Claims. (Cl. 90—20)

1. In a milling machine having a support, a tool spindle journaled in the support, a work table mounted on the support for movement transversely of the spindle and means for normally effecting translation of the table including a lead screw, a constantly driven power shaft and a reverser mechanism for coupling the lead screw to the power shaft, said reverser mechanism including a control lever having a neutral position and a power transmitting position on either side thereof, the combination of means for effecting a relative spiral movement between the tool and a work piece comprising a spiral dividing head mounted on the table for supporting the work piece for rotary movement, a splined shaft carried by the table and constantly driven by said power shaft, a gear box detachably mounted on the end of the table containing branch transmissions extending respectively to the spiral head and the lead screw, a shiftable clutch mem-

ber for connecting said branch transmissions to the splined shaft for actuation thereby, means detachably mounted on the table for locking said control lever in a neutral position including a slidable bar, means connecting the bar to said clutch member and trip dogs mounted on the bar for engagement with said fixed control lever to effect shifting of the bar and connected clutch to terminate the spiral movement.

2,002,817
ORNAMENTAL KNOB AND THE FORMATION THEREOF
David E. Johnson, Rockford, Ill.
Application November 11, 1932, Serial No. 642,201
3 Claims. (Cl. 29—161)

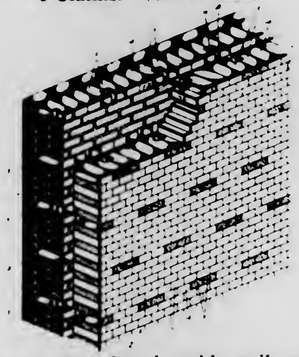


1. For forming a knob having an ornamental head and a shank at opposite ends with an annular ornamental flange projecting radially from the base of said head, the process which comprises forging a piece of wire to form said head at one end of the wire, a circular shoulder at the base of and facing away from said head and an end portion of uniform cross-section, projecting the end portion into a die recess snugly receiving the same, and forcing the wire into the die without lateral support for the base of the head whereby to lengthen said shank and shear back the metal at the base of said head so that the natural flow of the metal forms an annular flange at the juncture of said shank and the base of said head.

2,002,818
TANK THEFT PREVENTION DEVICE
Clarence M. Jones, Tulsa, Okla., assignor to Fred V. Maddin, Muskogee, Okla.
Application February 13, 1934, Serial No. 711,052
7 Claims. (Cl. 70—14)

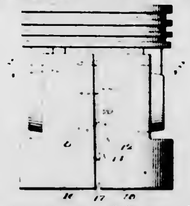
1. The combination with a fill pipe leading to a storage tank, of means for preventing access to or from the tank through the fill pipe at a point spaced remote in relation to its upper end, said means comprising a removable abutment in the fill pipe, means for limiting the downward

movement of the abutment in the fill pipe and key controlled dogs carried by said abutment and



cooperating with the inner periphery of the fill pipe for positively holding said abutment in adjusted position.

2,002,819
GREASE AND ITS MANUFACTURE
Gus Kaufman, Beacon, N. Y., assignor to The Texas Company, New York, N. Y., a corporation of Delaware
No Drawing. Application August 15, 1931, Serial No. 557,384
8 Claims. (Cl. 87—9)



3. The method of preparing a soap-mineral oil grease which comprises heating a soap-forming material with mineral oil to a temperature at which an increase in viscosity of at least 20% may occur, effecting a predetermined increase in the viscosity of the mixture of at least 20% by prolonging the heating at such temperature, and then effecting saponification and cooling to produce a grease.

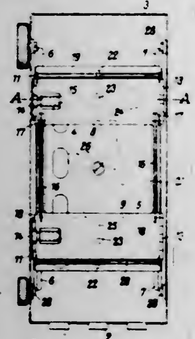
2,002,820
FIRE WALL
Michael Liptak, St. Paul, Minn.
Application January 10, 1931, Serial No. 507,845
9 Claims. (Cl. 72—101)

1. Permanent and replaceable walls each having bricks arranged therein to provide sockets having shoulders which extend longitudinally of the wall, and connectors having abutments engaging corresponding shoulders of the wall in a manner to prevent transverse separation, the sockets, shoulders and abutments being so related that the abutments can be released from the shoulders only after a rotative movement of the connectors to permit free withdrawal of the connectors from the permanent wall, the sockets being faced upwardly so that the connectors can be dropped into connecting position as the wall is built, and said connectors being held in operative position by the action of gravity.

2,002,821
DEVICE FOR EXPANDING PISTONS
Gordon Blain Luse, Big Spring, Tex.
Application August 23, 1934, Serial No. 741,168
3 Claims. (Cl. 309—12)

1. The combination with a piston having a longitudinal slot in the wall thereof, of a tapered wedge member disposed in the slot, said wedge member having one side abutting one edge of the slot, a laterally extending flange integral with said wedge and secured to the inner face of the piston wall on one side of the slot, a second wedge member tapered in the opposite direction and slidable on said first named wedge member for expanding the piston to a predetermined amount, said second named wedge member having an integral flange, and means for securing said last named flange to the inner face of the piston wall on the opposite side of the slot.

2,002,822
ARTIFICIAL PRODUCTS OF REGENERATED CELLULOSE
Herbert Mahn, Harry Meyer, and Hugo Pfannenstiel, Dessau in Anhalt, Germany, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany
No Drawing. Application January 13, 1930, Serial No. 420,599½. In Germany January 24, 1929
9 Claims. (Cl. 18—54)



1. The process which comprises incorporating into a viscose solution at least 0.1 per cent of an organic acid amide of the group consisting of methylacetanilide, ethylacetanilide, symmetrical diethyldiphenyl urea, asymmetrical diphenyl urea, ethyl phenyl ethyl tolyl urea, N-diethylbenzamide, methylbenzamide and N-isobutylbenzamide, emulsifying the acid amide in the viscose solution and acting with an acid precipitating bath upon the said viscose solution.

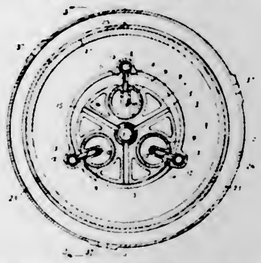
2,002,823
MOTOR VEHICLE CHASSIS FRAME
Alvin L. Marvel, Seaford, Del., and David E. Semon, St. Pauls, N. C.
Application April 3, 1934, Serial No. 718,820
9 Claims. (Cl. 280—106)

1. A motor vehicle chassis frame comprising a front rail section, a rear rail section, the ends of the front and rear rail sections joined together by members forming continuations of the rail sections and readily removable therefrom, the rail sections and members being of substantial U-shape in cross section with the side walls of the U-return bent upon themselves, and means at the ends of the removable members for securing said members to the rails.

2,002,824
ROLL FILM CAMERA
Bruno Mayer, Nuremberg, Germany
Application January 5, 1935, Serial No. 559
In Germany November 19, 1932
5 Claims. (Cl. 95—32)

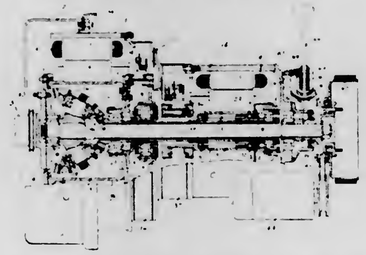
1. A roll film camera, comprising a camera cover, two masking screens fitted to the camera cover and slidable in opposite directions to vary the area of film exposed in taking a photograph, a double crank mechanism, likewise arranged on the camera cover, for displacing the masking screens, and means for actuating the double crank mechanism from outside the camera.

2,002,825
TWO-PIECE FOUR-IN-HAND NECKTIE
Mark H. McWhirter, McCamey, Tex., assignor of one-half to Edwin G. Stafford, McCamey, Tex.
Application July 10, 1934, Serial No. 734,536
1 Claim. (Cl. 2—155)



As a new article of manufacture, a two-piece four-in-hand necktie, comprising a primary section provided with a tab on its inner end, an auxiliary section provided with a tab on its inner end, said auxiliary section provided at the inner end of said tab with a puckered built-in pocket portion, a flat elastic strip in said pocket portion, a series of parallel lines of stitching through said puckered pocket portion and flat elastic strip and extending longitudinally of the auxiliary section, said auxiliary section also provided with longitudinally extending reinforcing lines of stitching beyond the puckered pocket portion, and detachable fastening means on the contiguous faces of said tabs at the inner ends of said sections, substantially as shown and described.

2,002,826
FILTER
Matthew F. Moran, Kansas City, Mo.
Application October 30, 1933, Serial No. 695,853
3 Claims. (Cl. 210—153)



1. In a filter of the character described having a retort for receiving the liquid to be filtered and a header to remove the filtered liquid from the retort, a plurality of hollow leaf filter members removably mounted on the said header, each having an outlet pipe projecting from the leaf, an annular inclined shoulder formed around the projected portion of said outlet pipe, a tube integral with the header in telescoping engagement with the said outlet pipe, and an inclined face formed on the end edge of said tube bearing against the inclined annular shoulder and means associated with said pipe and tube to permit relative longitudinal movement and to preclude relative rotation thereof.

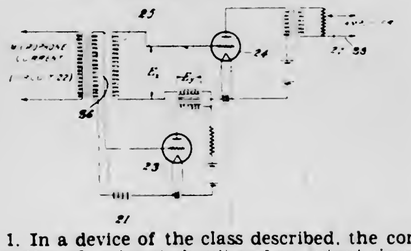
2,002,827
ROTARY COMPRESSOR
Jacob J. Morch, Port Credit, Ontario, Canada
Application February 19, 1934, Serial No. 711,929
2 Claims. (Cl. 230—140)

1. A rotary compressor comprising a rotary cylindrical casing; a cylindrical piston disk rotatably mounted in and eccentric to the casing; a plurality of vanes hingedly connected with the internal periphery of the cylindrical casing; a plurality of spools journaled in the piston disk on axes parallel to that of the disk, each having an arc of its periphery disclosed at the periphery of the disk and each disk having a pocket slidably receiving one of the vanes; a stationary hollow shaft on which the piston disk rotates, the shaft having a radial port therein and the piston disk radial inlet passages adapted successively to communicate with said port, the said vanes each having an exit passage extending through one face thereof, and through its hinge in a direction parallel to its axis; radial conduits in the casing communicating at their outer ends with said passages; a stationary conduit for compressed air; and a stationary part concentric with the rotary casing and having a chamber therein with which the stationary conduit communicates, said chamber having a port therein with which the inner ends of the radial conduits successively communicate.

2,002,828
GEAR DAMPER FOR ENGINE DRIVE TRANSMISSION SYSTEMS
Alfons H. Neuland, Irvington, N. J.
Application December 30, 1932, Serial No. 649,637
20 Claims. (Cl. 74—282)

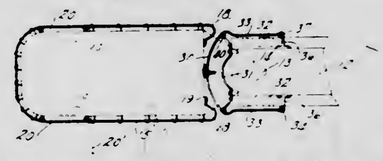
2. In combination, an internal combustion engine having a member rotating at a varying angular velocity at low speed, a dynamo rotor member having substantial inertia, a load member, differential gearing connecting all of said members, yielding means for permitting an angular movement of one of said members and additional means for limiting said angular movement and for positively transmitting power between said engine and said load member.

2,002,829
MEDICINAL PREPARATION
Arnold E. Osterberg, Rochester, Minn., assignor to The Chemical Foundation, Incorporated, New York, N. Y., a corporation of Delaware
No Drawing. Original application May 28, 1929, Serial No. 366,765. Divided and this application April 21, 1933, Serial No. 667,194
3 Claims. (Cl. 167—58)



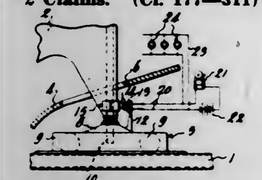
2. A medicinal preparation for the treatment of infantile eczema, containing the homogenous ether-soluble extract of the redistilled fraction of crude coal-tar which is steam-volatile at 100° C. at atmospheric pressure incorporated with an ointment vehicle containing pulverized zinc oxide and/or starch.

2,002,830
CONVEYER
Chase Keith Pevear, New York, N. Y., assignor to The Lamson Company, Syracuse, N. Y., a corporation of Massachusetts
Application September 11, 1930, Serial No. 481,149
9 Claims. (Cl. 198—127)



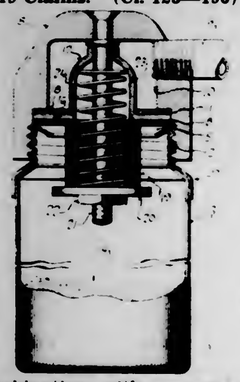
7. A curve for a live roller conveyer comprising, in combination, a pair of carrying rollers mounted with their axes at an angle to each other, a belt for driving said rollers, and a cinching roller mounted between said carrying rollers to hold the belt in driving contact with the under side thereof, said cinching roller having that portion of its surface which is in contact with the belt positioned with its inner end higher than its outer end.

2,002,831
METHOD AND APPARATUS FOR VOLUME CONTROL
George Ramsey, Brooklyn, N. Y.
Application August 1, 1929, Serial No. 382,767
17 Claims. (Cl. 179—171)



1. In a device of the class described, the combination of an input circuit and an output circuit, a main circuit connecting said input circuit and said output circuit, and an auxiliary circuit operatively connected with said input circuit and said main circuit, and means in said auxiliary circuit to impose an inverted wave of the same frequency of low amplitude upon a portion of said main circuit to control the amplitude of waves in said main circuit.

2,002,832
GUARD SYSTEM FOR TRACTOR-TRAILER COMBINATIONS
Harold H. Robinson, Opalocka, Fla., assignor to Curtiss Aerocar Company, Inc., Opalocka, Fla., a corporation of Florida
Application May 22, 1933, Serial No. 672,133
1 Claim. (Cl. 293—55)



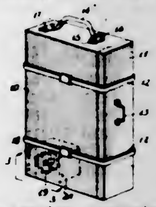
A guard rail system for a semi-trailer and its associated tow car, comprising a guard rail extending around the rear and sides of the semi-trailer and bowed inwardly at the forward end thereof, a guard rail extending around the rear end of the tow car and formed between the bowed portions of the first guard rail upon an arc having a center of curvature approximately at the pivot center of the tow car and semi-trailer and serving to protect the rear end of the tow car in all angular positions relative to the semi-trailer, said two main guard rails being interrupted adjacent the wheels of the semi-trailer and the rear wheels of the tow car, guard rail sections bridging the interrupted portions of the main guard rails, the main guard rails at the points of interruption and the ends of the guard rail sections being formed with cooperating eyes, and pins releasably holding said eyes in alignment.

2,002,833
ALARM SYSTEM FOR TRACTOR-TRAILER COMBINATIONS
Harold H. Robinson, Opalocka, Fla., assignor to Curtiss Aerocar Company, Inc., Opalocka, Fla., a corporation of Florida
Application May 22, 1933, Serial No. 672,134.
2 Claims. (Cl. 177—311)

1. In a tractor-trailer combination wherein the two vehicles are pivotally connected together for relative angular movement in a horizontal plane, a normally open alarm circuit including a pair of spaced switch contact members secured to one of the vehicles on substantially the center line thereof, two horizontally spaced switch closing members, secured to the other vehicle and positioned on opposite sides of the center line of the last named vehicle, to alternatively engage and connect said switch contact members to close the alarm circuit when the vehicles assume a predetermined relative angular position to either side of a common center line.

2,002,834
APPARATUS FOR INJECTING GRAPHITE INTO ENGINES
Carl R. Rolen, Waukesha, Wis.
Application November 23, 1933, Serial No. 699,309
19 Claims. (Cl. 123—196)

7. In combination with a passage through which dry finely powdered material is conveyed pneumatically, a felt barrier to control the rate of flow of the material through said passage, the density of the barrier determining the rate of flow of the material therethrough, and adjustable means to compress said felt barrier to adjust its density.

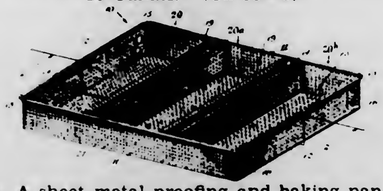


2,002,835
SIPHON DEVICE
William H. Rose, Jersey City, N. J.
Application May 11, 1934, Serial No. 725,047
4 Claims. (Cl. 137—20)

1. In a siphon device, in combination, an upwardly extended resilient tubular member capable of attachment to the neck of a container, a second resilient tubular member carried by the upper portion of said first tubular member and angularly movable with respect thereto and a compressible tube within said tubular members, the normal position of said tubular members be-

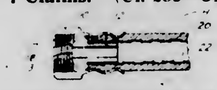
ing such as to effectively bend and close said compressible tube the resiliency of said tubular members returning them to their normal relationship after they have been moved from said normal relationship.

2,002,836
BAGGAGE CARRIER
Pasquale Rossi, New York, N. Y., assignor of one-half to Anastasio Petrocelli, Hoboken, N. J.
Application December 4, 1933, Serial No. 700,763
8 Claims. (Cl. 190—38)



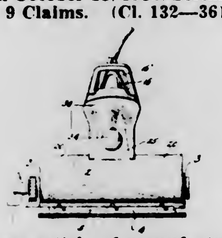
1. A baggage carrier, comprising a receptacle for baggage and having an opening in the side wall at one corner, a member movably mounted on one end thereof upon said corner forming a closure for said opening and adapted to assume a position flat against the end of the receptacle, castors mounted upon one side of said member, and means holding said member in a closed position with the castors disposed within the baggage carrier and in an open position with the castors extended below the end of the baggage carrier.

2,002,837
ELECTRIC DISCHARGE TUBE
John Walter Ryde, London, England, assignor to The General Electric Company Limited, London, England
Application May 29, 1934, Serial No. 728,101
In Great Britain April 4, 1933
3 Claims. (Cl. 176—122)



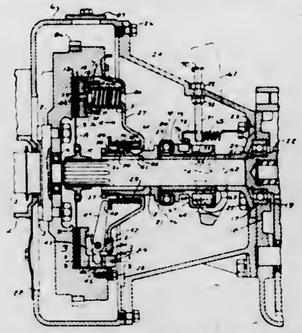
1. An electric discharge tube comprising an envelope, a pair of main discharge electrodes arranged within the envelope, leads passing through the envelope to the electrodes, a vaporizable substance within the envelope and a hollow metal body fitting closely the interior of the end wall of the envelope adjacent to one of the electrodes and out of contact with the leads so that it will not act as an electrode, said body having a part extending into the region between the electrodes so as to intercept heat from the discharge, the heat being conveyed through the metal body and the portion closely fitting the end wall to heat the latter.

2,002,838
BREAD BAKING PAN
Per. August Soderholm, Bridgeport, Conn.
Application May 8, 1934, Serial No. 724,493
10 Claims. (Cl. 53—6)



1. A sheet-metal proofing and baking pan for hearth bread comprising a bottom and a pair of oppositely disposed sides substantially perpendicular to said bottom to flatten the ends of a loaf proofed and baked in said pan and to engage and limit the length of said loaf, the bottom and said sides being foraminated to permit the heat from and over the hearth to bake the crust of the loaf hard all over.

2,002,839
HOSE COUPLING
Henry D. Stecher, Lakewood, Ohio, assignor to The Weatherhead Company, Cleveland, Ohio, a corporation of Ohio
Application June 24, 1933, Serial No. 677,421
7 Claims. (Cl. 285—84)

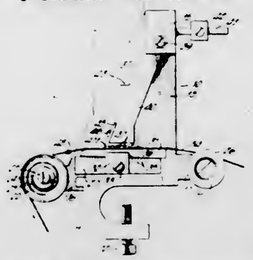


4. A hose coupling comprising a body portion having a sleeve, a chamber within the sleeve adapted to receive a hose, and an end wall at the base of said chamber, said end wall having an annular recess therein, said recess being adapted to receive material of the end of the hose and said recess being adjacent the sleeve whereby the walls of the recess can be deformed to pinch the material of the hose by the application of radial pressure to the exterior of the sleeve.

2,002,840
HAIR WAVING
Hermann Stein, South Ozone Park, Carl G. Gross, Mount Vernon, N. Y., and Warner S. Luci, Linden, N. J., assignors, by mesne assignments, to American Machine and Metals, Inc., New York, N. Y., a corporation of Delaware
Application October 15, 1932, Serial No. 637,902
9 Claims. (Cl. 132—36)

1. As a new article of manufacture for use in hair waving, a pair of inter-connected particylindrical members, spaced from each other and joined together along both their longitudinal edges to form a spacer.

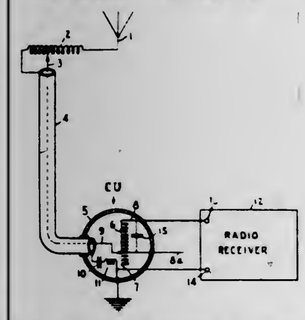
2,002,841
CLUTCH
John W. Tatter, Detroit, Mich., assignor, by mesne assignments, of one-half to Ella I. Ingersoll, Dearborn, Mich.
Application April 9, 1931, Serial No. 528,861
30 Claims. (Cl. 192—111)



1. In a friction clutch, the combination of a driving member, a driven member, a clutch main shaft, a thrust member engaging said driven member, means for forcing said thrust member into engagement with said driven member, and automatically operated means for taking up clearance due to wear of said driven member, said automatically operated means comprising a plurality of ball members surrounding said clutch main shaft.

2,002,842
THERAPEUTIC AGENT AND PROCESS FOR MAKING COLLOIDAL CALCIUM MALATE
John Torigian, Queens Village, N. Y., assignor to The Drug Products Co. Inc., Long Island City, N. Y., a corporation of New York
No Drawing. Application December 6, 1933, Serial No. 701,154
8 Claims. (Cl. 167—68)

1. As a new therapeutic agent for injection purposes calcium malate finely dispersed in aqueous solution.

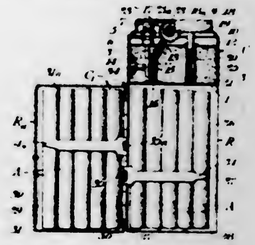


2,002,843
THREAD OR YARN CLEANER
Arthur E. Truesdell, Pittsfield, Mass.
Application November 17, 1932, Serial No. 643,080
6 Claims. (Cl. 28—64)

1. In a device of the character described, a frame, a detector unit swingingly mounted thereon, a table mounted on said frame, a guide plate over which a filament of fibrous material is movable mounted on said table, the engaging surfaces of said table and said plate being oppositely inclined with respect to the line of travel of said filament, whereby the longitudinal move-

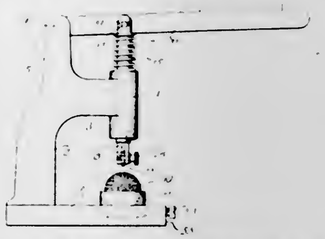
ment of said plate varies the distance thereof from said unit, and means for adjustably holding said plate to said table.

2,002,844
RADIO RECEIVING SYSTEM
Julius Gourgues Aceves and Ernest Valentine Amy, New York, N. Y., assignors to Amy, Aceves & King, Inc., New York, N. Y., a corporation of New York
Application October 31, 1932, Serial No. 640,374
10 Claims. (Cl. 250—20)



4. In a system for protecting a radio receiver from interference, in combination, an antenna, a lead-in from said antenna to said receiver, a conducting sheath enclosing said lead-in, a ground connection to said sheath, a step-down transformer interposed between said antenna and said lead-in, and a step-up transformer interposed between said lead-in and said receiver, the turn ratios of said transformers being the same.

2,002,845
CIGAR LIGHTER
Louis V. Aronson, Newark, N. J., assignor to Art Metal Works, Inc., a corporation of New Jersey
Application June 3, 1927, Serial No. 196,255
31 Claims. (Cl. 67—7.1)



21. A lighter construction comprising a fuel receptacle, a wick and pyrophoric sparking wheel lighting means adjacent thereto on the receptacle, a snuffer cap member pivotally mounted on the receptacle, a ratchet wheel mounted coaxially with the sparking wheel and fixed to rotate therewith, said snuffer cap member comprising in part a guard covering and substantially concealing the sparking and ratchet wheels, a spring pressed pawl mounted within and substantially covered by said snuffer cap member adjacent its wheel guarding portion, and for rotating the wheel when the snuffer cap is elevated, a finger piece member, means on said receptacle on the side of said wheel remote from said wick mounting said finger piece for downward movement thereon, a coiled spring within said finger piece tending to force the same upwardly, and means whereby upon pressing said finger piece downwardly, said snuffer is elevated from said wick and said wheel is rotated by manual pressure to ignite the wick.

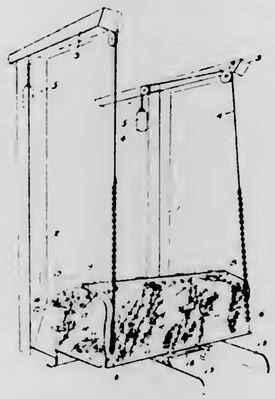
2,002,846
PYROPHORIC LIGHTING MECHANISM
Louis V. Aronson, Newark, N. J.
Application March 1, 1930, Serial No. 432,363
2 Claims. (Cl. 67—7.1)

1. Pyrophoric lighting mechanism comprising a lever, a member on which said lever is pivoted, and means for oscillating said lever, said means comprising a movable rack member, and a pinion on said first-named member, said rack member coacting with said pinion, the teeth of said pinion interlocking with said lever.

2,002,847
GOLF BALL PRINTING MACHINE
Raphael Atti, Union City, N. J.
Application March 11, 1932, Serial No. 598,171
4 Claims. (Cl. 101—381)

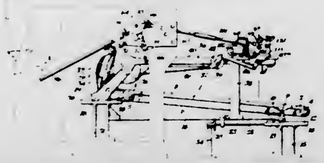
1. A type or die holder consisting of a main block and a clamping bar having a plurality of type receiving slots formed therein and extending radial to a common center, type mounted in said slots, a gasket, and set screws for securing said gasket between said clamping bar and type on one side and said block on the other side.

2,002,848
PROCESS OF PRODUCING FINISHES IMITATIVE OF STONE
Harry Cohen, Galion, Ohio, assignor to The Perfection Steel Body Company, Galion, Ohio, a corporation
Application July 11, 1934, Serial No. 734,675
4 Claims. (Cl. 91—68)



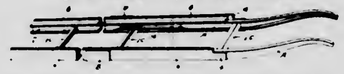
1. The process of producing imitative effects in the finishing of articles of manufacture which consists in applying to a base to be treated with an imitative finish a small quantity of a masking liquid, subjecting said liquid as applied superficially to the base to pressure to cause the same to be moved to different portions of the base to

be masked, and whilst the said different portions are subject to the moisture of the liquid apply-



ing to the base a coat or coats of coloring matter which does not adhere to the masking liquid.

2,002,849
MASKING APPARATUS FOR FINISHING ARTICLES OF MANUFACTURE
Harry Cohen, Galion, Ohio, assignor to The Perfection Steel Body Company, Galion, Ohio, a corporation
Application July 23, 1934, Serial No. 736,621
10 Claims. (Cl. 101—114)

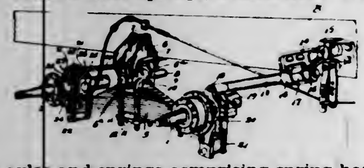


1. In masking apparatus of the class described, in combination, a masking enclosure comprising a rearmost section, end sections movably mounted upon said rearmost section, means normally holding the end sections in an open outward position, a frontward section movable in relation to the rearmost section, and members carried by the frontward section engageable with the end sections in moving the frontward section to closed position, whereby to cause the end sections to close to operative positions about an article of manufacture at the same time that the frontward section is caused to close about said article, the several sections aforesaid being provided with openings through which a finishing substance may pass in stenciling operations.

2,002,850
PAPER FEEDING MACHINE
Frank L. Cross, Port Washington, N. Y., assignor to Cross Paper Feeder Company, Boston, Mass., a corporation of Massachusetts
Application June 3, 1933, Serial No. 674,177
Renewed November 22, 1934
6 Claims. (Cl. 271—38)

1. The combination with a feed table and means for feeding a fanned-out bank of sheets upon said feed table, of sheet-actuated tripping devices adjacent to the end of said feed table toward which the bank of sheets is fed, sheet-separating combing devices acting above said feed table adjacent to said tripping devices to impart a final separating movement to sheets in the same direction as the bank feed, means under the control of said tripping devices for arresting the action of said combing devices, tail-drags engaging the fanned-out bank of sheets approximately sheet lengths from said tripping devices, feed-off devices arranged to engage and raise the tail end of the top sheet adjacent to said tail-drags, and delivery mechanism arranged to take the raised tail end of the top sheet and move the same rearwardly from the feed table away from said combing and tripping devices.

2,002,851
EXTENSION AXLE UNIT FOR TRUCKS
Raymond P. Divney, Galion, Ohio, assignor to The Perfection Steel Body Company, Galion, Ohio, a corporation
Application April 2, 1934, Serial No. 718,720
5 Claims. (Cl. 280—106)



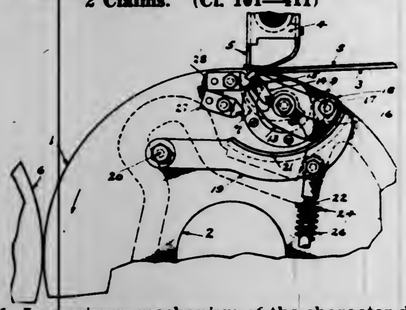
1. In automobile truck constructions of the type described, in combination, a main truck chassis embodying spaced side frame members, an extension unit for said main truck chassis likewise embodying spaced side frame members in substantial alignment with the corresponding members of the main truck chassis and projecting a considerable distance alongside of the latter side frame members, fastening means between the side frame members of the main truck chassis and the extension unit, reinforcing parts intermediate the said side frame members bracing the corresponding side frame members of the chassis and extension unit against vertical stresses, and against relative longitudinal movement and a double axle and wheel unit wholly mounted upon the extension unit aforesaid.

2,002,852
THIRD AXLE UNIT FOR TRUCKS
Raymond P. Divney, Galion, Ohio, assignor to The Perfection Steel Body Company, Galion, Ohio, a corporation
Application April 21, 1934, Serial No. 721,825
9 Claims. (Cl. 280—124)

1. In a third axle unit construction for automotive trucks, in combination, a truck frame,

springs at opposite sides of the said frame, transverse trunnion means between the springs and the frame affording pivotal mountings for the springs enabling the same to rock upwardly and downwardly at their ends while disposed longitudinally of the frame, axles at the front and rear ends of said springs, connections between

said axles and springs comprising spring hangers affording universal connections between the axle and springs, adjustable radius rods connected with the spring hangers at the front ends of the springs and attached to the frame and resilient connections intermediate the frame and the spring hangers at the rear ends of the springs.



2,002,853

GRIPPER MECHANISM

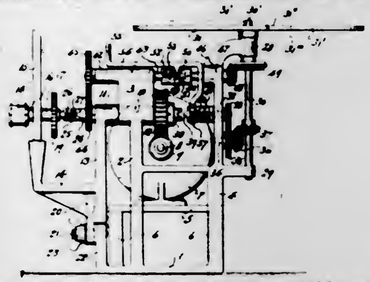
William K. Eckhard, Dunellen, N. J., assignor to R. Hoe & Co., Inc., New York, N. Y., a corporation of New York; Irving Trust Company, permanent trustee

Application October 2, 1931, Serial No. 566,485

2 Claims. (Cl. 101—411)

1. In a gripper mechanism of the character described, the combination of a frame, a rotary gripper carrier, a gripper shaft eccentrically and rotatably mounted on the carrier, a tumbler block secured to the said gripper shaft for turning same to open and close the grippers, a pin fixed to said frame and coactable with said tumbler block to turn same when the carrier rotates, a roller secured to the tumbler block, a lever arm pivotally mounted on the carrier, a spring rod connected to said lever arm and carrier for pressing the lever arm into engagement with the roller, said lever arm having a single arcuate operating face on which the roller rides, and means including a plurality of stops fastened in spaced relation on said carrier and directly engaging said tumbler block, for confining the movement of the tumbler block within predetermined limits.

2,002,854



SELECTIVE TRANSMISSION FOR MOTION PICTURE AND SOUND PROJECTORS

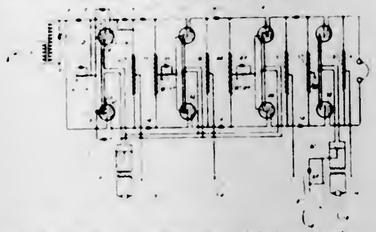
Edwin J. Hadley, Brooklyn, N. Y.

Application January 22, 1932, Serial No. 588,059

2 Claims. (Cl. 88—16.2)

1. In an associated motion picture projector and phonograph mechanism, a motor actuated drive shaft, a bracket member angularly adjustable about the axis of said drive shaft, a carrier plate for projector mechanism connected with said bracket member, a projector shaft journaled in said carrier plate in alignment with said drive shaft and adapted to be driven by the latter, a phonograph turn-table, a vertical turn-table shaft carrying said turn-table, said turn-table shaft having a pair of bevel gears thereon, a transmission means connected to one of said

bevel gears for driving said turn-table at one speed, a second transmission means connected to the other of said bevel gears for driving said turn-table at another speed, each transmission means having a clutch means for engaging the same in driven relation to said drive shaft, and a clutch shift mechanism common to each clutch means and operative to release one clutch means when engaging the other.



2,002,855

ELECTRIC WAVE AMPLIFYING SYSTEM

Edward E. Hiler, Bloomfield, N. J.

Application August 28, 1929, Serial No. 388,923

4 Claims. (Cl. 250—27)

1. In an electric-wave amplifying system, the combination of detector electron discharge devices, each of said devices having a grid element together with a cathode and anode, means for controlling the grids of said devices whereby one of said devices detects by grid rectification and another by plate rectification, external circuits extending between the anodes and cathodes of said devices, and an inductive reactance element having portions thereof respectively included in each of said external circuits.

2,002,856

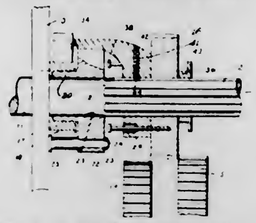
SEAL

Samuel N. Hope, Wauwatosa, Wis., assignor to Griffith-Hope Company, West Allis, Wis., a corporation of Wisconsin

Application July 9, 1934, Serial No. 734,325

3 Claims. (Cl. 292—318)

1. A seal comprising a housing having opposite walls and an insert-receiving opening, and a resilient loop-shaped insert-locking member in said housing, at least one of said walls having a part projecting into the space within said loop-shaped member to form an insert-confining space between said part and the opposite wall of the housing.



2,002,857

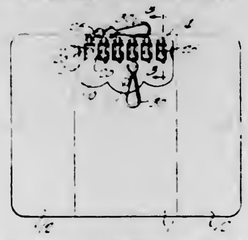
ANTIBACK ROLL MECHANISM FOR CARS

Charles M. Jameson, Pasadena, Calif.

Application February 1, 1932, Serial No. 590,169

5 Claims. (Cl. 192—4)

1. A device of the kind described consisting of a transmission shaft, a ratchet mounted thereon against rotation, a plurality of dogs held by gravity in engagement with the ratchet, a carrier rotating with the shaft and upon which the dogs are mounted, a low and reverse sliding gear mounted on said shaft, means allowing the gear to rotate with the shaft as it slides thereupon, and means intercoupling together the slidable gear and carrier, whereby the gear may slide while the carrier remains stationary, and means controlled by the intercoupling means and designed to engage the dogs to hold them out of engagement with the ratchet.



2,002,858

KEY SUPPORT

Robert C. Legat, New Britain, Conn., assignor to G. E. Prentice Manufacturing Company, New Britain, Conn., a corporation of Connecticut

Application August 19, 1932, Serial No. 629,470

6 Claims. (Cl. 150—40)

1. A key supporting assembly for key cases or the like, comprising a supporting plate having a generally planar body portion and having an outwardly bowed portion above said body portion and extending between its opposite sides, openings in said bowed portion between a plurality of bowed bar portions, key hangers having upper ends with swiveled connections to the upper part of said plate including loops above said bowed portion, the bar portions being arranged so that they normally hold the upper ends of the hangers in mutually spaced relation when the lower parts of the hangers lie in juxtaposition to the body portion of the plate, and fastening tabs to secure the plate to a case or the like, said tabs being disposed between certain of said bar portions and lying in the plane of said body portion.

2,002,859

PRODUCTION OF FERRIC COMPOUNDS

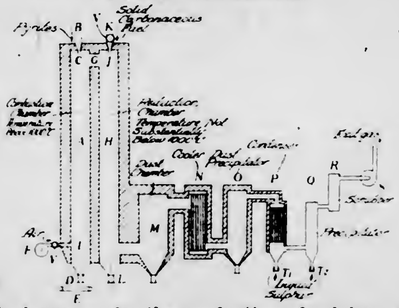
Stanley Isaac Levy, Surrey, and George Wynter Gray, London, England

No Drawing. Application December 10, 1930, Serial No. 501,464. In Great Britain January 31, 1930

8 Claims. (Cl. 23—126)

3. A process of preparing simultaneously in the dry way ferric salts of two different acids, one being a ferric halide, which comprises subjecting a ferrous salt of one acid to the action of a gaseous medium capable of reacting with the ferrous salt to form a ferric halide and a ferric salt containing another acid radical, the temperature of said reaction being sufficiently high to cause volatilization of the ferric halide.

2,002,860



TREATMENT OF IRON PYRITES FOR RECOVERY OF SULPHUR AND FORMATION OF IRON OXIDE

Stanley Isaac Levy, Kingston Hill, England

Application June 27, 1933, Serial No. 677,867

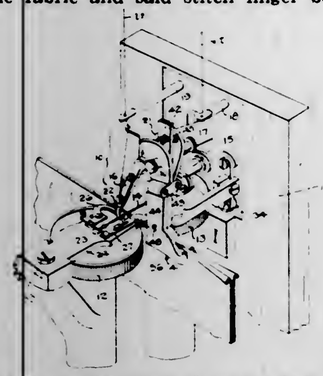
In Great Britain June 30, 1932

7 Claims. (Cl. 23—224)

1. A process for the production of sulphur and iron oxide by introducing finely divided pyrites into a combustion space, causing air to enter at the bottom of the combustion space and to pass through it in quantity insufficient for complete oxidation of the mineral, conserving the heat of combustion so that the gases passing from this space are at a temperature in the region of 1000° C. or higher, introducing finely divided solid carbonaceous fuel into the gases in a reduction space in such quantity that substantially the whole of the carbon content is converted into carbon dioxide, and maintaining in the reduction space a temperature not substantially below 1000° C.

2,002,861

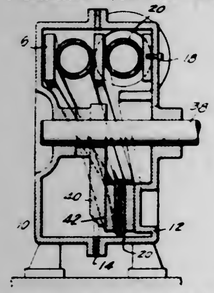
FABRIC GUIDING AND SEAMING MECHANISM



Carl Frederick Mack, Philadelphia, Pa.

Application December 9, 1930, Serial No. 500,996

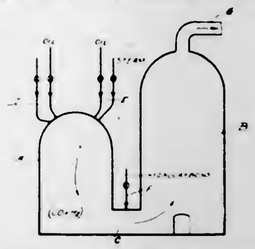
12 Claims. (Cl. 112—20)



1. In a sewing machine, in combination, means for feeding a vertically arranged fabric through the machine, a horizontal needle arranged for movement back and forth across the vertical plane of said fabric, a stitch finger operatively associated with said needle, a support for said stitch finger, and a guide for said needle, said stitch finger support being provided with a laterally extending lug and said needle guide member being provided with a spring pressed pressure member, said lug and said spring pressed member lying in substantially the same horizontal

plane and being adapted to engage opposite sides of the fabric and said stitch finger being ex-

tended across the point of contact between said lug and spring-pressed member.



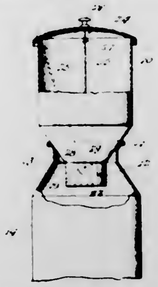
2,002,862
ROTARY PUMP
Archibald A. Moran, Mendham, N. J.
Application August 14, 1934, Serial No. 739,751
7 Claims. (Cl. 103—149)

1. A pump comprising a coiled spring, a hollow coil of compressible material interposed between the convolutions of said coiled spring and a rotor coacting with the spring for successively compressing different portions of said coil.

2,002,863
METHOD OF PRODUCING FUEL GAS
Theodore Nagel, Brooklyn, N. Y., assignor to Carbureted Gas, Inc., a corporation of Delaware
Application January 26, 1933, Serial No. 653,619
2 Claims. (Cl. 48—215)

1. The process which comprises continuously introducing oil and oxygen into a hot zone for reaction to carbon monoxide and hydrogen while so limiting the oxygen supplied that substantially all of the carbon of the oil is converted to substantially only carbon monoxide, and continuously controlling the temperature of the carbon monoxide hydrogen gas mixture by continuously introducing steam and additional oil into the said carbon monoxide hydrogen gas mixture for reaction to carbon monoxide and hydrogen in a second zone, while so limiting the amount of steam and hence the oxygen supplied thereby that substantially all of the carbon of the oil introduced therewith is converted to substantially only carbon monoxide, and while so limiting the amount of steam and additional oil that when contacted with the hot carbon monoxide, hydrogen gas mixture produced by the first men-

tioned oil and oxygen reaction substantially only carbon monoxide and hydrogen are produced.



2,002,864
TRACTION DEVICE FOR ATHLETIC SHOES OR THE LIKE
Ralph Nichols, Elyria, Ohio
Application July 31, 1933, Serial No. 683,074
1 Claim. (Cl. 36—59)

A traction device for shoes comprising a T-shaped plate of sheet metal having a shank and a cross head at one end thereof projecting from opposite sides of the shank, the other end portion of the shank being of increased width and bent to form a depending transversely extending blade sharpened along its free lower edge and an attaching base having a fastener receiving opening formed therein, the portions of the cross head projecting from opposite sides of the shank being disposed at an angle to diverge outwardly therefrom and being then increased in width and curved in an opposite direction and each bent to form a depending transversely extending blade sharpened along its lower edge and an attaching base formed with a fastener receiving opening, each blade corresponding in width to its attaching base and the blades of the cross head converging toward the blade of the shank.

2,002,865
MILK STRAINER
Samuel N. North, Rising Sun, and Thomas J. Gurley, Patriot, Ind.; said North assignor to Albert L. Lowe, Patriot, Ind.
Application May 27, 1932, Serial No. 613,958
Renewed April 14, 1934
4 Claims. (Cl. 210—158)

2. A milk strainer comprising a container for the milk to be strained, straining elements in the container, a cover for the container tiltable to partly open position, a rod carried by the cover,

and a baffle carried by the rod above the straining elements.

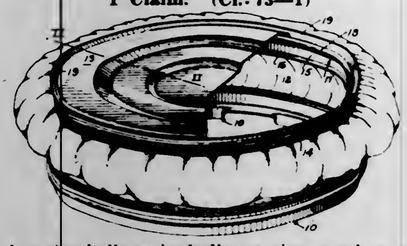
2,002,866
TENSIONING DEVICE FOR SHUTTLES
Joseph B. Plevyak, Carbondale, Pa.
Application December 2, 1931, Serial No. 578,598
Renewed January 5, 1935
10 Claims. (Cl. 139—214)

1. In a device of the character described, a tension arm, a torsion spring for controlling said arm; a rotatable tensioning member on which said spring is mounted, said member having means for engaging and holding the lower coil of the spring to rotate the same therewith, the shuttle having a seat therein for the reception of said tensioning member; a ring-screw adjustable toward and from the rotatable tensioning member, and serving the double purpose of carrying the ring of the tension arm and of pressing the rotatable tensioning member to hold the same in operative position in its seat; and means for locking the rotatable member in adjusted positions.

2,002,867
VIEWING CABINET
Frank T. Powers, Douglaston, N. Y.
Application September 27, 1933, Serial No. 691,144
9 Claims. (Cl. 40—95)

1. In a machine for viewing a strip of images, the combination of a holder for a roll of said strip, a holder for a receiving core for said strip, said holders having opposed rotatable hubs adapted to engage the ends of said roll and of said receiving core, a plate intermediate of said holders, and means including one of the rotatable hubs of each of said holders for selectively rotating either said receiving core or said roll to feed the strips in either direction over the surface of said plate.

2,002,868
SCISSORS SHARPENER
Austin E. Rainey, Titusville, and William J. Rainey, Grove City, Pa.
Application August 14, 1933, Serial No. 685,098
1 Claim. (Cl. 76—82.2)



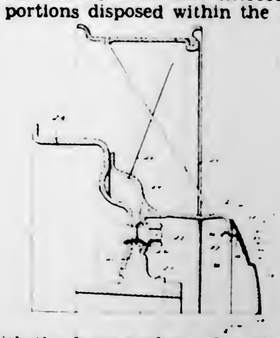
A scissors sharpener comprising a unitary holder consisting of a strip of sheet metal bent intermediate its length to form a flat end portion constituting a handle and a guide extending downwardly from the front end of the handle, the strip being then bent to form a lip extending rearwardly from the lower edge of the guide and then bent downwardly and forwardly to form a flange and a base member projecting forwardly from the flange beyond the guide and having a pocket along its rear side formed by the lip and flange, a tongue extending upwardly from the front side edge of the base member and overhanging the same, and a file resting upon the upper face of the base member with its rear edge portion engaged in the pocket and its front edge portion overlapped by the tongue.

2,002,869
SOLE REENFORCING PLATE
John T. Riddell, Evanston, Ill.
Application March 23, 1932, Serial No. 600,762
3 Claims. (Cl. 36—2.5)

1. The combination with a shoe of a sole reenforcing means comprising a pair of plates arranged one above the other on the inner side of the shoe sole, one of said plates originating at a point back of and adjacent the position of the ball of the wearer's foot and extending to the toe portion of said sole, the other of said plates being shorter than the first plate and arranged to include the back portion of said first plate adjacent the ball of the wearer's foot, and a transverse crease in each of said plates adjacent the ball of the wearer's foot to substantially confine the bending of said sole to that location.

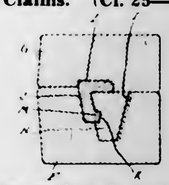
2,002,870
METER BELLOWS
Edward Rockafellow, San Francisco, Calif., assignor to American Meter Company, a corporation of Delaware
Application December 21, 1932, Serial No. 648,238
1 Claim. (Cl. 73—1)

A meter bellows including a rim member, said rim member having a grooved portion adapted to receive a binder edge portion of a flexible body, said rim having a radially outwardly flared portion and a plurality of annular bead portions connecting said grooved portion and said outwardly flared portion, one of said beads being turned radially outwardly and opening inwardly and another of said beads being turned inwardly and opening outwardly, the latter of said beads having its axially outer wall connected to the said outwardly flared portion of the rim member.



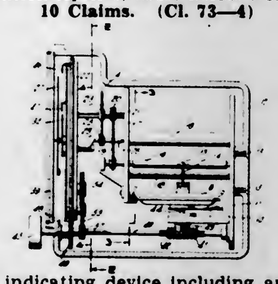
2,002,871
VIBRATING MECHANISM
John Sharp, Cleveland, Ohio
Application January 15, 1934, Serial No. 706,664
11 Claims. (Cl. 175—338)

9. In a vibrating mechanism, the combination of a support having a wall formed with an opening and an annular side, an electro-magnet comprising a core having at its inner end lateral portions engaging said wall at opposite sides of the opening therein, the central portion of said core extending through said opening, and a coil on one side of said wall, an insulating block provided with terminals, means for securing the lateral portions of said core and block in fixed relation to the opposite side of said wall, a resilient member engaging the free edge of said annular side and supporting centrally of the latter an armature, and a member carried by said armature and vibrated thereby.



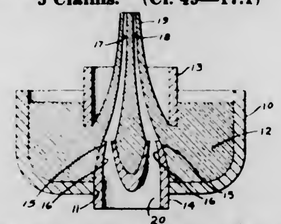
2,002,872
HUB CAP
Charles W. Sinclair, Detroit, Mich., assignor, by mesne assignments, to The Kelsey-Hayes Wheel Company, Detroit, Mich., a corporation of Delaware
Application February 23, 1932, Serial No. 594,684
4 Claims. (Cl. 301—108)

1. A hub cap provided with a body portion having spaced slots therethrough and having depressions in the front side thereof, and clips having portions disposed within the depressions



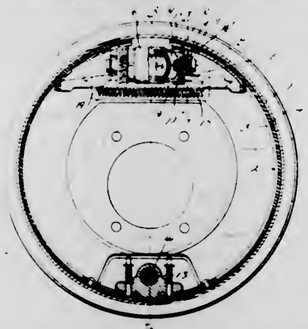
flush with the front surfaces thereof and having spring fingers extending rearwardly from the cap body through the slots aforesaid.

2,002,873
APPARATUS FOR MOLDING WATER CLOSET RIMS
James M. Teahen, Detroit, Mich.
Application February 12, 1934, Serial No. 710,923
4 Claims. (Cl. 25—129)



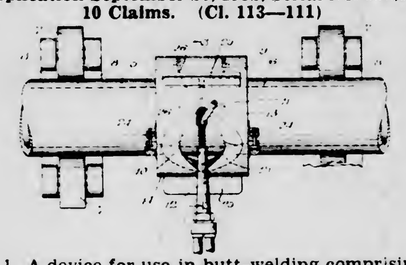
1. A mold for casting channeled flushing rims for water closet bowls comprising a plurality of segmental mold sections for molding the undercut portions on opposite sides of said rim, a pair of matched mold sections for molding the external surface of said rim, one of said sections being recessed to receive said segmental mold sections with draft permitting of separation therefrom, and the other of said matched mold sections forming a support for said segmental sections permitting of the lateral withdrawal of the same when said first matched section is removed.

2,002,874
ALTIMETER
Adolf Urfer, Richmond Hill, N. Y., assignor to Bendix Aviation Corporation, South Bend, Ind., a corporation of Delaware
Application April 6, 1932, Serial No. 603,650
10 Claims. (Cl. 73—4)



8. An indicating device including an actuator responsive to changes in conditions or operations, relatively stationary circular scale means having indicia thereon, pointers cooperating with said scale means and drivably connected to said actuator for operation thereby, reference marks associated with said indicia and simultaneously movable in an opposite direction with respect to said pointers along said indicia during setting for indicating the preset condition, and means for simultaneously moving the reference marks and pointers in opposite directions and comprising a movable support carrying the actuator, a worm gear associated with said support, a worm drivably connected to said gear, a knob for operating said worm from the front of the instrument, and means for moving said movable support for bodily movement of said actuator along its operating axis upon operation of said worm and worm gear.

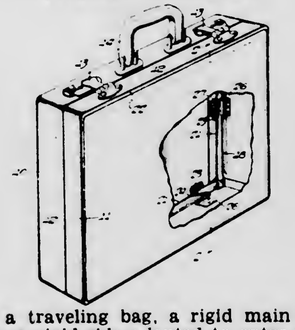
2,002,875
METHOD OF AND APPARATUS FOR DRAWING GLASS
William J. Woods, Corning, N. Y., assignor to Corning Glass Works, Corning, N. Y., a corporation of New York
Application May 24, 1933, Serial No. 672,704
5 Claims. (Cl. 49—17.1)



1. The method of making multiple bore tubing which includes drawing glass upwardly from around a hollow body submerged in a pool of molten glass and admitting bore forming air at different levels into the glass through passages in the body.

2,002,876
BRAKING MECHANISM
Carl F. Baisch and John William White, Detroit, Mich.; said Baisch assignor to Kelsey-Hayes Wheel Company, Detroit, Mich., a corporation of Delaware
Application November 14, 1932, Serial No. 642,678
9 Claims. (Cl. 188—79.5)

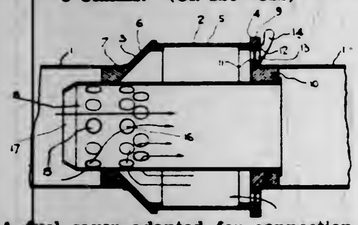
1. The combination of a brake drum, a backing plate, friction means within and engageable with said drum, means comprising reciprocable members for moving said friction means relative to said drum, means movable with said reciprocable members and adjustable relative thereto to control the positions thereof relative to each other, and adjustable means mounted on said backing plate and engaging said first mentioned adjustable means for adjusting the same.



2,002,877
WELDING EQUIPMENT AND METHOD OF WELDING
William N. Barrington, Birmingham, Ala., assignor to The American Cast Iron Pipe Company, Birmingham, Ala., a corporation of Georgia
Application September 20, 1932, Serial No. 634,084
10 Claims. (Cl. 113—111)

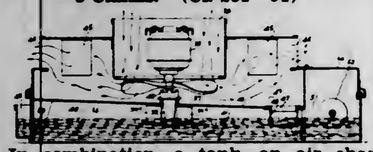
1. A device for use in butt-welding comprising, a channeled collar-like member to surround the ends and adjacent portions of parts to be welded to provide an arcuate chamber for said parts and member, said member having an opening for application of a flame to the said ends and portions, said channel and opening communicating, whereby the flame and combustion gases will circulate thru the chamber.

10. The method of butt-welding which comprises, alining the parts to be welded in end to end relation circumferentially, and enclosing substantial portions of the ends of said parts within a chamber to exclude air currents from contact with said enclosed ends and portions, and while so enclosed projecting a flame through a peripheral opening in the chamber against said ends and into the chamber circumferentially around said ends, rotating the parts within said chamber while projecting the flame therein, and progressively feeding welding material to said ends through said opening in proximity to the flame as the parts rotate.



2,002,878
TRAVELING BAG
Aaron S. Belber, Woodbury, N. J.
Application April 7, 1934, Serial No. 719,572
10 Claims. (Cl. 190—44)

1. In a traveling bag, a rigid main or body member, a rigid side adapted to enter the rigid body member, collapsible bellows folds connected



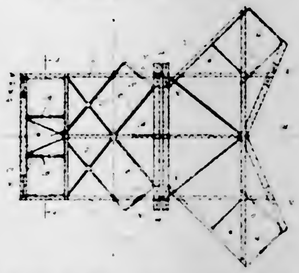
with the rigid body member and the side, and spring means connected with the rigid body and the side for normally urging the latter toward the former.

2,002,879
FUEL SAVER
James Blakeman, Vancouver, British Columbia, Canada, assignor of fifty per cent to William Kennedy, Vancouver, British Columbia, Canada
Application August 6, 1934, Serial No. 738,731
3 Claims. (Cl. 126—312)

1. A fuel saver adapted for connection to a smoke pipe and a flue comprising a shell enclosing a sleeve, means for passing gases from the smoke pipe to the sleeve through its outer periphery, and means for passing auxiliary air through the shell into the sleeve.

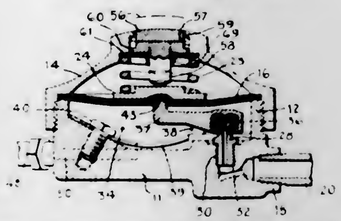
2,002,880
HUMIDIFIER
Edwin T. Brace, Springfield, Ohio, assignor to The Buckeye Incubator Manufacturing Company, Springfield, Ohio, a corporation of Ohio
Application April 15, 1932, Serial No. 605,476
5 Claims. (Cl. 261—91)

3. In combination, a tank, an air chamber having an air inlet passage at the top and a laterally-disposed air outlet passage, a fan arranged to force a stream of air downwardly into said air chamber, means to lift water and discharge it laterally into said chamber across the path of said air, said air chamber having a sloping bottom constituting a drain member inclined across said air chamber for receiving and conveying the solid particles deposited by the incoming air after said particles have been wet by the water spray, and a container disposed at the lowest point of said drain member, said container being adapted to maintain said particles in a submerged condition yet to debar them from returning to the tank, whereby to prevent said particles from drying and re-entering the air stream and also from clogging the water supply to said lifting means.



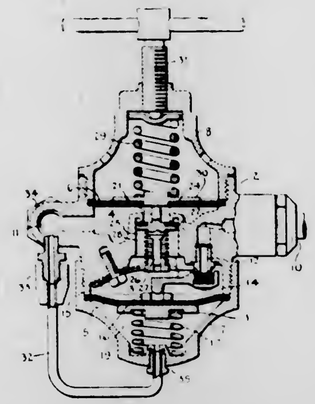
2,002,881
TRACK
Erich Bretschneider, Dresden, Germany
Application July 22, 1931, Serial No. 552,501
In Germany July 26, 1930
2 Claims. (Cl. 246—251)

1. A track for toy railroads, in which a control for signals, gates and the like actuated by a downwardly moving track section is operated for this section by the weight of a passing train, comprising a yielding, rebounding and elastic means for holding the continuous trackway with ties when not loaded for a sufficient distance beginning before and ending behind the part to be controlled in a yielding rebounding manner in a higher position than the normal position of the remaining track and ties to be pressed by the



weight of the passing train into normal position, said means being easily insertable under the track and withdrawable therefrom and not firmly connected therewith, and transmission means connected with the part to be controlled and actuated by the depression of the track section.

2,002,882
FLOATING FISH TRAP
Hans L. Christie, Los Angeles, Calif.
Application June 6, 1934, Serial No. 729,330
9 Claims. (Cl. 43—102)

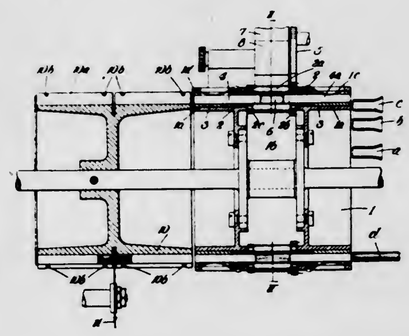


1. A floating fish trap comprising buoyant members adapted to float in a body of water, a metal net supporting frame maintained above the water level thereby having cages slidably coacting with said buoyant members and adjustable means connecting the metal frames with said buoyant members.

2,002,883
SEAT LEAK INDICATOR FOR PRESSURE REGULATORS
George M. Deming, East Orange, N. J., assignor to Air Reduction Company, Incorporated, New York, N. Y., a corporation of New York
Application September 29, 1932, Serial No. 635,341
16 Claims. (Cl. 116—114)

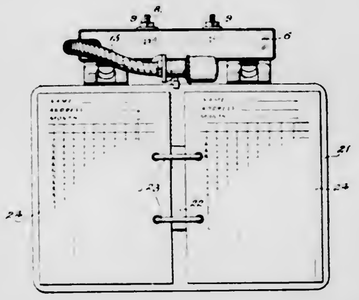
1. The combination of a pressure regulator having a diaphragm and a pressure chamber on one side of the diaphragm, a valve element for controlling the supply of gas to the chamber, mechanism, including said diaphragm, responsive to the pressure in the chamber for operating the valve element, a visible signal on the other side of the diaphragm, and inactive during the ordinary operation of the pressure regulator, and means for moving the visible signal into display position when gas pressure in the chamber causes abnormal outward movement of the diaphragm.

2,002,884
GAS REGULATOR
George M. Deming, East Orange, N. J., assignor to Air Reduction Company, Incorporated, New York, N. Y., a corporation of New York
Application July 5, 1933, Serial No. 679,049
2 Claims. (Cl. 50—26)



1. A gas pressure regulator apparatus comprising means for reducing gas pressure from a declining source pressure starting above 1000 lbs. per square inch to adjustable delivery pressures of the order of several atmospheres at least, the said means including two regulator valve stages of the diaphragm type in series, an adjusting spring acting on the second-stage diaphragm, with means for adjusting the pressure of said spring, a back-cap forming with the first-stage diaphragm a tight gas pressure chamber at the outer side of said diaphragm, a control spring in said gas pressure chamber, and a control duct connecting said chamber with the reduced pressure side of the lower stage of the apparatus.

2,002,885
TEXTILE FIBER SPRAYING OILS
James G. Detwiler, New York, N. Y., and Theodore C. Heisig, Bayonne, and John E. Rosnell, Bound Brook, N. J., and Frank W. Hall, Port Arthur, Tex., assignors to The Texas Company, New York, N. Y., a corporation of Delaware
No Drawing. Application September 9, 1932, Serial No. 632,390
6 Claims. (Cl. 87—9)

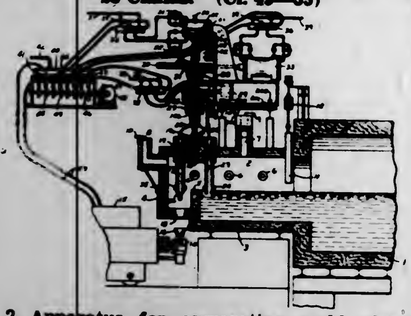


1. A cotton fiber spraying oil consisting essentially of a light lubricating oil having dissolved therein 5% or less of a water-soluble soap and 1% or less of lecithin, the amount of lecithin being less than the amount of water-soluble soap.

2,002,886
APPARATUS FOR THE PRODUCTION OF CIGARETTES
William Frederick Maitland Edwards, London, and Rowland Frank May, Middlesex, England, assignors to Filter Tips Limited, London, England, a British company
Application October 31, 1934, Serial No. 750,904
In Great Britain July 14, 1933
7 Claims. (Cl. 131—39)

1. An apparatus for the production of cigarettes provided with a stub portion at the mouthpiece end, comprising an intermittently movable carrier, means on the carrier for supporting a cigarette with an aligned stub portion, means for wrapping a uniting band about the aligned cigarette and stub portion, means for supplying the uniting band to the wrapping means, and means operable between the intermittent movements of the carrier for actuating the wrapping means.

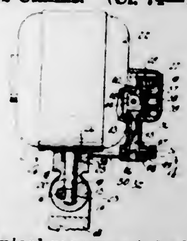
2,002,887
ROUTE FILE
Tom W. Flory, Ottawa, Kans.
Application July 6, 1934, Serial No. 734,038
6 Claims. (Cl. 45—58)



1. A dash-board file holder comprising a dash-board attached support, a lateral bracket arm carried thereby and extending rearwardly therefrom, a file holder panel adapted to be seated on said bracket, and cooperatively engageable connector means carried respectively by the forward edge of the panel and said support on either side of said bracket arm.

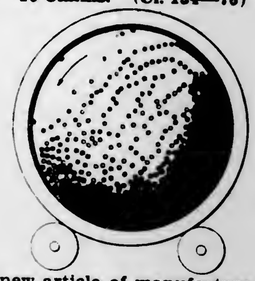
2,002,888
ORNAMENTAL TOE REENFORCEMENT FOR STOCKINGS
Gustav Gastrich, Wyomissing, Pa., assignor to Textile Machine Works, Wyomissing, Pa., a corporation of Pennsylvania
Application January 25, 1933, Serial No. 653,358
3 Claims. (Cl. 66—182)

1. A full fashioned sheer-knit stocking, comprising a foot portion including an instep and a toe pocket having in its top area a plurality of coursewise opposed substantially triangular flexible areas each convergingly tapered walewise of the stocking toward the pocket tip and an area between said areas at the top of the pocket constituting a relatively inflexible separate-thread substantially triangular shield having a coursewise side adjacent to the pocket tip and its other sides along the respective adjacent sides of the flexible areas, said areas together with the sides and bottom of the pocket in the coursewise zone thereof constituting a band-like element about the toe portion of the stocking foot of gradually increasing flexibility around the band from said tip toward the instep.



2,002,889
SUCTION GLASS GATHERING DEVICE
Paul L. Geer, Bellevue, Harold A. Meere, Wilkinsburg, and William A. Merton, Pittsburgh, Pa.
Application April 7, 1932, Serial No. 603,736
28 Claims. (Cl. 49—55)

2. Apparatus for segregating mold charges from a mass of molten glass comprising a forehearth having an extension chamber beyond the area of the glass, a discharge orifice at the bottom of said extension chamber, a plurality of feeder tubes within the forehearth one of which is disposed in alinement with the discharge orifice and the other over the surface of the glass in the forehearth chamber, means for drawing glass charges into the latter tube and for expelling the charges from the tube over the discharge orifice, and means for alternately contacting said tubes with the molten glass.

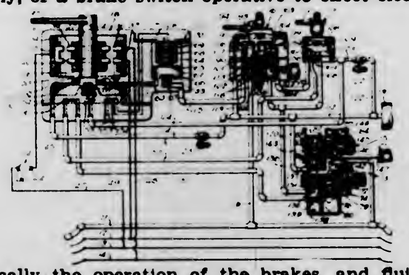


11. The method of feeding glass which comprises initially lifting and subsequently severing a confined mass of glass from a molten glass source and thereafter subdividing the segregated mass into a mold charge of predetermined weight and shape.

2,002,890
MECHANICAL MOVEMENT
Louis Greenberg, Chicago, Ill.
Application July 22, 1932, Serial No. 623,992
12 Claims. (Cl. 74—70)

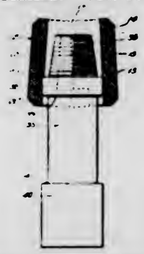
1. A mechanical movement, including an oscillatory motor having a driven shaft, a supporting element underneath said motor relatively to which it may oscillate, and a train of power-transmitting elements having therein reversing means comprising a worm having a horizontal axis carried by said driven shaft, a worm wheel meshing with said worm, a second worm, a vertical shaft on which said worm wheel and said second worm are mounted, a second worm wheel disposed below said first-mentioned worm in mesh with said second worm and having a horizontal axis, and a cylindrical member connected to and adapted to be oscillated by said last-mentioned wheel by an eccentric lost motion connection for oscillation extending at an angle to said driven shaft and gear means connecting said member to said supporting element.

2,002,891
BRONZE, BRONZE POWDERS, AND METHOD OF MAKING THE SAME
Everett J. Hall, Elizabeth, N. J.; Harriet L. Hall, executrix of said Everett J. Hall, deceased, assignor to Metals Disintegrating Company, Inc., Elizabeth, N. J., a corporation of New Jersey
Application June 4, 1931, Serial No. 542,189
10 Claims. (Cl. 134—76)



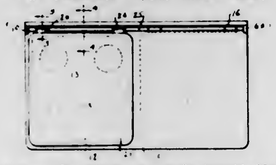
9. As a new article of manufacture, a mixture of about 58% of flaked aluminum particles, about 1% stearic acid, about 1% aluminum stearate, and about 40% "Varnolene", the flaked aluminum having a leafing film, and the mixture being in a substantially homogeneous and persistent paste form.

2,002,892
ELECTROPNEUMATIC BRAKE
Ellis E. Hewitt, Edgewood, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a corporation of Pennsylvania
Application July 12, 1934, Serial No. 734,770
6 Claims. (Cl. 303—15)



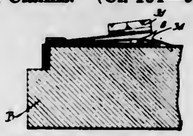
1. In a brake system, the combination with a brake pipe, a source of fluid under pressure, and

a brake valve device for controlling a communication through which fluid under pressure from said source is supplied to said brake pipe and for varying the pressure of fluid in said brake pipe to effect the operation of the brakes pneumatically, of a brake switch operative to effect elec-



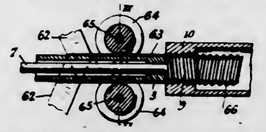
trically the operation of the brakes, and fluid pressure responsive means operatively controlled by movement of said brake switch for cutting off the supply of fluid under pressure from said source to said brake valve device through said communication.

2,002,893
DRILL PIPE PROTECTOR
Charles K. Holt, Santa Barbara, Ira B. Marsh, Ventura, and John B. Merritt, Santa Barbara, Calif.
Application May 19, 1933, Serial No. 671,880
Renewed November 5, 1934
14 Claims. (Cl. 308—4)



5. A well drilling string having longitudinally spaced projecting parts, a resilient continuous annular body adapted to be sprung over one of said parts to a position on the string between said parts, and means in the body for preventing radial expansion of the body after it has been positioned between said parts, said means including, substantially rigid members embedded in the body, and means for connecting said members to form an annular rigid assembly.

2,002,894
STOVE
Bertrand B. Kahn, Cincinnati, Ohio, assignor to The Estate Stove Company, Hamilton, Ohio, a corporation of Ohio
Application November 27, 1933, Serial No. 699,819
9 Claims. (Cl. 126—214)

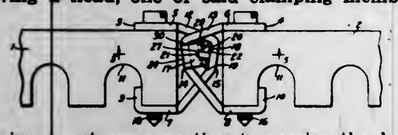


6. A stove having a substantially flat top, a cover for said stove top, said cover being substantially shorter than the top length, cover attaching means affording a permanent attachment of the cover to the stove and comprising a member extending lengthwise of the stove top for substantially the stove length adjacent the rear thereof, and means adjacent opposite ends of one side edge of the cover connecting the cover to said member for pivotal movement of the cover on an axis extending in the direction of the member and for a traversing movement in the direction of the member whereby selected portions of the stove top may be exposed at the side of the covered part.

2,002,895
ARTICLE OF PRINTER'S FURNITURE
Elmer L. Kokanour, Fort Lauderdale, Fla.
Application March 22, 1934, Serial No. 716,775
4 Claims. (Cl. 164—98)

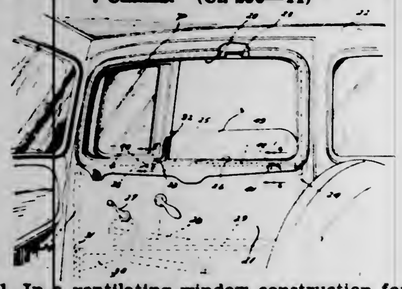
3. An article of manufacture comprising a punch device adapted to be applied to the platen of a job printing press, said device having a heel for clamping engagement between the platen and bail of said press and having a toe adapted to enter a slit in the tympan drawsheet for positioning said device on the platen.

2,002,896
METHOD OF AND MEANS FOR THE MANUFACTURING OF HELICALLY GROOVED ENDLESS HOSE AND TUBING
Josef Kopetz, Vienna, Austria
Application October 30, 1931, Serial No. 572,164
In Austria November 10, 1930
7 Claims. (Cl. 93—80)



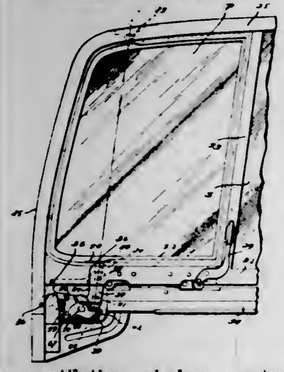
1. Apparatus for the purpose set forth including a frame supporting a fixed hollow mandrel, a spindle rotatably mounted within the said mandrel, a threaded plug on the end of said spindle immediately in front of the free end of the said hollow mandrel, an internally threaded member mounted in the said framework and spaced continuously about the said plug, means for rotating the said spindle, plug, and internally threaded member in the same direction and at the same speed, means for revolving rolls of ribbon-shaped material in ribbon form about the said hollow mandrel so that a tube of the said material is formed upon the outside of the said hollow mandrel, and a set of clamping rollers adapted to press against the said tube and to prevent the same from rotating upon the said hollow mandrel.

2,002,897
BELT CONNECTER
Edward H. Kremer, Dayton, Ohio, assignor to The Dayton Rubber Manufacturing Company, Dayton, Ohio, a corporation of Ohio
Application February 13, 1934, Serial No. 711,034
13 Claims. (Cl. 24—33)



1. A belt connecter comprising interlaced clamping members with pintle members dis-

posed therebetween, one of said pintle members having a head, one of said clamping members

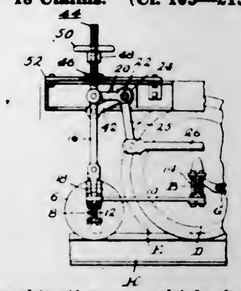


having a cut-away portion to receive the head and hold one of said pintle members.

2,002,898
VEHICLE VENTILATING WINDOW
Dwight B. Lee, Detroit, Mich.
Application April 30, 1934, Serial No. 723,253
7 Claims. (Cl. 296—44)

1. In a ventilating window construction for a vehicle body having a window casing, a frame slidable in said casing into and out of registration with the window opening, a bar slidably mounted on said frame, fixed supports carried by said casing, and a plurality of members spaced longitudinally of said bar engageable with said supports for securing said frame in position in registration with the window opening.

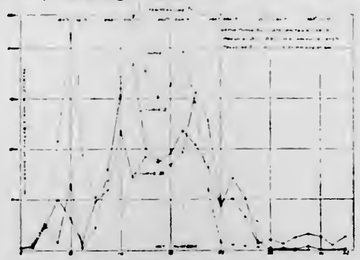
2,002,899
VEHICLE VENTILATING APPARATUS
Dwight B. Lee, Detroit, Mich.
Application April 30, 1934, Serial No. 723,254
5 Claims. (Cl. 296—44)



1. In a ventilating window construction of the character described, a frame, a panel pivotally mounted in said frame, a gear supporting frame secured to said first frame, a worm wheel rotatably mounted on said supporting frame, a retainer slidably mounted on said supporting frame, a worm carried by said retainer, and means for urging said retainer toward said worm wheel.

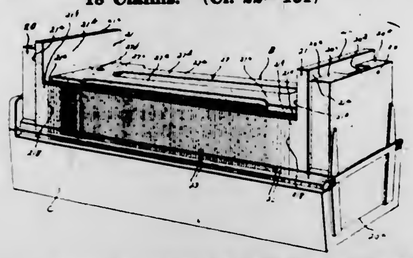
2,002,900
DECORATED GLASS ARTICLE
Edward C. Leibig, Corning, N. Y., assignor to Corning Glass Works, Corning, N. Y., a corporation of New York
Application January 6, 1933, Serial No. 650,456
1 Claim. (Cl. 41—18)

A vessel of thermally and chemically resistant glass having a design which is composed of a colored area and an uncolored area, one area being raised with respect to the other area, the colored area consisting of a thin surface layer of the glass which contains a small amount of an element of the copper sub-group having an atomic weight between 63 and 108 of the first periodic group, said colored layer having an expansion coefficient not higher than the uncolored portion of the glass.



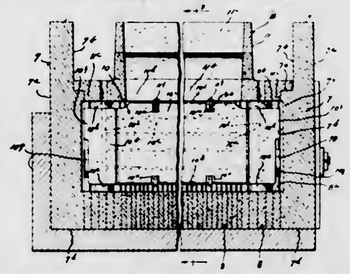
2,002,901
VEHICLE AND PILOT MEANS THEREFOR
David W. Main, Oklahoma City, Okla., assignor to Transportation Systems, Inc., Oklahoma City, Okla., a corporation of Oklahoma
Application March 28, 1932, Serial No. 601,691
18 Claims. (Cl. 105—215)

1. In combination, a vehicle having wheels adapted to traverse a railway track, pilot wheels alined with said vehicle wheels and adapted to coact with the track in guiding the vehicle, and resilient arms rigidly connected to the vehicle at one end and to said pilot means at the other end and adapted to permit independent vertical movement between the vehicle wheels and said pilot wheels without independent lateral movement between said wheels.



2,002,902
PROCESS FOR REMOVING GUM AND GUM FORMING CONSTITUENTS FROM CRACKED PETROLEUM DISTILLATES
Samuel M. Martin, Jr., Pittsburgh, and William A. Gruse, Wilkinsburg, Pa., assignors to Gulf Refining Company, Pittsburgh, Pa., a corporation of Texas
Application January 8, 1932, Serial No. 585,570
11 Claims. (Cl. 196—23)

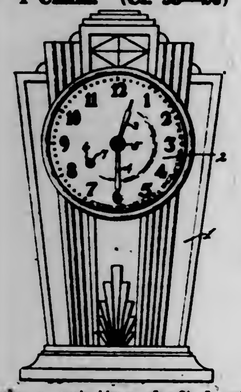
9. In the manufacture of motor fuels from pressure still distillates consisting chiefly of gasoline, the process which comprises removing from such distillates at least one intermediate cut containing a preponderance of gum and gum-forming constituents, this cut being taken within the limits of a temperature range of about 195° to 285° F., treating this cut to eliminate gum and



gum-forming constituents, and uniting the so purified cut with the bulk of the distillate from which it was derived.

2,002,903
APPARATUS FOR MAKING RADIATORS
James F. McIntire, Detroit, Mich., assignor to United States Radiator Corporation, Detroit, Mich., a corporation of New York
Original application August 15, 1932, Serial No. 628,950. Divided and this application March 19, 1934, Serial No. 716,420
18 Claims. (Cl. 22—131)

1. A mold for forming a radiator having end and side walls, headers upon the end walls, substantially parallel fluidways extending between the headers, and fins projecting laterally from opposite sides of said fluidways, comprising substantially parallel longitudinally extending dry sand cores having relatively thin elongated bodies for forming the fluidways and having enlargements at opposite ends thereof, cores of block-like configuration between and cooperating with said enlargements for forming the headers, and a casing for said cores comprising slabs at opposite ends of said cores in spaced relation to the enlargements, vertically disposed fin cores arranged one against the other in a row between said enlargements and having substantially horizontal and vertical portions respectively spaced beneath, between and upon the outer sides of said longitudinally extending cores, vertically disposed header cores arranged one against the other between the slabs and fin cores and having substantially horizontal and vertical portions respectively spaced beneath and upon the outer sides of said longitudinally extending cores, and a cover core extending over the vertical portions of said header and fin cores between said slabs, the said slabs being provided in their inner faces with recesses into which metal may flow to form the end walls of the radiator, one of said slabs being provided with an opening for receiving molten metal and having a runner for conducting said metal to the recess therein, the fin cores being provided in horizontal alignment with the recesses aforesaid with recesses into which metal may flow to form the fins of the radiator, the fin cores and the header cores being provided with horizontally aligned slots into which metal may flow to form the side walls of the radiator, the header and fin cores having openings in communication with and adapted to receive molten metal from the opening in the slab aforesaid and having runners for conducting such metal from said openings to the spaces between the upright portions thereof.



2,002,904
APPARATUS FOR MAKING RADIATORS
James F. McIntire, Detroit, Mich., assignor to United States Radiator Corporation, Detroit, Mich., a corporation of New York
Original application August 15, 1932, Serial No. 628,950. Divided and this application March 19, 1934, Serial No. 716,421
11 Claims. (Cl. 22—131)

1. A mold for forming a radiafor having end and side walls, headers upon the end walls, a fluidway extending between said headers, fins projecting laterally from opposite sides of the fluidway to said side walls, and fins projecting laterally from the headers to said side walls, comprising a longitudinally extending dry sand core having a relatively thin elongated body for forming the fluidway and having enlargements at opposite ends thereof for forming the headers, and a casing for said core comprising slabs at opposite ends of said core in spaced relation to the enlargements, vertically disposed fin cores arranged one against the other in a row between said enlargements and having substantially horizontal and vertical portions respectively spaced beneath and upon opposite sides of said elongated body, vertically disposed header cores arranged one against the other in rows between the slabs and the adjacent fin cores aforesaid and having substantially horizontal and vertical portions respectively spaced beneath and upon opposite sides of said enlargements, and a cover core extending over the vertical portions of said fin and header cores between said slabs and having depending portions that extend between the vertical portions of the header and fin cores, said cover core having a sprue for molten metal, and one of said depending portions having an opening therein communicating with the sprue and with the space between the vertical portions of said fin cores and forming a gate for the reception of molten metal, the slabs being provided in their inner faces with recesses into which metal may flow to form the end walls aforesaid, the fin cores being provided in horizontal alignment with the recesses just mentioned with recesses into which metal may flow to form the first mentioned fins, the header cores being provided in horizontal alignment

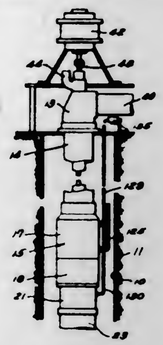
with the recesses aforesaid with recesses into which metal may flow to form the last mentioned fins, the bases of the recesses in the fin and header cores being provided at their outer upright edges with aligned slots into which metal may flow to form the side walls aforesaid.

2,002,905
DEVICE FOR INDICATING WHETHER A CLOCK IS RUNNING
Bernard F. Muldoon, Mountain View, N. J., assignor to Henry Hyman, Brooklyn, N. Y.
Application July 1, 1933, Serial No. 629,413
1 Claim. (Cl. 58—26)

In a clock, a rotating shaft having an end projecting in front of the face of said clock, and a faceted member attached thereto and eccentric thereof.

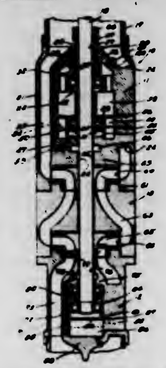
2,002,906
CAN TOP REMOVER
John H. Mullan, San Francisco, Calif.
Application March 20, 1934, Serial No. 716,479
5 Claims. (Cl. 81—3.1)

1. In a can top wrench, the combination of a jaw member having a handle with a longitudinal slot therein, a grip member having a cooperating jaw member, a securing means passing through the slot in the handle of said jaw member carried by and forming a longitudinally movable pivot for said grip member, and means disposed between said jaw member and said grip member operating between said members with a wedging action to tighten said securing means and prevent a longitudinal movement thereof in said slot when said grip member is moved toward said jaw member handle.



2,002,907
MOTOR PUMP
Charles Robert Sessions, San Francisco, Calif., assignor, by mesne assignments, to Menhorn, Inc., Los Angeles, Calif., a corporation of California
Application June 8, 1921, Serial No. 476,092
Renewed March 19, 1928
25 Claims. (Cl. 103—87)

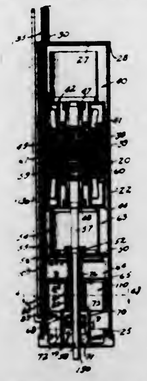
1. A device of the class described, comprising: a motor casing; an electric motor in said casing; a shaft on said motor extending through said casing; a fluid seal, related to said motor shaft, for sealing the hub joint between said shaft and said casing in fluid-tight relationship; and means functioning upon the operation of said motor for changing the pressure on said fluid seal.



3. A device of the class described, comprising: a motor casing; an electric motor in said casing; a shaft on said motor extending through said casing; a pump connected to said shaft; a fluid trap, related to said motor shaft, for sealing the hub joint between said shaft and said casing in fluid-tight relationship; and a pneumatic means in said casing to control the pressure on said fluid trap in response to pressure variations set up by said pump.

2,002,908
BEARING STRUCTURE
Earl Mendenhall and Junius B. Van Horn, Los Angeles, Calif., assignors to Menhorn, Inc., Los Angeles, Calif., a corporation of California
Application September 26, 1932, Serial No. 634,908
21 Claims. (Cl. 308—134)

1. A bearing structure adapted to operate submerged in any fluid, comprising: walls forming a bearing chamber, said bearing chamber being substantially filled with a lubricating medium; a bearing in said bearing chamber; a vertical shaft extending into said bearing chamber and journalling in said bearing; seal means around said shaft for completely separating said lubricating medium in said chamber and said fluid in which said bearing structure is submerged; walls forming a balance chamber below said bearing chamber and containing bodies of said lubricating medium and said fluid in pressure-transferring relationship; passage means communicating between the upper end of said balance chamber and said bearing chamber; and means for preventing said lubricating medium from escaping from said bearing chamber should the level of said fluid fall below the level of said lubricating medium.

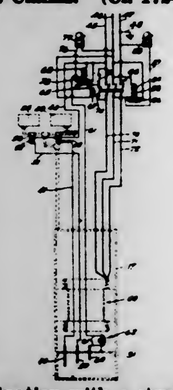


2,002,909
SUBMERSIBLE STRUCTURE
Earl Mendenhall and Junius B. Van Horn, Los Angeles, Calif., assignors to Menhorn, Inc., Los Angeles, Calif., a corporation of California
Application September 26, 1932, Serial No. 634,911
11 Claims. (Cl. 103—102)

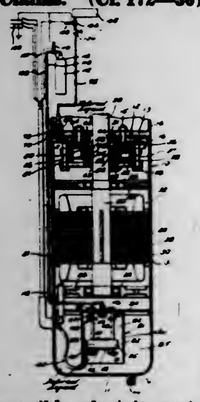
1. In a submersible structure adapted to be submerged in an external liquid, the combination of: an enclosing structure; walls extending across the interior of said enclosing structure and dividing this interior into an upper chamber, an intermediate chamber, and a lower pressure-transfer chamber, said intermediate and said lower chambers communicating with each other; a shaft extending from said intermediate chamber through said upper chamber; a sealing means around said shaft and sealing said upper chamber from said intermediate chamber, said sealing means providing external and internal portions respectively communicating with said upper and intermediate chambers; means changing the pressure in said upper chamber with respect to the pressure of said external liquid in which said structure is submerged; walls forming a passage communicating with said upper chamber and extending downward below said intermediate chamber to communicate with said lower chamber to substantially equalize the pressures on said external and internal portions of said sealing means.

2,002,910
SUBMERSIBLE MOTOR WITH MERCURY-SEALED BALANCING MEANS
Earl Mendenhall and Junius B. Van Horn, Los Angeles, Calif., assignors to Menhorn, Inc., Los Angeles, Calif., a corporation of California
Application November 7, 1927, Serial No. 231,513
Renewed August 3, 1932
17 Claims. (Cl. 286—9)

1. In a device adapted to operate below the surface of an external fluid, the combination of: a shell, the interior of said shell containing an internal fluid; a fluid-sealed member separating said internal and said external fluids; and a valve in said member, said valve allowing a passage of fluid therethrough when said member is in a predetermined position.

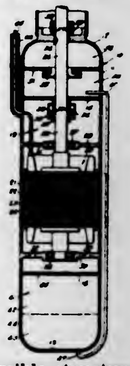


2,002,911
INVERTED MOTOR FOR PUMPS
Earl Mendenhall and Junius B. Van Horn, Los Angeles, Calif., assignors to Menhorn, Inc., Los Angeles, Calif., a corporation of California
Application January 9, 1928, Serial No. 245,307
6 Claims. (Cl. 103—87)



6. In a submersible motor-pump unit adapted for use in pumping a well, the combination of: a pump positioned in said well beneath the surface of the well liquid; a motor shell positioned below said pump but spaced therefrom to define a chamber communicating with the intake of said pump to conduct well liquid to the intake of said pump; a motor in said motor shell; connecting means operatively connecting said pump and said motor and extending through said chamber; a seal at the junction of said connecting means and said motor shell, an outer portion of said seal communicating with said chamber and an inner portion thereof communicating with the interior of said motor shell; and means for maintaining the pressure inside said motor shell substantially the same as the intake pressure of said pump, said means including a passage in open communication at one end with the lower part of said motor shell and at the other end with the well liquid drawn into said chamber by said pump, said passage opening on the pumped well liquid at a level near the top of said motor shell.

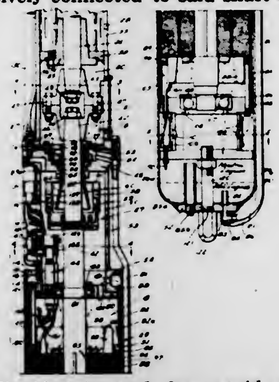
2,002,912
CONTROL DEVICE FOR PUMPING SYSTEMS
Earl Mendenhall and Junius B. Van Horn, Los Angeles, Calif., assignors to Menhorn, Inc., Los Angeles, Calif., a corporation of California
Application March 23, 1931, Serial No. 524,494
28 Claims. (Cl. 172—36)



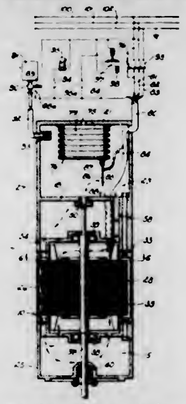
1. In combination with a structure submerged in an external liquid and providing a chamber containing variable amounts of said external liquid: a plurality of pressure-varying means above the surface of said external liquid and individually controlling the pressure in said structure to control the amount of said external liquid in said chamber; a plurality of electrode means extending varying distances into said chamber toward said surface of said external liquid; and circuit means operatively connecting each of said electrode means to a corresponding pressure-varying means.

2,002,913
SUBMERSIBLE MOTOR STRUCTURE WITH MECHANICAL SEAL
Earl Mendenhall and Junius B. Van Horn, Los Angeles, Calif., assignors to Menhorn, Inc., Los Angeles, Calif., a corporation of California
Application September 26, 1932, Serial No. 634,909
24 Claims. (Cl. 172—36)

1. In a submersible electric motor structure, the combination of: a shell containing a liquid and defining a motor chamber, said shell being submerged in an external liquid; a motor in said motor chamber; a shaft on said motor; a seal at the junction of said shaft and said shell; walls forming a gas chamber containing gas in its upper end and openly communicating at its lower end with said liquid in said shell; and means for supplying additional liquid to said liquid in said shell under pressure greater than the pressure at the depth of submergence of said shell, thereby forcing said liquid in said shell upward in said gas chamber to raise the liquid level therein until the head developed in the lower portion of said gas chamber is greater than the pressure of said external liquid at the depth of submergence of said shell and thereby maintaining in said shell a pressure greater than the pressure outside said shell, the liquid level in said gas chamber dropping as the pressure in said shell decreases.



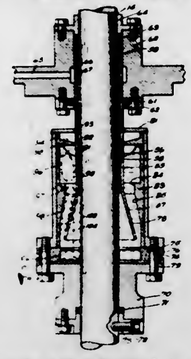
2,002,914
CONSTRUCTION FOR SUBMERSIBLE MOTORS AND THE LIKE
Earl Mendenhall, Los Angeles, and Junius B. Van Horn, Alhambra, Calif., assignors to Menhorn, Inc., Los Angeles, Calif., a corporation of California
Original application September 26, 1932, Serial No. 634,911. Divided and this application January 12, 1935, Serial No. 1,520
12 Claims. (Cl. 172—36)



1. In a submersible structure, the combination of: an enclosing structure submerged in an external liquid and defining a main chamber containing an internal liquid; a rotatable shaft extending upward from said main chamber; a seal at the junction of said shaft and said enclosing structure; pump means above said main chamber and operated by said shaft and intaking from said external liquid in which said enclosing structure is submerged and discharging in communication with said seal; and walls forming a balance chamber communicating between said main chamber and the pressure developed by said pump means and containing pressure-transferring bodies of said internal and external liquids for building up the pressure in said main chamber to a value higher than the pressure of said external liquid at the depth of submergence of said structure and thereby substantially equalizing the pressures on opposite sides of said seal.

2,002,915
MOTOR CONSTRUCTION
Earl Mendenhall, Junius B. Van Horn, and Clarence J. Coberly, Los Angeles, Calif.; said Mendenhall and said Van Horn, assignors to Menhorn, Inc., Los Angeles, Calif., a corporation of California
Application September 26, 1932, Serial No. 634,912
28 Claims. (Cl. 172—36)

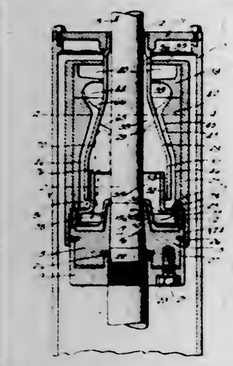
1. In a submersible electric motor structure, the combination of: a shell positioned in a surrounding medium; a motor in said shell; a shaft on said motor extending from said shell; a sealing means sealing the junction of said shaft and said shell; walls defining an auxiliary chamber communicating with said sealing means; pump means for building up a pressure in said auxiliary chamber which is greater than the pressure of said surrounding medium, said pump means being operatively connected to said shaft and circulating liquid into and from said auxiliary chamber; a throttle means for throttling the flow of said liquid through said auxiliary chamber to regulate the pressure therein; and a pressure transfer means communicating with said auxiliary chamber and with the interior of said shell for building up a pressure in said interior of said shell substantially equal to the pressure in said auxiliary chamber.



2,002,916
SUBMERSIBLE MOTOR CONSTRUCTION
Earl Mendenhall, Los Angeles, and Junius B. Van Horn, Alhambra, Calif., assignors to Menhorn, Inc., Los Angeles, Calif., a corporation of California
Application April 16, 1934, Serial No. 720,774
16 Claims. (Cl. 172—36)

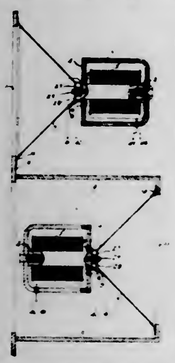
1. In combination in a submersible electric motor: a motor shell containing an internal liquid and adapted to be submerged in an external liquid; an electric motor in said motor shell and providing a shaft extending through said shell; a seal at the junction of said shaft and said shell and providing an internal portion contacted by said internal liquid and an external portion communicating with said external liquid; pumping means in that end of said shell opposite said seal and intaking internal liquid from one section of said shell and discharging said internal liquid at higher pressure into another section of said shell; and means transferring the discharge pressure of said pump to said internal liquid contacting said internal portion of said seal to maintain on said internal portion of said seal a pressure in excess of the pressure on said external portion of said seal.

2,002,917
SEALING DEVICE
Earl Mendenhall and Junius B. Van Horn, Los Angeles, Calif., assignors to Menhorn, Inc., Los Angeles, Calif., a corporation of California
Application June 16, 1931, Serial No. 544,792
17 Claims. (Cl. 286—9)



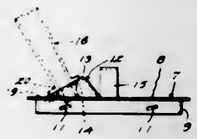
17. In a fluid seal adapted to effectively seal two liquids at the junction of a rotating member and a stationary member, the combination of: a cup means secured to said rotatable member and retaining a body of mercury rotating therewith; and a stationary baffle attached to said stationary member and extending into said cup means to a position beneath the surface of said body of mercury, said baffle cooperating with said rotatable member to define an annular chamber, opposite sides of said baffle respectively communicating with said two liquids whereby one of said liquids communicates with one portion of said surface of said mercury positioned in said annular chamber, and the other of said liquids communicates with another portion of said mercury surface positioned in the space between said baffle and said cup means, said baffle being formed of metal and being coated with a non-metallic coating which prevents direct contact between the metal of said stationary baffle and the mercury rotating relative thereto thus preventing pitting of said baffle.

2,002,918
FLUID-PACKED SEAL
Earl Mendenhall, Junius B. Van Horn, and Clarence J. Coberly, Los Angeles, Calif.; said Mendenhall and said Van Horn, assignors to Menhorn, Inc., Los Angeles, Calif., a corporation of California
Application June 29, 1931, Serial No. 547,542
27 Claims. (Cl. 286—9)



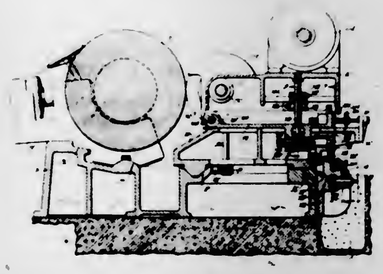
1. A seal for sealing the junction of a vertically positioned rotatable member and a stationary member, including in combination: cup means secured to one of said members and retaining a

body of sealing liquid; an apron secured to the other of said members and extending downward around said rotatable member and into said sealing liquid, said apron terminating in a lower edge



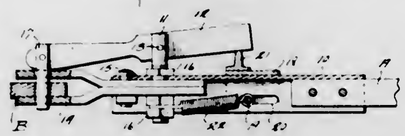
submerged in said sealing liquid at all times regardless of the operation of said seal; and a pumping means setting up a continuous circulating flow of said sealing liquid in said cup means and transversely across said lower edge.

2,002,919
ELECTROMAGNETIC TRANSLATING SYSTEM
Benjamin F. Miessner, Millburn Township, Essex County, N. J., assignor to Miessner Inventions, Inc., a corporation of New Jersey
Application June 17, 1932, Serial No. 617,738
7 Claims. (Cl. 179—115.5)



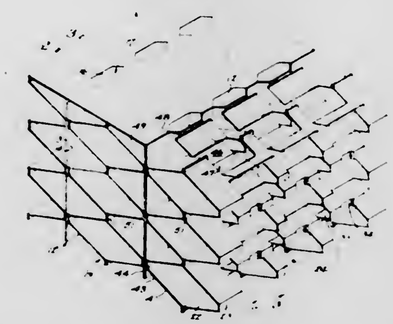
1. In an electromagnetic translating system, the combination of two sound reproducers each including a magnetic circuit wherein is provided an air-gap and including a dynamic coil operatively located in said air-gap and a diaphragm coupled to said coil; a common source of pulsating direct current for exciting said magnetic circuits; a common source of sound representing oscillations for energizing said dynamic coils; electrical interconnections between said two reproducers whereby the pulsations respectively induced in said dynamic coils by said excitation mutually cancel; and a common baffle for the diaphragms of said reproducers, said diaphragms being so disposed with respect to said baffle that their radiations on either one side of said baffle combine in aiding phase.

2,002,920
MILKING DEVICE
Henry L. Morency, Boulder, Colo.
Application July 26, 1933, Serial No. 682,319
2 Claims. (Cl. 31—50)



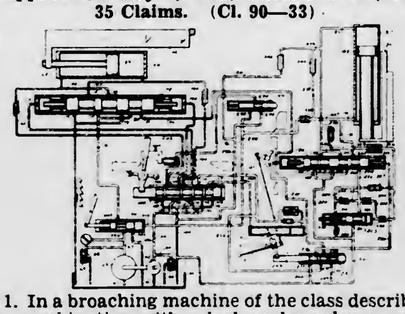
1. In a milking receptacle, a receptacle body having an open top, a cover for said open top, said cover having a portion of its top pressed upwardly to form a flat inclined wall, said wall having an aperture therein, and an elongated milking tube of resilient material having one end of smaller diameter than the other, a broad flange surrounding said tube adjacent the smaller end, a rib surrounding the tube in close proximity to the flange and between the same and the adjacent end, and said tube being tapered from said rib to the adjacent end to facilitate its introduction into said inclined wall opening, said rib being yielding to pass through the opening whereby the edge of the opening will be held between the rib and said flange.

2,002,921
GRINDING MACHINERY
Lester F. Nenninger, Cincinnati, Ohio, assignor to Cincinnati Grinders Incorporated, Cincinnati, Ohio, a corporation of Ohio
Application May 3, 1933, Serial No. 669,212
9 Claims. (Cl. 51—49)



1. In a grinding machine of the class described the combination of a bed, a grinding wheel support mounted thereon for a translation relative thereto, a slide on the support for transverse adjustment relative thereto, a grinding wheel carriage pivotally mounted on the slide for oscillation in the direction of adjustment of the slide, power means for actuating the slide, manual means for oscillatably adjusting the carriage, additional power means for oscillating the carriage, a coupling between the power oscillating means and carriage whereby the power oscillating means is effective regardless of the adjustment of the slide with respect to the support, including a spline shaft adapted to be oscillated by the power oscillating means, an arm in operative engagement with the spline shaft and shiftable relative thereto with the slide, and an axially adjustable plunger contacting with the arm and forming a part of the manual oscillating means.

2,002,922
COUPLING FOR PUMP RODS, TRAILER HITCHES AND THE LIKE
Herman A. Onken, Webster City, Iowa
Application February 9, 1935, Serial No. 5,879
3 Claims. (Cl. 280—33.15)



1. A coupling of the character described, comprising a body having an apertured fork at one end, a lever pivoted upon the body and having a locking bolt adapted to pass through the apertures of the fork, a slide mounted upon the body for longitudinal movement toward or from the pivot pin of the lever, the slide when pushed toward the pin being disposed beneath the rear end of the lever and preventing the rear end from being depressed and the locking bolt from being raised from the fork, the slide being retractible to permit the depression of the rear end of the lever.

2,002,923
RADIATOR FIN CONSTRUCTION
Oscar C. Palmer, Phoenix, Ariz.
Application November 27, 1931, Serial No. 577,578
3 Claims. (Cl. 257—130)

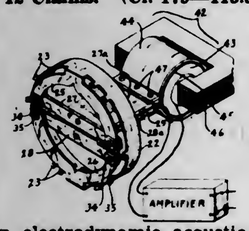
3. A radiator construction comprising a first set of water tube members, a second set of water tube members in spaced parallel relation thereto forming an air channel therebetween, each set of water tube members having beads thereon projecting into the air channel, and two fins in the air channel, each fin being a transversely corrugated section of sheet metal, the corrugations of each fin forming two sets of crests, each fin having crests of one set engaging the adjacent water tube member between the beads thereon, and portions of said crests opposite the beads on the water tube member bent reversely so as to be between the crests of the other set of crests on the same fin, the crests of said other set of each fin being in engagement with each other and having portions opposite the beads reversely bent into engagement with the beads between the crests of the first set of each fin, said two fins being interlocked to hold them against displacement relatively to each other.

2,002,924
BROACHING MACHINE
Millard Romaine, Cincinnati, and Erwin G. Roehm, Norwood, Ohio, assignors to The Cincinnati Milling Machine Company, Cincinnati, Ohio, a corporation of Ohio
Application May 3, 1933, Serial No. 669,209
35 Claims. (Cl. 90—33)

1. In a broaching machine of the class described the combination with a bed, and a column, of a ram mounted on the column for movement relative thereto in a given direction, a table mounted on the bed having a plurality of stations and movable in a direction angularly related to the direction of movement of the ram for successively positioning the stations of the table with respect to the ram, means for shifting the table and automatically positioning it with respect to the ram, means for actuating the ram, means associated with either the ram or table for locking the same in position during the operation of the other, and means associated with the operating part and operable thereby for rendering the last named means inoperative to effect the operation of the locked member.

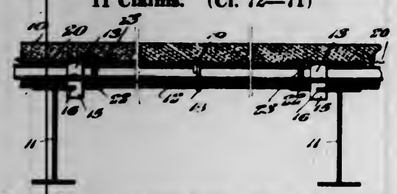
19. In a broaching machine of the class described the combination with a broaching ram and a work supporting table having a plurality of work positions adapted to be successively aligned with the ram, said table and ram being movable relative to one another in angularly related directions, of independent hydraulic motors for actuating the ram and table, said hydraulic motors being operated in sequential order each at the conclusion of the operation of the other, an hydraulic circuit for effecting the operation of said motors, a reversing valve in the circuit for each motor, power control means including a second hydraulic circuit for actuating the reversing valves, a pilot valve in said control circuit for each reversing valve, connections between said pilot valves whereby the reversing valves are sequentially operated, manual means for operating one of said pilot valves for initiating the cycle, dog controlled means for shifting said pilot valve and effecting the operation of said second pilot valve, additional dog controlled means for shifting said second pilot valve to effect a reverse actuation of its reversing valve, further dog controlled means for shifting said second pilot valve to effect a neutralizing or stopping position of its reversing valve, and power controlled means for locking the first pilot valve in position during the cyclic movement of the second pilot valve and reversing valve.

2,002,925
COVER BAG FOR CAGES
Merritt D. Robison, San Francisco, Calif.
Application June 6, 1934, Serial No. 729,260
8 Claims. (Cl. 119—17)



1. A cover bag for cages, comprising an upper bag portion and a lower bag portion having hori-

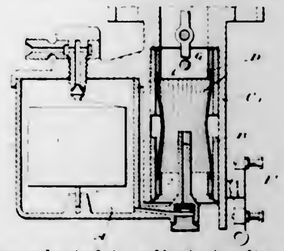
zontal edges, said portions fixed together about their horizontal edges, said upper portion consist-



ing of a plurality of sections adapted to close over said cage or hang down about and under said lower portion.

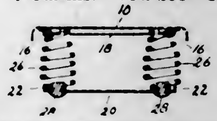
2,002,926
ELECTRODYNAMIC LOUD SPEAKER
Lincoln Thompson, Naugatuck, Conn.
Application July 30, 1932, Serial No 626,416
12 Claims. (Cl. 179—115.5)

8. In an electrodynamic acoustic vibrator, a circular closed ring of conducting material having a plurality of inwardly extending flexible conductors circumferentially disposed therearound and adapted to provide a plurality of arcuate current paths electrically in parallel in said ring, means for providing a magnetic field adapted to traverse said ring, and means for causing a flow of oscillatory currents in said flexible conductors and in said ring, said air gaps extending substantially around the entire circumference of said ring.



2,002,927
BUILDING CONSTRUCTION
Frederick M. Venzie, Philadelphia, Pa., assignor to National Gypsum Company, Buffalo, N. Y., a corporation of Delaware
Application June 24, 1931, Serial No. 546,436
11 Claims. (Cl. 72—71)

8. A floor construction comprising primary supporting means, ceiling surfacing units, means for supporting said units, and means for supporting said last named means by and above said first named means and out of contact therewith.



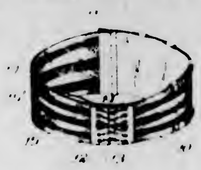
2,002,928
CARBURETOR
Edward Susanna Almaraz, Madrid, and Edmond Cabezas San Antonio, Guadalajara, Spain
Application November 18, 1932, Serial No. 643,204
In Spain November 21, 1931
3 Claims. (Cl. 261—44)

1. A carburetor, comprising in combination, a casing having tubular side walls, a diffusor within said casing, said diffusor consisting of a number of elongated flexible blades forming a tube having a variable cross-section and shape; a movable ring connected with adjacent ends of all of said blades, another movable ring connected with the opposite ends of all of said blades, a throttle valve disc within said casing, a valve stem carrying said disc and rotatably mounted in said casing, a shaft connected with the first mentioned ring and projecting through a slot formed in said casing, a cam situated outside of said casing and firmly connected with said stem, said cam being in contact with said shaft, a lever firmly connected with said shaft and said cam, said lever being situated outside of said casing

and being adapted to adjust simultaneously the position of said throttle valve relatively to said casing and the position of the first-mentioned ring relatively to the second-mentioned ring, a movement of the first-mentioned ring toward the second-mentioned ring causing a bending of said flexible blades, whereby a Venturi tube is formed, another shaft connected with the second-mentioned ring and projecting through a slot formed in said casing, and another lever rotatably mounted outside of said casing in a side wall thereof and adapted to move the second-mentioned shaft to adjust the position of the second-mentioned ring relatively to the first-mentioned ring.

2,002,929
SADDLE
Bert J. Anderson, Hammond, Ind.
Application December 8, 1934, Serial No. 756,673
7 Claims. (Cl. 208—15)

1. A saddle for a velocipede including a stamped seat member, a tongue secured to the under surface of the seat member, a flat member having a segmental groove adjacent each end thereof secured to the under surface of the seat member transverse the longitudinal axis thereof, a reach member movably secured to said tongue member, and a pair of springs riveted to the rear end of said reach member, the topmost coil of each spring being positioned within a segmental groove in said flat member.

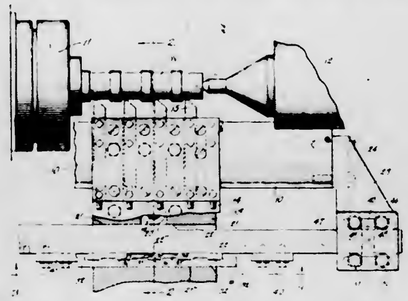


2,002,930
BRAKE RIGGING
Walter H. Baselt, Chicago, Ill., assignor to American Steel Foundries, Chicago, Ill., a corporation of New Jersey
Application July 30, 1932, Serial No. 626,289
22 Claims. (Cl. 188—56)

1. In a car truck, the combination of pairs of wheels therefor, brake rigging for said wheels including brake beams and connected truck levers located to the inside and outside of the wheels respectively, rods connecting the levers on both sides of the truck, an equalizer bar supported by the truck frame and operatively connected to the truck levers, release means for resiliently return-

ing said rigging to release position, said release means including spaced brackets mounted on said truck, a rod slidably mounted on said brackets, resilient means cooperating with said last named rod, and a flexible connection between said rod and the ends of the bar for permitting lateral movement of said equalizer bar.

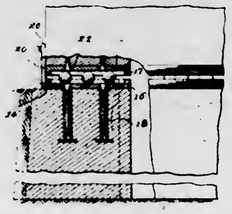
2,002,931
COLOSTOMY BELT
Myrtle A. Bowman, Rochester, Minn.
Application December 26, 1931, Serial No 583,388
8 Claims (Cl. 128—283)



6. A colostomy belt including, a band-like body portion, and a flat flexible resilient water proof removable colostomy pocket carried by said belt.

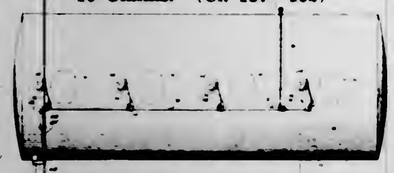
2,002,932
STEEL FOR RAILROAD RAILS, WHEEL TIRES, PLANK PILES, AND OTHER OBJECTS
Herbert Buchholtz, Dortmund, Germany, assignor to the firm Vereinigte Stahlwerke Aktiengesellschaft, Dusseldorf, Germany
No Drawing. Application December 11, 1931, Serial No. 580,500. In Germany December 12, 1930
2 Claims. (Cl. 75—1)

1. A steel for railroad rails, wheel tires, plank-piles and other objects which are subjected to heavy wear, said steel containing about 0.05 to 0.20% of carbon, about 0.08 to 0.25% of phosphorous, about 0.1 to 0.6% of silicon, about 0.6 to 1.6% of manganese and about 0.25 to 1% of copper and the balance substantially iron.



2,002,933
TOOL RELIEF MECHANISM
Timothy B. Buell, Rockford, Ill., assignor to Sundstrand Machine Tool Co., Rockford, Ill., a corporation of Illinois
Application December 23, 1933, Serial No. 703,815
20 Claims. (Cl. 82—14)

1. In a lathe having a bed, rotatably mounted work supporting means, a carriage movable longitudinally of the work axis, and a tool slide mounted on the carriage for movement toward and away from the work, in combination, a cam bar supported on the bed extending longitudinally through a recess in the carriage, a roller carried on the cross slide arranged to engage the inner edge of the cam bar to determine the path of the tool along the work during a turning operation, resilient means normally urging the tool slide away from the work acting to hold said roller against the surface of the cam bar, and means for withdrawing the tool slide from the work upon the completion of the turning operation and prior to the return movement of the carriage comprising means normally holding said cam bar in its operative position, and means operable upon the completion of the turning operation to release said holding means and permit said resilient means to withdraw the cross slide, said means comprising a pair of relatively movable parts positioned intermediate the forward



edge of the cam bar and the carriage, said parts having projecting portions arranged to interengage to hold the cam bar in its normal position and each part having recesses adapted to receive the projecting portions of the other part to permit movement of the cam bar away from the work, a dog secured to said cam bar adapted to engage the end of one of said parts during movement of the carriage to move said part into interfitting engagement with the other part at the completion of the cutting operation, and a second dog arranged to engage said movable part as the carriage returns to its starting position to interengage the projecting portions of said parts and return the cam bar to its normal position.

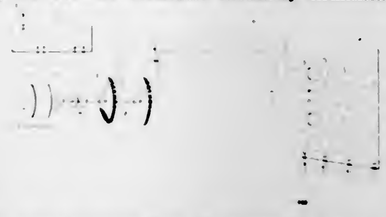
2,002,934
BUILDING CONSTRUCTION
George R. Collins, Kansas City, Mo.
Application April 10, 1933, Serial No 665,428
1 Claim. (Cl. 72—77)

In a building construction having a foundation and a building thereon, plates secured to the upper side of said foundation, oppositely disposed plates on the underside of said building, ball bearings disposed between said plates permitting of the free movement of either said building or said foundation and a strip disposed adjacent the outside of the building over the opening between said plates for preventing the entrance of foreign elements between the plates.

2,002,935
SAFETY MEANS FOR TANKS
Robert W. Crossen, Jr., Plainfield, Ill., assignor to Farrell Manufacturing Company, Joliet, Ill., a corporation of Illinois
Application July 30, 1932, Serial No. 626,434
10 Claims. (Cl. 137—162)

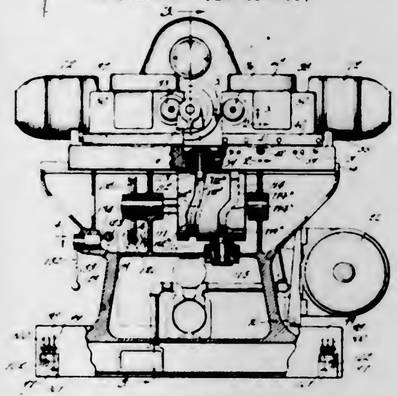
1. In a tank, the combination of a plurality of compartments, valve control means for controlling discharge from said compartments, said control means including a cam member for each compartment, a lever for each cam member for operating said cam members, a rotatable shaft mounted on and extending longitudinally of the tank and connected to said levers for operation thereof, a handle for rotating said shaft, said levers and said cam members, and means outside of said tank for automatically rotating said shaft to operate said levers and said cam members.

2,002,936
FILTER
Charles Davies, New York, N. Y.
Application July 28, 1932, Serial No. 625,229
5 Claims. (Cl. 183—71)



1. A filter comprising a body of filtering material shaped to provide a central filtering portion of zig-zag cross-section and a smooth rim portion encircling the central portion intermediate the crests of the zig-zags.

4. A filter unit comprising a corrugated body of filtering material, and a casing comprising two oppositely disposed relatively rigid members, each member comprising an upstanding open-faced central portion to accommodate the corrugations and an outwardly extending flange encircling the central portion, and means to secure the filter body between the casing members.

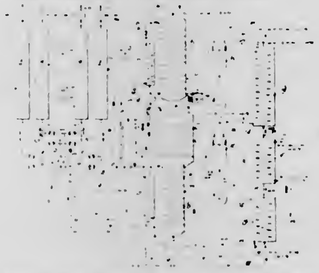


2,002,937
TELEVISION SYSTEM
Harry Melville Dowsett, Winchmore Hill, London, England, assignor to Radio Corporation of America, a corporation of Delaware
Application July 25, 1932, Serial No. 624,437
In Great Britain July 27, 1931
4 Claims. (Cl. 178—6)

1. In television receiving apparatus, a viewing panel on which electro-optical image reproductions are to be made, means for producing over the several elemental areas of the viewing panel signal controlled point representations of the varying values of lights and shadows of a subject of which the electro-optical image is being produced, and a plurality of light producing means surrounding each point of controlled light representation for producing independently of signalling indications constant intensity illumination

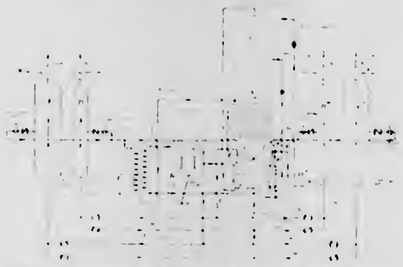
over areas surrounding the areas of image point representations.

2,002,938
MACHINE TOOL
Leo A. Dumser and Oscar W. Floody, Rockford, Ill., assignors to Sundstrand Machine Tool Co., Rockford, Ill., a corporation of Illinois
Application March 6, 1933, Serial No. 659,744
16 Claims. (Cl. 29—70)



1. A machine comprising, in combination, a frame, an arbor rotatably mounted on said frame, a work support movable transversely on said frame beneath said arbor, means for reciprocating said work support at feed and traverse rates including means for moving the support at a feed rate prior to its reversal at each end of its stroke, a pair of work chucking and rotating fixtures on said support one on each side of said arbor, each comprising a holder and a work chucking device rotatably mounted on the holder on an axis parallel with said cutter arbor and in overhung relation thereto so as to facilitate replacing finished work pieces with work blanks, means for driving said chucking device at a relatively low speed, and means for clamping work pieces to said chucking devices and for releasing said work pieces therefrom during continued rotation of the chucking devices comprising piston and cylinder devices on said fixtures, and control valves for said piston and cylinder devices having operating pedals positioned on the front of said frame adjacent to the bottom thereof and arranged to be foot operated.

2,002,939
STENCIL AND MARKING INK
William Ernest, Martinez, Calif., assignor of one-half to Emanuel H. Baer, Associated, Calif.
No Drawing. Application February 14, 1934, Serial No. 711,223
1 Claim. (Cl. 134—32)



A stencil and marking ink consisting of approximately 32 fluid ounces of liquid shellac, 5⅓ to 6 fluid ounces of turpentine, 2 to 2⅓ fluid ounces of beeswax, 5⅔ to 8 fluid ounces of pigment, and 80 to 167 fluid ounces of alcohol.

2,002,940
PROCESS FOR THE RESOLUTION OF GAS MIXTURES
Mathias Fränkl, Augsburg, Germany, assignor to American Oxythermic Corporation, New York, N. Y., a corporation of Delaware
Application October 14, 1931, Serial No. 568,714
In Germany May 20, 1931
14 Claims. (Cl. 62—175.5)

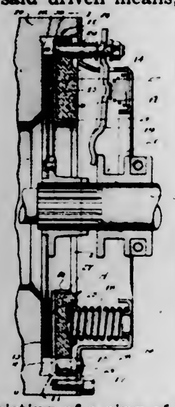
14. In a process for the resolution of a gas mixture, the improvement which comprises compressing a gas mixture to condenser pressure, cooling by passing through a cold yielding zone, removing a portion of compressed and cooled gas, rewarming said portion including heat exchange with an additional quantity of gas mixture which is subsequently subjected to resolution, compressing, cooling, then detensioning to recover cold given up to the additional quantity of gas mixture, and reintroducing into the process whereby cold and compression losses are reduced.

2,002,941
METHOD AND MEANS OF SEPARATING GAS MIXTURES
Mathias Fränkl, Augsburg, Germany, assignor to American Oxythermic Corporation, New York, N. Y., a corporation of Delaware
Application October 21, 1931, Serial No. 570,119
In Germany November 12, 1930
11 Claims. (Cl. 62—175.5)

1. The method of separating a gas mixture into components, which comprises conducting a gas mixture in cold exchange relation with a cold regenerative body, withdrawing a smaller part of said gas mixture during its cold exchange with said cold regenerative body, liquefying and separating the remainder of said gas mixture into higher and lower boiling components, the component having a lower boiling point being partially in a gaseous state, passing the said smaller part of the gas mixture in cold exchange relation with a part of the lower boiling gaseous component whereby the gaseous component is heated and the gas mixture cooled, expanding such warmed portion of the lower boiling component, subsequently conducting the expanded component in contact with a regenerative body to impart cold to said body, separating the cooled smaller part of the gas mixture into components, and bringing separated components into cold exchange relation with a regenerative body.

11. An apparatus for separating a gas mixture into components, including in combination means for effecting a cold exchange between a gas mixture and separated components, means for liquefying and separating said gas mixture into higher and lower boiling components, the first mentioned means being connected in operative relation by conduits for passing gases to and from with the second mentioned means, means for effecting a cold exchange between gaseous and liquid separated components, gas expanding means positioned between said first mentioned cold exchange effecting means and the liquefying and separating means wherein a separated component is expanded, and a conduit connecting the gas expanding means with the first mentioned cold exchange effecting means whereby expanded component is conducted directly to such means for imparting cold thereto.

2,002,942
TELEPHONY
Marion W. Gieskieng, Denver, Colo., assignor, by direct and mesne assignments, to Radio Corporation of America, New York, N. Y., a corporation of Delaware
Application December 13, 1929, Serial No. 413,757
11 Claims. (Cl. 179—78)



1. In a signalling system, a source of sounds, photoelectric means to convert the sounds into electrical variations in such a manner that weaker sounds are converted into greater variations in proportion than stronger sounds, means for transmitting the electrical variations through an interference zone, means for receiving transmitted electrical variations and interference impulses comprising a pair of multi-electrode electron discharge tubes having their input and output circuits connected in push pull, and means for biasing at least one of the electrodes of each tube to such a point on the grid voltage-anode current charactertistic of each tube that the received electrical variations are re-distorted in accordance with the original sounds and the interference impulses reduced.

2,002,943
CLUTCH
Alfred J. Hartley, Detroit, Mich., assignor to Continental Motors Corporation, Detroit, Mich., a corporation of Virginia
Application December 10, 1930, Serial No. 501,338
9 Claims. (Cl. 192—68)

1. In a clutch having driving and driven members and driving and driven means respectively connected in driving engagement with said driv-

ing and driven members; said driving means comprising a sheet metal member adapted to provide a substantially flat wearing surface for engagement with said driven means, and a back-

ing member consisting of a ring of heat resisting material secured in concentric relation to said sheet metal member and adapted for transmitting the driving effort in conjunction with said sheet metal member.

2,002,944

ACCESS OPENING FOR USE IN AIRCRAFT CONSTRUCTION

Charles E. Hathorn, Hempstead, N. Y., assignor to Curtiss Aeroplane & Motor Company, Inc., a corporation of New York

Application July 15, 1932, Serial No. 622,633
5 Claims. (Cl. 244—31)

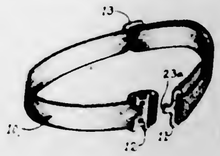
1. In an airplane, a fabric covering having an access opening therein, a slide fastening device for closing said opening, flexible webs securing said fastening device to the opposite edges of said opening, a rigid metal frame secured to the fabric on one side of said opening, and a second metal frame secured to the fabric on the other side of said opening, the said frames preventing the occurrence of stresses due to shrinkage of the fabric tending to pull the fastening device apart.

2,002,945

PROCESS OF PRODUCING CEMENTITIOUS MATERIAL

Gilbert A. Hoggatt, Buffalo, N. Y., assignor to Certain-teed Products Corporation, New York, N. Y., a corporation of Maryland

No Drawing. Application March 1, 1934, Serial No. 713,617
11 Claims. (Cl. 106—34)



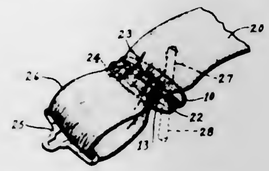
1. The process of manufacture of calcined gypsum which comprises calcining gypsum, and adding to the gypsum before completion of the calcining operation a halogen acid.

2,002,946

BUCKLE AND PROCESS OF MAKING SAME

Joseph Jacobs, Bridgeport, Conn., assignor to A. J. Donahue Corporation, Milford, Conn., a corporation of Connecticut

Application March 28, 1934, Serial No. 717,779
2 Claims. (Cl. 241—5)



1. The method of assembling an eye buckle having upright prongs formed at each corner, a slide buckle having a pair of upright prongs formed at opposite ends, and a hook plate, to a longitudinal webbing strap to produce an adjustable band garter, which consists of forming one end of the strap into a loop, assembling said loop vertically upon said eye buckle with the end of said strap positioned between said prongs, bending said corner prongs downwardly upon said strap, threading said hook plate upon the opposite end of said strap, forming the hook plate end of said strap into a loop including said hook plate, moving said latter loop vertically down upon said slide buckle and bending the prongs thereof down upon said strap in such a manner as to include the double thickness of said strap.

2,002,947

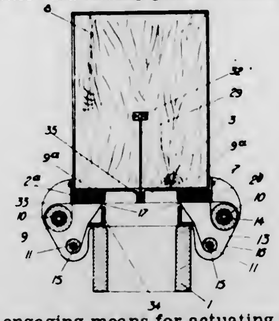
SLIDE BAR FOR MEN'S GARTERS

Joseph Jacobs, Bridgeport, Conn., assignor to A. J. Donahue Corporation, Milford, Conn., a corporation of Connecticut

Application March 28, 1934, Serial No. 717,781
3 Claims. (Cl. 241—6)

1. The combination of a slide buckle with an adjustable flexible looped strap, said buckle consisting of a metal frame comprising a pair of end cross-bars and a central cross-bar spaced from said end cross-bars by a pair of slots, said central cross-bar comprising two sections welded together, the end of said strap being looped about and concealing the welded joint between the sections of said central cross-bar.

2,002,948



DEVICE FOR PLACING PROTECTIVE COVERINGS AUTOMATICALLY ON THE SEATS OF WATER CLOSETS

Camille Joriot, Lac-ou-Villers, France

Application April 5, 1934, Serial No. 719,218
In France April 13, 1933
6 Claims. (Cl. 4—247)

1. In a device for placing protective coverings on the seats of water closets, rollers mounted on each outer side of the seat, a sliding plate, means

connecting the sliding plate with the lid of the bowl to cause said sliding plate to move with the

bowl and engaging means for actuating said rollers on the movement of the lid.

2,002,949

HAND BAG

Herman I. Kenler, New York, N. Y.

Application December 13, 1934, Serial No. 757,270
5 Claims. (Cl. 150—29)

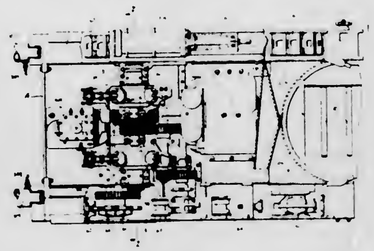
1. A handbag including a channel member, a bag having a opening, a slide fastener for said opening, the slide fastener having a hook bearing stringer of a relatively incompressible thin material, said stringer and a portion of the bag wall being clamped in said channel member and being otherwise separate of each other, a strip of a body providing compressible flexible material connected to the stringer therealong, and the body forming strip being positioned wholly within the channel member, so as to be concealed therein and to prevent the stringer from slipping out of the channel member.

2,002,950

PRESSURE GAUGE

Maximilian Klein, Sellersville, Pa., assignor to United States Gauge Company, Sellersville, Pa., a corporation of Pennsylvania

Application September 27, 1932, Serial No. 635,103
6 Claims. (Cl. 73—109)



3. A pressure gauge comprising a socket member, a bracket supporting the moving parts of said gauge having a part lapping said member, a bushing having a head formed to act as a spacer securing said bracket part to said member, a dial disposed against said spacer, and means to secure said dial to said bushing independently of said bracket part.

2,002,951

LOADING MACHINE CONTROL MECHANISM

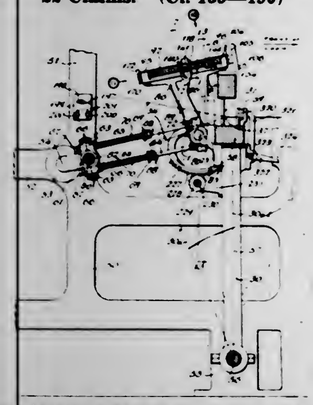
Nils D. Levin and Edward G. Lewis, Columbus, Ohio, assignors to The Jeffrey Manufacturing Company, Columbus, Ohio, a corporation of Ohio

Application May 8, 1930, Serial No. 450,741
18 Claims. (Cl. 180—9.2)

1. In a machine of the class described comprising a pair of traction elements, and steering mechanism comprising a drum and cooperating band associated with each traction element, the combination of separate hydraulically actuatable means for operating said bands, a source of fluid under forced pressure, and a valve for effecting alternate or simultaneous supply of the hydraulic medium to said band operating means or for blocking the supply to said band operating means simultaneously, said valve comprising a casing and a plug rotatable and axially reciprocable in said casing, the blocking position of the valve being reached by axial displacement of the plug from its supply position.

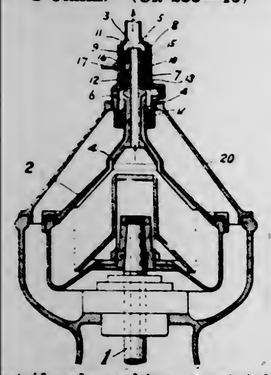
2,002,952

MATERIAL HANDLING MECHANISM



Nils D. Levin, Columbus, Ohio, assignor to The Jeffrey Manufacturing Company, a corporation of Ohio

Continuation of application Serial No. 450,742, May 8, 1930. This application July 26, 1933, Serial No. 682,348
8 Claims. (Cl. 198—7)



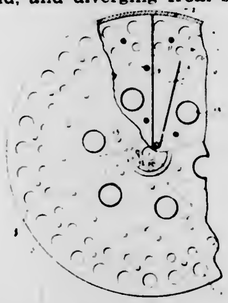
1. Material handling mechanism comprising a pair of elongated laterally spaced box-like elements, supporting and tractive members housed in said elements, a substantially horizontal frame interconnecting said elements below their upper extremities, a motor mounted on said frame, driving connections between the motor and tractive members supported on said frame, an elongated substantially horizontal conveyor extending above said motor and connections and including a trough between the upper extremities of said box-like elements for lateral support thereby, the rear end of said conveyor being pivotally connected to the rear ends of said elements on a transverse axis, said conveyor having a forward horizontally pivoted end projecting beyond said elements, and hydraulically actuated means for swinging said end relative to the remaining portion of the conveyor or for moving the conveyor as a whole about said axis.

2,002,953
ADJUSTING DEVICE FOR LOOMS AND METHOD OF CONTROLLING THE BEATING-UP OPERATION
Irving Lewin and Conrad Walter Geier, Hazleton, Pa., assignors to Duplan Silk Corporation, New York, N. Y., a corporation of Delaware
Application October 11, 1933, Serial No. 693,086
22 Claims. (Cl. 139—190)

1. An adjusting device to control the beating-up operations of looms to accommodate altered fell positions, comprising a lay sword, a lay carried by said lay sword, a crank connector, an adjustable eccentric connection between said sword and connector and automatic means actuated by the movement of the lay to return the lay to its normal beating-up position after adjustment.

2,002,954
CENTRIFUGAL SEPARATOR
Hans Olof Lindgren, Appelviken, Sweden, assignor, by mesne assignments, to The De Laval Separator Company, New York, N. Y., a corporation of New Jersey
Application September 18, 1931, Serial No. 563,540
In Sweden December 15, 1930
1 Claim. (Cl. 233—46)

In a centrifugal machine, a rotatable tubular element through which a fluid is adapted to flow, two non-rotatable tubular elements surrounding the rotatable tubular element, one of which forms a channel through which another fluid is adapted to flow and the other of which forms a channel communicating with said rotatable tubular element, elastic collars each comprising a free tubular end surrounding the rotatable tubular element and an outwardly projecting end, a flange projecting inwardly from one of said non-rotatable tubular elements, an internal sleeve adjustable lengthwise of the last named non-rotatable tubular element, the other of said non-rotatable tubular elements extending within and adjustable lengthwise of the internally flanged tubular element, the adjustable non-rotatable tubular element and said adjustable sleeve confining between them and said flange, on opposite sides of the flange, the outwardly projecting ends of the respective elastic collars, thereby forming a collecting chamber enclosed by the rotatable tubular element, said flange and the elastic collars, said collecting chamber having an opening adapted to be connected with a source of absolute pressure below the pressures in the respective channels.



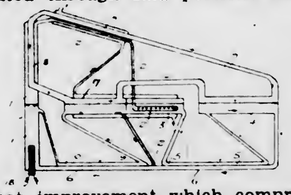
2,002,955
DETACHABLE-HOOD GARMENT
William Lipson, Brookline, Mass.
Application February 18, 1935, Serial No. 7,090
3 Claims. (Cl. 2—84)

1. A coat provided with sleeves, a neck portion and a collar permanently attached to the neck portion and folded back over the outside of the coat at the back, the sides and the front of the coat, a hood separably attached to the coat, said hood having a back, sides and front portions and having a lower margin at the said back, sides and front portions, fastening means on the inside of the coat near the neck portion and including the front portion of the coat, and cooperating fastening means at the said lower margin of the hood and including the said front portions of the said lower margin of the hood, the fastening means and the cooperating fastening means being adapted to cooperate to detachably connect the said lower margin of the hood to the inside of the coat at the neck portion of the coat including the front portion of the said neck portion of the coat.

2,002,956
MANIFOLD FOR TUBULAR DRIERS
Adolph W. Lissauer, Louisville, Ky., assignor to Louisville Drying Machinery Co., Louisville, Ky.
Application June 6, 1934, Serial No. 729,179
2 Claims. (Cl. 257—92)

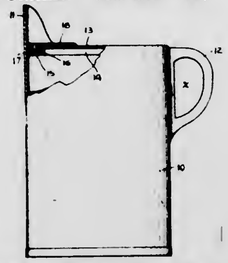
2. In a manifold of the class described, a dished member and a disc shaped member and a plurality of scoops disposed between said members, each of said scoops having a scooping wall adapted to run substantially through the radial distance of said members and form a separating wall within the space between said members, said scoop having also a retaining wall forming a continuation of said scooping wall and adapted to run through a portion of the radial distance of the manifold, and diverging from said scooping

wall as the distance from the said walls from the center of the manifold increases, said scoops having also side walls uniting the scooping and retaining walls to each other.



2,002,957
EXPLOSION AND COMBUSTION MOTOR
Cesare Longobardi, Rome, Italy
Application March 30, 1933, Serial No. 663,612
In Italy April 6, 1932
3 Claims. (Cl. 123—51)

1. A combustion motor comprising open-ended casings having slots through the casings and extending longitudinally thereof, a series of pistons within each casing, successive couples of said pistons forming with the walls of the casing a combustion chamber between the members of the couple, the corresponding pistons of each couple having the same motion, and the two pistons of each couple having opposite motion, pins integral with the pistons projecting from each casing through said slots, coupling bars attached to the pins of corresponding pistons having the same motion.



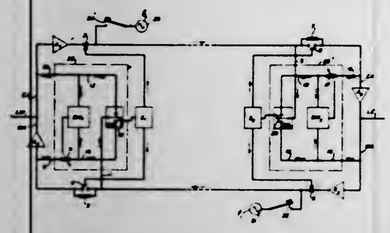
2,002,958
ABSORPTION REFRIGERATING APPARATUS AND METHOD
Guido Maiuri, London, England, assignor, by mesne assignments, to Electrolux Servel Corporation, a corporation of Delaware
Application February 25, 1928, Serial No. 256,993
In Great Britain February 25, 1927
11 Claims. (Cl. 62—119.5)

8. In a cycle of refrigeration including the evaporation from solution into inert gas, absorption therefrom, generation, and reabsorption of refrigerant fluid, in which cycle absorption liquid is circulated through said portions thereof in

series, that improvement which comprises circulation of additional absorption liquid through the absorption and generation portions of said cycle independently of the evaporation portion.

2,002,959
LIQUID DISPENSING RECEPTACLE
Helen M. Matters, Omaha, Nebr.
Application December 9, 1933, Serial No. 701,625
4 Claims. (Cl. 221—11)

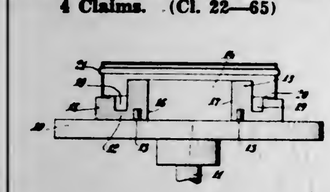
1. In devices for the purpose described, a receptacle having an upright cylindrical wall, a transversely curved spout projecting from and disposed in alignment with a part of said cylindrical wall, a handle opposite the spout on a part of the cylindrical wall, the top of said receptacle being provided with a slot having a curvature corresponding approximately to the curvature of the spout and disposed closely adjacent thereto, and a closure-member adapted to fit snugly in the slot and provided with a lifting-plate normally engaging the top of the receptacle.



2,002,960
PRIMING MIXTURE
Joseph D. McNutt, New Haven, Conn., assignor to Winchester Repeating Arms Company, New Haven, Conn., a corporation of Maryland
No Drawing. Application November 18, 1933, Serial No. 698,688
6 Claims. (Cl. 52—4)

1. A priming mixture comprising basic lead trinitroresorcinol and lead dinitrophenylazide.

2,002,961
TRANSMISSION CONTROL IN SIGNALING SYSTEMS
Nathaniel C. Norman, New York, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application December 27, 1933, Serial No. 704,124
4 Claims. (Cl. 179—170)

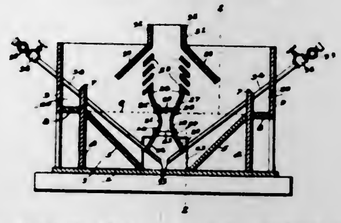


1. In combination, a four-wire circuit comprising two oppositely directed one-way paths for repeating signals in opposite directions between two two-way circuits, a switching device connected to one of said paths near its output and

responsive to signals therein to disable the other one-way path, and control means connected both to said one path near its output and to said other path near its input, which when operated disables said switching device, said control means being adjusted so as to be unoperated when signals are impressed thereon from said one path

and only echoes of said signals are impressed thereon from said other path, and to operate in response to energy received from said other path when outgoing signals received from the associated two-way circuit are present in the input of said other one-way path, and incoming signals are simultaneously present in the output of said one one-way path.

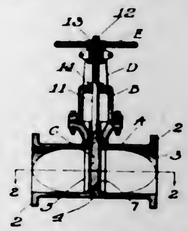
2,002,962
CENTRIFUGAL CASTING MACHINE AND METHOD
William D. Sargent, Newark, N. J., assignor, by mesne assignments, to Durafer (Inc.), Dover, Del., a corporation of Delaware
Application November 6, 1931, Serial No. 573,353
4 Claims. (Cl. 22—65)



1. A casting device comprising rotatable means for supporting a mold, said means being formed with a plurality of annular troughs of smaller diameter than the mold to receive metal to be directed into the mold by centrifugal force due to its rotation.

4. The method of centrifugal casting which comprises pouring molten metal into a stationary annular trough of relatively small cross section and great circumferential length, rotating said metal about a long radius by rotating said trough and substantially simultaneously and uniformly accelerating all metal in the trough, and substantially simultaneously discharging all the metal radially and uniformly into a closely adjacent encircling rotating mold.

2,002,963
FROZEN CONFECTION
Floyd L. Schade, Kansas City, Kans.
No Drawing. Application July 27, 1932, Serial No. 625,201
7 Claims. (Cl. 99—16)



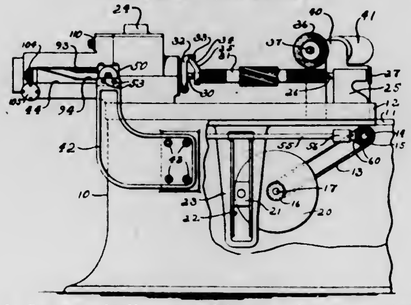
1. A frozen confection including a potable liquid, containing milk and sugar and having added thereto, agar-agar, gelatine and glycerine.

2,002,964
VENTURI FLOTATION METHOD
Walter Leon Sheeler, Vancouver, British Columbia, Canada
Original application January 23, 1930, Serial No. 422,880, now Patent No. 1,916,020, dated June 27, 1933. Divided and this application May 20, 1931, Serial No. 538,740. In Canada August 28, 1929
4 Claims. (Cl. 209—165)

1. A shallow depth and low pressure venturi mineral flotation method, which comprises, forming from the pulp body a plurality of separate short upright and laterally confined annular streams of the pulp solution opening from said pulp body to prolong contact of the solid values with the re-agent and frothing agent, and each stream discharging above and down onto said pulp body in unrestricted bulk flow in permeating said streams with a gaseous agent at low pressure and in sufficiently large volume to render said streams ascendently buoyant and form mineral collecting bubbles therein as said streams ascend, in annularly constricting the ascending streams at a given elevation below the point of discharge of said streams onto said pulp body to break up large bubbles and accelerate the rate of flow and thereafter expanding said streams in exposure to atmosphere to froth the same and slow up the rate of ascending flow, by venturi action, whereby the resulting differential of flow will diffuse the gaseous agent through said streams and break up the larger bubbles.

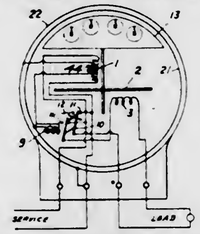
2,002,965
THROTTLE VALVE
Frank J. Smith, Kansas City, Mo., assignor to Standard Oil Company, Chicago, Ill., a corporation of Indiana
Application February 13, 1933, Serial No. 656,451
8 Claims. (Cl. 137—75)

1. A throttle valve comprising, a body shell having a rectangular cross section, and a valve gate adapted for movement transversely of the axis of said shell, said shell being formed with a convex and cylindrical seat for said gate protruding within said rectangular cross-sectional portion of said shell, the contacting and lower end of said gate being convex and cylindrical and lying parallel with said seat throughout the entire range of movement of said gate.



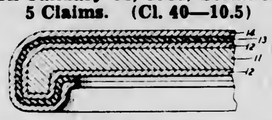
2,002,966
METHOD OF AND APPARATUS FOR EXTRUDING TUBES AND OTHER ELONGATED SHAPES
Stanley W. Sparks, Norwalk, Conn., assignor to Charles H. Bickell, trustee, representing Metals Research Syndicate, New York, N. Y.
Application November 12, 1932, Serial No. 642,469
7 Claims. (Cl. 207—3)

1. The method of extruding tubular shapes, which comprises introducing a metal blank heated to a plastic condition into an elongated extrusion chamber having an open end, positioning a mandrel in the open end of said chamber and in symmetrical spaced relation with respect to the inner wall thereof; then, while maintaining the other end of said chamber in a sealed condition, causing the movement of said chamber and the blank carried therein longitudinally with respect to such mandrel while effecting the extrusion of the metal of said blank through the space between the end of the mandrel and the adjacent wall of metal surrounding the mandrel adjacent the end thereof, confining the extruded shape as it issues from said chamber and pending a complete ejection therefrom within a metallic tubular guide, removing said extruded shape from said tubular guide and also removing the mandrel from the extruded shape and recovering the latter.



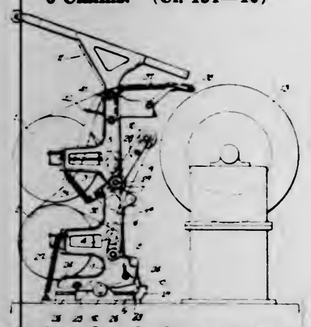
5. In an extrusion apparatus, the combination of a rotatable die container having a central die therein that is adapted to rotate with said container, means for rotating said container, a mandrel adapted to be projected into one end of said die, means for advancing and retracting the same towards and from said die, means for advancing and retracting said container and thereby effecting the extrusion of a blank confined within said die into a tubular shape of the desired configuration, means adapted to engage the extruded portion of the tubular shape for effecting the withdrawal of such extruded shape from the die and means for completely sealing one end of said container during the actual extrusion operation.

2,002,967
GRINDING APPARATUS
Robert Edwin Spurr, Detroit, Mich., assignor to Chrysler Corporation, Detroit, Mich., a corporation of Delaware
Application July 3, 1933, Serial No. 678,914
13 Claims. (Cl. 51—95)



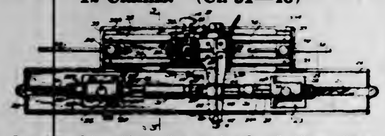
1. In a grinding machine, a frame, a table mounted for reciprocation on said frame, a drive shaft journaled on said frame, means operable by said drive shaft for reciprocating said table, a grinding tool journaled on said frame, means for rotating said tool, work holding means for journaling a piece of work relative to said frame and in operative relation with respect to said grinding tool, said work holding means including a shaft journaled on said table, means for connecting said second shaft to the work piece for even rotation therewith, a sleeve journaled on said second shaft and provided with a cam surface, a stud fixed relative to said frame and engaging said cam surface for causing rotation of the sleeve upon reciprocation of the table, a member fixed to said second shaft and provided with openings therein, a lock member carried by said sleeve and cooperable with the openings in said last-named member for locking the latter relative to the sleeve, and means operable by said drive shaft for withdrawing said lock member from an opening in the member fixed to said second-named shaft and for causing rotation of said second shaft and the work piece independently of said sleeve at a limit of the reciprocation of said table.

2,002,968
ANTITAMPERING METER
Walter C. Wagner, Ardmore, Pa., and George B. Schleicher, Clementon, N. J.
Application August 16, 1933, Serial No. 685,403
6 Claims. (Cl. 171—34)



1. An induction watthour meter comprising the combination with its operating elements and their circuits of a metal base and cover, an insulated metallic shell and having a voltage applied between said cover and said shell, a low-voltage winding of a transformer for supplying said voltage and a relay interposed in said low-voltage circuit.

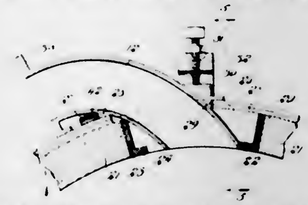
2,002,969
NUMBER PLATE FOR TELEPHONE DIALS
Walter W. Werring, Brooklyn, N. Y., and Trevor S. Huxham, Chatham, N. J., assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application January 31, 1934, Serial No. 709,148
5 Claims. (Cl. 40—10.5)



3. A number plate for telephone dials comprising a disc-like base plate having a peripheral lip, an envelope of cellulose material in which said plate is enclosed, a character bearing film of cellulose material and a film of transparent cellulose material, said character bearing and transparent films being united to each other and covering the upper surface and lip portion of said enclosed base plate.

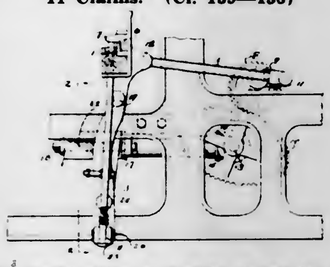
2,002,970
APPARATUS FOR THE MANUFACTURE OF PNEUMATIC TIRES
Harry Willshaw, Wylde Green, and Frank Arthur Davenport, Erdington, Birmingham, England, assignors to Dunlop Tire and Rubber Corporation, Buffalo, N. Y.
Application August 3, 1934, Serial No. 738,196
In Great Britain June 10, 1933
6 Claims. (Cl. 154—10)

1. Apparatus for building pneumatic tires comprising a forming drum, a frame movable toward and from said drum, a stock roll and feeding mechanism mounted on said frame, and a driving mechanism mounted on said frame to rotate said feeding mechanism and stock roll and comprising means to contact with the surface of said drum when said frame is moved toward said drum and to be free of said drum when said frame is moved away from said drum.



2,002,971
REAMER SHARPENER
Herman W. Zimmerman, Chicago, Ill., assignor to Automotive Maintenance Machinery Co., Chicago, Ill., a corporation of Illinois
Application July 30, 1932, Serial No. 626,357
12 Claims. (Cl. 51—48)

1. In combination in a tool of the class described, means for rotatably supporting the reamer in substantially horizontal position, a grinding carriage mounted for movement along the axis of the reamer, means for limiting movement of said carriage, a grinding wheel supported by said carriage, means for predetermining the position of each reamer blade with respect to the grinding surface of said wheel, and means for gauging predetermined positions of said reamer blade positioning means.

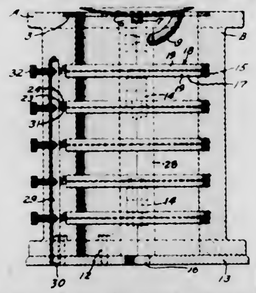


2,002,972
APPARATUS FOR MAKING PORTLAND CEMENT
Thorkild Avnsoe, Bellerose, N. Y., assignor to International Cement Corporation, New York, N. Y., a corporation of Maine
Original application December 26, 1931, Serial No. 583,268. Divided and this application December 29, 1932, Serial No. 649,253
6 Claims. (Cl. 222—7)

1. An apparatus of the type defined, comprising a kiln with a metal shell and a refractory lining, an opening in said shell registering with an overlapping portion of an opening in said refractory lining, a flanged hollow member fixed to the inner surface of said shell and offset from a portion of the opening in the shell, a feed pipe fixed to the outer surface of said shell and a

removable connection between one end of said pipe and the kiln, said connection being adapted to pass through the registering portions of said openings, and means for retaining said removable connection upon the shell.

2,002,973
SHUTTLE MOTION
Robert J. Bartholomew, Germantown, Pa., assignor to Fletcher Works, Incorporated, Philadelphia, Pa., a corporation of Pennsylvania
Application June 20, 1931, Serial No. 545,746
11 Claims. (Cl. 139—136)



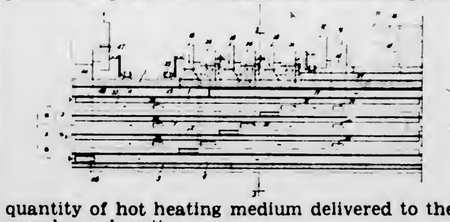
1. In combination, a batten, a batten rack, a lever connected to the rack, a slotted pivotally mounted block connected to the lever, a crank for driving the block, an eccentric gear connected to the crank, an eccentric gear for driving the first mentioned eccentric gear, a crank on the shaft of the second mentioned eccentric gear connected to the batten for driving the same, said block crank making one complete revolution to each two revolutions of the batten crank.

2,002,974
FRACTIONATION DEVICE AND METHOD FOR EMPLOYING THE SAME
Charles A. Bennett, Stoneville, Miss., and George E. Gaus, Washington, D. C.; dedicated to the free use of the Public
Application November 26, 1934, Serial No. 754,830
1 Claim. (Cl. 19—72)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

In a device of the character described, comprising a base having an exhaust port formed therein; a vertical sectional cylindrical chamber hingedly connected and provided with locking means with one of its sections affixed to said base; a boss having a duct formed therein and integral with the outer wall of said affixed section; said duct having its induction port in said base, and a plurality of valve controlled eduction ports formed in the interior walls of said affixed section; said chamber having horizontally encircling

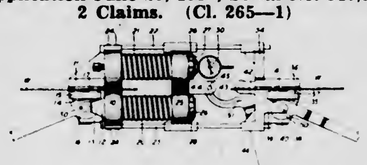
recesses formed on its inner wall and abutting said eduction ports; a plurality of circular bisectioned trays, comprising screen cloth, and an induction port formed on the periphery thereof and communicating with a channel having eduction ports formed in the interstices of said screen cloth; means on the periphery of said trays for preventing leakage of air; means for alining, and means for slidably mounting said trays within said chamber; a circular concave baffle plate, of

lesser diameter than the bore of said chamber, detachably mounted on the upper end thereof; an inductor tube having its eduction port terminating at an opening provided off center in said baffle plate and having its induction port formed in the wall of the affixed section of said chamber; a dome-like substantially transparent receptacle with a diameter substantially equal the bore of said chamber and adapted to surmount said baffle plate, and means for detachably mounting said receptacle on said chamber.



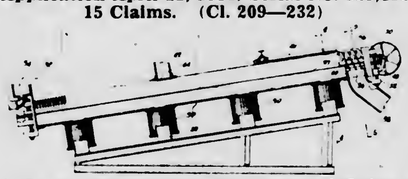
2,002,975
TWISTED STRANDS AND THE METHOD OF PRODUCING SAME
Winfred M. Brooks, West Orange, N. J.
Application November 21, 1933, Serial No. 698,954
3 Claims. (Cl. 117—52)

1. As a new article of manufacture: a strand consisting of a flat and one or more round wires twisted together, the round wire or wires lying throughout in one and the same helically extending trough formed by one face of the flat wire, the other face of the flat wire being naked throughout.



2,002,976
BAKING OVEN
Ralph Byron, New York, N. Y., assignor to J. O. Ross Engineering Corporation, New York, N. Y., a corporation of New York
Application July 27, 1934, Serial No. 737,233
11 Claims. (Cl. 107—55)

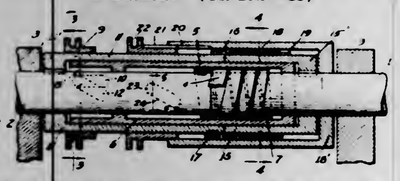
1. In a baking oven, an oven chamber in combination with a source of heating medium supply, a duct lengthwise of the oven to receive the hot heating medium, individual units comprising a blower, mixing chamber and ducts communicating with said hot heating medium duct and with said oven, said units stationed at predetermined points along the oven, means for controlling the



quantity of hot heating medium delivered to the oven by each unit.

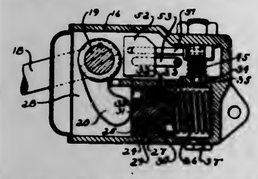
2,002,977
DYNAMOMETER
James A. Carr, Maplewood, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application June 29, 1931, Serial No. 547,507
2 Claims. (Cl. 265—1)

1. In a device of the kind described, a frame having a fixed clamping member and a movable clamping member, a block slidable upon said frame between the clamping members, spring means between the fixed clamping member and said block, said spring means being anchored at its ends to said fixed clamping member and said block respectively, a gauge for indicating the tension of said spring means, a tensioning cam lever connecting said slidable block and movable clamping member for drawing them toward each other against the tension of said spring means and thereby transferring the tension in the specimen held by the clamping members to said spring means.



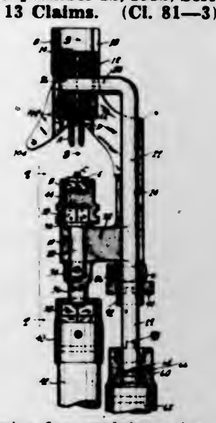
2,002,978
APPARATUS FOR CONCENTRATING ORES
Edward Wilson Davis, Minneapolis, Minn.
Application April 11, 1931, Serial No. 529,412
15 Claims. (Cl. 209—232)

1. In an ore concentrator, means defining an inclined elongated agitating zone having a liquid and tailings overflow at the lower end and a concentrate discharge at the upper end, magnetic means disposed adjacent said zone to establish therein a magnetic field varying in intensity from one side of said zone to the other, means for so agitating a liquid pulp fed to said agitating zone as to move the magnetizable values contained therein toward the stronger portion of said magnetic field and for conveying them upwardly through said zone to a concentrate discharge, said magnetic means being so disposed with respect to said agitating zone as to cause the mag-



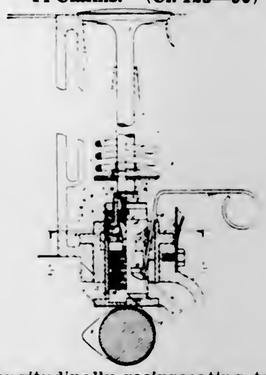
netizable values to assume a path in their travel upwardly toward the concentrate discharge substantially completely separate from that of the non-magnetic materials contained in the portions of the liquid pulp that flow downwardly through said agitating zone toward the liquid and tailings overflow and said agitating means being adapted to agitate said pulp less violently in the lower end of said zone than in the upper end thereof.

2,002,979
CLUTCH
Franklin C. Fisher, Los Angeles, Calif., assignor, by direct and mesne assignments, of twenty per cent to Alfred W. Knight, San Marino, Calif., twenty per cent to Washington R. Freeman, Los Angeles, Calif., 20 per cent to Louis B. Girard, Los Angeles, Calif., and twenty per cent to J. Royden Estey, South Pasadena, Calif.
Application February 16, 1931, Serial No. 515,906
5 Claims. (Cl. 192—48)



5. In combination, a driving element, a driven element and two reversely operating helical spring means cooperating with said elements to provide for driving the driven element in either direction and to automatically prevent the driven element becoming the driving element upon reversal of relative motion of said elements in either direction of rotation, each helical spring means having one end positively connected to one of said elements in drive communicating relation and having its other end in light frictional engagement with the other of said elements, and means operatively associated with each of said spring means at said other end for forcibly releasing either of said helical spring means from such light frictional engagement.

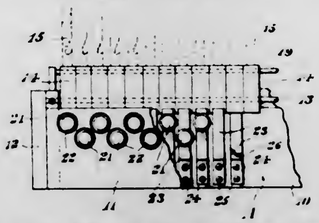
2,002,980
SHOCK ABSORBER
William M. Giesen, Detroit, Mich.
Application May 31, 1933, Serial No. 673,710
12 Claims. (Cl. 267—8)



6. In a vehicle having relatively movable sprung and unsprung parts, a fluid pressure shock absorber including a piston and cylinder having fluid medium therein for yieldably opposing movement of said parts in at least one direction, said cylinder being provided with an outlet, a valve in said outlet adapted to be closed by the pressure in said cylinder, mechanism normally holding said valve against closing under the influence of said pressure, and means operable by centrifugal action when said vehicle is deviated from a straight course for rendering said valve holding mechanism inoperative.

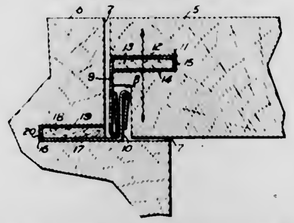
2,002,981
WIRE CONNECTER TOOL
Joseph R. Halladay, Alliance, Ohio, assignor to James R. Kearney Corporation, St. Louis, Mo., a corporation of Missouri
Application September 12, 1932, Serial No. 632,775
13 Claims. (Cl. 81—3)

1. In a device for applying wire connecters of bolt and nut type, a frame having a lateral opening, aligned wrench members disposed at opposite sides of said opening and adapted, respectively, for engaging a bolt and nut of the connecter to be applied, means for reciprocating one of said wrench members toward and from said wire opening, means for rotating one of the wrench members to effect threaded connection of the connecter-bolt and -nut, a wire-receiving seat formed on said frame adjacent said opening, and wire guiding members, directed from said opening toward said seat.



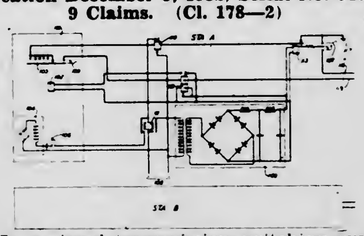
2,002,982
SELF-ADJUSTING VALVE-OPERATING TRANSMISSION DEVICE
Edwin B. Hudson, Middletown, Ohio
Application March 25, 1932, Serial No. 601,224
14 Claims. (Cl. 123—90)

1. A longitudinally reciprocating transmission device comprising longitudinally relatively movable members having opposed surfaces converging transversely to the line of relative movement of the members, a locking element between said surfaces, and a wedging member actuated incident to reversal of movement of the device at one end of its stroke for moving said locking element



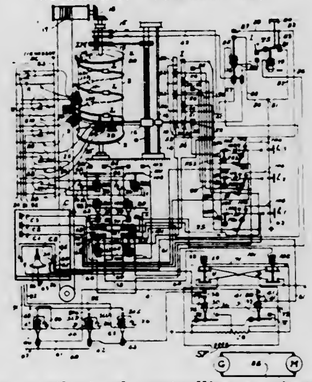
in the direction of convergence of said surfaces and actuated incident to reversal of movement of the device at the other end of its stroke for releasing said element from said surfaces.

2,002,983
RACK FOR HOLDING TWIST DRILLS
Frank L. Johnson, Brattleboro, Vt.
Application July 10, 1933, Serial No. 679,786
2 Claims. (Cl. 211—69)



1. A holder for drill bits of different sizes comprising a casing including a top and bottom wall, a plurality of independently pivoted sockets for receiving the drill bits, spring means engaging each socket for normally holding the sockets against swinging movement, resilient key bars mounted in the casing normally arranged about the rear ends of the drill sockets in rear of the pivot points thereof, and keys for operating the resilient key bars slidable through the top wall of the casing.

2,002,984
WEATHER STRIP
Joseph E. Johnson, Boston, Mass.
Application November 23, 1932, Serial No. 644,003
2 Claims. (Cl. 20—69)



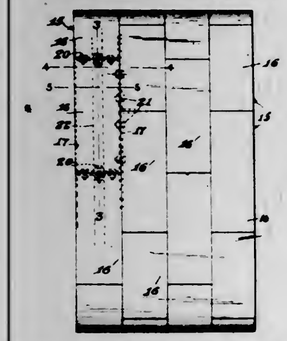
1. In a window or door structure, the combination of two members which are relatively movable, one toward and from the other, one member being a casing provided with a rabbet and the other being a closure one edge of which is received within said rabbet, said closure being provided in said edge with a rabbet leading from its inner face, said closure being provided also with a groove, disposed outwardly with relation to the second-mentioned rabbet and extending transversely of the direction of movement of said closure, two metallic weather strips associated with said members, respectively, and extending in the direction of relative movement of said members, said strips overlapping each other within the second-mentioned rabbet, one of said strips being carried by said closure and, with the second-mentioned rabbet, forming a groove which extends in said direction from the inner face of said closure outwardly, and the other strip being secured to said casing and extending outwardly into the last-mentioned groove, the strip carried by said closure being provided with a flange extending transversely of said direction, and received within the first-mentioned groove, and presenting a channel within the first-mentioned groove, and a filler also received within the first-mentioned groove and within said channel and fixedly securing said flange therein.

2,002,985
AUTOMATIC PRINTING TELEGRAPH EXCHANGE SYSTEM
George A. Locke, Glenwood, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application December 9, 1932, Serial No. 646,368
9 Claims. (Cl. 178—2)

1. In a signal transmission switching system, the combination of a plurality of sending stations, a plurality of receiving stations, and an auxiliary sending and receiving station, rotary devices individual to each of said sending stations for selecting any one of said receiving stations, a normally deenergized circuit extending from each of the sending stations to each of said devices, operating means at each of said sending stations arranged when operated by a single movement, to close one of said circuits and to thereby cause one of said devices to automatically select an idle one of said receiving stations for connection to said one of said circuits, and means connected to each of said rotary devices and adapted when all receiving stations are busy, for connecting said auxiliary station to the sending station connected to the last operated rotary device.

2,002,986
SYSTEM OF CONTROL FOR ELEVATORS
Samuel N. Rubin, Astoria, N. Y., assignor, by mesne assignments, to The Gurney Elevator Co., Honesdale, Pa., a corporation of Pennsylvania
Application November 8, 1930, Serial No. 494,280
46 Claims. (Cl. 187—29)

1. The method of controlling a circuit controller in accordance with position of a car mov-



able in a pre-determined path which consists in energizing an electrical inductor when the car is at pre-selected points, traversing said inductor by a search coil movable in accordance with the car, and utilizing current induced in said search coil by said inductor to close a car running circuit to reverse movement of the car and return it to a landing when, if during loading and unloading it should move in either direction away from a level therewith.

2,002,987

REENFORCEMENT FOR TUBULAR AND LIKE STRUCTURES

Walter F. Schuls, Youngstown, Ohio, assignor to Truscon Steel Company, Youngstown, Ohio, a corporation of Michigan

Application April 29, 1932, Serial No. 608,323
19 Claims. (Cl. 61—45)

1. In a structure of the character set forth, the combination with wall plates located end to end, of reenforcing girder members located along intermediate portions of the plates between their sides, and common means securing adjacent plates together and securing the girder members to the plates.

2,002,988

PREPARATION OF METHYL-ANTHRAQUINONE

Louis Spiegler, South Milwaukee, Wis., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware

No Drawing. Application January 19, 1934, Serial No. 707,335
5 Claims. (Cl. 260—57)

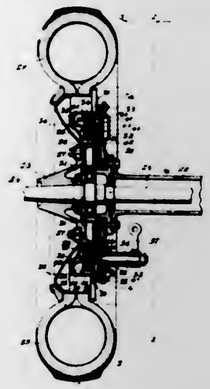
1. In the purification of 2-methyl-anthraquinone, the step which comprises treating it with a water soluble oxidizing agent under conditions more mild than those leading to the oxidation of the methyl group.

2,002,989

HAIR WAVING METHOD

Paul R. Steinbach, Lakewood, Ohio, assignor to The Realistic Permanent Wave Machine Company, Cincinnati, Ohio, a corporation of Ohio

No Drawing. Application June 9, 1932, Serial No. 616,359
4 Claims. (Cl. 132—36)



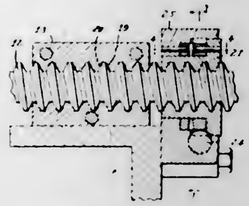
1. The method of waving hair which comprises moistening the hair with a solution containing a material capable of removing a small amount of cystenic acid and a material capable of removing substantially all of the free sulphur in the hair, and heating the moistened hair.

2,002,990

VEHICLE BRAKE

Herbert E. White, Cleveland, Ohio, assignor to Truscon Steel Company, Youngstown, Ohio, a corporation of Michigan

Application August 14, 1931, Serial No. 557,168
5 Claims. (Cl. 188—72)



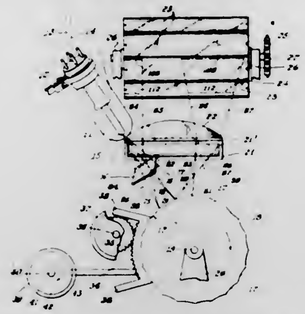
1. The combination with a fixed support, of a wheel journaled thereon, interleaved relatively rotatable brake plates carried respectively by the support and wheel, means for pressing the plates together to create braking resistance to their relative rotation, and an abutment for said brake plates located between the inner and outer edges of both relatively rotatable plates and permitting a rocking movement of the plates to accommodate radially disposed differences in thickness of said disks.

2,002,991

BACKLASH REMOVER

Charles B. De Vlieg, Jackson, Mich., assignor to Associated Patents, Inc., Cincinnati, Ohio, a corporation of Ohio

Refiled for abandoned application Serial No. 316,504, November 1, 1928. This application October 31, 1932, Serial No. 640,561
19 Claims. (Cl. 90—22)



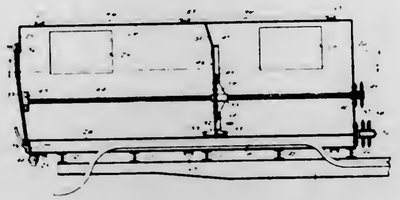
10. In combination, a screw, a nut therefor, means causing rotation between said screw and said nut, a supplemental nut for said screw, automatic means acting independently of the first-named means exerting rotative force upon said supplemental nut for changing the distance relation between the said nuts, said automatic means including means whereby said rotative force acts in one direction for either direction of rotation of said first named means, and holding means resisting end thrust between said screw and said nuts in such changed distance relation.

2,002,992

TELEVISION METHOD AND APPARATUS

Harold P. Donle, Meriden, Conn., assignor to Radio Inventions, Inc., New York, N. Y., a corporation of New York

Application April 1, 1932, Serial No. 602,539
9 Claims. (Cl. 178—6)



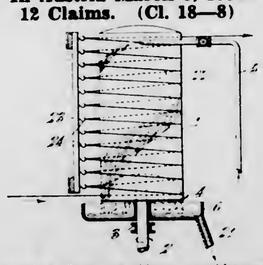
1. In an apparatus for scanning a visual image, a concentrated light source capable of modulation, a line scanning device comprising a rotatable element carrying fixed thereon a plurality of concave cylindrical reflectors whose axes of curvature are contained in planes common to their axis of rotation, and a field scanning device comprising a rotatable element carrying fixed thereon a plurality of concave cylindrical reflectors whose axes of curvature are contained in planes common to their axis of rotation, said light source and rotatable elements being arranged to form a scanned image suitable for direct viewing by the eye of an observer.

2,002,993

REFUSE-COLLECTION DEVICE

William F. Ehrick and Ralph A. Garverick, Marion, Ohio, assignors to The Marion Steel Body Company, Marion, Ohio, a corporation of Ohio

Application July 26, 1934, Serial No. 737,085
5 Claims. (Cl. 296—24)



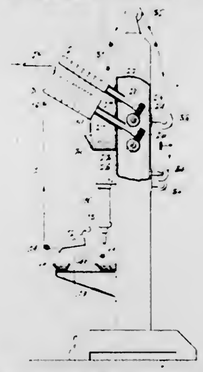
1. In combination, a motor vehicle having a completely enclosed receptacular body of substantially uniform internal cross-section, a plurality of screws within said body extending parallel with each other, through substantially the entire length of said body, passing through the front wall thereof and provided with driving means in front of said front wall, means for rotating said screws in unison in either direction, a compressor plate within said body, nuts non-rotatably carried by said compressor plate and receiving said screws and a guide roller carried by the lower portion of said plate and positioned rearwardly of said nuts and at all times insuring spacing of said plate slightly from the bottom of said body.

2,002,994

CONTINUE PROCESS AND APPARATUS

August Hartmann, Berlin-Lichterfelde, Walter Hoefinghoff, Hohenlimburg Obernahmer, and Gotthard Bauriedel and Walter Ostermann, Wuppertal-Barmen, Germany, assignors to American Bemberg Corporation, New York, N. Y., a corporation of Delaware

Application January 6, 1933, Serial No. 650,512
In Austria March 5, 1932
12 Claims. (Cl. 18—8)

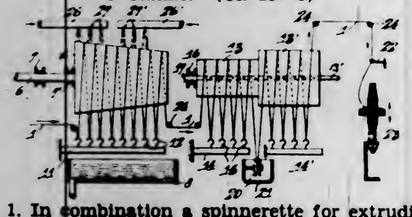


7. In a device for treating continuous lengths of formed filaments, in combination, a helically grooved roller, means for guiding filaments thereover, and means for passing treating liquid through said grooves, in a direction at an angle to the direction of movement of said filaments.

2,002,995

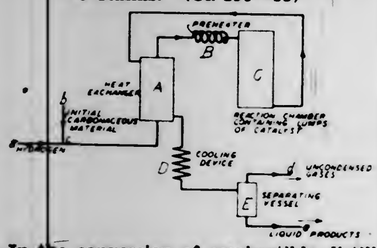
CONTINUE PROCESS APPARATUS

August Hartmann, Berlin-Lichterfelde, Walter Hoefinghoff, Hohenlimburg Obernahmer, and Alex Luchtenberg and Hubert Kempf, Wuppertal-Barmen, Germany, assignors to American Bemberg Corporation, New York, N. Y., a corporation of Delaware



Application January 6, 1933, Serial No. 650,513
In Austria March 5, 1932
3 Claims. (Cl. 18—8)

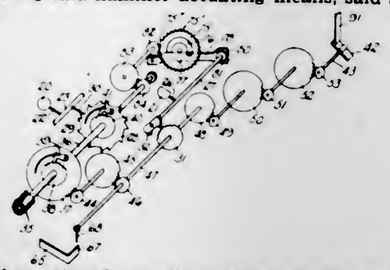
1. In a spinning machine for producing and treating continuous lengths of artificial filaments, comprising, a spinning frame having spinning apparatus arranged on one side thereof, driven rollers positioned directly above said spinning apparatus, said rollers so constructed as to pass filaments drawn from said spinning apparatus from one end of said rollers to the other, means directly above said rollers for supplying treating liquid to said filaments while passing around said rollers, means to guide said filaments vertically upwardly and over said spinning frame, collecting means on the opposite side of said frame to which said filaments are



passed vertically downwardly, and a drying roller positioned directly above said collecting means over which said filaments pass, and means to drive said collecting means.

2,002,996
CONTINUE PROCESS AND APPARATUS
Walter Hoefinghoff, Hohenlimburg Obernahmer, and August Hartmann, Berlin-Lichterfelde, Germany, assignors to American Bemberg Corporation, New York, N. Y., a corporation of Delaware
Application January 6, 1933, Serial No. 650,514
In Austria March 5, 1932
5 Claims. (Cl. 18—8)

1. In combination a spinnerette for extruding filaments of artificial origin, a series of cylinders, means for guiding the filaments from said spinnerette to said cylinders, means for guiding the filaments around said cylinders in a helical path, means for wet-treating and drying the filaments during their passage of the cylinders, the drying being accomplished in steps on a plurality of said cylinders, the cylinders being heated, and means for remoistening the filaments between said cylinders.

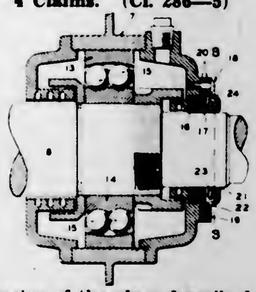


2,002,997
DESTRUCTIVE HYDROGENATION OF CARBONACEOUS MATERIAL
Paul Herold and Hermann Kaufmann, Leuna, Germany, assignors to Standard-I. G. Company, Linden, N. J., a corporation of Delaware
Application October 23, 1931, Serial No. 570,760
In Germany October 31, 1930
6 Claims. (Cl. 196—53)

1. In the conversion of combustible distillable carbonaceous materials by catalytic destructive hydrogenation at a temperature between 300° and 700° C. and under a pressure above 20 atmospheres, the step of working with a catalyst comprising a compound selected from the group consisting of the isopoly acids and metallic complex acids of molybdenum and tungsten and the salts of the said acids.

2,002,998
ALARM CLOCK
Christian Jauch, Winsted, Conn., assignor to William L. Gilbert Clock Company, Winsted, Conn., a corporation of Connecticut
Application April 6, 1933, Serial No. 664,730
3 Claims. (Cl. 58—16)

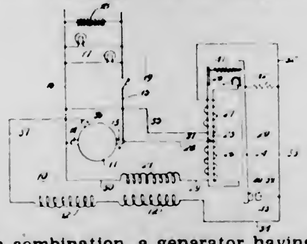
1. In an alarm clock, a hammer for giving a gentle audible signal, actuating means for imparting a slow beat to said hammer, a second hammer for giving a more disturbing signal, actuating means for imparting a fast beat to said second hammer, driving means common to both of said hammer actuating means, said sec-



ond mentioned actuating means including an actuating part and an actuated part relatively movable into and out of operative relation, and means driven in timed relation to said first mentioned actuating means for controlling said second actuating means.

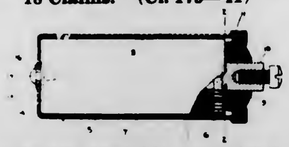
2,002,999
CLASP
Helen H. Jones, Cranston, R. I.
Application October 11, 1933, Serial No. 693,164
5 Claims. (Cl. 24—163)

1. A clasp device comprising, a flexible and bendable member formed with terminal throat openings in its extreme upper and lower edges, oppositely located and separate bendable members at the lower edge, the lower opening being normally closed, said oppositely located and separate bendable members extending beyond the extreme lower edges of the lower throat opening.



2,003,000
SEAL FOR DYNAMO ELECTRIC MACHINES
Walter Frederick Kelpe, St. Louis County, Mo., assignor to Wagner Electric Corporation, St. Louis, Mo., a corporation of Delaware
Application December 10, 1930, Serial No. 501,192
4 Claims. (Cl. 286—5)

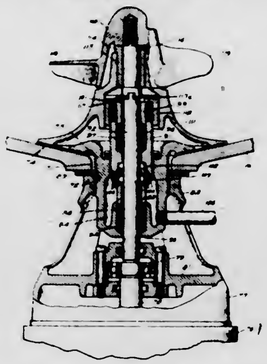
1. In a device of the class described, the combination of a machine casing, a rotor shaft mounted in a bearing in a wall of said casing and



projecting exteriorly beyond said casing, the interior of said casing being subject to a sub-atmospheric pressure which causes air to be drawn in through said bearing, and means for preventing liquid which may collect on the exterior portion of said shaft from being drawn into the casing with the air to the detriment of elements in the casing, said means comprising a liquid guard secured to the exterior of the casing and spaced from said bearing and surrounding said shaft and forming therewith a gap of a size to sustain a capillary column, said guard being provided with means other than the gap for permitting the passage of air from the exterior of the guard to the interior of the casing through the bearing to thereby prevent the establishment of a pressure differential between the exterior and the interior of the guard which would cause air to be drawn through the gap.

2,003,001
VOLTAGE REGULATING DEVICE
Bennett M. Leece, Cleveland, Ohio, assignor to The Leece-Neville Company, Cleveland, Ohio, a corporation of Ohio
Application January 5, 1934, Serial No. 705,409
7 Claims. (Cl. 171—229)

1. In combination, a generator having a main field, an auxiliary field winding opposing said main field, and a regulator having a plurality of magnet coils energized from said generator and vibratory means responsive to said coils for varying the ampere turns of said main field, one of the magnet coils being in the circuit of the auxiliary field winding and another of said coils being in a circuit which is affected by the operation of said vibratory means.

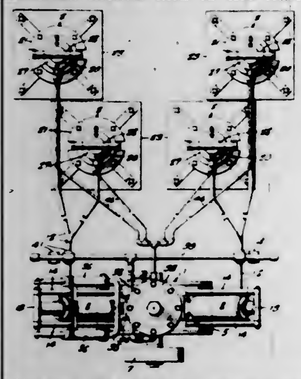


2,003,002
ELECTRICAL CONDENSER
Thomas L. Lee, Rochester, N. Y., assignor to North East Appliance Corporation, Rochester, N. Y., a corporation of New York
Application January 2, 1930, Serial No. 418,101
18 Claims. (Cl. 175—41)

1. A condenser assembly comprising: a condenser of the rolled type, a tubular sheet-metal housing enclosing the condenser and having an integral closed end, a sheet-metal connector lying against said closed end and provided with projections engaging the end of the condenser, a hollow rivet connecting the connector with said end of the housing, and a plug driven into and closing the opening through said rivet.

12. A condenser comprising, in combination, a condenser subassembly comprising a cylindrical body of condenser material including foil strips and insulating strips, a case subassembly for enclosing the condenser subassembly comprising an open ended tube having a closed end, and a connector carried by its closed end, a closure subassembly secured in the open end of the case subassembly comprising a nonconducting head member, a metal member extending through the head member and secured thereto, and a connector carried by said metal member adapted to be connected with a condenser foil, means provided by the case subassembly for securing the closure subassembly thereto and for causing both of the connectors to electrically engage one each of the foil strips.

2,003,003
DISHWASHER
Ralph E. Marbury, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a corporation of Pennsylvania
Application November 11, 1931, Serial No. 574,253
4 Claims. (Cl. 141—9)



1. In a washer including a container having an opening in the bottom wall thereof, a bushing structure in the opening and a motor-driven shaft extending upwardly through the bushing structure, and an impeller structure supported on the bottom wall of the container and including a supporting conical sleeve interfitting with bushing structure, an impeller and a driving shaft therefor supported by said sleeve, said shaft having a loose driving engagement with the motor-driven shaft.

2,003,004
HYDRAULIC PUMPING UNIT
James W. McQuaid, Overton, Tex.
Application November 22, 1933, Serial No. 699,275
1 Claim. (Cl. 60—54.5)

A hydraulic transmission system comprising a series of hydraulically driven elements, pipes connected to said elements, hydraulic cylinders grouped radially with respect to one another and each connected with one of said pipes, pistons operating in said cylinders, a common crank case supporting said cylinders, a power shaft journaled in said crank case, means between the pistons and the power shaft to reciprocate said pistons, a supply reservoir mounted on the crank case, fluid release means for said driven elements and connected to said reservoir, pumps mounted on one of said first-named cylinders and actuated by the piston of the latter, a manifold means connecting said pumps to the reservoir and to the pipes, check valves for said manifold means, and

a manually controlled bypass means connected to the manifold means and to the fluid release

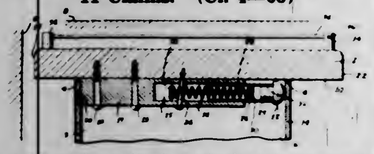
means adjacent the latter's connection to the reservoir.

2,003,005

METHOD OF REMOVING SPRAY RESIDUE FROM FRUIT

Harry C. McLean and Albert L. Weber, New Brunswick, N. J., assignors to Endowment Foundation, New Brunswick, N. J., a corporation of New Jersey

No Drawing. Application October 27, 1933, Serial No. 695,505
16 Claims. (Cl. 146—219)



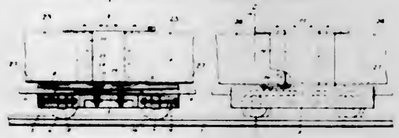
1. A method of washing fruit and the like to remove spray materials from the surface thereof which includes applying to the fruit a solution containing a small proportion of hydrochloric acid and an alkali metal salt of a sulphonated hydrocarbon.

2,003,006

WATER TANK COVER

Barnett Samuel Michelson, Boston, Mass.

Application April 11, 1933, Serial No. 665,543
11 Claims. (Cl. 4—68)



1. A cover for a flush tank that is provided with substantially vertical walls one of which is adapted to be secured to a building wall, one side of the cover being adapted to engage against the said building wall, the cover being provided with an inner, substantially flat, face that is adapted to rest in substantially horizontal position on the said vertical walls to close the flush tank, a support of less width than the width of the tank being secured to said inner face and having a bore that is horizontally disposed when the cover rests on the said vertical walls, a coiled spring one end of which is horizontally disposed in the bore, a plunger connected with the other end of the spring and extending horizontally beyond the support, the plunger being adapted by the spring to bind yieldingly against an inner wall of the flush tank that is disposed opposite to said one wall, whereby the yielding action of the spring will cause the said side of the cover to engage yieldingly against said building wall in order to hold the cover yieldingly in horizontal position on the flush tank, the cover being adapted to be removed from the flush tank in opposition to the yielding binding action of the spring, and means for adjusting the spring to vary the binding action of the plunger.

2,003,007

MATERIAL HANDLING SYSTEM FOR MINES

Edmund C. Morgan, deceased, late of New York, N. Y., by Olive Eugenie Morgan, executrix, New York, N. Y., assignor to American Morgan Company, a corporation of Delaware

Original application February 17, 1923, Serial No. 619,588. Divided and application December 9, 1927, Serial No. 238,877. Again divided and this application June 1, 1933, Serial No. 673,868
24 Claims. (Cl. 105—1)

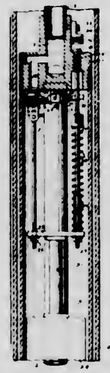
7. A trough train comprising a plurality of flexibly coupled truck frames, a continuous trough comprising a plurality of sections each flexibly connected at its ends to said truck frames, longitudinally disposed friction devices for engaging the upper surfaces of the material in the trough to retain it in carrying position, and springs located at the sides of the trough for urging downwardly the said friction devices against the upper surfaces of such material.

2,003,008

HINGING-LOCKING MECHANISM

Albert Henry Franks Perl, Birmingham, England

Application March 29, 1934, Serial No. 717,957
In Great Britain March 28, 1933
2 Claims. (Cl. 16—146)



1. In and for a table with folding leg, a hinging-locking mechanism comprising a hinge-plate for attachment to said leg, hinged to a second hinge-plate for attachment to said table, two further, locking, hinge-plates hinged together and also hinged to the first two hinge-plates aforesaid, one to each, the pintles which hingedly connect all said hinge-plates lying in two planes at right angles to each other so as to permit of relative movement between said first two hinge-plates into a predetermined position, whereat the pintles connecting said first two hinge-plates with said locking hinge-plates are collinear, to permit said locking hinge-plates to rotate about the pintles last-mentioned and thereby lock and brace said first two hinge-plates in said position, said second hinge-plate being bent to form a box, of which said hinge-plate constitutes one end, having the other end and the top open to accommodate said leg when folded, and adapted to be secured by its bottom to said table, one side of said box forming an abutment adapted to be engaged by the adjacent one of said locking hinge-plates in the predetermined position aforesaid, and a spring for urging said locking hinge-plates into their locking position.

2,003,009

METHOD AND APPARATUS FOR PRODUCING LIQUID FROM WELLS

Jeddy D. Nixon, Houston, Tex., assignor to S. S. McClendon, Jr., Houston, Tex., trustee

Application June 10, 1932, Serial No. 616,487
13 Claims. (Cl. 103—248)

1. Apparatus for producing liquid from a well which includes a collector, means for successively entrapping loads of liquid in said collector, an outlet conduit leading out from said collector, means for supplying an operating fluid, under pressure, into the well, means for automatically applying said operating fluid, successively, into the collector to completely expel each collected load through said conduit as the load is collected, means under the influence of the fluid being so applied and excluding the entrance of a load into the collector until the next preceding load has been completely expelled, means for communicating the collector with said conduit while load is being entrapped, and means for automatically suspending the application of said operating fluid successively upon the completion of the expulsion of each successive load.

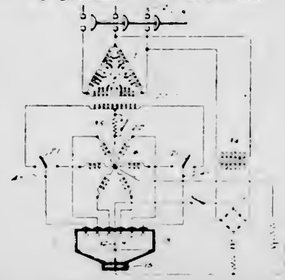
2,003,010

FLUID ELEVATOR

Jeddy D. Nixon, Houston, Tex., assignor to S. S. McClendon, Jr., Houston, Tex., as trustee

Application February 27, 1933, Serial No. 658,882
6 Claims. (Cl. 103—248)

1. In apparatus for raising predetermined loads of liquid, successively, from a well to the ground surface, liquid entrapping means having a chamber provided with an inlet for an operating fluid under pressure and a relief outlet, a valve controlling the inlet, a relief valve controlling the outlet, an eduction tube leading from the chamber, a float arranged to be elevated by the entrapped liquid and operative, when elevated, to effect the opening of the inlet valve and the closing of the relief valve, whereby the operating fluid is admitted into the chamber to expel the load from said chamber through said tube, and operative when lowered to effect the closing of the inlet valve and the opening of the relief valve, a dash pot containing mercury which acts to retard the



downward movement of the float to maintain the inlet valve open until the entrapped load of liquid is discharged from the well.

2,003,011

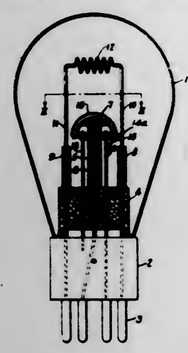
TREATING-OUT TRANSFORMER

Herbert A. Rose, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa., a corporation of Pennsylvania

Application December 21, 1932, Serial No. 648,204
8 Claims. (Cl. 175—363)

3. In a rectifier system, a multi-anode rectifier, a transformer for treating out said rectifier comprising a main winding adapted for connection to the anodes, said winding being adapted to supply a voltage substantially equal to the arc drop of the rectifier, means for adjusting the voltage of the windings, an auxiliary winding associated with said transformer, said auxiliary winding being adapted to supply a voltage greater than the arc drop of the rectifier and means for connecting one of said anodes at will to said main winding or said auxiliary winding.

2,003,012



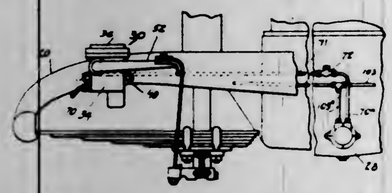
GRID GLOW TUBE STRUCTURE

Stephan P. Sashoff, Gainesville, Fla., assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa., a corporation of Pennsylvania

Application May 27, 1933, Serial No. 673,221
3 Claims. (Cl. 250—27.5)

1. An electrical discharge device comprising a vacuum-tight container, a press, a cathode supported on leads projecting above said press, insulating sleeves encasing said cathode leads for a

substantial distance above said press, an inleading wire sealed through said press and projecting upward therefrom, a sleeve of insulating material



about said wire, and an anode connected to the upper end of said wire adjacent the top of said insulating sleeve and substantially enclosing the top of said sleeve.

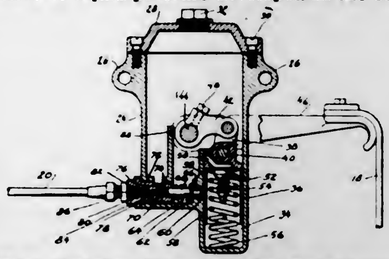
2,003,013

VEHICLE CHASSIS LUBRICATING MECHANISM

George R. Siegrist, Port Huron, Mich.

Application November 26, 1929, Serial No. 409,944
30 Claims. (Cl. 184—7)

1. Vehicle chassis lubricating mechanism comprising, in combination, a vehicle chassis having a fluid pressure shock absorber adapted to place fluid under pressure in response to the shock or road travel of the chassis, a lubricant reservoir separate from said shock absorber, lubricant pumping mechanism communicating with said reservoir and with a part to be lubricated, said pumping mechanism being arranged in a closed circuit with said shock absorber to receive fluid pressure impulses therefrom to respond operatively to draw lubricant from the lubricant reservoir and deliver the same to the part to be lubricated.



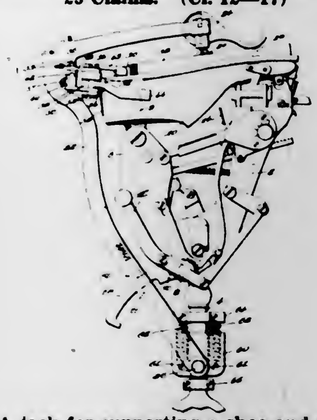
2,003,014

COMBINED LUBRICATING AND SHOCK ABSORBING MECHANISM FOR MOTOR VEHICLES

George R. Siegrist, Port Huron, Mich.

Application November 27, 1929, Serial No. 410,029
7 Claims. (Cl. 184—7)

2. In liquid pressure lubricating and shock absorber mechanism for a vehicle, a liquid reservoir, a liquid compression chamber arranged therein to receive liquid therefrom, means responsive to vehicle travel operable to place the liquid in the compression chamber under pressure, liquid operated pumping mechanism arranged within the liquid reservoir communicating therewith to receive liquid therefrom and responsive to liquid pressure developed in the compression chamber to operatively respond to deliver lubricant under pressure.



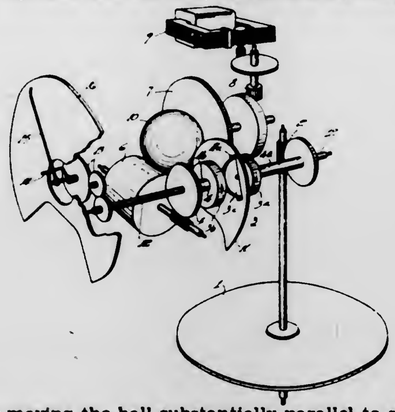
2,003,015

SHOE SUPPORTING JACK

Ralph C. Simmons, deceased, late of Beverly, Mass., by Elizabeth D. Simmons, executrix, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a corporation of New Jersey

Application March 31, 1933, Serial No. 663,746
25 Claims. (Cl. 12—17)

1. A jack for supporting a shoe and a guiding templet associated therewith having, in combination, means for supporting a shoe, means for securing the templet against the sole of a shoe mounted on the supporting means, and a templet positioning device comprising members movable into engagement with the templet and the sides of the shoe while the shoe is supported in the jack.



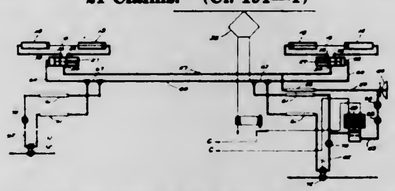
2,003,016

DEMAND METER

Benjamin H. Smith, Bloomfield, N. J., assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa., a corporation of Pennsylvania

Application September 13, 1934, Serial No. 743,860
5 Claims. (Cl. 171—273)

4. In a demand meter, a primary meter element operable at variable speed, a timing element operable at substantially constant speed, and variable-ratio transmission and differential mechanism connecting said elements, said mechanism including a cylinder and a disc mounted for rotation in such positions that a linear element of the cylinder is substantially parallel to a radius of the disc, a ball in engagement with the cylinder and the disc, and differential means



for moving the ball substantially parallel to said linear element of the cylinder.

2,003,017

CONTROL APPARATUS FOR CAR CONNECTERS

Walter H. Smith, Philadelphia, Pa., assignor to Westinghouse Electric and Manufacturing Company, a corporation of Pennsylvania

Application November 29, 1929, Serial No. 410,509
21 Claims. (Cl. 191—1)

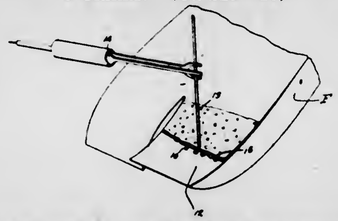
1. In combination, a car body, a current collector carried thereby, a conductor leading from the current collector, means at an end of the car for connecting the conductor to a similar conductor on a second car, means for grounding the current collector, and means preventing operation of the grounding means while the conductor is connected to the conductor on the second car.

2,003,018

THERMOSTAT

John A. Spencer, Newtonville, Mass., assignor to General Plate Company, Attleboro, Mass., a corporation of Massachusetts

Application September 8, 1930, Serial No. 480,453
6 Claims. (Cl. 297—11)



3. A unitary thermostat comprising a sheet of resilient material normally formed with a concavity in one direction, and being so constituted that it may be overcentered by an externally applied force to a position of opposite concavity, but returning under its own impulse to the original position of concavity as soon as said external force is removed, said disc having a peripheral portion of differing temperature coefficient of expansion from its central portion, said peripheral portion being a substantially superficial extension of said central portion, whereby, upon change of temperature in the proper sense, said sheet may be overcentered by the external application of forces to its abnormal position, wherein said central portion is maintained under radial compression by the said peripheral portion until a sufficient temperature change in the reverse sense takes place to release the radial compression due to the differential expansions of said central portion and said peripheral portion, whereupon the sheet returns, under its own impulse, to its normal position of concavity.

2,003,019

METHOD OF PROTECTIVELY FACING SURFACES WITH ABRASION RESISTING MATERIAL

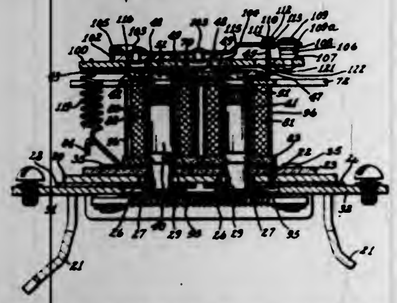
Karl Strobel, Whittier, Calif., assignor to Stoody Company, Whittier, Calif., a corporation of California

Application September 16, 1930, Serial No. 482,270
9 Claims. (Cl. 219—10)

1. The method of providing protective surfaces in which there are diamond substitutes, which consists of coating pieces of diamond substitute with a coating which will delay the heating of the pieces of diamond substitute, and applying these coated pieces to the work by the application of welded on molten metal.

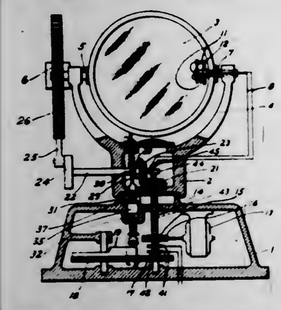
2,003,020

WELDING ROD FOR APPLYING PROTECTIVE ABRASION RESISTING FACINGS



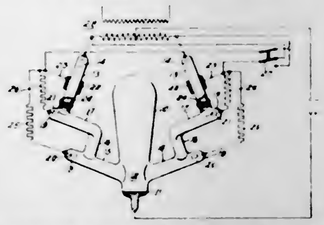
Karl Strobel, Whittier, Calif., assignor to Stoody Company, Whittier, Calif., a corporation of California

Application September 16, 1930, Serial No. 482,271
15 Claims. (Cl. 219—8)



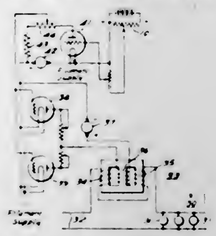
1. A welding rod for applying protective facings comprising a mass of diamond substitute particles, each particle having a protective flux coating designed to retard melting of the particle, said particles being held together in rod like form by a fusible metal.

2,003,021
ELECTROMAGNETIC SWITCH
Raymond H. Sullivan, Rochester, N. Y., assignor to North East Appliance Corporation, Rochester, N. Y., a corporation of New York
Original application May 29, 1930, Serial No. 457,112. Divided and this application August 13, 1931, Serial No. 556,831
3 Claims. (Cl. 200—87)



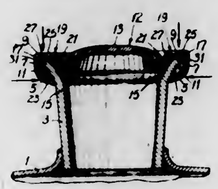
1. An electromagnetic switch comprising, in combination, a base; a pair of magnet cores insulatingly secured at one end to the base, and having windings thereon; an armature hinge bracket secured to the other ends of the cores; an armature carrying a contact and hingedly connected with the bracket; a cooperating contact insulatingly mounted to the base through a contact support; a spring bracket insulatingly secured to the base intermediate the winding and base; and a spring connecting the spring bracket and armature.

2,003,022
BEACON
Henry H. Thompson, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a corporation of Pennsylvania
Application November 23, 1928, Serial No. 321,411
11 Claims. (Cl. 177—352)



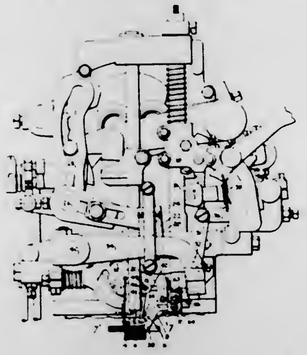
5. A beacon comprising in combination, a projector, rotatably mounted means for supporting the projector, said projector being rotatably mounted on the supporting means, a main shaft and driving means therefor, an auxiliary shaft journalled in the projector supporting means, means disposed to be actuated by the auxiliary shaft for oscillating the projector about its axis of support on the supporting means, gear means connecting the main and auxiliary shafts, whereby when the auxiliary shaft is locked against rotation the supporting means and projector are rotated by the main shaft and when the auxiliary shaft is released and the supporting means locked against rotation the projector alone is oscillated, and means actuated by the driving means and operable to alternately lock the auxiliary shaft against rotation and unlock the supporting means and lock the supporting means and unlock the auxiliary shaft in accordance with a predetermined cycle of operation.

2,003,023
MERCURY VAPOR OR NOBLE GAS RECTIFIER WITH ARC CONTROL
Jürgen von Issendorff, Berlin-Siemensstadt, and Fritz Netzsch, Berlin-Charlottenburg, Germany, assignors to Westinghouse Electric and Manufacturing Company, a corporation of Pennsylvania
Application October 13, 1931, Serial No. 568,580
In Germany October 16, 1930
4 Claims. (Cl. 175—354)



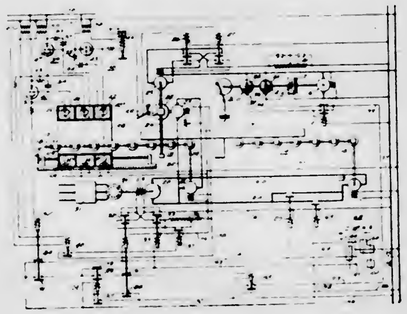
1. A rectifier comprising a container, a cathode compartment in said container, a cathode in said compartment, a second compartment communicating with said cathode compartment and providing an arc path therefrom, a main anode in said second compartment, an auxiliary anode adjacent said arc path outside said cathode compartment and a controllable and an uncontrollable grid between said auxiliary anode and said main anode.

2,003,024
CURRENT-CONTROL APPARATUS
Charles P. West, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa., a corporation of Pennsylvania
Application November 25, 1932, Serial No. 644,285
11 Claims. (Cl. 171—312)



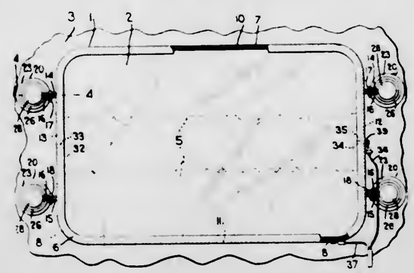
1. In apparatus for controlling an electrical condition of a circuit, in combination, a rotatable potentiometer winding, means for impressing a substantially constant potential on the potentiometer winding, conducting means disposed on a carrier to engage varying portions of the potentiometer winding to receive a potential which varies in accordance with the position of the conducting means on the carrier, and means for impressing said varying potential on an electric circuit to control an electrical condition thereof.

2,003,025
CLOSURE
Frederick Westerbeck, University City, Mo., assignor to Mallinckrodt Chemical Works, St. Louis, Mo., a corporation of Missouri
Application April 8, 1933, Serial No. 665,219
4 Claims. (Cl. 220—27)



1. A container, a substantially rigid nozzle on said container, said nozzle having a cylindric end, said cylindric end having an upper and axially presented sharp sealing edge having an acute angle and an axially presented lower edge at least as great as a right angle, a soft metal cap seating on said end and having a depending soft metal flange surrounding said cylindric portion, and a binding band closely fitted to said soft metal cap and surrounding the flange thereof opposite the said sharp edge and having its margin turned inwardly to confine the soft metal against the sealing edges and about said cylindric portion.

2,003,026
SHOE SEWING MACHINE
Carl F. Whitaker, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a corporation of New Jersey
Application June 14, 1933, Serial No. 675,739
11 Claims. (Cl. 112—45)

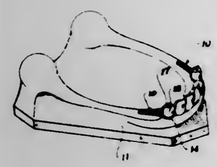


1. A shoe sewing machine of the McKay type having, in combination, stitch forming and work feeding devices including a straight hook needle, a rotary work supporting horn, a presser-foot for alternately clamping and releasing the work supported by the horn, and a feed point acting on the side of the work engaged by the presser-foot to feed the work when released, a knife operating in the line of feed with the feed point to form a stitch receiving groove in the work, and means for connecting the knife to be operated by the combined movements of the presser-foot and feed point.

2,003,027
CONTROL FOR SHEARING APPARATUS
Ralph H. Wright, Swissvale, Pa., assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa., a corporation of Pennsylvania
Application May 26, 1934, Serial No. 727,766
12 Claims. (Cl. 164—48)

1. In combination, a cutting device, means for actuating the cutting device, means for carrying material into cutting position, means for initiating the operation of the material carrying means, adjustable control means responsive to the position of the material as it is moved into cutting position for stopping the material carrying means to position the material for a predetermined length of cut and for thereafter initiating the operation of the cutting device and means for adjusting the position of said control means to vary the cut length.

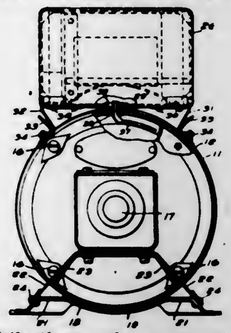
2,003,028
WINDSHIELD HEATER
Louis Zaiger, Lynn, Mass.
Application June 6, 1934, Serial No. 729,294
7 Claims. (Cl. 219—19)



7. A windshield heater comprising a pane of glass, a glass-carrying member of rubber encircling the glass and having on its inner face a groove to receive the edge of the glass and also having a windshield-engaging lip, a metal supporting member encircling the rubber glass-carrying member and holding the latter clamped to the edge of the glass, said metal supporting member having outwardly-extending arms, suction cups carried by said arms for holding the heater to the windshield, an electric heating unit carried by the supporting frame and situated on the windshield side of the glass.

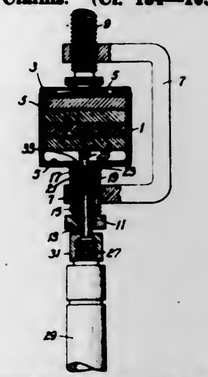
2,003,029
SOUND PICTURE SYSTEM
Walter J. Albersheim, New York, N. Y., assignor to Electrical Research Products, Inc., New York, N. Y., a corporation of Delaware
Application August 23, 1934, Serial No. 741,037
6 Claims. (Cl. 179—100.3)

1. In combination, a sound translating unit, a film having sprocket tooth perforations subject to mechanical variations, a sprocket wheel for feeding said film at uniform velocity past said sound translating unit comprising a driving member, a plurality of sprocket teeth with individual resilient members, and means in said driving member for supporting said resilient members in equally spaced relation.



2,003,030
DENTAL CLASP
John V. Amenta, Chicago, Ill.
Application June 7, 1934, Serial No. 729,368
2 Claims. (Cl. 32—5)

1. A dental clasp formed from two pieces of metal; one of said pieces being formed to provide clasp portions and an anchor loop extending laterally from said clasp portions and including spaced arms lying substantially within a common plane but spaced slightly from each other throughout at least a part of their extent so to provide a slit or space therebetween; and the other of said pieces being formed to provide a cusp or occlusal rest portion extending between said clasp portions but in a plane above the latter; said second-named piece including a shank portion extending between said arms in a plane slightly above the latter and soldered thereto within said slit or space.

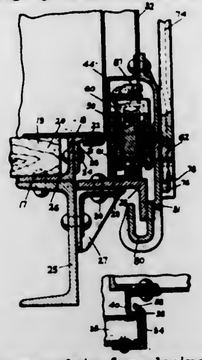


2,003,031
CAPACITOR MOTOR
John G. Baker, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa., a corporation of Pennsylvania
Application June 21, 1933, Serial No. 676,827
14 Claims. (Cl. 172—233)

1. In combination with a motor subject to oscillations around the axis of its shaft and a condenser, means supporting the condenser upon the motor to enable the motor to oscillate around its

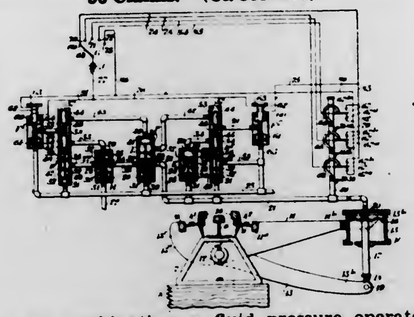
shaft axis while the condenser remains substantially stationary.

2,003,032
LUBRICATING APPARATUS
Frank S. Barks, St. Louis, and Alexander P. Fox, University City, Mo., assignors to Lincoln Engineering Company, St. Louis, Mo., a corporation of Missouri
Application May 18, 1934, Serial No. 726,318
3 Claims. (Cl. 184—105)



1. In a lubricating clamp for spring covers and the like, a clamp screw adapted to be sealed about an opening in a cover, a reciprocating member passing through the clamp screw and having an opening therethrough and means for normally pressing said member through said opening and toward contact with said spring.

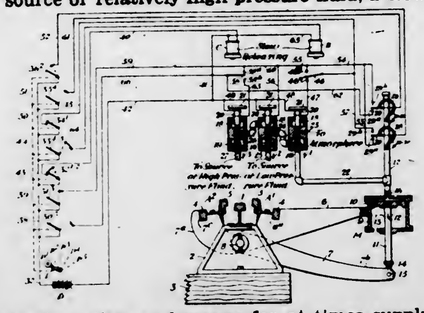
2,003,033
CAR DOOR
Wilfred A. Beauchamp, Chicago, Ill., assignor, by mesne assignments, to The Youngstown Steel Door Company, Cleveland, Ohio, a corporation of Ohio
Application November 15, 1933, Serial No. 698,059
14 Claims. (Cl. 20—22)



1. In a railway car door comprising a metallic panel disposed in substantially the outer plane of said door, a horizontally extending backing plate secured to the lower portion of said panel, said backing plate being offset inwardly from said panel and disposed in substantially the inner plane of said door, said panel being coped adjacent the lower corners of said door, elevating

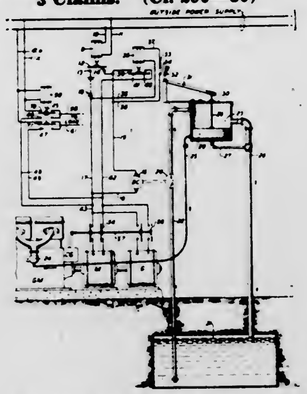
mechanism insertable through each of said coped portions having operative relationship with said

door and a cover plate for closing each of said portions secured to said door.



2,003,034
FLUID PRESSURE DISTRIBUTION SYSTEM
Herbert L. Bone, Swissvale, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a corporation of Pennsylvania
Application October 25, 1932, Serial No. 639,434
56 Claims. (Cl. 303—20)

1. In combination, a fluid pressure operated device, a first pipe in which fluid is maintained at a relatively low substantially constant pressure, a second pipe in which fluid is maintained at a relatively high substantially constant pressure, means for at times supplying fluid to said device from said first pipe and for at other times supplying fluid to said device from said second pipe, and means for at still other times exhausting fluid from said device into said first pipe or to atmosphere according as the pressure of the fluid in the device is above or below a predetermined pressure which is somewhat higher than the pressure of the fluid in said first pipe.

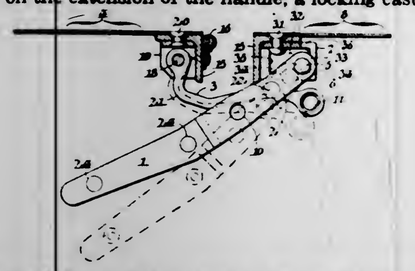


2,003,035
RAILWAY BRAKING APPARATUS
Herbert L. Bone, Swissvale, and John W. Logan, Jr., Wilkinsburg, Pa., assignors to The Union Switch & Signal Company, Swissvale, Pa., a corporation of Pennsylvania
Application February 17, 1933, Serial No. 657,210
12 Claims. (Cl. 303—20)

1. Railway braking apparatus comprising a braking bar extending parallel to a track rail, a fluid pressure motor for moving said braking bar toward said track rail to a braking position, a first pipe connected with a source of relatively low pressure fluid, a second pipe connected with a source of relatively high pressure fluid, a slow-

releasing relay, and means for at times supplying fluid pressure to said motor from said first or said second pipe according as the armature of said relay is picked up or released.

2,003,036
CONTROL CIRCUIT
Vincent T. Callahan, Bergenfield, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application July 20, 1934, Serial No. 736,153
3 Claims. (Cl. 290—30)

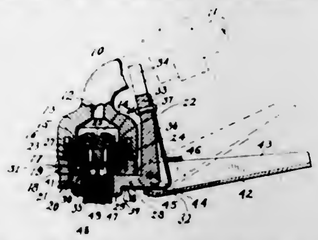


3. In a system for automatically starting an internal combustion engine having an electric starter, the combination with a supply circuit, a normally energized magnet in said circuit, a local circuit closed by the deenergization of said magnet, a current supply and an electric motor connected in said local circuit, a fuel pump actuated by said motor, a fuel cup connected to said pump, a float in said cup, a contact closed by the rise of said float upon the filling of said cup by said pump, a magnet in said local circuit energized upon the closure of the last mentioned contact, for energizing said starter for starting the engine.

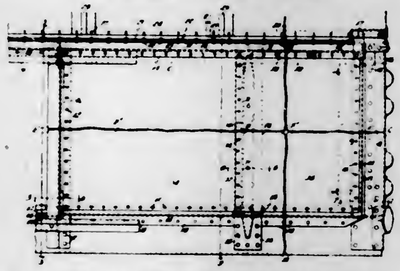
2,003,037
DOOR OPERATING MECHANISM
Isaac M. Chambers, Altoona, Pa.
Application March 30, 1934, Serial No. 718,129
2 Claims. (Cl. 292—283)

1. In combination with a door member and a door framing member, a link pivotally attached to one of said members, an operating handle piv-

otally attached to the link, said operating handle and said link each being extended beyond the common pivotal point of attachment, a lug mounted on the extension of the handle, a locking casting having a pocket to receive the lug in locking engagement, said handle and said extension of the link having holes therein which are in registry when the door is locked shut and a removable locking pin through said holes.



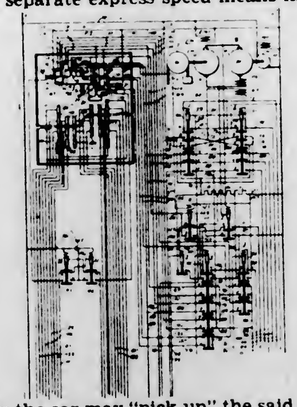
2,003,038
TRUCK
Carl F. Collins, Winterhaven, Fla.
Application June 13, 1934, Serial No. 730,406
12 Claims. (Cl. 214—65.5)



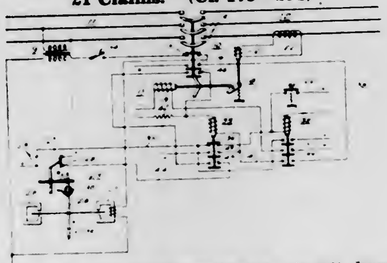
1. In a hand truck comprising a wheeled frame, a pair of slidable arms on the frame, movable towards and away from one another, a sliding rack bar for each arm, means including a shaft and pinion for simultaneously operating the rack bars towards and away from one another, a double ended lever rockably mounted intermediate its ends on each rack bar, a sliding carriage for each arm, means connecting the carriage with its arm, a pivot for the lower end of each double ended lever, and a pin and slot connection between the upper end of the levers and carriages.

2,003,039
AIR CHUCK
John C. Crowley, Cleveland Heights, Ohio, assignor to The Dill Manufacturing Company, Cleveland, Ohio, a corporation of Ohio
Application November 10, 1931, Serial No. 574,103
4 Claims. (Cl. 284—17)

1. In an air chuck, a member arranged at the valve stem engaging end of the chuck and provided with a stem receiving opening, said member having a substantially L-shaped arm the outer end of which is inclined inwardly toward the chuck, a spring clip having angularly disposed parts one of which is substantially parallel to the inclined outer end of said L-shaped arm and is secured thereto and the other of which is substantially parallel to the outer side of said member and is provided with a valve stem thread engaging portion normally positioned in the opening in said member, and means carried by said L-shaped arm for deflecting said spring clip.



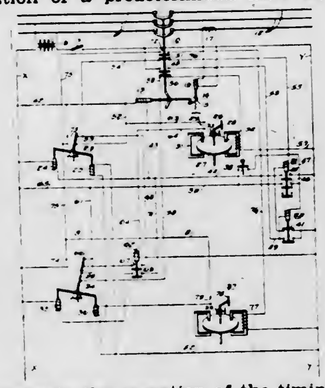
2,003,040
HOUSE CAR
Frank Ditchfield, Cleveland, Ohio, assignor to The Youngstown Steel Door Company, Cleveland, Ohio, a corporation of Ohio
Application September 9, 1933, Serial No. 688,737
14 Claims. (Cl. 105—409)



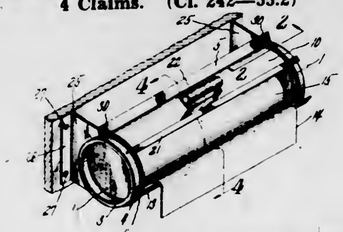
2. A house car having a metal side sill; a metal side plate; metal side posts secured at their top and bottom ends to the side plate and side sill, said posts being of maximum depth at their central portions and tapered inwardly toward their top and bottom ends; metal sheathing secured to the outer sides of said posts at said central portions and extending in a vertical plane spaced outwardly of the upper and lower ends of the posts; means for attaching the upper edge of the sheathing to the side plate in spaced relation to the upper ends of the posts; and means extending between and connecting the lower edge of the sheathing and side sill.

2,003,041
CONTROL SYSTEM
William F. Eames, Edgewood, Pa., assignor to Westinghouse Electric & Manufacturing Company, a corporation of Pennsylvania
Application October 11, 1929, Serial No. 398,942
8 Claims. (Cl. 187—29)

1. In an elevator system having a car, means for operating the car at a normal high speed, separate means for causing the car to operate at an express speed above its normal high speed, means for registering calls for stops to be made by the car, means responsive to the registration of a stop call and to the approach of the car to that call for causing the car to "pick up" the said call at a point a predetermined distance from the floor corresponding thereto, and means responsive to the registration of said call and to the approach of the car to said point for rendering said separate express speed means ineffective whereby the car may "pick up" the said call while operating at normal speed.



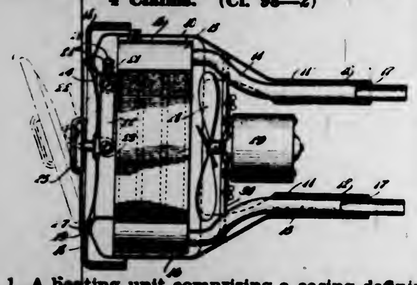
2,003,042
AUTOMATIC RECLOSING CIRCUIT BREAKER SYSTEM
E. Vernon Ellett, Pocahontas, Va., assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa., a corporation of Pennsylvania
Application March 11, 1933, Serial No. 660,376
21 Claims. (Cl. 175—294)



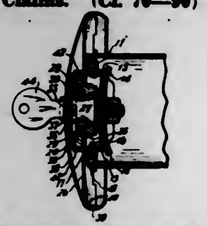
1. In an automatic reclosing circuit breaker system, in combination, a circuit breaker, means for opening the circuit breaker, control means responsive to the opening operation of the breaker for effecting a reclosure of the breaker, and means for rendering said control ineffective to reclose the breaker a second time in the event that the breaker reopens before the expiration of a predetermined time interval.

2,003,043
AUTOMATIC RECLOSING CIRCUIT BREAKER SYSTEM
E. Vernon Ellett, Pocahontas, Va., assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa., a corporation of Pennsylvania
Application March 11, 1933, Serial No. 660,378
14 Claims. (Cl. 175—294)

1. In an automatic reclosing circuit breaker system, in combination, a circuit breaker, means for automatically opening the breaker, closing means for the breaker, means independent of the opening means responsive to the opening of the breaker for causing the closing means to reclose the breaker substantially instantaneously, means responsive to the operation of the reclosing means for rendering the reclosing means ineffective to produce a second instantaneous reclosure, timing means operable in response to a reopening of the breaker for causing the closing means to effect a second reclosure of the breaker at the expiration of a predetermined interval, means responsive to the operation of the timing means for rendering said timing means ineffective to operate the closing means, and additional timing means operable in response to the breaker remaining closed a predetermined time after any reclosure for rendering the reclosing means again effective to produce a substantially instantaneous reclosure.



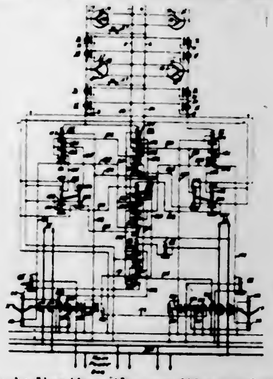
2,003,044
DISPENSING CABINET
Antonio Galante, Medford, Mass.
Application December 5, 1934, Serial No. 756,065
4 Claims. (Cl. 242—55.2)



3. A device of the class described, comprising a casing having a pair of spaced end members provided with circular peripheral portions U-shaped in cross section with their open sides oppositely disposed and having marginal peripheral beads, a curved side wall having its ends secured within said U-shaped portions and having its side edges spaced apart to form an opening through which a roll of sheet material may be inserted within said casing, the lower of said side edges being extended outwardly and its margin turned upwardly, a curved cover member having its ends slidable within said U-shaped portions and movable to and from a position closing said opening, the lower edge of said cover being extended downwardly and outwardly to press said sheet material against the outwardly extending portion of said side wall back of its upwardly extending margin, said outwardly extended cover edge having an opening at each end through which said beads extend, a handle secured to said cover, and means for supporting said casing.

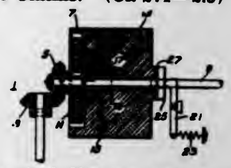
2,003,045
HOT WATER HEATER FOR AUTOMOBILES
Roy H. Griffiths, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a corporation of New York
Application November 8, 1934, Serial No. 752,685
4 Claims. (Cl. 98—2)

1. A heating unit comprising a casing defining an opening in its face, a heat radiator enclosed thereby, means for directing air through the casing toward said opening, and a single heat deflector pivotally mounted on the casing and adapted to assume a plurality of positions with respect thereto and in one of its positions completely to close said opening.



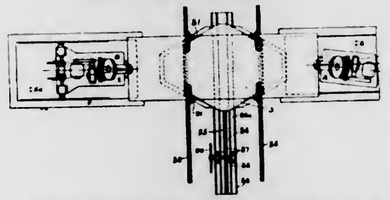
2,003,046
CLOSURE
James N. Halkett, Cleveland Heights, Ohio, assignor, by mesne assignments, to Eaton Detroit Metal Company, Cleveland, Ohio, a corporation of Ohio
Application September 6, 1933, Serial No. 688,346
4 Claims. (Cl. 70—90)

1. In closure devices, the combination of a member having an opening, a cap for closing said opening, said cap and said member having cooperating parts whereby the cap is adapted to be secured to said member by a rotary movement, a cover rotatably mounted on said cap, a lock barrel secured to said cap, a lock cylinder rotatably mounted in said barrel and having key actuated means for securing the barrel and cylinder against relative rotation, a bolt slidably mounted on said barrel, said cover having a circular series of V-shaped lugs adapted to be engaged by said bolt to secure the cover against rotation relative to the cap, and means on said cylinder for actuating said bolt.



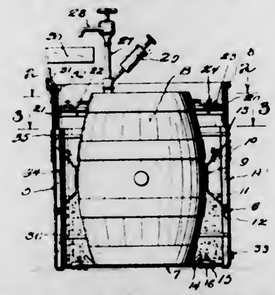
2,003,047
CONTROL SYSTEM
Stuart C. Hensen, Akron, and Melville B. Hankin, Cuyahoga Falls, Ohio
Application June 9, 1932, Serial No. 616,279½
9 Claims. (Cl. 177—311)

1. In a power control system, in combination, a first station, a second station, a direct current control bus connecting the stations, circuit breakers at the second station for connecting a preferred feeder circuit and an auxiliary feeder circuit to a main power bus, control and signalling means at the first station individual to each circuit breaker at the second station, said signalling means being responsive to different polarities, a control conductor for connecting each circuit breaker to the corresponding control and signalling means at the first station, relay means responsive to the voltage applied to the preferred feeder circuit for transferring the main power bus from the preferred feeder circuit to the auxiliary feeder circuit on failure of voltage on the former circuit and for transferring the main power bus back to the preferred feeder circuit from the auxiliary feeder circuit on return of voltage to the preferred feeder circuit, control means actuated by the movement of the circuit breakers for applying different polarities from the control bus to the control conductors to actuate the signalling



means for indicating the positions of the circuit breakers, locking relay means at the second station and operable from the first station over the control conductor individual to the preferred feeder circuit for preventing the automatic transfer of the main power to the auxiliary feeder circuit by opening the energizing circuit to said transfer relay means when the preferred feeder circuit is tripped from the first station, and a second locking relay means at the second station and operable from the first station over the control conductor individual to the auxiliary feeder circuit for preventing the automatic transfer of the main power bus to the preferred feeder circuit by opening the energizing circuit to said transfer relay means when the auxiliary circuit breaker is closed from the first station.

2,003,048
PHOTOPHONE APPARATUS
Clinton R. Hanna, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a corporation of Pennsylvania
Application February 2, 1931, Serial No. 512,978
9 Claims. (Cl. 271—2.3)

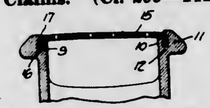


3. A mechanical filtering system comprising a driving means, a driven shaft, a flywheel fixed on said shaft, means resiliently connecting said driving means to said flywheel for driving said driven shaft, a second flywheel, and means frictionally connecting said flywheels.

2,003,049
APPARATUS FOR CUTTING OR BEVELING EDGES OF METAL PLATES
George K. Hull, Fredonia, N. Y.
Application March 8, 1934, Serial No. 714,624
11 Claims. (Cl. 164—60)

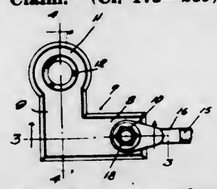
8. A bevel shear construction comprising a pit; a frame structure having its lower portion disposed in said pit; adjacently disposed circular blades providing cooperating edges for cutting a plate; bearing means for said blades carried by said frame structure positioning said blades above said pit; means for rotating said blades; supporting means for said frame structure including a pivotal connection at one end thereof having a vertical axis passing through said cooperating edges at their most proximate portions, said frame structure and supporting means being adapted for horizontal movement within said pit to adjust the positions of said blades; a rail secured along each of the opposite sides of said pit; a pressure fluid working cylinder carried by said frame structure at the opposite end thereof; a double-acting piston in said cylinder; piston rods extending in opposite directions from said piston; roller elements carried at the outer ends of said rods and engaging the respective said rails; and means for introducing and exhausting pressure fluid to and from the opposite ends of said cylinder to effect relative movement of said cylinder and said piston and thereby effect swivelling movement of said frame structure about said axis.

2,003,050
BEER CONTAINER AND COOLER
Harry Iselin, Racine, Wis.
Application September 15, 1933, Serial No. 689,594
6 Claims. (Cl. 62—32)



1. A device for cooling the contents of a barrel comprising a container for receiving the entire barrel said container having an open upper receiving end, clamping means carried by the container for engaging and centering the barrel within the container, the container being adapted to receive a refrigerant, and a cover plate disposed within the upper end of the container around the barrel to expose the upper end to view and to permit the contents thereof to be drawn off.

2,003,051
PURIFICATION OF STRONG PHOSPHORIC ACID
William H. Knox, Jr., Nashville, Tenn., assignor to Victor Chemical Works, a corporation of Illinois
No Drawing. Application July 5, 1933, Serial No. 679,145
5 Claims. (Cl. 23—165)



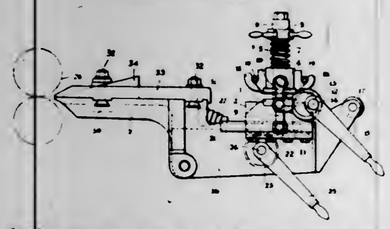
1. The method of substantially completely removing lead impurities from strong phosphoric acid which comprises adding to phosphoric acid having a concentration of the order of 70% or higher and containing lead impurities, a compound yielding chloride ions in an amount substantially in excess of the number required to form lead chloride with the lead present, whereby substantially all of the lead is precipitated as a lead chloride compound, and separating the resulting lead chloride compound from the acid.

2,003,052
SPRINKLER HEAD
Edward E. Lord, Pasadena, Calif., assignor of one-half to J. D. Ross, Pasadena, Calif.
Application October 17, 1933, Serial No. 693,977
2 Claims. (Cl. 299—141)

2. A spray nozzle comprising a body having an ovate groove defined in part by spaced apart inner and outer walls, the latter being of greater breadth than the former and connected therewith by a laterally extending joinder wall, the outer wall being of gradually increasing thickness toward said joinder wall, a spray plate of uniform thickness having an ovate flange extending into said groove, the groove containing a fluid waterproofing material, and the outer wall having its portion of lesser thickness swaged over and inwardly against the spray plate so as to snugly force the inner surface of the plate against the edge of said inner wall and apply pressure against the waterproofing fluid material to displace same into the joints between the flange and the walls of the groove.

2,003,053
STORAGE BATTERY TERMINAL CONNECTER
Frank Paviovic and Joseph George Sintic, Cleveland, Ohio
Application March 29, 1934, Serial No. 718,059
1 Claim. (Cl. 173—259)

A device for connecting a conductor to a battery post comprising a body formed of one piece of material and of L-shape to provide a pair of arms extending at right angles to each other, said body having flat upper and lower faces and one arm having a hole extending through its outer end for receiving a bolt for connecting a conductor terminal to said arm and the other arm having an opening in its outer end for receiving a bat-



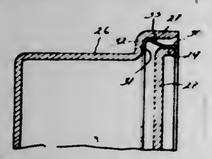
tery post, the outer end of the last mentioned arm being of enlarged circular form, with the hole passing through the circular part, and said hole tapering downwardly, with the small end opening out through the lower face of the body and its large end opening out through the upper face thereof, and said small end of the hole being of slightly greater diameter than the diameter of the battery post, and said hole being adapted to receive the lead which covers the upper part of the battery post.

2,003,054

CLEANING, AND FEEDING OF METAL STRIPS TO ROLLS OR ROLLING MILLS

Francis Gerald Ratcliff, Birmingham, England

Application June 1, 1933, Serial No. 673,902
In Great Britain June 18, 1932
1 Claim. (Cl. 80—43)



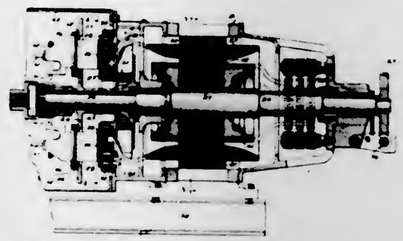
A device for cleaning and feeding metal strips to the rolls of rolling mills, comprising a cleaning press, a carrier frame member, a bracket forming the bed of the press mounted to run in guides on said frame to be movable towards and away from the rolls, means for moving the bracket in the guides for feeding a metal strip gripped by the press to the rotating rolls, a movable press jaw, means for fixing a fabric cleaning strip to such jaw, and means for guiding the strip to the rolls mounted to move with the bed of the press, comprising a portion of the bracket which extends forwardly of the press with the front edge adjacent the rolls when in action, lateral guides thereon for coacting with the edge of the metal strip and a wedge clamp for frictionally holding the metal strip against the face of the said portion of the bracket which extends forwardly of the press.

2,003,055

BRAKE DRUM CONSTRUCTION

Charles W. Sinclair, Detroit, Mich., assignor, by mesne assignments, to The Kelsey-Hayes Wheel Company, Detroit, Mich., a corporation of Delaware

Application April 18, 1932, Serial No. 605,955
8 Claims. (Cl. 188—218)



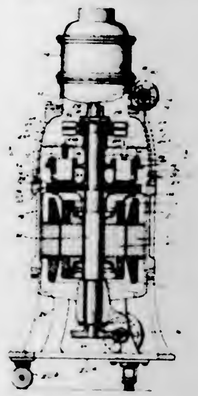
7. In a brake drum construction, the combination with a brake drum and a back plate encircled by and spaced from said brake drum, of a shield within the space between said brake drum and back plate and secured to one of said members and extending adjacent to the other.

2,003,056

ELECTRIC POWER CONVERTER

George T. Southgate, Forest Hills, N. Y., assignor to Union Carbide and Carbon Research Laboratories, Inc., a corporation of New York

Application November 30, 1931, Serial No. 578,136
13 Claims. (Cl. 171—123)



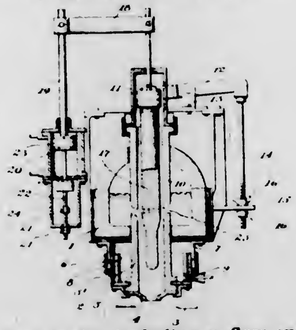
2. In a device for supplying direct current, the combination of a core structure having slots, a primary winding embedded in said slots, a secondary winding adjacent to the primary winding, means for supplying alternating current to said primary winding to produce a rotary magnetic field therein, a commutating device electrically connected to said secondary winding, said commutating device including a rotating part, and means for rotating said part in synchronism with the rotating magnetic field in the primary winding, said core structure having magnetic material arranged to bridge the slots and cover portions of the winding embedded therein.

2,003,057

ARC-WELDING POWER UNIT

George T. Southgate, Forest Hills, N. Y., assignor to Union Carbide and Carbon Research Laboratories, Inc., a corporation of New York

Application November 30, 1931, Serial No. 578,137
8 Claims. (Cl. 171—123)



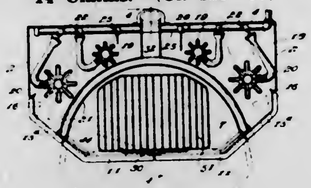
2. In a device for supplying direct current having a drooping voltage characteristic, the combination of a primary field structure and a secondary field structure, said field structures including cores having teeth with oblique ends, means for moving one of said field structures relatively to the other to vary the flux leakage, commutating means connected to the windings of said secondary field structure, and an external reactance in series with said primary.

2,003,058

GLASS FEEDER

Thomas Stenhouse, Washington, Pa., assignor to Hazel-Atlas Glass Co., Wheeling, W. Va., a corporation of West Virginia

Application October 29, 1932, Serial No. 640,298
7 Claims. (Cl. 49—55)



7. A glass feeder including a flow spout containing molten glass, means for discharging glass from any selected stratum of the glass in the flow spout and blocking the flow of glass from any other level, and means for periodically accelerating and retarding the discharge.

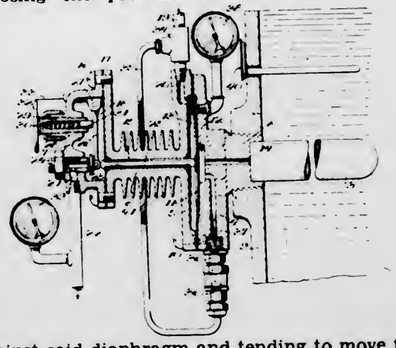
2,003,059

COOKING RANGE

Jacob Teller, New Rochelle, and Arthur P. Schulz, New York, N. Y., assignors to Teller Stove Designing Corporation, New York, N. Y., a corporation of New York

Application April 18, 1932, Serial No. 605,994
14 Claims. (Cl. 126—37)

1. A cooking range comprising a base, a body thereon, said body having a semi-circular oven compartment with a curved rear wall, utility compartments arranged upon each side of said oven compartment, and a rotary rack support within said oven compartment, the axis of the rotary rack support being substantially in the plane of the front wall of the oven compartment.



2,003,060

THERMOSTATIC CONTROLLING DEVICE

William S. Thomas, Montoursville, Pa., assignor of one-half to Ernest L. Heckert, Montoursville, Pa.

Application April 2, 1934, Serial No. 718,711
11 Claims. (Cl. 236—32)

1. In a thermostatic controlling device, a movable diaphragm operatively connected to the element to be controlled, an expansion chamber communicating with one side of said diaphragm and adapted to be heated by a medium the temperature of which varies in accordance with the position of the element being controlled, said expansion chamber containing a quantity of expansible fluid medium the pressure of which varies with changes in the temperature of the medium by which the chamber is heated and tends to move said diaphragm in one direction, means for opposing the pressure of said fluid medium

against said diaphragm and tending to move the latter in the opposite direction, and means for automatically establishing communication between said expansion chamber and a source of said fluid medium each time that the pressure of said medium within said chamber reaches a predetermined point.

2,003,061

TOOL

Alexander Wallace, New Rochelle, N. Y., assignor of two-fifths to Lewis H. Saper and Moses Cohen, of New York

Application April 19, 1933, Serial No. 666,822
5 Claims. (Cl. 81—3.6)

1. A tool for handling spectacles for angling an end piece thereof comprising a pair of jaws for clamping said end piece, a journal associated with said jaws, and a wrench adapted to be received in said journal and to engage said end piece, said wrench being adapted for rotation within the journal for angling said end piece.

2,003,062

COMBINED STAPLE AND STRAP

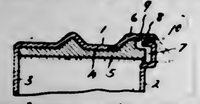
Charles C. Wickwire, Cortland, N. Y., assignor to Wickwire Brothers, Cortland, N. Y., a corporation of New York

Application April 5, 1934, Serial No. 719,228
1 Claim. (Cl. 85—49)

A unitary staple for clamping cables having a soft covering of insulation, comprising a substantially straight metal body of steel wire having two spaced legs depending substantially at right angles to said body; and a broad flat metal clip sub-

stantially bridging the space between said legs and projecting materially beyond said body on both sides thereof longitudinally of the cable to be held and electrically welded to the under side

of said body between said legs and presenting a smooth flat surface adapted to engage and compress the insulation on said cable over an extended area when said legs are driven into a supporting surface.



2,003,063

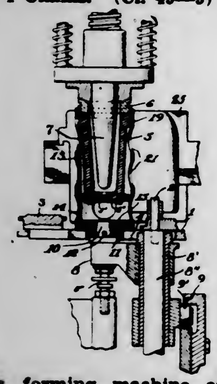
BRAKE DRUM CONSTRUCTION

Joseph E. Batie, Detroit, Mich., assignor, by mesne assignments, to The Kelsey-Hayes Wheel Company, Detroit, Mich., a corporation of Delaware

Application May 9, 1932, Serial No. 610,213

3 Claims. (Cl. 188—218)

1. In a brake drum construction, the combination with a back plate having an annular flange, of a brake drum comprising an annular flange, a liner within said last mentioned flange, and a retainer for said liner permanently secured to said last mentioned flange and forming an annular groove receiving said first mentioned flange.



2,003,064

CAGE FOR PARISON MOLDS

Arthur W. Beeson, Washington, Pa., assignor to Hazel-Atlas Glass Company, Wheeling, W. Va., a corporation of West Virginia

Application April 27, 1932, Serial No. 607,860

4 Claims. (Cl. 49—9)

1. A glass forming machine comprising a single rotary table, a plurality of glass forming units carried by the table, each unit including a parison mold, a blow mold and a neck ring, both molds adapted to be brought into cooperative relation with the neck ring, means for elevating the parison mold into cooperative relation with the neck ring, and means supporting the parison mold solely from its top, whereby the parison mold may expand freely downward from its top to prevent jamming, said supporting means throughout its length being substantially within the greatest diameter of the parison mold.

2,003,065

COMPOSITION FOR COATING SHEETS, FIBROUS STOCKS, AND THE LIKE

Charles M. Boyce, Cedar Rapids, Iowa, assignor to John R. Ditmars, New York, N. Y.

No Drawing. Application June 20, 1931, Serial No. 545,832

8 Claims. (Cl. 91—67.9)

1. The method of modifying the surface characteristics of a paper or similar base bearing an ink impression which comprises applying thereto a transparent film-forming solution containing casein and gelatin in an aqueous vehicle, controlling the consistency of said solution to secure a desired depth of film over the base and the ink impression thereupon to secure the desired uniform surface finish.

2,003,066

FIREARM OF THE GAS RELOADING TYPE

Fridtjof Nielsen Bröndby, Oslo, Norway

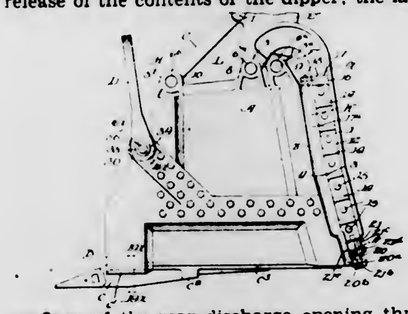
Application February 16, 1933, Serial No. 657,130

In Norway February 22, 1932

9 Claims. (Cl. 42—3)

1. An automatic fire arm of the gas reloading type having a breech mechanism comprising a barrel having a bore therein, a piston cylinder having a channel connecting said cylinder with said barrel bore in order to allow the combustion gases to enter into said cylinder, a piston cooperating with said cylinder and connected with the breech mechanism to operate the same, said piston engaging said cylinder during a part only of its travel thereby opening said cylinder to the atmosphere to thoroughly empty the combustion gases therefrom and permit the same to be filled with air, the volume of said cylinder being at least equal to a substantial portion of the volume of the barrel bore so that the air content therein is sufficient to cause a supplemental combustion of the combustion gases whereby not only the pressure and expansion of the combustion gases are utilized, but also the supplemental heat created and the formation of mud and soot is held to a minimum.

2,003,067



EXCAVATING DIPPER CONSTRUCTION

William H. Brune, Chicago Heights, Ill.

Application February 19, 1931, Serial No. 516,884

8 Claims. (Cl. 214—145)

1. An excavating dipper having a rear discharge opening and a door constructed with hinging means adapting it to swing to open and close said opening; said door having its portion which lies nearer to its axis of hinging movement and its portion which lies nearer to its end which swings in the opening movement substantially straight from side to side but in two planes, at a substantial angle one to the other, thereby developing in said door a substantial arch through which the door supports the load within the dipper, and whereby, in swinging to open position, the door affords more effective release of the contents of the dipper; the lateral

confines of the rear discharge opening through which the body receives the door when closed, lying in planes conforming to those of the door.

2,003,068

PROTECTIVE FINISH

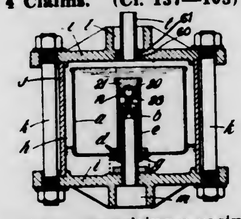
Michael J. Callahan, Parlin, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware

No Drawing. Application August 5, 1931, Serial No. 555,369

5 Claims. (Cl. 91—68)

1. An article of manufacture having a metal surface covered with a coating the film forming material of which consists predominately of nitrocellulose, and a top coat on the nitrocellulose coating of polyhydric alcohol-polybasic acid resin containing in chemically combined form the acid radicals of fatty oil acid.

2,003,069



STEAM TRAP, AND APPARATUS FOR CONTROLLING OR MAINTAINING THE SUPPLY OF WATER OR OTHER FLUID

Frederick Samuel Carter, Cardiff, Wales

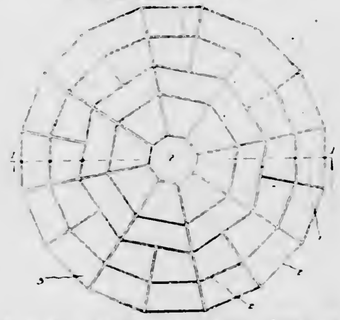
Application July 7, 1932, Serial No. 621,235

In Great Britain July 13, 1931

4 Claims. (Cl. 137—103)

2. A steam trap comprising a casing having an inlet for the steam and an outlet for the condensate, a central tube in said inlet to allow a free passage of air out of the trap, a float in said casing, an inner tube carried by the casing and communicating with the outlet, an outer tube, open at its lower end to the casing and co-axial with said inner tube, attached to the float and arranged to leave an annular space around the inner tube, and a ball valve comprising a ball carried by the float and a seating on the inner tube adapted to receive the ball to seal the entry to the inner tube, the arrangement being such that the ball is freely attached to the float and the steam pressure holds the ball against the seating until such time as the amount of condensate raises the float sufficiently to carry the ball clear of the seating, whereupon the condensate siphons away over the top of the inner tube.

2,003,070



CONSTRUCTION OF LENSES FOR CONCENTRATING THE HEAT OF THE SUN

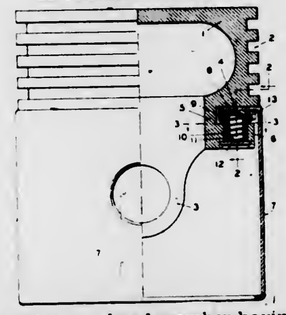
José Ylla-Conte, Barcelona, Spain

Application July 2, 1932, Serial No. 620,696

In Spain July 3, 1931

5 Claims. (Cl. 88—57)

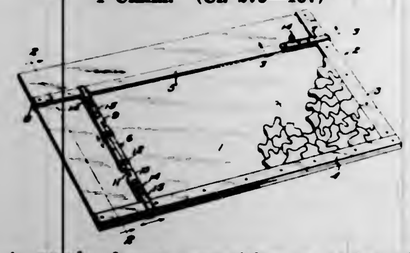
1. A solar heat concentrating lens, comprising a frame having a flat supporting surface, a plurality of flat-surfaced prismatic glass elemental parts having thick ends all carried by said frame and disposed radially thereabout, one of the large flat sides of each elemental part being disposed in a common plane parallel to the flat supporting surfaces of said frame, the other large flat side of each part being disposed at an angle to the first-mentioned side, the thick ends of the elemental parts being directed towards the center of the lens, whereby the parts direct beams of parallel rays toward the focus of the lens.



2,003,071

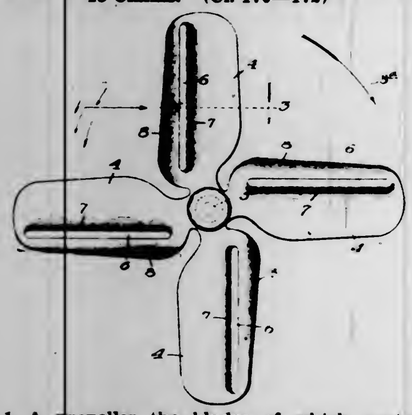
PISTON

Burns Dick, Ferguson, Mo., assignor to Wagner Electric Corporation, St. Louis, Mo., a corporation of Delaware



Application September 24, 1932, Serial No. 634,703

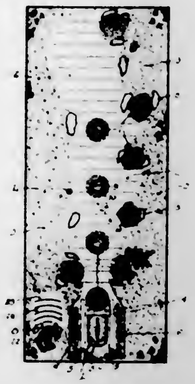
11 Claims. (Cl. 309—14)



1. In a piston, a head member having a downwardly extending portion adjacent the periphery thereof and provided with a radial projection, a skirt member provided with an inwardly extending flange portion lying between the head member and the radial projection, a coiled spring carried by the radial projection and maintaining the flange in contact with the head, the axis of the spring being parallel to the axis of the piston, and means comprising interengaging portions on the flange and the head member for preventing relative horizontal movement between the head and the skirt.

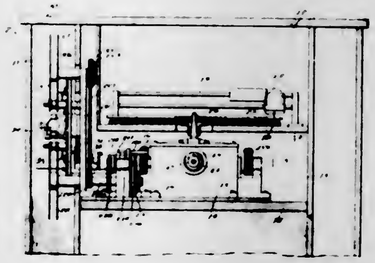
2,003,072
PUZZLE FRAME
Thomas A. Eynon, Scranton, Pa.
Application March 15, 1933, Serial No. 660,928
1 Claim. (Cl. 273—157)

A puzzle frame comprising a rectangular shaped board to receive and have assembled thereon pieces of a puzzle, an adjustable frame carried by said board in which the pieces are assembled and including a pair of rigid members and a pair of movable members, said rigid members arranged at right angles to one another and fixed to the board at certain edges of the latter, said movable members slidably connected to each other and to said rigid members and one of said movable members adjustable as to length and the other movable member having one end slidably connected to one edge of the board.



2,003,073
PROPELLER
Guy S. Faber, Chicago, Ill., assignor to General Regulator Corporation, Chicago, Ill., a corporation of Illinois
Application August 8, 1930, Serial No. 473,988
15 Claims. (Cl. 170—172)

1. A propeller the blades of which contain openings therethrough, each of said blades having a forwardly-extending, deflector surface adjacent an edge of the opening therein operative to produce suction at said opening.

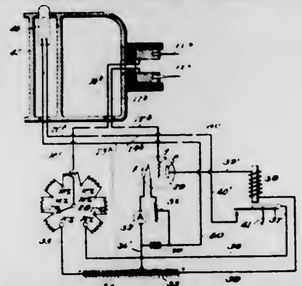


2,003,074
GOLF PLAYING FIELD
Benjamin E. Gage, Evanston, Ill., assignor to Kellogg Huntington, Evanston, Ill.
Application February 1, 1933, Serial No. 654,571
1 Claim. (Cl. 273—32)

A golf playing field comprising: a fairway provided with sand traps; a tee-area at one end of said fairway comprising co-extensive longitudinally extending strips of sand and surface corresponding to said fairway surface; a plurality of objective greens disposed along said fairway at measured distances in advance of

said tee area, the distance between adjacent objective greens being not greater than the length of said tee-area; and a playing green and associated approach-area in rear of said objective greens and apart from said fairway.

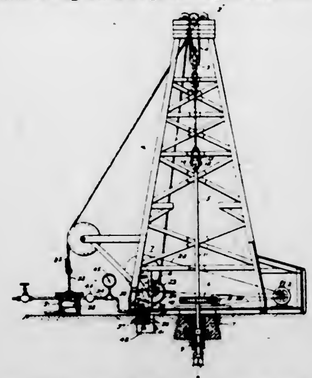
2,003,075
OPERATING MECHANISM FOR MOTION PICTURE PROJECTORS AND PHONOGRAPHS
Herman B. Gardner, Chicago, Ill., assignor of forty-nine per cent to Harry J. Lurie, Chicago, Ill.
Application May 9, 1932, Serial No. 610,206
10 Claims. (Cl. 88—16.2)



1. In a transmission, a shaft, a second shaft having its axis coincident with the axis of the first mentioned shaft, a third shaft having its axis coincident with the axes of the first mentioned shaft and said second shaft, said third shaft being disposed intermediate the first mentioned shaft and said second shaft, a fourth shaft spaced from and extending parallel to the first mentioned shaft, means for driving the first mentioned shaft, means for driving the second shaft, clutch means for coupling the first mentioned shaft to said third shaft, clutch means for coupling said second shaft to said third shaft, means including a clutch for operatively connecting the first mentioned shaft to said fourth shaft, and means including a clutch for operatively connecting said second shaft to said fourth shaft.

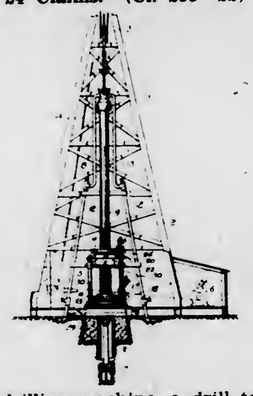
2,003,076
PROCESS FOR THE HEAT TREATMENT OF OILS AND FATS, MORE PARTICULARLY FOR THE PURPOSE OF BLEACHING AND HARDENING SAME
Wilhelm Gensecke, Gonsenheim, near Frankfort-on-the-Main, Germany, assignor to American Lurgi Corporation, New York, N. Y., a corporation of New York
No Drawing. Application October 7, 1930, Serial No. 487,093. In Germany April 4, 1930
1 Claim. (Cl. 87—12)

The process of producing a neutral bleached edible oil or fat which comprises separating the albuminous and mucilagenous matter from a colored edible oil or fat, separating the free fatty acids therefrom by neutralization with alkali, heating the oil or fat to a temperature in the neighborhood of 280° C. for a sufficient time to bleach the same, whereby free fatty acids are formed, and directly thereafter distilling off the free fatty acids in a vacuum with the aid of an inert gas.



2,003,077
MATERIAL TESTING APPARATUS
Thomas E. Heppenstall, Longview, Wash., assignor of one-half to The Long-Bell Lumber Company, Kansas City, Mo., a corporation of Missouri
Application September 14, 1928, Serial No. 306,050
6 Claims. (Cl. 175—183)

1. Means for grading construction materials having a moisture content, such as a number of pieces of lumber, comprising an audion tube, sources of current for the filament, grid and plate electrodes of said tube, a pair of relatively fixed material penetrating contacts in the grid circuit of said tube, a relay in the plate circuit of said tube, a normally open indicating circuit controlled by said relay, and a potentiometer in circuit with said material engaging contacts and the said grid, said potentiometer being calibrated in terms of moisture content, said relay being actuated to close the indicating circuit as a reduced current flows in the plate circuit of said tube due to an increased flow of current in the grid circuit when the material engaging contacts are forcibly driven into a piece of material having a moisture content above that for which the potentiometer has been set.

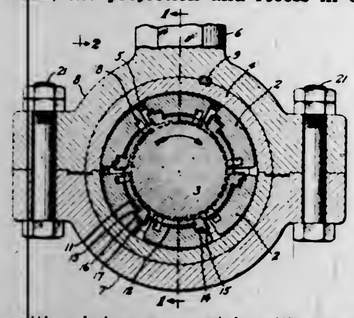


2,003,078
DRILLING MACHINE
Frederic W. Hild, Los Angeles, Calif.
Original application February 2, 1921, Serial No. 441,768. Divided and this application January 30, 1930, Serial No. 424,563
24 Claims. (Cl. 255—19)

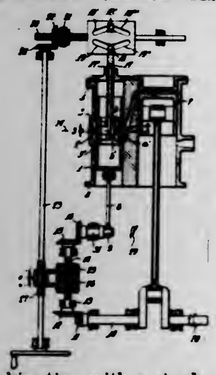
11. The combination of a drilling means operative under its own weight for advancing, a brake for regulating the advance of said drilling means, and fluid-pressure means for automatically controlling said regulating brake in accord-

ance with changes in the resistance of the material being drilled, to thereby maintain substantially uniform drilling conditions.

2,003,079
DRILLING MACHINE
Frederick W. Hild, Denver, Colo.
Application February 2, 1921, Serial No. 441,768
Renewed January 15, 1926
24 Claims. (Cl. 255—22)



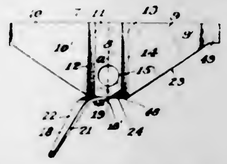
2. In a drilling machine, a drill tool, a fluid body under pressure sustaining the weight thereof, a feed element acting upon the tool, and means actuated by variations in said fluid pressure to control the operation of said element.



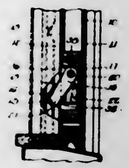
2,003,080
BEARING
Carl Gustaf Janson, Stockholm, Sweden, assignor to Aktiebolaget Nomy, Stockholm, Sweden, a corporation of Sweden
Application June 5, 1931, Serial No. 542,224. Renewed September 6, 1933. In Sweden June 10, 1930
12 Claims. (Cl. 308—73)

1. A bearing comprising an inner member, an outer member, said members being relatively rotatable, and a bearing block between said members, said block and said inner member having irregular surfaces to cause tilting of the block

comprising a projection on said inner member and a recess in said block to cooperate with said projection, the projection and recess in operative position being asymmetric with respect to the block to restrict the block to one manner of fitting with respect to the inner member.



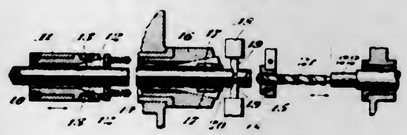
2,003,081
VALVE MECHANISM
Hubert Jexler, Zurich, Switzerland
Application December 10, 1932, Serial No. 646,699
In Germany December 14, 1931
9 Claims. (Cl. 121—142)



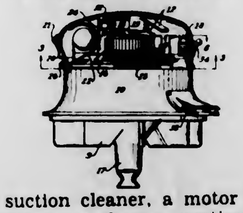
1. The combination with a single acting reciprocating engine having a piston and a crank shaft, of a motive fluid control mechanism including a valve having a passage of invariable size for the motive fluid, means for imparting to said valve a back and forth movement with one stroke for each two strokes of the engine piston, a pair of normally stationary members coacting with said valve to control the flow of motive fluid through said passage, means for varying the time of the stroke of the valve in respect to that of the piston, and means for simultaneously moving said members toward or from each other.

2,003,082
AUTOMATIC COUPLING FOR PIPE LINES, ELECTRIC LINES ON RAILWAY AND OTHER VEHICLES AND THE LIKE
Wilhelm Kaiser and Hans Balke, Lichtenberg, Berlin, Germany, assignors to National Malleable and Steel Castings Company, Cleveland, Ohio, a corporation of Ohio
Application March 4, 1935, Serial No. 9,156
In Germany September 2, 1933
7 Claims. (Cl. 285—58)

5. An automatic connector comprising a front face extending vertically with respect to the longitudinal axis of said connector, a wing extending laterally and rearwardly from one side of said face, another wing extending laterally and forwardly from the opposite side of said face, said wings being adapted to cooperate with complemental wings on a second connector for effecting lateral alignment of said faces, a ridge at one side of said first-mentioned face, said first-mentioned face having at its opposite side a recess complemental to said ridge, said ridge and recess being adapted to engage a complemental recess and ridge on said second connector to maintain the faces against relative lateral displacement, and means maintaining said faces against relative vertical displacement.

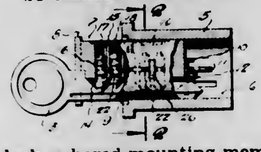


2,003,083
LOCK CONSTRUCTION
Walter E. Keller, Elkhart, Ind., assignor to The Adlake Company, Chicago, Ill., a corporation of Illinois
Application February 8, 1932, Serial No. 591,530
4 Claims. (Cl. 292—197)



1. The combination with a vertically movable sash, and a lock rack in opposition to the inside face of the same, of a pawl pivotally mounted on the sash for swinging movement into engagement with the rack, and a bolt slidably mounted on the sash at right angles to the direction of movement of the pawl for camming coaction with the latter.

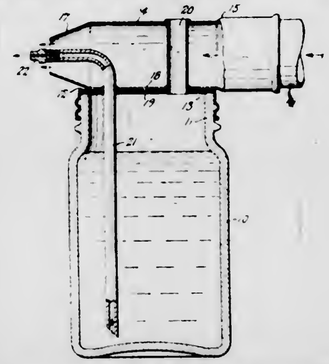
2,003,084
METHOD OF MAKING NUT BLANKS
James A. Kinney, Lebanon, Pa., assignor to Bethlehem Steel Company, a corporation of Pennsylvania
Application December 13, 1933, Serial No. 702,117
8 Claims. (Cl. 10—86)



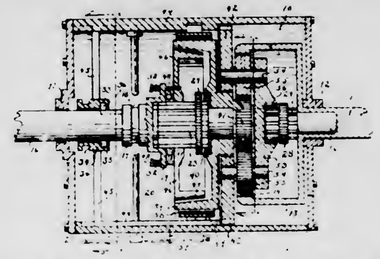
1. A method for manufacturing nuts, comprising the steps of rolling a hexagon bar having geometrical and tolerance characteristics equivalent to a cold rolled bar of similar size, removing the scale from the bar, producing drilled nut blanks from said scaled bars, brightly finishing the facets of the blanks by burnishing, and then tapping the blanks.

2,003,085
SUCTION CLEANER
William H. Kitto, Canton, Ohio, assignor to The Hoover Company, North Canton, Ohio, a corporation of Ohio
Application January 31, 1934, Serial No. 709,063
In Great Britain January 5, 1934
8 Claims. (Cl. 240—2)

1. In a suction cleaner, a motor including a casing portion, a frame portion extending rigidly at the side of said casing portion, an armature rotatably supporting said frame portion, a removable casing portion enclosing said frame portion and provided with an opening on one side, a light reflector, socket, and bulb carried by said removable casing portion adjacent said opening and within the normal periphery of said casing portion, and current-carrying means connecting said socket with a source of electric current.



2,003,086
CYLINDER LOCK
Samuel A. Liss, Philadelphia, Pa., assignor to Briggs & Stratton Corporation, Milwaukee, Wis., a corporation of Delaware
Application March 31, 1933, Serial No. 663,805
24 Claims. (Cl. 70—47)

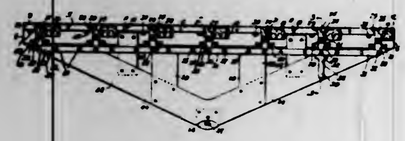


1. In a lock, a bored mounting member, a lock cylinder rotatable therein, a plurality of key operable tumblers carried by the cylinder and having linear movement transversely of the cylinder, and another tumbler movable in a plane angularly disposed to the plane of movement of said plurality of tumblers and operable by any one of said plurality of key operable tumblers to a position interlocking the cylinder and its mounting members.

2,003,087
SPRAYER
Erik Sigfrid Lynger, Stockholm, Sweden, assignor to Electrolux Corporation, Dover, Del., a corporation of Delaware
Application January 25, 1933, Serial No. 653,452
In Germany February 9, 1932
3 Claims. (Cl. 299—89)

1. A sprayer without moving parts comprising a liquid container having an open top, a cover member engageable with said container, an air supply tube secured to and in contact with said cover member, one end of said tube being adapted to be connected to an air supply conduit and to form a hand-grasp member and the other end of said tube being constricted to form an air blast nozzle, a liquid riser conduit extending through, and being supported by said cover member, one end of said riser conduit extending to near the bottom of said liquid container and the other end extending within said air supply tube and terminating in a liquid nozzle adjacent to said air blast nozzle, said air supply tube and said cover member being formed with aligned continuously open apertures in adjacent portions for supplying air to said container, and an unobstructed relief tube extending through said cover member for establishing communication between the interior of said container and the atmosphere, said relief tube having a greater cross-sectional area than the cross-sectional area of said apertures and having an upper opening so located with respect to said hand-grasp member as to be closable directly by the same hand of the operator as is holding said hand-grasp member.

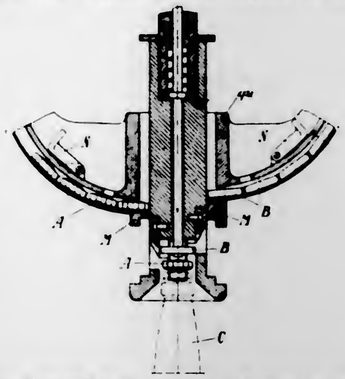
2,003,088
SEMIAUTOMATIC TRANSMISSION
Archie G. McGuire, Fort Dodge, Iowa
Application December 18, 1933, Serial No. 702,952
10 Claims. (Cl. 74—260)



1. In a device of the class described, a shaft designed to be operatively secured to a prime mover, a second shaft, an internal ring gear secured to said second shaft, a plate member rotatably mounted on said first shaft, an external gear rotatably mounted on said first shaft, an external gear rotatably mounted on said plate and engaging the said first-mentioned external gear and the said internal ring gear, a clutch mechanism secured to said first-mentioned external gear, governor mechanism operatively secured to said first shaft and said clutch mechanism for engaging and disengaging said clutch mechanism, an internal clutch secured to said plate, and an external clutch operatively secured to said first shaft capable of being manually placed in engagement with the internal clutch on said plate.

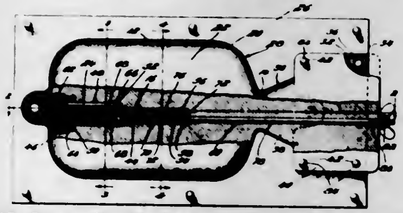
2,003,089
DAY AND NIGHT ILLUMINATED PLATE FOR SIGNS
John M. Moore, New York, N. Y.
Application April 12, 1934, Serial No. 720,237
2 Claims. (Cl. 40—133)

1. A day and night illuminable plate for signs, comprising a front opaque background member of phenol condensation material having character openings, and a back translucent member upon the back of said front member and also of phenol condensation material and integrally joined therewith with solvents.



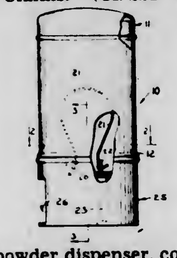
2,003,090
CLAMP
Thomas Pesci, Raritan, N. J.
Application October 25, 1934, Serial No. 749,886
2 Claims. (Cl. 24—250)

1. A clamp for gripping the edge of a large sheet of linoleum or the like, comprising a relatively long base forming a clamp jaw along one of its longitudinal edges, a clamp plate forming a jaw coacting with the first mentioned jaw, hinges secured to the base and to the opposite edge of the clamp plate relatively to the jaw upon the latter, pivot pins secured upon the base having their axes perpendicular to the base and at right angles to the axis of the clamp plate, levers rotatably mounted upon said pivot pins, a part upon each lever arranged for engaging the clamp plate for turning it about the hinges to close said jaws, a dip upon the clamp plate arranged to be engaged by one of said levers for opening the jaws, a connecting bar connecting the levers for simultaneous operation, and an operating hand tool detachably mounted upon a lever.



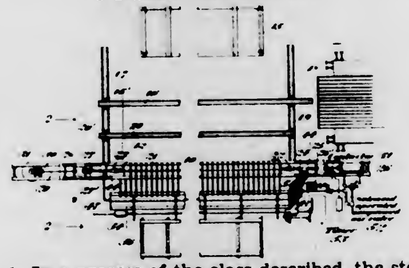
2,003,091
METHOD OF AND DEVICE FOR CLOSING UP VESSELS, ESPECIALLY BOTTLES
Rudolf Remy, Munich, Germany, assignor to Willy Faltlhauser, Munich, Germany
Application May 28, 1931, Serial No. 540,749
In Germany June 2, 1930
22 Claims. (Cl. 226—81)

1. Apparatus for applying to a receptacle a closure that is adapted to be expanded and contracted in applying and removing the same comprising means for supporting a receptacle, means for supporting a closure in position to be applied to the receptacle, means for bringing the closure and receptacle into engagement to apply the closure to the receptacle, and means movable with respect to the closure to engage



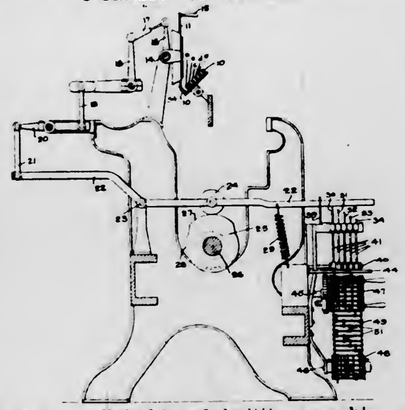
the top thereof and expand the same prior to applying the closure to the receptacle.

2,003,092
APPARATUS FOR MOLDING A LIQUID BAG
Antonio Richards, Providence, R. I.
Application April 14, 1934, Serial No. 720,523
13 Claims. (Cl. 18—35)



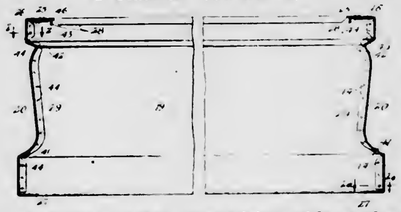
13. In a liquid bag molding apparatus, a lower mold having a hemi-liquid bag and neck concavity, core means adapted to receive a cover of rubber or other plasticizable material to be vulcanized and/or molded and to lie therewith in a molding position in said lower mold, including a main core portion of the desired shape of the interior of the bag and of the thickness of the bag except for the rounded edges and constricted neck thereof having a cut-out portion slightly offset from the vertical central line thereof including a base portion, a center portion of less width, said base portion having holes projecting upwardly therefrom in said core and said center portion having vertical grooves extending laterally inwardly thereof, and an upper portion of less width extending laterally on one side of the vertical central line thereof a slight distance and a substantial distance on the other side thereof, said main core also having a hole extending vertically upwardly from said second offset side of said upper cut-out portion to the top portion of said core, a supplemental core portion substantially complemental to the cut-out portion, having a complemental base having pins projecting vertically upwardly therefrom within said main core holes, a center portion having splines projecting laterally thereof within said main core grooves, and an upper portion of less width than said cut-out upper portion, extending from the second side of said cut-out portion to a line spaced from the vertical central line of said core an amount equal to the amount that the first side of said cut-out is spaced from said vertical center, to form a liquid bag wall forming slit extending vertically near the center of said composite core, and a rod projecting from the upper portion thereof through said hole in said main core and having a threaded end extending beyond the mold end wall, a nut threaded on said rod end to clamp said mold portions together and an upper mold having a cooperating hemi-liquid bag and neck to overlie said core and rubber covering thereof to mold the exterior of said liquid bag with said lower mold.

2,003,093
TOOTH POWDER DISPENSER
Herbert Barnum Seeley, New York, N. Y.
Application July 14, 1934, Serial No. 735,093
12 Claims. (Cl. 221—62)



1. A tooth powder dispenser, comprising a container, a valve arrangement disposed in the bottom and provided with a spring to bias the valve to closed position and means for operating said valve projecting below the container, and a bottom receptacle detachably carried by the container to house the operating means of the valve and to receive a tooth brush being directed against said means to open the valve and cause the powder in the container to deposit directly upon the brush, said bottom receptacle being removable from said container independently of said valve.

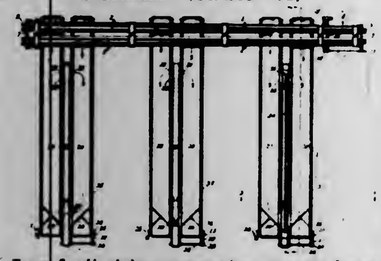
2,003,094
METAL ARTICLE AND METHOD OF PREPARING SAME
William Robert Shimer, Bethlehem, and James A. Kinney and Frank O. Kichline, Lebanon, Pa., assignors to Bethlehem Steel Company, a corporation of Pennsylvania
Application August 4, 1930, Serial No. 473,004
Renewed October 27, 1934
5 Claims. (Cl. 148—12)



1. In a process of the class described, the steps of upsetting the end of a rod, heating the entire rod above the critical range, subjecting such rod to sufficient tension to straighten, quenching the end, drawing such quenched end by means of the residual heat in the rod and allowing the rod to cool in the air.

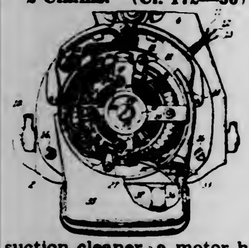
2,003,095
FULL FASHIONED KNITTING MACHINE
George A. Strauch, Rockledge, and Emil F. Richter and Joseph Earnest Garrett, Philadelphia, Pa., assignors to Artcraft Silk Hosiery Mills, Inc., Philadelphia, Pa., a corporation of Delaware
Application April 16, 1934, Serial No. 720,716
5 Claims. (Cl. 66—127)

1. In a full-fashioned knitting machine, in combination, a plurality of reciprocable thread carrier bars, a rockable member adapted to engage any one of said carrier bars to effect its movement in either direction, a main lever operative to rock said member to varying degrees so as to effect its engagement with one or the other of said bars, a rectilinearly shiftable stop member for each carrier bar movable into position beneath said main lever and adapted to govern the movement of said lever depending upon which of said carrier bars is to be actuated, each stop member being spring-biased to normally maintain it in inoperative position with respect to said main lever, and means for selectively shifting said stop members in accordance with a predeterminedly fixed order into operating positions relatively to said main lever, said means including a plurality of bell crank levers directly engaging the several stop members and adapted to selectively shift the latter into lever-intercepting position against the restraining influence of the spring bias to which each stop member is subjected.



2,003,096
BURIAL CASKET
Lester N. Strunk, Boyertown, Pa., assignor to Boyertown Burial Casket Company, Boyertown, Pa., a corporation of Pennsylvania
Application January 11, 1935, Serial No. 1,270
4 Claims. (Cl. 27—6)

1. A burial casket comprising side and end sheets of relatively thin flexible metal having like irregular contours in cross section, an inturned



end flange on an end sheet and normal thereto, the broadside of said flange being of the same irregular contour as the sheets, the adjacent end portion of the adjacent side sheet having its end edge of said irregular contour and being unflanged, and means securing said unflanged portion of said side sheet to said end sheet at the flange thereof and in lapped relation thereto.

2,003,097
FRUIT SIZER
George P. Vickery, Glendora, Calif., assignor to Food Machinery Corporation, San Jose, Calif., a corporation of Delaware
Application June 2, 1930, Serial No. 458,959½
6 Claims. (Cl. 209—71)

1. In a fruit sizing apparatus, means for separating fruit into groups according to size, and a packing conveyor adapted to receive fruit therefrom, said conveyor comprising an endless packing belt, an endless return belt having its lower run disposed alongside the upper run of the packing belt and inclined relative thereto whereby a portion of the lower run of the return belt is higher than the upper run of the packing belt, and a portion thereof is lower than the upper run of the packing belt, means for diverting fruit from the upper run of the packing belt to the lower run of the return belt at a point where the latter is below the former, and means for diverting said fruit back from the lower run of the return belt to the upper run of the packing belt where the former is higher than the latter.

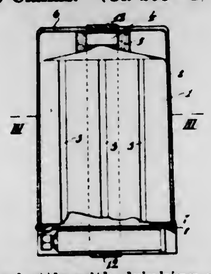
2,003,098
SUCTION CLEANER
Harry B. White, Canton, Ohio, assignor to The Hoover Company, North Canton, Ohio, a corporation of Ohio
Application November 9, 1933, Serial No. 697,233
2 Claims. (Cl. 172—36)

1. In a suction cleaner, a motor having a stationary field, a frame including spaced arms which extend axially and radially at the side of said field to provide a bearing seat at a point spaced at the side of said field, a bearing in said seat, an armature carried by said frame with its shaft mounted in said bearing; a terminal block including mutually insulated terminals carried by said frame and extended between certain of said spaced arms, said block being positioned between said arms and said armature, said terminals facing radially outward between the axially extending portion of said arms; and current-carrying leads connected to said terminals and between said terminals and said motor.

2,003,099
LUGGAGE BAG
Leonard George Arpin, Fort Lauderdale, Fla., assignor of one-half to Howard C. Jelks, Fort Lauderdale, Fla.
Application May 20, 1933, Serial No. 671,977
6 Claims. (Cl. 190—43)

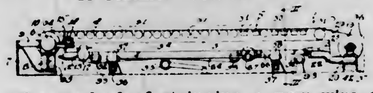
1. A luggage bag comprising flexible side members and an intermediate flexible web connecting said side members and forming the top, bottom and side edges of said bag, a curved metal plate in the top portion of the bag, said web having an entrance slit extending over said metal plate, hookless fasteners for closing said slit, a handle secured to the top portion of said bag, a second handle secured to the bottom portion of said bag, said bag being adapted to be folded at mid-section and the handles brought together for carrying the same.

2,003,100
LUGGAGE BAG
Leonard George Arpin, Fort Lauderdale, Fla., assignor of one-half to Howard C. Jelks, Fort Lauderdale, Fla.
Application October 11, 1933, Serial No. 693,075
11 Claims. (Cl. 190—43)



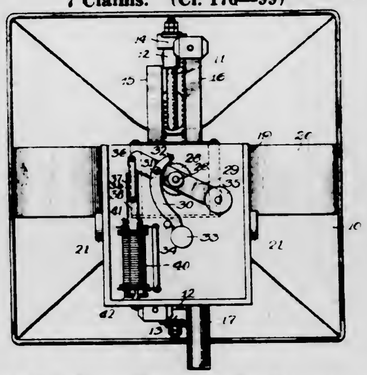
1. In a luggage bag, flexible side members, a web connecting said side members, reinforcements at the ends of said bag, a handle secured to each reinforcement whereby the bag may be folded to bring said handles into contacting relation and a reinforcement upon one side of the bag for forming a bottom therefor in its folded relation.

2,003,101
FLOWER HOLDER
Arthur W. Asman, Lombard, Ill.
Application June 3, 1933, Serial No. 674,175
13 Claims. (Cl. 47—41)



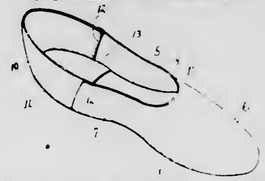
8. In an article of the class described, a wire bent into serpentine double spiral configuration, substantially an ellipsoid of revolution, adapted to receive flower stems, said wire having sufficient strength to support said stems, and a vacuum cup connected with said wire for supporting the wire in operative position to receive stems and adapted to be detachably secured on any surface.

2,003,102
TRAVELING SET
Julius Baer, Munich, Germany
Application October 18, 1933, Serial No. 694,050
In Germany November 9, 1932
5 Claims. (Cl. 206—1)



1. Traveling bottle with drinking cup, in which the cup put on the bottle from above encloses the bottle tightly and in which the rim of the cup rests on a ring-shaped projecting part provided on the lower end of the bottle, whereby both parts are attached to each other in such a manner, that they can be separated at once, on the outside of the bottle, or on the inside of the cup wall, grooves or channels being provided for, by means of which the space formed between cup and bottle on the one hand, and the open air on the other hand, communicate with each other.

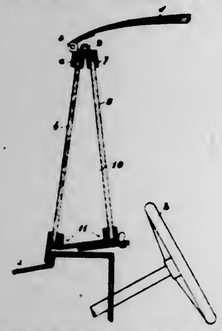
2,003,103
MEANS AND METHOD OF STRINGING A FOURDRINIER WIRE
Earl E. Berry, Beloit, Wis., assignor to Beloit Iron Works, Beloit, Wis., a corporation of Wisconsin
Application August 20, 1932, Serial No. 629,716
45 Claims. (Cl. 92—44)



1. The method of stringing a new wire on a laterally removable Fourdrinier paper machine, which comprises suspending a new wire in a loop at one side of the Fourdrinier table structure, moving said table structure laterally into said loop of wire, supporting said wire on said table structure, tightening the wire on the table structure and moving said table structure back into operating position in the machine with said wire supported thereon.

2,003,104
ARC LAMP
Harold J. Brunk, Chicago, Ill., assignor to The C. F. Pease Company, a corporation of Delaware
Application April 14, 1933, Serial No. 666,191
7 Claims. (Cl. 176—99)

1. An arc lamp comprising two carbon supporting racks, a single pinion engaging said racks to move them in opposite directions, a solenoid connected in series in the circuit of said carbons, a core for said solenoid, pawl and ratchet mechanism actuated by the movement of said core for rotating said pinion to move said carbons toward and away from each other, to maintain an arc of substantially constant average length during consumption of said carbons, said mechanism comprising positive mechanical connections operative during the entire period of energization of said solenoid, but inoperative during the de-energization thereof, whereby said racks and carbons may be manipulated without reference to said solenoid when the circuit is open and a circuit in parallel with said solenoid and in series with said carbons to permit a heavy current to flow through the arc formed between said carbons and increase the light emitted thereby without materially increasing the strength of said solenoid.

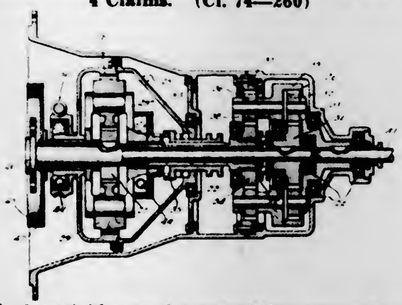


2,003,105
REPAIR LINING FOR SHOES
Benjamin Caplan, Philadelphia, Pa.
Application February 11, 1933, Serial No. 656,236
2 Claims. (Cl. 36—55)

1. A repair lining for shoes to be secured in a shoe in place of the original lining after the latter has been removed, said repair lining comprising a sole of material such as leather, a vamp portion of material such as canvas stitched along its

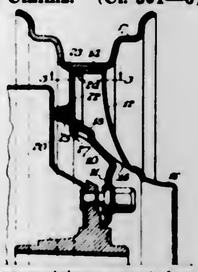
lower edge to the edge of the forward part of the sole, a counter of material such as leather stitched along its lower edge to the heel part of said sole and having its forward ends stitched to the rear ends of the inner and outer sides of the vamp, and a heel pad of material such as leather superimposed upon the heel portion of the sole and secured thereto.

2,003,106
WINDSCREEN
Charles François Carlotti, Brussels, Belgium
Application July 27, 1933, Serial No. 682,402
In Germany July 28, 1932
3 Claims. (Cl. 20—40.5)



1. In a wind screen for motorcars and other vehicles in combination walls, the said walls being arranged according to inclined upwardly converging planes, and both inclined divergently downward relatively to a vertical plane therebetween, whereby a closed chamber having a larger width at the bottom than at the upper portion is formed between the said walls, and heating means arranged at the bottom of the said chamber, whereby the ascending hot air is put directly into contact with the said walls, the cold air falling down between the two ascending streams of hot air.

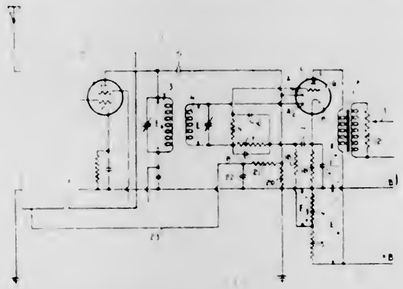
2,003,107
LUBRICATING DEVICE
Adiel Y. Dodge, South Bend, Ind., assignor to The Lubrication Corporation, South Bend, Ind., a corporation of Delaware
Application October 15, 1932, Serial No. 637,921
14 Claims. (Cl. 221—47.4)



1. In combination, a lubricant gun having a high pressure cylinder, a lubricant cartridge having an outlet in one end, an apertured piston forming a movable end wall for the cartridge, means for mounting the cartridge upon the gun with its outlet in communication with said cylinder, a piston adapted for operation in said cylinder, a piston operating plunger extending through said cartridge and through said apertured cartridge piston, and means including separable telescopic members for establishing a lubricant tight seal between said cartridge piston and said plunger.

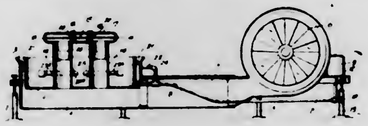
2,003,108
VARIABLE SPEED TRANSMISSION
Adiel Y. Dodge, South Bend, Ind.
Application December 12, 1922, Serial No. 646,777
4 Claims. (Cl. 74—260)

1. A variable speed transmission comprising a planetary differential gear set with its reactance member or ring gear fixed, a second planetary differential gear set, and a variable speed unit of a mass inertia impulse type and a drive shaft, said drive shaft being connected to the driving gear of the second differential gear set and also connected to the driving member of the variable speed unit, the driving member of the first differential gear set connected to the reactance member of the second differential gear set, the driven member of the variable speed unit connected to the driving member of the first differential gear set.



2,003,109
WHEEL STRUCTURE
Warren H. Farr, Detroit, Mich., assignor to Budd Wheel Company, Philadelphia, Pa., a corporation of Pennsylvania
Application May 27, 1932, Serial No. 613,842
20 Claims. (Cl. 301—6)

7. A wheel comprising a metal spoke of channel-section and a closure member therefor including a resilient portion for locking the member to the spoke.

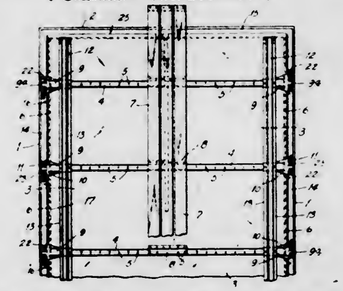


2,003,110
RADIO RECEIVING SYSTEM
Paul O. Farnham, Boonton, N. J., assignor, by mesne assignments, to Radio Corporation of America, New York, N. Y., a corporation of Delaware
Application November 4, 1932, Serial No. 641,280
7 Claims. (Cl. 250—20)

1. In a radio receiver, an automatic control system comprising a pair of rectifiers, input means for impressing radio voltages upon each rectifier, an output circuit for each rectifier, means impressing bias voltages upon each rectifier to render the same inoperative for radio input voltages of less than predetermined values, and means energized by the rectified output of one rectifier for automatically reducing both bias

voltages when the input on said one rectifier rises above the predetermined value below which no rectification obtains.

2,003,111
OIL BURNER
Henry L. Fischer, East St. Louis, Ill., assignor to Eagle Foundry Company, Belleville, Ill., a corporation of Illinois
Application October 3, 1932, Serial No. 635,940
4 Claims. (Cl. 158—92)



1. An oil burner comprising a fire pot having an air chamber surrounding the bottom and sides thereof, means for delivering air to said chamber, an oil supply pipe opening into said fire pot, a conduit leading upwardly from said air chamber through the bottom of said fire pot, an outlet head at the upper end of said conduit, said chamber being provided with outlet openings adjacent to the upper edge of said fire pot, and a plurality of horizontally disposed pipes located inside said fire pot and communicating therewith and with said chamber.

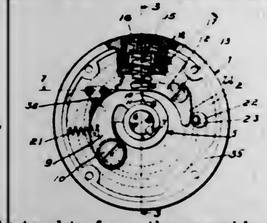
2,003,112
SEALING COMPOUND FOR PNEUMATIC TIRES AND METHOD OF MAKING THE SAME
Hartly French and William Frederick Welbeloved, Toronto, Ontario, Canada, assignors to Christopher William Chant, Toronto, Ontario, Canada
No Drawing. Application April 3, 1934, Serial No. 719,808. In Canada January 29, 1931
12 Claims. (Cl. 134—17.5)

1. A tire sealing composition, including finely comminuted asbestos intimately associated with a substantially less amount of powdered magnesia and mixed with a dilute solution of water containing glucose, a substantial percentage of calcium chloride, and a much smaller percentage of an alkali; all combined in proportion insuring hydration of a substantial part of the magnesia and a paste-like consistency for the composition.

2,003,113
GONDOLA CAR ROOF
Garth G. Gilpin, Riverside, Ill., assignor to P. H. Murphy Company, New Kensington, Pa., a corporation of Pennsylvania
Application December 26, 1931, Serial No. 583,272
7 Claims. (Cl. 105—377)

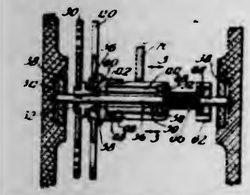
1. A gondola car roof comprising a series of roof sheets spanning the car from side to side and connected together to form a self-supporting roof, hinge devices for securing the roof to the car at the eaves, said devices including slidable pivots adapted to be engaged with and disengaged from said roof, whereby said roof is adapted to be swung upwardly from either side of the car or removed bodily therefrom, and a brace located entirely inside of and carried entirely by the roof in closed position for supporting the roof when it is swung upwardly from either side of the car.

2,003,114
GARMENT PROTECTOR
Samuel J. Goldsmith, Chicago, Ill.
Application November 26, 1934, Serial No. 754,701
3 Claims. (Cl. 223—61)



1. As a new article of manufacture, a garment protector of the hood type comprising similarly shaped front and back pieces positioned one in front of the other and having arched top margins and substantially straight side margins, one of said pieces being formed of a centrally folded sheet of transparent "Cellophane" type material and having the fold unbound and arranged to form a straight bottom margin therefor and having the edges of the opposed pieces resulting from folding coincide one with the other so that it is of double thickness throughout, and a connecting strip between and connected to the top and side margins of the two pieces and having means associated therewith forming an aperture at the top of the protector for the hook of a clothes hanger.

2,003,115
LOAD LIMITING DEVICE
Henry P. Grohn, Chicago, Ill.
Application September 26, 1932, Serial No. 634,907
5 Claims. (Cl. 192—150)

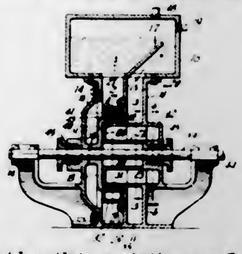


1. In a load limiting device of the character described including a driving element and a driven element, a movable member on one of said ele-

ments, an engaging surface on the other element, a cooperating engaging surface on said movable member, means for yieldably holding said surfaces in engagement to drive said driven element to a predetermined load limit, said surfaces being ar-

ranged to tend to force the movable member out of engagement at said predetermined load limit, and means controlled by said holding means to quickly complete the disengagement at said predetermined limit.

2,003,116
ELECTRIC CLOCK MOTOR
Laurens Hammond, Chicago, Ill., assignor to The Hammond Clock Company, Chicago, Ill., a corporation of Delaware
Application May 9, 1932, Serial No. 610,097
5 Claims. (Cl. 172—275)



1. In a synchronous motor, the combination of a shaft, a rotor fixed to said shaft and having a conical bearing surface, an inertia flywheel having a bearing surface cooperable with said conical bearing surface on said rotor, and a compression spring for pressing said inertia wheel toward said rotor to maintain the bearing surfaces thereof in contact.

5. In a synchronous alternating current motor, the combination of a rotor shaft, a rotor secured thereto, a pinion rotatable on said shaft, an inertia wheel rigidly secured to said pinion, and a compression and torsion spring having its ends anchored to said pinion and to said shaft respectively, said spring resiliently resisting relative rotational movement between said inertia wheel and said shaft, and resiliently pressing said inertia wheel and pinion in a direction longitudinally of said shaft.

2,003,117
FLUID DISPLACING PUMP
Edward F. McCarthy, Chicago, Ill., assignor of one-half to Charles H. McCarty, Chicago, Ill.
Application May 26, 1934, Serial No. 727,601
3 Claims. (Cl. 230—75)

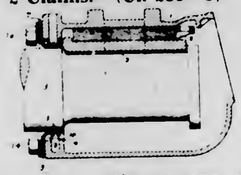
1. In a pump of the character described, the combination with a casing to contain a circulating liquid and provided with a fluid outlet; of a stationary member within the casing and ported for the inlet and outlet of a liquid respectively from and return to the casing, said member being also independently ported for the inlet of a fluid from the exterior of the casing and for the outlet of the fluid into the casing; a vaned impeller rotatable about said stationary member in such manner that the inner ends of the vanes successively pass over the liquid and fluid outlet ports of said member; a stationary partition exteriorly concentric with the impeller and disposed opposite the fluid port outlet of the stationary member to thereby maintain an area of reduced pressure beneath a vane while passing

over the fluid outlet; a stationary fluid stripper adjacent the periphery of the impeller and having its advance edge opposite the liquid outlet port of the stationary member, said partition and stripper being spaced from each other to thereby permit the discharge of liquid and fluid from the impeller into the casing; and means for conducting the fluid to be displaced from outside of the casing to said stationary member.

2,003,118
ELECTRIC WELDING APPARATUS
George E. Mirfield, Robert E. Lewis, and Cyril Firth, Youngstown, and John E. Neale, Girard, Ohio, assignors to The Youngstown Sheet & Tube Company, Youngstown, Ohio, a corporation of Ohio
Application March 22, 1933, Serial No. 662,098
18 Claims. (Cl. 29—33)

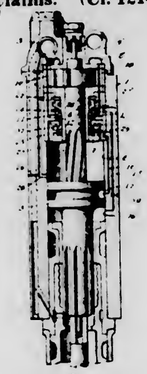
1. The combination with apparatus for welding together the edges of an axial seam cleft in a formed tube blank, of means for effecting a predetermined positioning of the seam cleft relative to the welder including a roll table for moving the blank axially, auxiliary supports for lifting the blank from the table and rotating it, and retractible means for entering the seam cleft upon its arrival at the predetermined position.

2,003,119
EXPANSIBLE BELLOWS
Robert E. Newell, Irwin, Pa., assignor to Robertshaw Thermostat Company, Youngwood, Pa., a corporation of Pennsylvania
Application April 10, 1934, Serial No. 719,868
5 Claims. (Cl. 236—99)



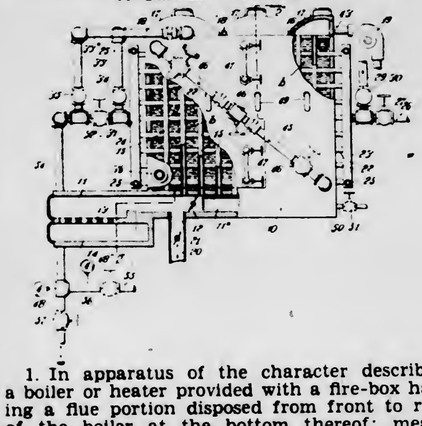
1. As an article of manufacture, an expansible bellows comprising a base member having a flat inner face, a head having a flat inner face, a corrugated cylinder joining the head and base member and arranged to normally hold the inner faces of said head and base member against each other, the flat inner faces of said head and base members being surrounded by portions contoured

to substantially conform to the inner surface of said corrugated cylinder, and means for supply-



ing a fluid to said bellows between the head and base member for moving them relative to each other.

2,003,120
OIL SEAL AND DUST GUARD FOR JOURNAL BOXES
William B. D. Penniman, Lawyer's Hill, Md.
Application July 29, 1927, Serial No. 209,256
2 Claims. (Cl. 286—5)

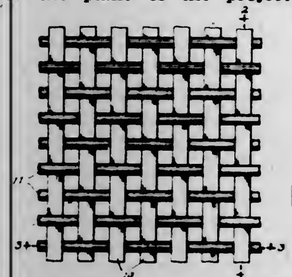


1. Means for preventing escape of oil from journal boxes of railway rolling stock wherein the weight of the car is received by the axle through a segmental bearing thereby permitting substantial transverse movements between the axle and the bearing and its associated journal box incident to operation, said means comprising a resilient, elastic sheet of packing material secured in substantially oil-sealing relation to the end of the journal box, and having an axially extending flange portion closely embracing the end of the axle whereby said transverse movements are substantially absorbed in the portion of said sheet lying between the securing means and the axle.

2,003,121
PERCUSSIVE TOOL VALVE
Herman J. Schorle, Astoria, N. Y., assignor to Worthington Pump and Machinery Corporation, New York, N. Y., a corporation of Virginia
Application August 18, 1934, Serial No. 740,368
10 Claims. (Cl. 121—28)

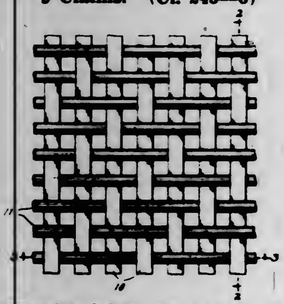
1. In a percussive tool, the combination, of a cylinder, a hammer piston in the cylinder, a valve chest having a valve chamber and a pressure fluid inlet passage, said chest having fluid supply passages leading from said chamber to said cylinder, a valve in said valve chamber, a central flange on said valve co-operating with adjacent surfaces on the valve chest to provide restricted passages for controlling delivery of pressure fluid to said cylinder, one end of said valve being of greater area than the other end, and a valve-holding area formed internally of said flange and intermittently subjected to pressure for holding the valve in position.

2,003,122
APPARATUS FOR HEATING, POWER, AND REFRIGERATION PURPOSES
August Schwarz, Chicago, Ill.
Application March 2, 1934, Serial No. 713,685
27 Claims. (Cl. 257—6)



1. In apparatus of the character described, a boiler or heater provided with a fire-box having a flue portion disposed from front to rear of the boiler at the bottom thereof; means whereby the flue portion is separated into a plurality of flue chambers; the upper part of the boiler being provided with a plurality of flue-gas chambers; a plurality of vertically arranged flue tubes disposed intermediate of said flue portion and said flue-gas chambers; a plurality of horizontal medium conveying tubes arranged in vertical series intermediate of the vertically disposed flue tubes; manifold means at the inlet ends and at the outlet ends of said medium conveying tubes; and valve controlled means whereby a heat exchange medium may be introduced into the chamber of the boiler or heater into contact with all of said tubes.

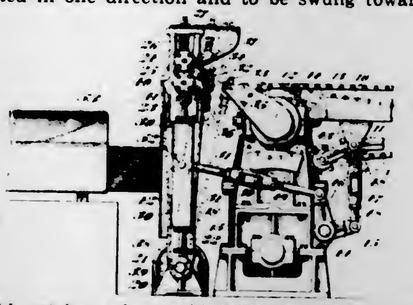
2,003,123
WOVEN WIRE BELT FOR PAPER MAKING MACHINES
Harry G. Specht, Montclair, N. J., assignor to Eastwood-Nealley Corporation, Belleville, N. J., a corporation of New Jersey
Application June 22, 1934, Serial No. 731,874
9 Claims. (Cl. 245—8)



1. Woven wire fabric for paper making machines comprising interwoven warp and weft wires with knuckles produced in both the warp and weft wires, the warp wires throughout their length being of non-circular cross-section elongated in one dimension, said elongated dimension being parallel to the plane of the woven wire fabric whereby the weft knuckles cross the elongated faces of the warp wires and have their outer projected surfaces substantially coextensive transversely with said elongated faces

to present a greater weft knuckle surface contiguous to the plane of the projected warp

knuckles than would be the case if the weft knuckles were formed about circular cross-section warp wires.



2,003,124
WOVEN WIRE BELT FOR PAPER MAKING MACHINES
Harry G. Specht, Montclair, N. J., assignor to Eastwood-Nealley Corporation, Belleville, N. J., a corporation of New Jersey
Application June 22, 1934, Serial No. 731,875
9 Claims. (Cl. 245—8)

1. Woven wire fabric for paper making machines comprising interwoven warp and weft wires with knuckles produced in both the warp and weft wires, the warp being carried over one and under a plurality of weft wires, the warp wires throughout their length being of non-circular cross-section elongated in one dimension, said elongated dimension being parallel to the plane of the woven wire fabric whereby the weft knuckles cross the elongated faces of the warp wires and have their outer projected surfaces substantially co-extensive transversely with said elongated faces to present a greater weft knuckle surface contiguous to the plane of the projected warp knuckles than would be the case if the weft knuckles were formed about circular cross-section warp wires.

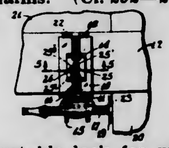
2,003,125
PILING DEVICE FOR SHEET MILL TABLES
Richard H. Stevens, Baltimore, Md., assignor to Bethlehem Steel Company, a corporation of Pennsylvania
Application March 23, 1934, Serial No. 716,962
14 Claims. (Cl. 80—43)

1. The combination with a catcher having a conveyor table adapted for rocking movement about a horizontal axis, of pinch-rolls mounted on the upper end of a swinging member pivotally supported at the rear end of said catcher for discharging sheets from said table to form a pile, said member being adapted to be swung away from said catcher when said table is tilted in one direction and to be swung toward

said catcher when said table is tilted in the other direction, said swinging member having means adapted to engage and align said delivered sheets when swung away from said catcher.

2,003,126
SIGN
Elmer L. Torstenson, Evanston, Ill.
Application May 14, 1934, Serial No. 725,498
10 Claims. (Cl. 40—125)

1. A sign construction comprising a backing and individual sign characters mounted on said backing, each sign character comprising a holder member having the general outline of the character and having a recess therein also having the general outline of the character, a plate member fitting in said recess and also having the general outline of the character, said plate member being of translucent material having a diffusing surface and provided with a reflecting coating on its rear surface, and means in said recess for sealing against the entrance of moisture at the edges of the junction between the plate member and the reflecting coating.

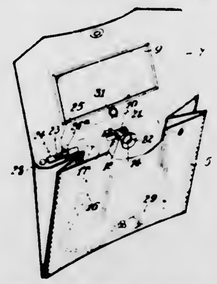


2,003,127
STRETCHING MACHINE AND METHOD OF OPERATING THE SAME
Arthur H. Vaughan, Salem, Ohio, assignor to The Electric Furnace Company, Salem, Ohio, a corporation of Ohio
Application September 19, 1932, Serial No. 633,799
18 Claims. (Cl. 153—35)

1. A stretching machine comprising means for engaging at spaced points the article to be stretched, the engaging means being relatively movable, means for applying a stretching force to an engaging means thereby to move the engaging means and stretch the article, and means actuated upon stretching of the article to reduce the applied force below that required for stretching while continuing to apply sufficient force to hold the article under tension.

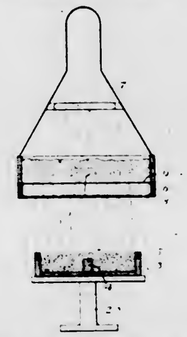
10. In the method of operating a stretching machine having relatively movable engaging means for holding an article to be stretched and means for effecting such relative movement, the steps consisting in supplying an article to the engaging means, effecting relative movement thereof to take up slack, continuing the movement in an amount to give a predetermined stretch, and holding the article temporarily in tension irrespective of the slack taken up.

2,003,128
ADJUSTABLE LOCK FOR WINDOWS
Alejo V. Vazquez, New York, N. Y.
Application May 7, 1934, Serial No. 724,322
4 Claims. (Cl. 292—251)



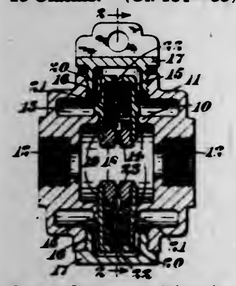
1. In an adjustable lock for windows, an inverted L-shaped body for attachment on the top edge of an inner sash of a window and having a top arm for extending across the top edge of the sash and a vertical arm for extending down along the face of the sash, U-shaped brackets attached at their centers upon said arms, said top bracket being endwise of the plane of the outer sash, said bottom bracket being endwise of the side of a window frame holding said sashes, and screws threadedly engaged through the arms of said U-shaped brackets for engaging into openings in strips attached upon the inner side of the outer sash and the side of the window frame, said U-shaped brackets being adjustably attached upon said body, and headed studs from the body engaging through bayonet slots in said brackets.

2,003,129
CONTROL DEVICE FOR ROLLING MILLS
Carl E. Bedell, Pittsburgh, Pa., assignor to Mesta Machine Company, Pittsburgh, Pa., a corporation of Pennsylvania
Application October 4, 1933, Serial No. 692,118
16 Claims. (Cl. 80—56)



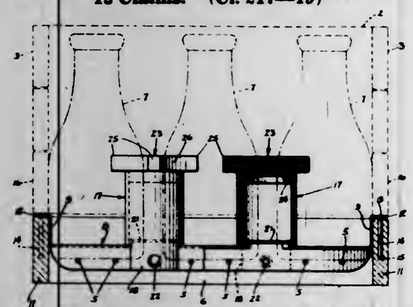
13. The combination with a rolling mill having roll adjusting screws and a motor for driving said screws, of a control device for said motor including a plurality of adjustable contact-actuators movable about a fixed axis, means for manually adjusting the position of each of said actuators relative to the others about said axis, a plurality of contacts rotatable about said axis adapted to engage said actuators respectively, and means for moving the contacts in accordance with the movement of said screws.

2,003,130
LADY'S HAND BAG
Walter O. Benjafield, New York, N. Y.
Application March 11, 1932, Serial No. 598,211
In Canada March 11, 1931
2 Claims. (Cl. 240—6.45)



1. A lady's handbag comprising in combination front, rear, and side walls forming a pocket, and a flap connected with the rear wall and foldable over the top of the pocket and over a portion of the front wall, an electric lamp mounted on the upper portion of the inside rear wall and perpendicularly with reference thereto, a battery and electrical conductors mounted in said pocket and connected with said lamp in circuit, a switch in said circuit, said front wall being cut away opposite said lamp, and a lens mounted over and covering an aperture in said flap that is in coincidence with said lamp in the closed position of said flap.

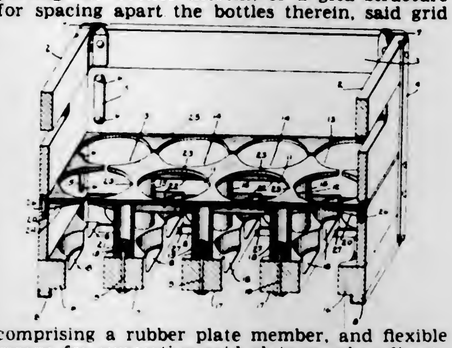
2,003,131
METHOD AND APPARATUS FOR MANUFACTURING ARTICLES OF BONDED GRANULES
Raymond C. Benner, Prescott H. Walker, and William G. Soley, Niagara Falls, N. Y., assignors to The Carborundum Company, Niagara Falls, N. Y., a corporation of Pennsylvania
Original application February 13, 1933, Serial No. 656,500. Divided and this application December 14, 1933, Serial No. 702,332
21 Claims. (Cl. 25—1)



12. Apparatus for the manufacture of bonded articles comprising a riddle having a screen, the mesh of the screen not exceeding five times the diameter of the average particles of grain to be passed therethrough, and a mold spaced below the screen of the riddle to receive screened material directly, the area of the riddle exceeding the area of the mold.

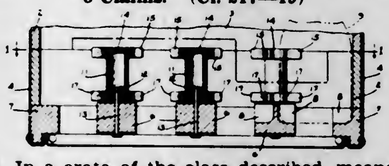
2,003,132
AIR-LINE OILER
John Bliss, London, England, assignor to C. C. Wakefield & Company Limited, London, England, a British company
Application March 24, 1934, Serial No. 717,256
In Great Britain April 7, 1933
15 Claims. (Cl. 184—55)

1. An air-line oiler comprising in combination a lubricant-reservoir, an airway, a valve passage communicating between and opening at its opposite ends respectively to the airway and the lubricant-reservoir, a valve seat in the said passage and a valve in the passage arranged to be seated solely by pressure remaining in the reservoir when air supply to the airway is cut off, and thereby to arrest further flow of lubricant from the lubricant reservoir.



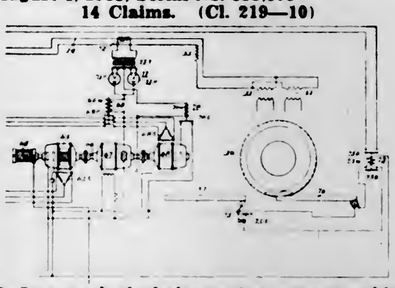
2,003,133
BOTTLE CRATE
Henry V. Bowman, Minneapolis, Minn., assignor to Bowman Products, Incorporated, St. Paul, Minn., a corporation of Minnesota
Application May 14, 1934, Serial No. 725,500
13 Claims. (Cl. 217—19)

1. A bottle crate comprising side and end walls, a perforated bottom supported by said walls, and a plurality of flexible elements formed of yieldable material that is bendable in any direction secured to said bottom in spaced relation and extending upwardly into the crate and cooperating to space apart the bottles to prevent direct contact therebetween.



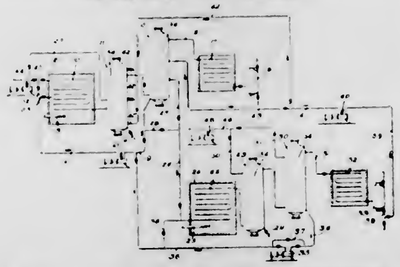
2,003,134
BOTTLE CRATE
Henry V. Bowman, Minneapolis, Minn., assignor to Bowman Products, Incorporated, St. Paul, Minn., a corporation of Minnesota
Application October 26, 1934, Serial No. 750,190
21 Claims. (Cl. 217—19)

1. The combination with a bottle crate comprising a plurality of walls and means for supporting the bottles therein, of a grid structure for spacing apart the bottles therein, said grid



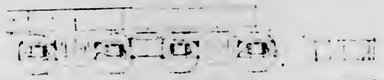
comprising a rubber plate member, and flexible means for supporting said plate member directly upon said bottle supporting means.

2,003,135
BOTTLE CRATE
Henry V. Bowman, Minneapolis, Minn., assignor to Bowman Products, Incorporated, St. Paul, Minn., a corporation of Minnesota
Application October 26, 1934, Serial No. 750,191
8 Claims. (Cl. 217—19)



1. In a crate of the class described, means in the bottom thereof for supporting the bottles, and a plurality of bottle spacing elements formed of stretchable and compressible material and flexible in substantially all directions secured to said supporting means and engaging the bottles with a yielding pressure to thereby space them apart.

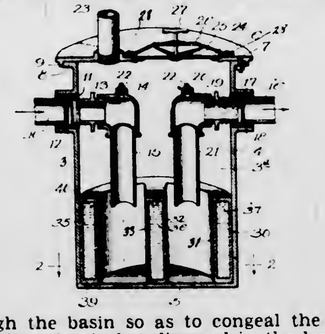
2,003,136
FREQUENCY CONTROL SYSTEM FOR ELECTRIC WELDERS
James V. Caputo, Crafton, Pa.
Original application December 23, 1931, Serial No. 582,811. Divided and this application August 4, 1933, Serial No. 683,605
14 Claims. (Cl. 219—10)



3. In a method of alternating current welding, the steps including supplying current of relatively high frequency to the work while moving the latter at relatively high speed, and decreasing the frequency of welding current and the speed of travel of the work on approaching the end of an individual weld.

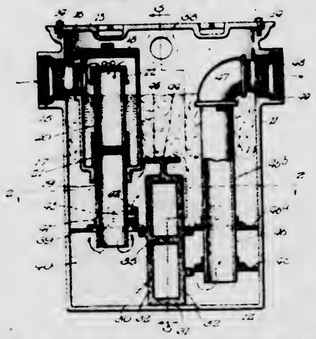
2,003,137
TREATMENT OF HYDROCARBON OILS
Luis de Florez, Pomfret, Conn., assignor to The Texas Company, New York, N. Y., a corporation of Delaware
Application February 2, 1931, Serial No. 512,855
10 Claims. (Cl. 196—49)

8. The process of treating hydrocarbon oil which comprises passing said oil in a stream of restricted cross section through a heating zone wherein said oil attains a cracking temperature, introducing the resulting heated oil directly into a reaction zone maintained at a substantially constant cracking temperature of the order of 800° F. under a relatively high superatmospheric pressure, wherein additional conversion occurs, passing resulting vapors through a fractionating zone wherein constituents heavier than those desired in the final product are condensed, removing the fractionated vapors and condensing them as a desired product, and introducing directly into said enlarged reaction zone a distillate oil comprising essentially gasoline constituents produced as a result of a cracking operation maintained under a pressure materially below that maintained in said reaction zone, whereby beneficial polymerization of said gasoline constituents takes place.



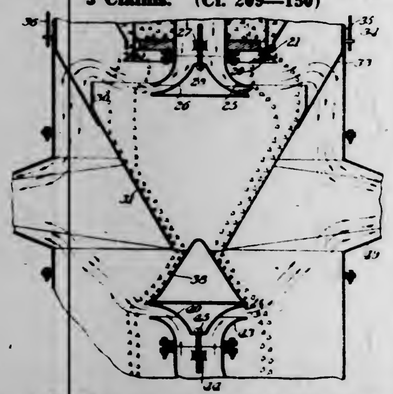
2,003,138
METALLIC STRUCTURE AND METHOD OF MAKING THE SAME
Walter de Fries, Youngstown, Ohio, assignor to The William B. Pollock Company, Youngstown, Ohio, a corporation of Ohio
Application June 23, 1931, Serial No. 546,271
21 Claims. (Cl. 29—164)

1. In the method of forming a structural shape such as a box girder, the steps comprising separately preforming web and flange members, securing lugged diaphragm plates to certain of said members transversely between the same, mechanically interlocking the remaining members in position by the lugs of said plates to form a structure closed on four sides, and welding the structure including welding along outside joints thereof and welding from without the structure said lugs in position.



2,003,139
GREASE TRAP
George J. Dehn, Chicago, Ill.
Application May 29, 1930, Serial No. 456,860
3 Claims. (Cl. 182—9)

2. In a grease trap of the character described, the combination of a basin provided with a removable top, means for passing drainage through the basin comprising horizontally extending inlet and outlet pipes outside of the basin, a pair of vertically extending, laterally spaced pipes in the basin, and a pair of horizontal nipples extending through the side wall of the basin and between the inlet and outlet pipes and the upper ends of the vertically extending pipes in the basin and serving to space the vertically extending pipes from the side wall of the basin and to permit of removal of said vertically extending pipes, and means for cooling the drainage during passage thereof



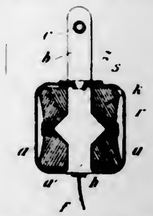
through the basin so as to congeal the grease, consisting of a jacket disposed in the lower end and formed separately from the basin and having a continuous chamber about the side wall of the basin and around the lower ends of the vertically extending pipes of the drainage-passing means, and pipe-connections extending through the basin and adapted to circulate a cooling medium through the chamber, said jacket being removable through the top of the basin for repair or replacement purposes upon removal of said vertically extending pipes and disconnection of the pipe-connections.

2,003,140
GREASE TRAP
George J. Dehn, Chicago, Ill.
Application April 22, 1933, Serial No. 667,390
21 Claims. (Cl. 210—56)

1. In a grease trap of the character described, the combination of a basin provided with an inlet and an outlet for drainage and having a removable cover, means in the basin for separating grease from the drainage as the latter flows through the basin, and means for varying the rate of flow of the drainage through the basin, disposed wholly within the basin and accessible for manipulation only when the cover is removed from the basin.

2,003,141
APPARATUS FOR SEPARATING GRANULAR MATERIAL
Morton I. Dorfan, Pittsburgh, Pa., assignor to Blaw-Knox Company, Blawnox, Pa., a corporation of New Jersey
Application December 14, 1932, Serial No. 647,085
3 Claims. (Cl. 209—150)

1. Apparatus for cleaning granular material comprising means for pouring the material, said pouring means having a substantially annular discharge opening, annular deflecting means below said discharge opening for dividing the poured material into inner and outer hollow streams, and means for blowing air transversely of the freely falling material.

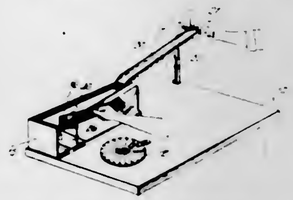


2,003,142
ADVERTISING CALENDAR
Joseph S. Fisher, New York, N. Y.
Application December 27, 1934, Serial No. 759,335
3 Claims. (Cl. 40—107)

1. A combined calendar and greeting card comprising a flat body having the calendar months of the year on the front side thereof, a greeting card including a flexible sheet, a weakened line extending across said sheet adjacent the top edge thereof and parallel thereto, said weakened line dividing the sheet into a cover section and a stub section, said stub section being adhesively secured to the back of said body adjacent the top thereof while said cover section is folded over the top edge and front of said body to lie flat thereagainst.

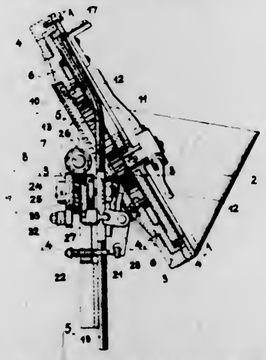
2,003,143
SUSPENSIBLE CLEW HOLDER FOR THREAD OR THE LIKE
Eduard Goddemeyer, Lippstadt, Germany
Application June 13, 1934, Serial No. 730,444
In Germany June 24, 1933
4 Claims. (Cl. 242—141)

1. In a suspensible clew holder made of a flexible material, a band cross enclosing the clew and having three arms of equal length and one arm of larger length, end eyelets in the three



equal arms and through which the longer arm extends so as to be adapted to serve as a suspension strip.

2,003,144
BROACHING TOOL
Frank F. Graham, Jr., Cardiff, Md.
Application October 27, 1933, Serial No. 695,493
2 Claims. (Cl. 255—62)

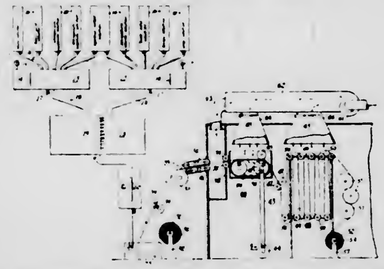


1. A broaching tool comprising a head having a wing projecting therefrom and an opening in one end having recesses on opposite sides thereof, a cutting blade removably secured to said head and impinging against the lower end of said wing and having a recess in one edge in line with one of the recesses in said head, a ball adapted to fit into the recess in said head and project into the recess in said cutting blade, and a screw in the end of said head adapted to force the ball into the recess in the cutting blade.

2,003,145
GAME APPARATUS
John Grauer, Whitestone, N. Y.
Application November 7, 1933, Serial No. 696,931
5 Claims. (Cl. 273—89)

1. A game apparatus comprising in combination, a two part chute, one part being stationary and one part movable and through which a missile may be rolled in directed flight and discharged into the stationary chute section, an impact member movable across said stationary chute section, a missile adapted to be rolled through said chute sections and to be intercepted in its flight by said impact member, means for trapping said missile, and a play indicator operated by said missile when the same is intercepted in its flight by said impact member.

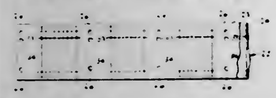
2,003,146
APPARATUS FOR ARRANGING THE FASTENER MEMBERS OF SLIDING-CLASP FASTENERS IN ROWS
Helmut Gutberlett, Wuppertal-Barmen, Germany
Application February 4, 1933, Serial No. 655,289
In Germany March 14, 1932
23 Claims. (Cl. 153—1)



1. In an apparatus for arranging the fastener members of sliding-clasp fasteners in rows, the combination of a hopper for containing a supply of fastener members, a rotatable annular transfer device provided with regularly spaced recesses on its inner surface for receiving individual fastener members from said hopper, ejecting means co-operating with said transfer device for automatically removing improperly positioned fastener members therefrom, a chute to which said fastener members are delivered by said transfer device, and means for receiving said fastener members from said chute and for automatically positioning said fastener members in rows in spaced corresponding positions.

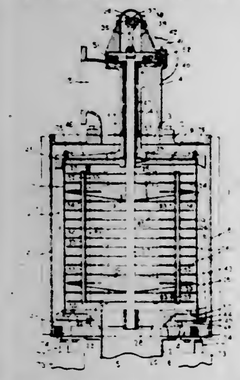
2,003,147
ELECTRIC VACUUM CLEANER
Osmund Holm-Hansen, Stratford, Conn., assignor to General Electric Company, a corporation of New York
Application August 25, 1933, Serial No. 686,752
2 Claims. (Cl. 242—85)

1. In a vacuum cleaner, the combination of a handle, a downwardly facing cord hook fixed on the lower portion of the handle, an upwardly facing cord hook, a band slidable on the handle to which the upwardly facing cord hook is attached, a spring-pressed catch carried by the band, and means carried by the handle with which the catch engages for limiting movement of the band along the handle, said means being spaced apart a distance greater than the depth of the lower hook.



2,003,148
METHOD AND MEANS FOR COMPOUNDING FLAME AND WATERPROOFING COMPOSITIONS FOR AQUEOUS CELLULOSIC MEDIA
Frederick W. Hochstetter, Pittsburgh, Pa., assignor to Treesdale Laboratories, Inc., a corporation of Delaware
Application March 23, 1933, Serial No. 662,291
2 Claims. (Cl. 134—78.6)

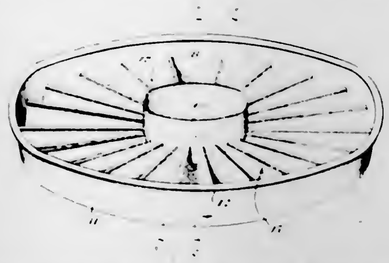
2. A method of compounding a composition of matter for flame and water-proofing aqueous cellulose media and their derivatives comprising heating 640 parts of water to 120° F., adding 48 parts of ammonium sulphate and stirring until completely dissolved, adding 16 parts of ammonium carbonate incrementally under constant stirring until effervescence ceases, adding 20 parts of boric acid previously dissolved in 128 parts of boiling water, adding 16 parts of borax and thoroughly mixing, adding 16 parts of starch previously cooked to about 1° Baumé and thoroughly mixing in the same under constant stirring; dissolving 6 parts of suitable soap in 128 parts of water and bringing it to the boiling point, thereafter adding the same to the previously compounded materials, bringing about emulsification of the whole and then lowering the temperature to about 110° F. and digesting for about 2 hours thereby forming a first composition; bringing 640 parts of water to the boiling point and dissolving therein 80 parts of ammonium chloride, 48 parts of boric acid and 16 parts of borax in the order named, and each after the preceding has been completely dissolved, stirring the same thoroughly after all three have been added and dissolved, separately dissolving 32 parts of soft gelatine in 256 parts of water and heating to about 200° F. under constant stirring and thereafter optionally adding thereto 13½ parts of glycerine, stirring thoroughly and then adding the same to the ammonium chloride—boric acid—borax solution under constant stirring for about 30 minutes and then digesting for about one hour at about 140° F.; dissolving 3 parts of suitable soap in 128 parts of water, heating to boiling and adding 8 parts of dextrine, stirring such constantly to ensure uniformity and then adding such to the ammonium chloride—boric acid—borax—gelatine solution, thereby forming a second composition; bringing 128 parts of water to the boiling point, dissolving therein 15 parts of soap bark and filtering, thereby forming a third composition; dissolving 32 parts of alum in 256 parts of water as a fourth composition; digesting each of the four compositions for about 4 hours while stirring from time to time; combining the first, second and fourth



compositions in a common vessel and then adding the third composition under vigorous stirring.

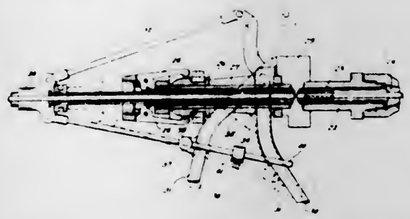
2,003,149
MANIFOLDING
Arthur A. Johnson, Bridgeport, Conn., assignor to Autographic Register Company, Hoboken, N. J., a corporation of New Jersey
Original application May 22, 1931, Serial No. 539,245. Divided and this application December 29, 1933, Serial No. 704,406
3 Claims. (Cl. 282—12)

1. A new article of manufacture comprising a manifolding pack with a strip of original sheets and strips of duplicate sheets, each strip having feed-regulating apertures in each of said sheets which align when said sheets are in superposed registered relation, starter escape apertures in each duplicate sheet underlying starter engaging portions in the original sheets, and a starter escape aperture in the original sheet overlying starter engaging portions in the duplicate sheets.



2,003,150
PULP SCREENING MACHINE
Nelson Moore Knight, Weymouth Heights, Mass.
Application October 29, 1934, Serial No. 750,481
10 Claims. (Cl. 92—34)

1. A pulp screening machine comprising a casing having an inlet at its upper end and a discharge opening at its lower end, a screen element situated within the casing between the inlet and the discharge opening and having a vertical screening wall, means for forcing the pulp back and forth through the screening wall as said pulp flows from the inlet to the discharge opening, screen-cleaning runners on the inlet side of the screening wall and means to produce a relative movement between said runners and said wall.

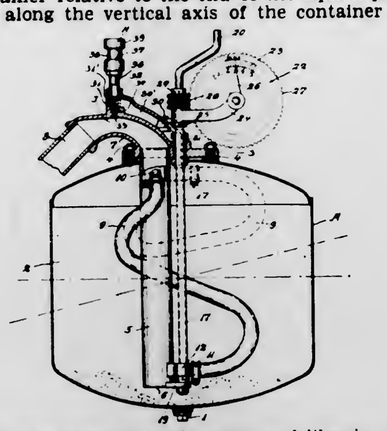


2,003,151
BAKING PAN
Rose Lang, Buffalo, N. Y.
Application June 19, 1933, Serial No. 676,450
7 Claims. (Cl. 53—6)

1. A cake pan of the type described including a receptacle having bottom and side walls and a removable member arranged in the bottom of said receptacle for molding an ornamental design upon the under side of the cake, said bottom wall

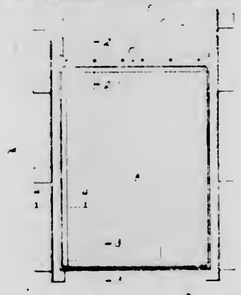
being formed with an opening through which access may be had to said molding member to remove it from said receptacle.

2,003,152
STOCK FEEDING AND GRIPPING DEVICE
Max E. Lange, Cleveland Heights, and William J. Burger, Shaker Heights, Ohio, assignors to The Warner & Swasey Company, Cleveland, Ohio, a corporation of Ohio
Application July 17, 1934, Serial No. 735,704
20 Claims. (Cl. 29—59)



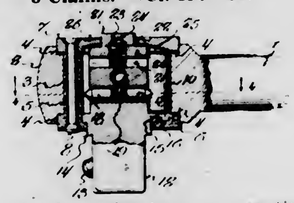
1. In a stock feeding and gripping device for a machine tool, stock gripping means, stock feeding means, and manually movable means for effecting release of the gripping means, actuation of the feeding means and closing of the gripping means, and a second manually movable means for restoring said feeding means to its initial position and independently of the movement of said first named manually movable means.

2,003,153
FLUID DISPENSING APPARATUS
Erich H. Lichtenberg, Milwaukee, Wis., assignor to Koehring Company, Milwaukee, Wis., a corporation
Application November 27, 1933, Serial No. 699,990
10 Claims. (Cl. 221—95)



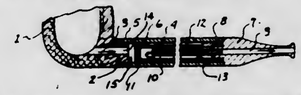
1. In a fluid measuring device, a container, the walls of which define a fluid reservoir, a siphon pipe extending into said reservoir and having an inlet end spaced from the bottom of the container, means for admitting a flow of fluid to the siphon pipe during siphoning operation to interrupt the siphon flow, said means comprising a flexible conduit entwined about the siphon pipe and opening at one end to the siphon passage and at the other end into the container, said last mentioned end being disposed at the vertical axis of the container, means for moving the end of the flexible conduit opening into the

container relative to the end of the siphon pipe and along the vertical axis of the container to



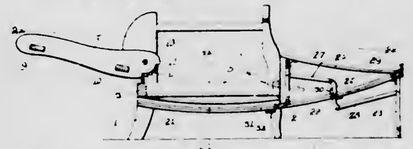
vary the distance therebetween and likewise the volume of fluid passing through the siphon.

2,003,154
FABRICATED DAMPER
Paul S. Menough, Mount Lebanon, Pa., assignor to The Duraloy Company, Pittsburgh, Pa., a corporation of Delaware
Application January 21, 1931, Serial No. 512,638
4 Claims. (Cl. 126—285)



1. A closure for furnace and like installations, comprising a frame section of cast alloy heat-resistant metal having dove-tailed channeled portions therein, and a corrugated sheet metal panel also of heat-resistant metal allow detachably mounted in the channeled portions of said frame.

2,003,155
REVERSIBLE FRICTION CLUTCH
Edward M. Pfauser, Wauwatosa, Wis., assignor to Blackhawk Mfg. Co., Milwaukee, Wis., a corporation of Wisconsin
Application July 1, 1932, Serial No. 620,401
8 Claims. (Cl. 192—44)



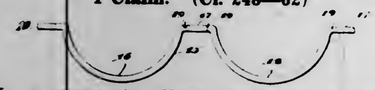
3. In a clutch mechanism, an operating member, a driven member rotatably mounted in said operating member, clutch rollers effecting operable frictional engagement between the operating member and driven member, means reversing the direction of said operable frictional engagement, and releasable means for locking the driven member and said reversing means in relative adjusted positions against rotary motion including a locking key carried directly by the driven member for selective engagement with the reversing means, said locking key having means for imparting an axial unlocking motion thereto.

2,003,156
SMOKING PIPE
Oliver T. Robertson, Terrace Park, Ohio
Application April 1, 1932, Serial No. 602,431
2 Claims. (Cl. 131—12)

1. In a smoking pipe construction having entrance and exit means, a hollow tubular member, a core member snugly slidable therein, and a plurality of communicating smoke passageways formed on the exterior of said core and closed by said tubular member, said passageways being connected with said entrance and exit means, said passageways lying substantially parallel, and communicating by means of reverse bends, and a moisture pocket formed in the exterior surface of said core member and communicating with one of said passageways.

2,003,157
MORRIS CHAIR CONSTRUCTION
Henry Saeger, Rochester, N. Y.
Continuation of application Serial No. 526,319, March 30, 1931. This application April 8, 1932, Serial No. 603,988
3 Claims. (Cl. 155—170)

3. In a chair of the character described and having a seat supported by legs, a pair of arcuate guide channels on said legs below said seat, an arcuate carrier frame mounted to slide in and out of said guide channels, a leg and foot rest hinged to the outer end of said carrier frame, a brace mounted on the under side of said carrier frame and a brace mounted on the under side of said foot and leg rest means connecting said braces to move them simultaneously to swing under said carrier frame and said leg and foot rest respectively into a vertical and parallel position to support the carrier frame on the floor and the leg and foot rest on the carrier frame.



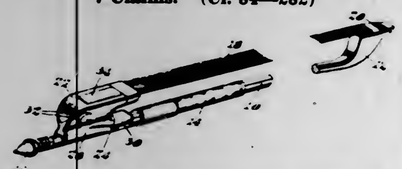
2,003,158
MOTOR FUEL AND METHOD OF MANUFACTURE
William Alvah Smith, Hamburg, N. Y.
No Drawing. Application June 24, 1931, Serial No. 546,667
13 Claims. (Cl. 44—9)

1. The process of improving the color of cracked gasoline and rendering it color stable, which comprises dissolving therein a small proportion of quinhydrone.

3. A liquid motor fuel mixture comprising cracked hydrocarbon spirits of the type which

tend to deteriorate upon storage and form gum or color, and quinhydrone in the proportions of 100 barrels of gasoline and between 0.03 and 5 pounds of quinhydrone.

2,003,159
PNEUMATIC DISPATCH SYSTEM
William J. Taylor, Syracuse, N. Y., assignor to The Lamson Company, Syracuse, N. Y., a corporation of Massachusetts
Application April 5, 1933, Serial No. 664,550
1 Claim. (Cl. 248—62)

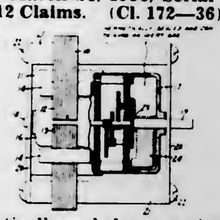


In a pneumatic dispatch system, clamps for transit tubes, each clamp comprising a plurality of tube receiving saddles, and planar flanges separating said saddles, each flange having a pair of transverse notches therein and a hole between the notches whereby the clamp may be easily broken at any notch to furnish a length having any desired number of tube receiving saddles and flanges with holes therein.

2,003,160
METHOD AND APPARATUS FOR ROLLING UNIFORM GAUGE STOCK
Arthur J. Townsend and Edward S. Miller, Canton, Ohio, assignors, by mesne assignments, to Harry M. Naugle and Arthur J. Townsend, both of Canton, Ohio
Application November 18, 1932, Serial No. 643,188
16 Claims. (Cl. 80—35)

1. In a rolling mill including work rolls and screw down means, means for operating the screw down means intermittently to adjust the gap between the rolls a predetermined amount during movement of material through the rolls, and means operated by the entry of material between the rolls for actuating the said operating means.

2,003,161
BOW FOR STRINGED INSTRUMENTS
Richard H. Turner, Beverly, Mass.
Application February 9, 1934, Serial No. 710,505
7 Claims. (Cl. 84—282)

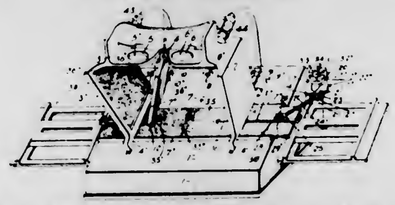


1. In a bow for stringed instruments, a frog having a throat with a hair-clamping portion at one side thereof and a stick-engaging portion at the other, the stick-engaging portion being extended transversely to supply a thumb flange opposite to the hair-clamping portion but offset with respect thereto.

2,003,162
ADJUSTABLE DOLLY
Donald L. Ulmer, Binghamton, N. Y.
Application April 28, 1933, Serial No. 668,410
2 Claims. (Cl. 280—35)

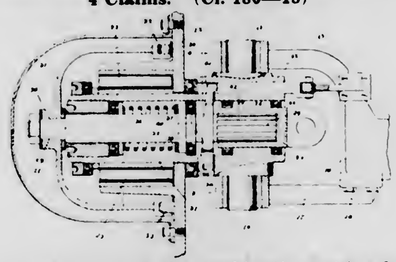
1. In a device of the class described, a plurality of cup-shaped members each having a castor mounted thereon, lugs projecting at right angles from the sides of the cup-shaped members, perforated bars pivotally mounted on the lugs by vertical pivots, the bars of opposing lugs adapted to be moved in contiguous relationship with each other, registering perforations in the bars, and locking means insertable in the perforations for securing the parts together.

2,003,163
DRIVE FROM SEALED GEAR CASING
Henry E. Warren, Ashland, Mass., assignor to Warren Telechron Company, a corporation of Maine
Application March 24, 1934, Serial No. 717,221
12 Claims. (Cl. 172—36)



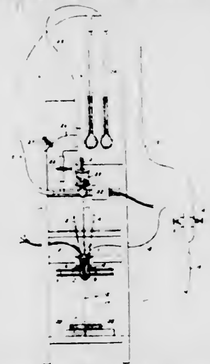
1. A hermetically sealed gear casing from which the air has been excluded and replaced by an inert gas, a gear train in said casing, oil partially filling said casing for lubricating said gear train, and means for conveying rotary movement from said gear train to the exterior of said casing.

2,003,164
MOTOR VEHICLE
Karl M. Wise, Buffalo, N. Y., assignor to The White Motor Company, Cleveland, Ohio, a corporation of Ohio
Application October 24, 1931, Serial No. 570,873
4 Claims. (Cl. 180—1)



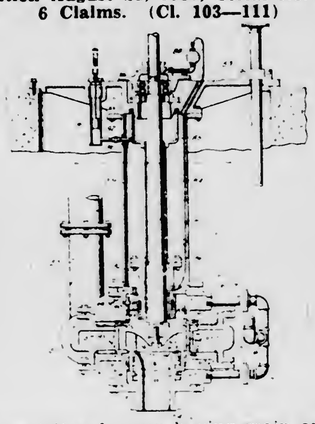
1. The method of manufacturing a motor truck which comprises, mounting the engine, radiator and cab upon longitudinally disposed angle irons spaced apart a distance substantially equal to the width of a standard truck frame to form an integral unit, mounting a front axle and steering gear upon longitudinally disposed angle irons to form a second unit, mounting a transmission mechanism on cross members connected at their ends to longitudinally disposed angle irons to form a third unit, mounting a rear axle and differential mechanism upon longitudinally disposed angle irons to form still another unit, and assembling said units together to form a complete vehicle by placing said angle irons on the side members of a vehicle frame and welding said angle irons and frame members together.

2,003,165
ORTHOPTIC INSTRUMENT
George Bates Wootten, Sudbury, Ontario, Canada
Application July 1, 1933, Serial No. 678,610
7 Claims. (Cl. 128—25)



6. In a device for treating eyes, means for locating the point of convergence of the axes of the patient's eyes, a stationary target, means for producing a virtual image of the stationary target in such a position as to be viewed by one eye, means for instantly and accurately locating such virtual image in a position coincident with the previously formed point of convergence, and a movable target viewed through the other eye, and means for instantly and accurately placing the centre of the movable target in an initial position coincident with the centre of the virtual image and the point of convergence in and out of which position it is adapted to be intermittently moved.

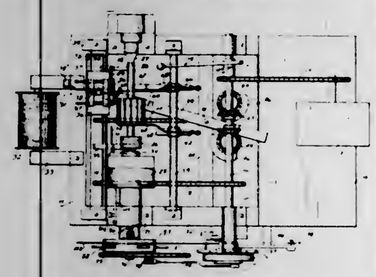
2,003,166
FRONT DRIVE FOR MOTOR CARS
Ottavio Zancan, New York, N. Y.
Application October 26, 1933, Serial No. 695,338
4 Claims. (Cl. 180—18)



1. In a motor car the combination, with a front axle, a steering knuckle comprising a wheel support pivotally mounted at each end of said axle, a wheel rotatably mounted upon each support, and a driving shaft for each wheel rotatably mounted within its respective support, of a clutch member carried by each wheel, another clutch member carried by its respective driving shaft, adapted to engage said wheel clutch member, one of said clutch members comprising a circumferential series of rollers positively connected to and actuated by said driving shaft, the other clutch member having a circumferential series of recesses adapted to register with said rollers, the depth of said recesses being at least equivalent to the radius of said rollers, so as to form a positive driving connection therewith, and means for automatically causing said shaft clutch member to move away from said wheel clutch member, when its steering knuckle is angularly displaced so as to cause the car to turn to the corresponding side thereof, so as to intitate the disconnection of one clutch member from the other.

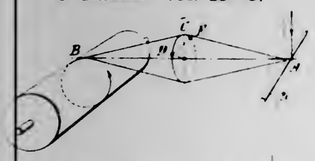
2,003,167
APPARATUS FOR FUSING POWDERED MATERIALS
Peter P. Alexander, Marblehead, Mass., assignor to General Electric Company, a corporation of New York
Application January 9, 1931, Serial No. 507,709
3 Claims. (Cl. 219—8)

1. In combination, a gas arc torch comprising a casing, a plurality of electrodes adjustably positioned relative to one another in said casing, a conduit positioned in said casing to direct a blast of gas between the arcing terminals of said electrodes, means for supplying gas and a powdered composition to said conduit, and means for vibrating said conduit.



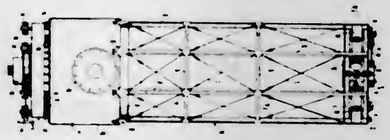
2,003,168
CENTRIFUGAL PUMP
Frank B. Allen, Lower Merion Township, Montgomery County, Pa., assignor to The Allen-Sherman-Hoff Company, a corporation of Pennsylvania
Application August 21, 1930, Serial No. 476,734
6 Claims. (Cl. 103—111)

1. A centrifugal pump having main and auxiliary impellers, a housing having a main chamber



and auxiliary chambers on either side thereof, communicating passages between said main chamber and said auxiliary chambers, and means for converting velocity fluid pressure in said chambers into static pressure effective in said communicating passages, said means comprising a disc in each auxiliary chamber integrally formed with said housing and dividing the chamber into two portions, one portion communicating directly with the auxiliary impeller to receive liquid therefrom, and the other portion communicating with the said passage leading therefrom to the main impeller chamber.

2,003,169
ARMATURE WINDING MACHINE
Frank A. Baldwin, Yonkers, N. Y.
Application October 9, 1934, Serial No. 747,512
7 Claims. (Cl. 242—13)



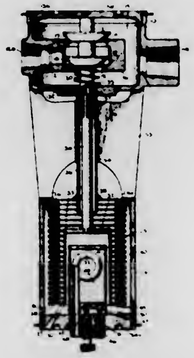
1. In an armature winding machine, means for rotatably supporting an armature core, means for feeding wire to a core slot and means for automatically turning the armature core, said turning means including a drive shaft, a sprocket wheel, means of connection between the sprocket wheel and armature core and a lever operatively connected to the drive shaft and sprocket wheel for moving the wheel.

2,003,170
PROCESS OF AND APPARATUS FOR THE PRODUCTION OF ARTIFICIAL SILK AND THE LIKE
Gotthard Bauriedel, Barmen, and Karl Meyer-Gaus, Wuppertal-Elberfeld, Germany, assignors to American Bemberg Corporation, New York, N. Y., a corporation of Delaware
Application October 5, 1932, Serial No. 636,380
In Germany October 5, 1931
9 Claims. (Cl. 18—8)

1. A stretch spinning device for the manufacture of artificial thread comprising, in combination, a thread deviating means, a collecting means, a thread guide located therebetween and mounted for oscillatory movement perpendicular to thread passing from the deviating device to the collecting means, means to oscillate said guide about an axis passing through the point of contact of the thread on the deviating means and on the collecting means, the path of the movement of said guide being such as to maintain constant during the spinning the thread lengths and filament angles.

2,003,171
TELESCOPE
Edward P. Burrell, Shaker Heights, Ohio, assignor to The Warner & Swasey Company, Cleveland, Ohio, a corporation of Ohio
Application January 15, 1932, Serial No. 586,920
39 Claims. (Cl. 88—32)

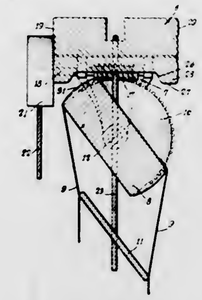
1. A telescope tube for supporting the optical system of a telescope which comprises structural metallic members arranged in supporting and reinforcing relationship with one another, said members having portions shaped to mate and interfit with one another and conform to the contour of the tube and integrally united by welding.



21. In a telescope tube, means for supporting a primary mirror adjacent one end of the tube, and means for supporting a secondary mirror adjacent the other end thereof, said last named means comprising a support having a bore, a sleeve carrying said secondary mirror and insertable in the said bore from the outer end thereof, and means for securing said sleeve in said bore.

2,003,172
GEOMETRICAL INSTRUMENT
Carleton W. Burt, Philadelphia, Pa.
Application August 19, 1933, Serial No. 685,896
1 Claim. (Cl. 33—1)

A geometrical instrument comprising a sheet of transparent material having a center perforation and other perforations adjacent but unequally spaced therefrom, a series of regularly spaced perforations along each of two opposed radii, the perforations in one series being respectively spaced from the center at greater distances than the corresponding perforations in the other series, arcs inscribed on the sheet respectively intersecting said radii at progressively increasing distances from the center, other perforations adjacent the outer edge of the instrument spaced to correspond with a progressively increasing series of angles having their vertices at said center and one side in coincidence with one of said radii, rays respectively extending from said last mentioned perforations toward the center perforation, and perforations respectively disposed at the intersection of each ray with the arc spaced from the center a distance substantially corresponding to its angle.

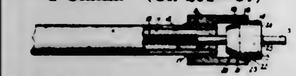


2,003,173
FLUID VALVE
Jesse H. Clark, Cicero, Ill., assignor to Walker Dishwasher Corporation, Chicago, Ill., a corporation of Delaware
Application March 14, 1933, Serial No. 660,682
4 Claims. (Cl. 221—101)

1. A liquid metering device for measuring a predetermined quantity of liquid comprising a valve housing having inlet and outlet liquid passageways, a valve in said housing controlling the flow of liquid through said housing from said inlet to said outlet passageway, an expansible member for operating said valve remotely situated with respect to said housing, a valve rod connecting said valve with said expansible member, a fluid passageway connecting said inlet passageway with said expansible member so that when liquid is flowing through said housing the pressure of the liquid in said valve housing is applied through said passageway to said expansible member to operate said valve to its closed position, means controlling the operation of said expansible member so that said valve is operated to close at a predetermined rate in response to the pressure of the liquid flowing through said housing, whereby a predetermined quantity of liquid is permitted to flow through said housing while said valve is being closed and heat dissipating members between said valve housing and said expansible member and said controlling means arranged to prevent a material transfer of heat from said housing to said latter members, whereby said members operate substantially uninfluenced by the temperature of the liquid flowing through said housing.

2,003,174
VENETIAN BLIND
Jesse E. Cooper, Los Angeles, Calif., assignor, by mesne assignments, to National Venetian Blind Co., Los Angeles, Calif., a corporation of California
Application July 19, 1934, Serial No. 735,924
5 Claims. (Cl. 156—17)

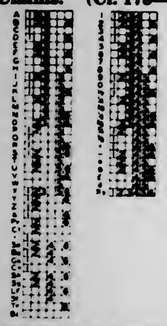
1. In a Venetian blind, a tilt-rail adapted to support slats of a blind for tilting adjustment, and means supporting said tilt-rail for tilting movement, said supporting means having a recess in the under surface thereof, and the axis of



movement of said tilt-rail being spaced from the mouth of said recess less than the distance between said axis and an edge of said tilt-rail.

2,003,175
ELECTRIC HEATER
Loretta M. Daly, Pittsfield, Mass., assignor to General Electric Company, a corporation of New York
Application August 12, 1933, Serial No. 684,839
3 Claims. (Cl. 201—67)

1. An electric heater comprising a resistance conductor, a metallic sheath encasing said conductor, an electrically insulating sleeve arranged within said sheath and having a portion projecting from said sheath, a terminal for said resistance conductor mounted within an aperture provided for it in said sleeve and projecting from said sleeve on the exterior of said sheath, a metallic band surrounding a portion of said sleeve within said sheath and rigidly secured to said sleeve, a metallic layer covering the outer surface of said sleeve and rigidly secured to said sleeve, and metallic masses united into substantially homogeneous structures with said metallic band and the inner walls of said sheath and said metallic surface covering the end of said sleeve and said terminal, whereby a fluid-tight joint is effected between said sheath and said terminal.



3. The method of sealing the terminal end of an electric heater provided with a resistance conductor, a terminal and a metallic casing surrounding said terminal which comprises providing an insulating sleeve arranged to be threaded onto said terminal and received in the end of said casing, coating the outer surface of said sleeve with a band of metal surrounding said sleeve where it fits into said casing, coating one end surface of said sleeve with a layer of metal, threading said sleeve onto said terminal with the coated end surface of said sleeve remote from said casing while the other end of said sleeve enters said casing and then uniting said metallic band into a substantially homogeneous metallic structure with the walls of said casing and said coating on the outer end of said sleeve into a substantially homogeneous metallic structure with said terminal.

2,003,176
ELECTRIC HEATER
Loretta M. Daly, Pittsfield, Mass., assignor to General Electric Company, a corporation of New York
Original application August 12, 1933, Serial No. 684,839. Divided and this application November 10, 1934, Serial No. 752,433
1 Claim. (Cl. 201—67)

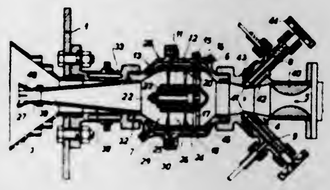
An electric heater comprising a resistance conductor, a metallic sheath encasing said conductor, a terminal connected with said resistance conductor having a portion projecting from said sheath, a metallic casing surrounding said terminal positioned in spaced relation with it, a fluid-tight joint between said casing and said sheath, an electrically insulating sleeve surrounding said terminal and received in said casing, a metallic band surrounding a portion of said sleeve within said metallic casing and rigidly secured to said sleeve, a metallic layer covering the outer surface of said sleeve rigidly secured to the sleeve, and metallic masses united into substantially homogeneous structures with said metallic band and the inner walls of said metallic casing and with said metallic layer covering the outer surface of said sleeve and said terminal, whereby a fluid-tight joint is effected between said terminal and said metallic casing.

2,003,177
SHIFT CONTROL FOR TELEGRAPH PRINTERS
Robert F. Dirkes, Jamaica, N. Y., assignor to The Western Union Telegraph Company, New York, N. Y., a corporation of New York
Application September 2, 1932, Serial No. 631,563
10 Claims. (Cl. 178—33)

1. In a telegraph printer, a printing mechanism, a selecting mechanism, a case shift mechanism, means responsive to a code combination for selecting said printing mechanism and means responsive to any one of a plurality of predetermined sub-combinations of two or more impulses occurring in said combination for controlling said case shift mechanism.

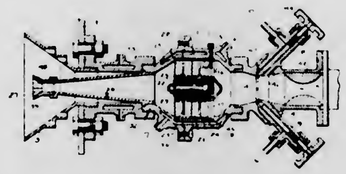
2,003,178
VEHICLE STEERING ARM GAUGE
John Fabien Duby, Boston, Mass.
Application February 23, 1932, Serial No. 594,514
13 Claims. (Cl. 33—203)

1. Testing apparatus comprising an element adapted to establish a predetermined point relative to a vehicle chassis, a yieldable unit adapted to be interposed between said element and a vehicle steering arm part, connecting means between said unit and steering-arm including a



pointed rod and associated hammer member, and indicating means associated with said unit to indicate when a point on the steering arm arc of travel lies in a straight line between the axis of said arc and the predetermined point.

2,003,179
MAGNETIC COMPASS
Harold T. Faus, Lynn, Mass., assignor to General Electric Company, a corporation of New York
Application October 12, 1933, Serial No. 693,279
8 Claims. (Cl. 33—222)

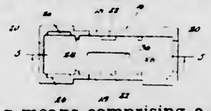


8. A compass needle comprising a central portion composed of a magnetic material and end portions composed of a different magnetic material, the central portion being softer and more permeable than the end portions, and the end portions being composed of a material having a coercive force exceeding 300 Gilberts per centimeter in order to provide a high directing force for the needle.

2,003,180
METHOD FOR CARBURETING HEAVY LIQUID FUELS
Giovanni Lucich, Trieste, Italy, assignor to firm "Società Anonima Carburatori Olii Pesanti (S. A. M. C. O.)", Trieste, Italy, a corporation of Italy
Application April 4, 1934, Serial No. 719,018
In Italy November 16, 1933
7 Claims. (Cl. 158—117.5)

1. The method of carbureting liquid fuel which consists in partially pre-vaporizing and spraying the fuel and mixing air therewith to form a primary mixture in which part of the fuel is in a vaporous state, mechanically breaking up the non-vaporized particles of fuel in the mixture, and at the same time cooling the vaporized portion of the fuel to condense the same and form minute liquid particles.

2,003,181
BURNER FOR HEAVY LIQUID FUELS
Giovanni Lucich, Trieste, Italy, assignor to firm "Società Anonima Carburatori Olii Pesanti (S. A. M. C. O.)", Trieste, Italy, a corporation of Italy
Original application April 4, 1934, Serial No. 719,018. Divided and this application November 14, 1934, Serial No. 753,033. In Italy November 16, 1933
16 Claims. (Cl. 158—77)

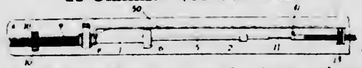


1. A burner for heavy liquid fuel comprising a compressed air intake, an air throttling member of suitable capacity in said intake, a fuel spraying and air mixing chamber connected to the intake, at least one fuel nozzle issuing into the said chamber, an atomizing chamber connected to the first mentioned chamber, and a burner tube leading from the atomizing chamber gradually reduced in diameter from its inner to its outer end.

2,003,182
CONTAINER
John M. Driver, Wynnewood, Pa.
Application July 26, 1930, Serial No. 470,966
5 Claims. (Cl. 229—53)

1. As a new article of manufacture, a bag comprising a transparent strip of flexible cellulose material and a second flexible strip of relatively stiff material, said strips being seamed together with the longitudinal edge portions of the transparent strip adhesively secured to the other strip to form a tubular bag body, the transparent strip forming the forward face of the bag, and said other strip together with portions of the transparent strip forming the rear face of the bag, and said seams being spaced inwardly from the longitudinal side edges of said forward face, the said front face being extended at one end of the tubular body, and that end of the tubular body, including a portion of the rear face, being folded and adhesively secured to the body of the bag at a location remote from the bottom edge of the front wall to form the bottom of the bag, the side seams and bottom seam location leaving the front face of the bag entirely unobstructed and free of seams.

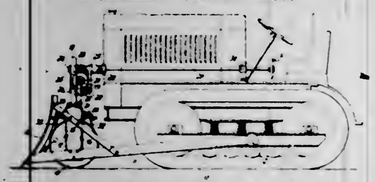
2,003,183
FRANGIBLE SEAL
Robert W. Ferguson, Trenton, and Harry P. Sparkes, Newark, N. J., assignors of one-half to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa., a corporation of Pennsylvania, and one-half to The Star Porcelain Company, Trenton, N. J., a corporation of New Jersey
Application March 5, 1935, Serial No. 9,476
5 Claims. (Cl. 292—307)



1. A sealing means comprising a receptacle of frangible material having a drain opening therein, the walls of the receptacle having abutments for engaging means for holding the seal in position and means preventing access to the holding means through said drain opening.

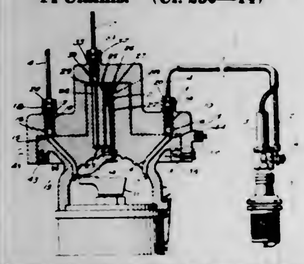
2,003,184
METHOD AND MEANS FOR PRODUCING FOAM FOR FIRE EXTINCTION
Wilhelm Friedrich, Berlin-Lichterfelde, Germany
Application December 5, 1933, Serial No. 701,069
In Germany December 13, 1932
5 Claims. (Cl. 261—116)

1. Method of producing a fire extinguishing foam which comprises dividing a unitary stream of quenching liquid into a plurality of relatively small free flowing converging jets whereby said stream is transformed into a stream of the liquid in finely divided form and aspirating air into and by means of said finely divided stream in the presence of a foam promoting agent.



2,003,185
RIFLING MACHINE
Hermann Ernst Gustav Thorismund Gerlich, Bexley, Kent, England
Application September 7, 1933, Serial No. 688,502
In Great Britain September 9, 1932
11 Claims. (Cl. 90—28.1)

1. Apparatus for shaping the internal surface of a barrel for a projectile propelling device and the bore of which barrel is to vary in its length in cross sectional area and comprising a rotatable cutting sleeve adapted to traverse the barrel to be shaped and having a plurality of circumferentially spaced radial slots, cutters each having a body part mounted slidably in one of said slots and having a single cutting blade at the outer part, a pattern rod mounted coaxially in said cutting sleeve and on which the inner parts of said cutters rest and adapted to regulate the radial setting of said cutters, the effective radial dimensions of said pattern rod varying in proportion to the varying radius of the surface to be shaped, said cutter body having its axial length disposed at an angle to the axis of the cutter box, the cutting blade of said cutter being disposed transversely to the body of the cutter, and the axis of the cutting sleeve, spring means adapted to retain said cutters in guiding engagement with said pattern rod, and said cutter bodies having curved



surfaces engaging said pattern rod, means for traversing said cutting sleeve axially through the barrel and relative to the barrel and the pattern rod, means for rotating the cutting sleeve, means for centering the cutting sleeve in the barrel, and means for mechanically advancing said pattern rod axially relative to the barrel.

2,003,186
SCRAPER
Joseph J. Glassner, Akron, Ohio, assignor of one-half to Bird C. Clutter, Akron, Ohio
Application August 27, 1932, Serial No. 630,685
2 Claims. (Cl. 37—146)

1. The combination with an earth-working scraper including a tractor, of a frame pivotally mounted thereon, a scraper blade at the free end of the frame, aligned vertical slides secured to opposite sides of the frame immediately behind said blade, respective guides for said slides, a roller journaled on said guides, rack and pinion mechanism connected respectively to the slides and guides for effecting relative movement thereof, and means for operating said rack and pinion mechanism from the tractor, said means including a shaft having a swivelled support on the tractor.

2,003,187
AUTOMOBILE RADIO DEVICE
Francis R. Good, Wynnewood, Pa., assignor of fifty one-hundredths to Frederick H. Shaw, Glenside, Pa.
Application October 2, 1933, Serial No. 691,886
14 Claims. (Cl. 250—14)

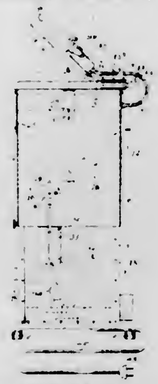
1. A device for a radio receiver-equipped vehicle having an internal combustion engine with an ignition system, comprising means for reducing the disturbing effects of said system on said radio receiver, and means for rendering said first-mentioned means ineffective to deleteriously affect the current flow in said system during periods of non-use of said receiver.

2,003,188
GAUGE
Frank P. Heid, Erie, Pa.
Application March 12, 1934, Serial No. 715,186
5 Claims. (Cl. 33—203)

1. A gauge of the kind described comprising relatively shiftable tubes telescopically fitting each other, aligned arms on the outer ends of said tubes, swiveled heads carried by said arms, a sleeve slidable on one of said tubes, a cap adjustably fixed to the other tube, tie rods fixed with the sleeve and having loose connections with the cap, a coiled tensioning spring arranged be-

tween the sleeve and said cap, means between the sleeve and the tube carrying the same for varying the tension of said spring, and indicator means operative by displacement of the tubes with relation to each other when applied to opposed vehicle wheels and on the turning thereof.

2,003,189
STOCKING MADE IN A SINGLE OPERATION AND METHOD FOR MAKING SAME
Woldemar Heinitz, Chemnitz, Germany, assignor to Schubert & Salzer Maschinenfabrik Aktiengesellschaft, Chemnitz, Germany
Application November 15, 1934, Serial No. 753,225
In Germany November 16, 1933
4 Claims. (Cl. 66—187)



1. A stocking made in a single operation on a flat knitting machine in which the upper part of the heel portions comprises loop wales progressively and simultaneously formed at the inside and outside with the instep loops placed in suspense, the number of said loop wales being progressively decreased at outside and inside in the lower heel portion.

2,003,190
APPARATUS FOR MAKING CONTACT PRINTS OR ENLARGEMENTS FROM DEVELOPED NEGATIVES
Edson S. Hineline, Rochester, N. Y., assignor to Folmer Graflex Corporation, Rochester, N. Y., a corporation of Delaware
Application December 6, 1933, Serial No. 701,127
48 Claims. (Cl. 88—24)

1. Apparatus for enlarging and for contact printing for photographic purposes from negatives, consisting of a housing or enclosure having two substantially rectangular, telescoping parts relatively slidable vertically and containing an enlarging lens equipment, means for supporting the negative either below or above the lens equipment, one of said telescoping parts having sock-

ets at different heights and the other of said telescoping parts having one or more spring pressed plungers constituting constantly detached parts

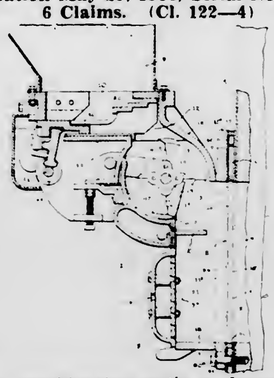
adapted to enter said sockets to hold the vertically slidable part at a desired position of vertical adjustment.

2,003,191
METHOD OF PRESERVING FRUIT
Wilhelm J. H. Hinrichs, Hamburg, and Hermann Wittkowski, Lockstedt-Niendorf, near Hamburg, Germany
No Drawing. Application July 21, 1933, Serial No. 681,660. In Germany March 15, 1933
3 Claims. (Cl. 99—8)

1. A method of preserving fruits and vegetables which comprises coating the fruit with a latex solution prepared from latex first concentrated by treatment in a rapidly rotating centrifuge and washed with ammonia-containing water, freeing the latex from hygroscopic and decomposable constituents and finally diluting with water, whereby an air pervious coating of latex is procured on said fruits and vegetables.

2,003,192
METHOD OF PRODUCING MOISTURE-PROOF AND AIR TIGHT COATINGS
Wilhelm J. H. Hinrichs, Hamburg, and Hermann Wittkowski, Lockstedt-Niendorf, near Hamburg, Germany
No Drawing. Application July 21, 1933, Serial No. 681,661. In Germany March 15, 1933
7 Claims. (Cl. 91—68)

1. A method of producing moisture-proof and airtight coatings on articles of commerce, including eggs, sausages, smoked articles, wallpaper, wood veneers, fabrics and the like, which consists in coating the said articles with a rubber latex, centrifugally highly concentrated and washed with ammonia solution, and which is completely freed from those hygroscopic and decomposable substances which are normal constituents of raw rubber latex.

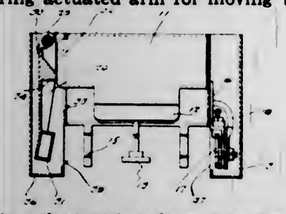


2,003,193
TOY
Yuzaburo Hirose, Los Angeles, Calif.
Application January 21, 1935, Serial No. 2,813
1 Claim. (Cl. 46—40)

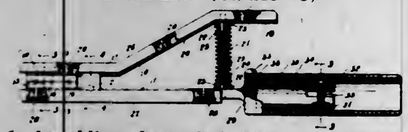
A toy boat comprising a closed hollow body, said body being formed with a slot at the rear end above the water line, a plate secured on the inner side of the lower portion of said body, a pair of spaced upstanding supports fixed to said plate, a second plate secured to the free end of said support, a rotatably mounted stem in said plate extending upwardly through the upper portion of said body and having a handle on the free end thereof, a spring motor secured to said stem, between said plates, a large gear fixed to said spring motor, a shaft rotatably mounted

between said plates adjacent said stem, a pinion gear on said shaft, in mesh with the motor gear, an escapement gear on said shaft, an escapement pallet extending through the slots in the body and having a tail propeller secured to the outer end thereof whereby the tail propeller is directly actuated from the escapement gear, and a bridge wall across the rear end of the body under the slot to prevent water from entering the body.

2,003,194
HEAT ABSORBING DEVICE FOR THE PROTECTION OF STOKERS
Jerome A. Hoffman, Detroit, Mich., assignor to Hoffman Combustion Engineering Company, Detroit, Mich., a corporation of Michigan
Application May 29, 1934, Serial No. 728,184
6 Claims. (Cl. 122—4)



1. The combination with a furnace and a stoker, of a water-cooled heat absorbing device interposed between the furnace and stoker to protect the latter from intense heat of the furnace comprising a relatively thin metallic frame having an opening surrounding the fuel-feeding opening of the furnace and through which fuel to the furnace may be fed and provided with an open-ended water channel therein for the continuous passage of water therethrough to absorb heat radiation from the furnace.



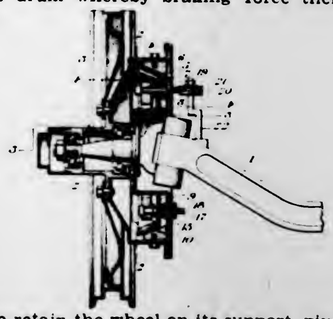
2,003,195
COMBINED CIGARETTE DISPENSER AND IGNITER
Luther M. Jackson and Clyde A. Prescott, Middletown, Pa.
Application April 12, 1933, Serial No. 665,785
2 Claims. (Cl. 312—86)

1. A combined cigarette dispenser and igniter comprising a casing, a feed device slidably mounted in the casing for discharging the cigarettes singly from the casing, said feed device having a slotted member extending therefrom, a support for receiving the cigarettes from the feed device, an igniting element at one end of the support,

a switch controlling an electric circuit for the igniting element, and including an operating lever having one end inserted through the slot of said member for closing the circuit upon cigarette discharging movement of the feed device and a spring actuated arm for moving the cigarette against the igniting element, said arm being normally held out of cigarette engaging position by the feed device and released thereby upon discharging movement of the feed device and said arm further being moved out of cigarette engaging position by the feed device upon an opposite movement thereof.

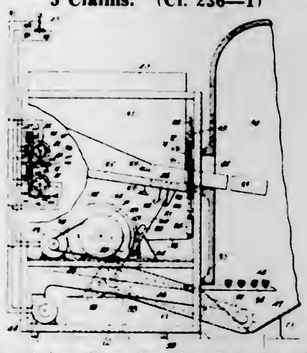
2,003,196
WELDING ELECTRODE HOLDER
Honel A. Jackson, Detroit, Mich.
Application December 7, 1933, Serial No. 701,385
2 Claims. (Cl. 219—8)

1. A welding electrode holder, comprising pivotally connected jaw members having means to hold an electrode therebetween, channeled members of electrical insulating material secured to said jaw members, the legs of the channeled members overhanging the jaw members to partially surround the metallic parts of the jaw members to more adequately insulate such metallic parts, a coil spring normally holding the jaw members in electrode holding position, and an insulating washer mounted on each jaw member and terminally engaging said spring.



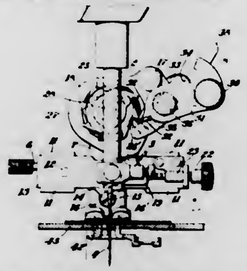
2,003,197
BUTTER-MOLDING DEVICE
Ollie C. Jackson, Bryn Mawr, Pa.
Application February 16, 1934, Serial No. 711,595
11 Claims. (Cl. 31—43)

1. In a device, a sectional mold, means rotatably mounted internally of said mold for separating material from the walls thereof, and means forming a part of said last mentioned means operable to score the surface of said material.



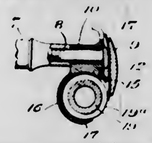
2,003,198
CLUTCH BRAKE
Bryan Jenkins, Flemington, W. Va.
Application December 18, 1933, Serial No. 702,991
2 Claims. (Cl. 188—72)

1. A brake comprising a drum secured to a wheel and having a tapering face with the taper of said face extending away from the wheel, a housing for said drum, a brake shoe slidably supported by said housing and having a conical-shaped flange to engage with the tapering face of the drum whereby braking force therefrom



acts to retain the wheel on its support, pivot lugs on the shoe, an annular member having recesses to receive the pivot lugs, means for limiting the pivotal movement of the member with respect to the shoe, and an operating means connected to the member.

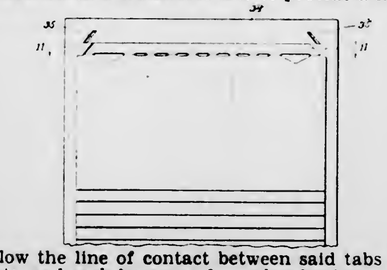
2,003,199
AUTOMATIC COAL STOKER
Frank James Johnson and Gerald Johnson, Glenside, Pa.
Application May 31, 1930, Serial No. 457,926
5 Claims. (Cl. 236—1)



2. In a stoker for a heating furnace, the combination of a draft operating means and a fuel feeding means, the draft operating means comprising an electric motor, a circuit therefor, a double acting thermostatic switch in said circuit adapted to close the circuit when heat is required, a branch circuit for the fuel feeding means, an electric clock connected in parallel with the blower motor, an adjustable circuit closing device operable by the clock to close the fuel feeding circuit at adjustably spaced intervals of time during the heat requirement, means carried by the fuel feeding device to open the circuit to the fuel feeding means after one feed of fuel, the said double acting thermostat being adapted to open the circuit to the draft operating means and clock when there is no heat required, and to close a circuit to a second electric clock, a second adjustable circuit closing device operable by the second clock to close the blower circuit and the fuel feed circuit at adjustably spaced intervals of time during the period of no heat requirement, means carried by the fuel feeding device to open both the blower and fuel feeding circuits after one fuel feed during the period of no heat requirement.

2,003,200
ATTACHMENT FOR SEWING MACHINES
John D. Karle, Roselle Park, N. J., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a corporation of New Jersey
Application August 1, 1933, Serial No. 683,112
12 Claims. (Cl. 112—160)

1. A sewing machine having, in combination, stitch-forming mechanism including a reciprocatory needle-bar, a needle carried thereby, a presser-bar, a frame fixed to said presser-bar, a presser-foot, means actuated by said needle-bar for imparting a vibratory motion to said presser-foot in a right line relative to said frame, and means for rendering said last named means inactive to vibrate the presser-foot at the will of the operator and without stopping the stitch-forming mechanism.



2,003,201
SAFETY RAZOR
Horace L. Kent, Brooklyn, N. Y.
Application September 26, 1933, Serial No. 691,055
4 Claims. (Cl. 30—12)

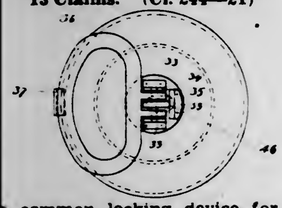
4. A safety razor comprising a body, a roller rotatably mounted in the body, a guard seated upon the body, screws passing through elongated slots in the guard and entering the body, so that the guard may be adjusted tangentially of the roller, a blade seated upon the guard in fixed relation to the latter, a cap engaged with the guard and having a threaded stem passing through the body, and a handle engaging the stem to retain the cap in place, the guard being formed with raised portions entering correspondingly shaped openings in the blade and the latter being flexible so that its cutting edge may be adjusted radially of the roller by varying the degree of clamping action of the cap.

2,003,202
FILING SYSTEM
James M. Keplar, Elkhart, Ind.
Application January 27, 1933, Serial No. 653,894
15 Claims. (Cl. 129—16)

10. In a filing system, a holder member of flat formation, and a plurality of overlapping card members supported on said holder, said holder and card members having interengaging slots and tabs for supporting said card members on said holder member, and said card members being weakened on a transverse line to provide a hinge

below the line of contact between said tabs and slots, and each lower card member having a part extending upwardly beneath the card above to the hinge line of the card above.

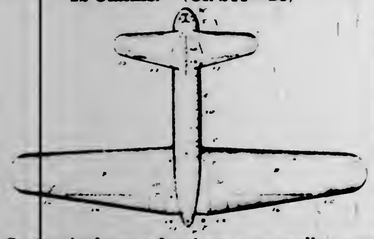
2,003,203
GAME
Young Wo Kim, Santa Barbara, Calif.
Application May 15, 1933, Serial No. 671,216
1 Claim. (Cl. 273—134)



A game apparatus comprising a game board having a surface divided into panels bearing a sequential relation to each other, a path defining a line impressed upon borders of abutting panels, each of said panels having an identifying designation and also being numbered to indicate its position in the sequence in which the game is played and also bearing code characters indicative of transfer and extent thereof to other panels, and chance devices including sticks having polygonal cross sections presenting faces bearing code characters similar to the code characters of said panels.

2,003,204
CARDIO-ACTIVE GLUCOSIDES OF DIGITALIS LANATA AND A PROCESS OF MAKING SAME
Walter Kreis, Basel, Switzerland, assignor to firm "Chemical Works Formerly Sandoz", Basel, Switzerland
No Drawing. Application July 19, 1933, Serial No. 681,219. In Switzerland July 22, 1932
13 Claims. (Cl. 260—25)

11. The desacetylated genuine glucoside A of digitalis lanata which is a white amorphous powder, one part of which is soluble in about 3000



parts of water which contains about 60% of C and about 8% of H, which yields on careful acid hydrolysis about 40% of digitoxigenin, about 31% of digitoxose and about 33% of a crystallized disaccharide $C_{12}H_{22}O_9$ composed of glucose and digitoxose, which possesses cardio-active properties and is useful for therapeutical applications.

2,003,205
QUICK RELEASE FASTENER FOR PARACHUTE HARNESS
Stig Ove Christian Kuhlemann, Stockholm, Sweden, assignor, by mesne assignments, to Irving Air Chute Company Incorporated, Buffalo, N. Y.
Application November 15, 1929, Serial No. 407,510
In Sweden August 19, 1929
13 Claims. (Cl. 244—21)

1. In a common locking device for coupling together all free ends of the straps of a parachute harness, the combination of detent means, and, means for releasing said detent means including a handle adapted to be swung upwardly and then to be turned.

2,003,206
AIRCRAFT
William L. Lewis, Los Angeles, Calif.
Application December 2, 1931, Serial No. 578,583
12 Claims. (Cl. 244—14)

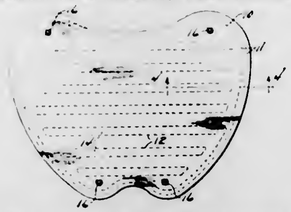
1. In an airplane, a fuselage, a propeller mounted at the extreme tail end of the fuselage, a wing mounted on the fuselage forward of said propeller, said fuselage and wings removed from the rearwardly directed propeller slipstream, vertically disposed stabilizing fins mounted on and depending from the under side of said wing adjacent the wing tips, respectively, a vertical, laterally swingable rudder mounted on and extending rearwardly from each of said stabilizing fins, and a landing surface engaging member mounted at the lower end of each of said fins.

2,003,207
BASEBALL GAME
Raymond Adolphe Lemoyne, Rochester, N. H.
Application December 26, 1934, Serial No. 759,275
4 Claims. (Cl. 273—88)

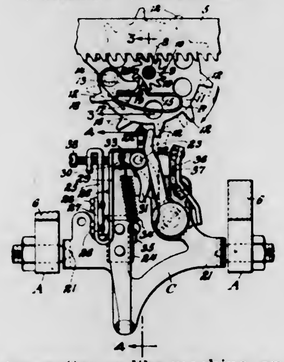
1. A game of the class described comprising an inclined board, a pair of parallel longitudinally extending strips forming a path for a ball, members hinged to the board and adapted to be knocked down by a second ball propelled over the board, said members having projections for extending across the path when knocked down, and guiding strips on the board for guiding the second ball against the movable members.

2,003,208
PROCESS FOR MAKING MAGNESIUM CARBONATE
Walter Hoge MacIntire, Knoxville, Tenn., assignor to American Zinc, Lead & Smelting Company, St. Louis, Mo., a corporation of Maine
No Drawing. Application July 12, 1932, Serial No. 622,169
7 Claims. (Cl. 23—67)

1. A process for making magnesium carbonate which consists in suspending magnesium oxide in water, adding ammonia gas to the suspension, then continuously adding carbon dioxide thereto, and continuing the addition of carbon dioxide until the mix begins to thicken, the quantity of ammonia being approximately 10% by weight of the magnesium oxide.



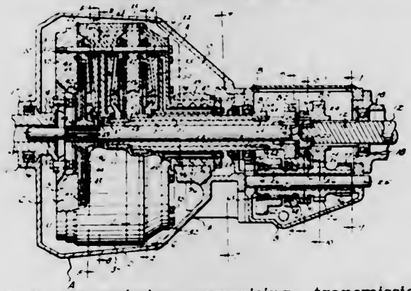
2,003,209
PLOW FOR ELECTRICAL SIGNALING OF RAILWAYS
Charles Victor de Saint-Martin, Paris, France, assignor to Michelin et Cie., Clermont-Ferrand, France, a corporation of France
Application September 8, 1933, Serial No. 688,667
In France September 10, 1932
12 Claims. (Cl. 246—193)



1. A plow for electric signaling on railroads comprising a plow frame, a cap, trunnions between the cap and the medial portion of the frame, the axes of the trunnions being transverse to the railroad, and contact plates in the frame having long thin edges contacting the rail head for distances in advance and in rear of the trunnion axis.

2,003,210
ABDOMINAL SUPPORT
Ralph B. McMurry, Kalama, Wash.
Application December 27, 1933, Serial No. 704,160
1 Claim. (Cl. 2—41)

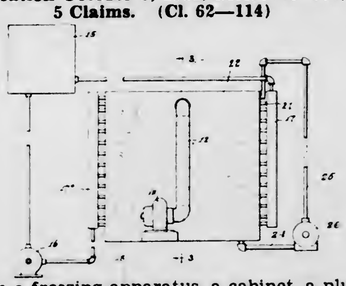
The combination with a body embracing garment, of a pad comprising a substantially heart-shaped body formed of a plurality of plies of fabric, stitches marginally connecting the plies and also providing spaced transversely disposed casements, stays fitted in the casements and having reversely tapered opposite ends, and separable fasteners at the inner face of the body embracing garment and on the pad at the outer side thereof for the placement of the latter over the abdomen of a wearer, with the stays lying transversely thereof to give the proper bend and tension to the pad.



2,003,211
TYPEWRITING MACHINE
William O. Michelsen, Long Island, N. Y., assignor to Royal Typewriter Company, Inc., New York, N. Y., a corporation of New York
Application September 5, 1934, Serial No. 742,787
7 Claims. (Cl. 197—82)

1. In a typewriter or like machine, an escapement mechanism including a rack, a pinion rotatable thereby, a pivoted back dog successively engageable with the teeth of said pinion during rotation of the latter, and yieldable means for retaining the nose of the dog out of contact with the successively following teeth of the pinion during rotation of the latter.

2,003,212
POWER TRANSMISSION
Roy E. Millican, Dallas, Tex., and Word R. Millican, Parsons, Kans.
Application August 11, 1934, Serial No. 739,380
19 Claims. (Cl. 74—336.5)

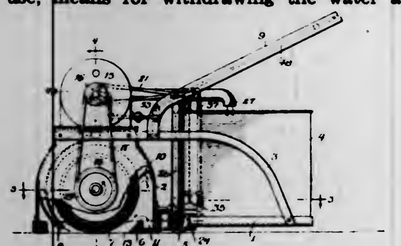


1. A transmission comprising, transmission gears, a plurality of hydraulic clutches connected with said gears, a driven shaft adapted to be connected with said gears and said clutches, a valve controlling the flow of hydraulic fluids to each clutch, a speed responsive governor operatively connected with said valve controlling the actuation of said clutches, and manually operated means for shifting said valve to limit the operation of the clutches to predetermined speed ratios.

2,003,213
AUTOMOBILE JACK
Frank Minutillo, Manahawkin, N. J.
Application April 11, 1934, Serial No. 720,097
1 Claim. (Cl. 254—1)

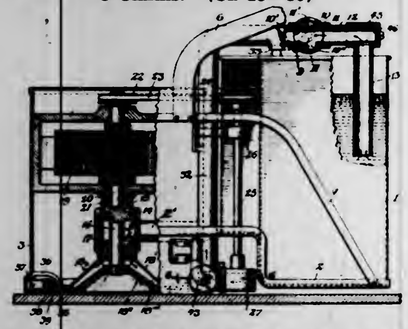
An automobile jack mounted on a base plate, a set of serrated rollers mounted to said base, a lifting screw mounted within the jack, a bevel gear mounted to the jack and operating said lifting screw, a bevel pinion rotating the bevel gear, a shaft mounted to said pinion, a square hole at the end of said shaft, a corrugated plate also attached to said pinion shaft, an extensible operating arm adapted to be inserted into the square socket in the pinion shaft, and spring clips attached to said extensible operating arm, said spring clips adapted to frictionally engage the corrugations in said corrugated plate attached to said pinion shaft.

2,003,214
FREEZING APPARATUS
Edward Joseph Murphy, Lynbrook, N. Y.
Application October 5, 1931, Serial No. 567,009
5 Claims. (Cl. 62—114)



1. In a freezing apparatus, a cabinet, a plurality of pans arranged in said cabinet in superposed relation and spaced from each other, said pans being of a width corresponding to the width of the cabinet but of a length less than the cabinet and arranged with alternate pans in contact with the same end wall of the cabinet and succeeding pans in contact with opposite end walls to provide a sinuous path for air currents over succeeding pans, a refrigerant-containing coil disposed in each pan, a liquid heat exchange medium disposed in each pan in contact with the coil therein, and air circulating means for extracting the air from the cabinet above the topmost pan and redelivering it below the lowermost pan.

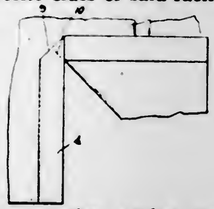
2,003,215
FLOOR CLEANER
Francis H. Nadig, Chicago, Ill.
Application July 17, 1934, Serial No. 735,664
2 Claims. (Cl. 15—50)



2. A floor cleaner including a cylindrical brush, a nozzle arranged adjacent said brush on one

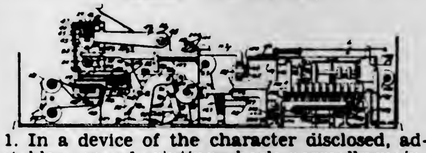
side thereof, a water tank, means for directing water from said tank through said nozzle for a given period to a point adjacent said brush, said brush being adapted to engage the floor when in use, means for withdrawing the water ad-

jacent the brush and from a point on the opposite side to where the water enters, means for directing air through said nozzle for a second period, and manually actuated means for controlling the supply of air and water to said nozzle.



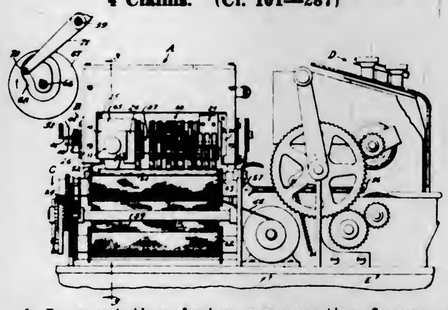
2,003,216
FLOOR CLEANING MACHINE
Francis H. Nadig, Chicago, Ill.
Application July 17, 1934, Serial No. 735,663
3 Claims. (Cl. 15—50)

1. A floor cleaner including a rotating water distributing head, an annular brush positioned around the discharge end of the head and in contact with the surface against which the head is adapted to project liquid, an annular trough arranged around said brush, said trough being open at the top, a sealing member carried by said trough and positioned to rest on the surface being cleaned whereby the water discharged from said head must pass beneath and between the bristles of said brush and then upwardly into said trough, a tank for supplying water to said head, a pump for removing the water from said trough and directing it into said tank, and a prime mover for rotating said head at the same time that the pump is operated.



2,003,217
GARMENT
Charles E. Oathout, Shaker Heights, Ohio, assignor to The Kaynee Company, Cleveland, Ohio, a corporation of Ohio
Application May 18, 1934, Serial No. 726,247
6 Claims. (Cl. 2—121)

1. In a garment, the combination of a placket opening of substantially rectangular shape, a continuous facing secured to the edges of said placket opening, said facing being folded at a point adjacent the crotch of said placket opening whereby opposite sides of said facing are super-

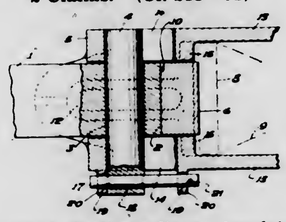


imposed on each other, and a portion of said facing, so folded, extending beyond the crotch of said placket opening.

2,003,218
ADJUSTABLE PRINTING MECHANISM
William J. Pearson, Los Angeles, Calif.
Application October 23, 1931, Serial No. 570,625
25 Claims. (Cl. 101—93)

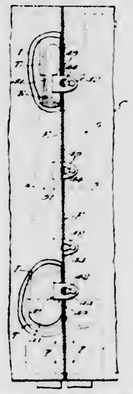
1. In a device of the character disclosed, adjustable numeral printing wheels normally maintained in a zero reading position, a keyboard including keys; operating mechanism adapted to connect one of the keys in said keyboard with every numeral printing wheel in a successive contact relation for the purpose of setting up numerical combinations in said numeral wheels, ratchet elements adapted to engage said operating mechanism to maintain said numeral wheels in their set-up relationship, and clearing mechanism adapted to be operated by a key in said keyboard to release said ratchet elements to permit return of said numeral wheels to zero reading position.

2,003,219
DATING DEVICE
William J. Pearson, Los Angeles, Calif.
Application October 23, 1931, Serial No. 570,628
4 Claims. (Cl. 101—287)



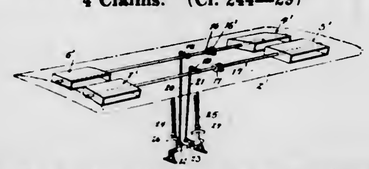
4. In a printing device, a supporting frame, a shaft supported in said frame, means for actuating said shaft, a switch controlling said shaft actuating means, printing wheels on said shaft, a printing element removably positioned in said frame and normally in alignment with said printing wheels, said printing element having a recess in its surface and said frame having an opening registering with said recess when said printing element is positioned in said frame in alignment with said printing wheels, a control arm pivotally mounted on said frame for actuating said switch, said control arm having a pin thereon projecting through said opening into said recess when said printing element is properly positioned in said frame and adapted to prevent the operation of the device when said printing element is removed from said frame or is not in alignment with said printing wheels.

2,003,220
TYPE-SETTING DEVICE
William J. Pearson, Los Angeles, Calif.
Application October 23, 1931, Serial No. 570,632
16 Claims. (Cl. 101—93)



1. In a device of the character disclosed, a printer comprising rotatable numeral printing wheels normally maintained in a zero position; a selector device having a definite number of operative positions, said selector successively rotating said numeral wheels from a zero position to a numerical combination position; a keyboard mechanism adapted to be manipulated a definite number of times to actuate said selector device to the said definite number of positions, and a progressive release lock controlling the printing operations of said printer, said progressive release lock adapted to be actuated to a lock releasing position upon a predetermined definite number of manipulations of said keyboard.

2,003,221
RAILWAY DRAFT APPLIANCE
William J. Regan, Wilkinsburg, and Enoch George, Jr., Pittsburgh, Pa., assignors to The McConway & Torley Company, Pittsburgh, Pa., a corporation of Pennsylvania
Application June 24, 1929, Serial No. 373,241
2 Claims. (Cl. 213—71)

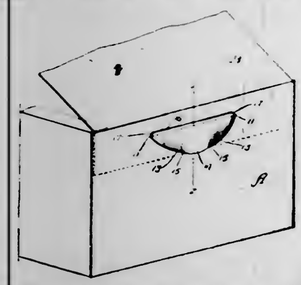


1. A railway draft appliance involving a car coupler having a curved rear end and provided with a pivot pin opening concentric with said end, a draft yoke, a bearing block of substantially uniform height and width throughout and having a rear face adapted to engage the forward follower of a draft gear and terminating at its forward end in a curved face cooperating with the curved face of the coupler, said coupler being slidable longitudinally with respect to said block, and a tail pin extending through said pivot opening for movably connecting the coupler and yoke, said yoke being provided with vertically aligned longitudinally extending slots for receiving the tail pin and being formed with inwardly projecting bosses adjacent said slots and having laterally spaced parallel walls overlapping opposite sides of said block, said bosses and walls forming guides for said block in all operative positions of the latter.

2,003,222
STUD-AND-EYE CLASP FOR CORSETS AND THE LIKE
Joel A. Rice, New York, N. Y.
Application July 10, 1934, Serial No. 734,499
9 Claims. (Cl. 24—222)

1. In a stud-and-eye clasp for corsets and the like, a flat resilient strip having tongues projecting beyond one of its longitudinal edges, the projecting portions of said tongues being formed with stud-receiving eyes, the inner end portions of said tongues being disposed at one side of said strip, and a second flat resilient strip lying permanently against said one side of the first named strip, said second strip having slots receiving portions of said tongues.

2,003,223
AIRPLANE
William K. Rose, New York, N. Y.
Application June 17, 1933, Serial No. 676,386
4 Claims. (Cl. 244—29)



3. An airplane including a wing structure having a plurality of openings therein on opposite sides of the fuselage, a substantially rectangular shutter structure arranged in each of the openings, each of said shutter structures having a top and bottom vane with a free passageway between the vanes, rotatable means for supporting each of the shutter structures and manually controlled means for shifting the shutter structures so as to be flush with the wing structure or positioned with the leading edge above or below the wing structure.

2,003,224
CONTAINER
Edwin J. Schoettle, Philadelphia, Pa., assignor to Edwin J. Schoettle Company, Philadelphia, Pa., a corporation of Pennsylvania
Application August 2, 1934, Serial No. 738,123
4 Claims. (Cl. 229—44)

1. Connected sections of a cardboard container or the like wherein one section has an opening

affording transversely spaced opposed corners and transversely spaced walls opposing one another at a point spaced longitudinally of the section from said corners, the other section having tab means affording shoulders transversely spaced thereon a distance equal to the distance between said corners and engaged therein, and a second tab means affording shoulders spaced transversely of said second section and engaged

and fitting between the opposed walls of the opening of the first member, at least a portion of the last-named tab means being spaced longitudinally of the second section from the first-named shoulders a distance such that it overlaps the confronted edge of the opening of the first section intermediate the points of engagement of the last-named shoulders with said opposed wall portions.

2,003,225

GUY INSULATING AND GRADING MEANS

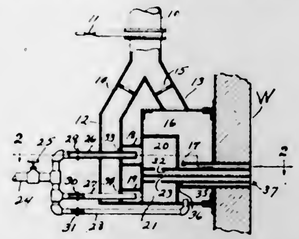
Edward C. Vrooman, Schenectady, N. Y., assignor to Locke Insulator Corporation, Baltimore, Md., a corporation of Maryland

Original Application September 4, 1930, Serial No. 479,755. Divided and this application August 24, 1932, Serial No. 630,266

7 Claims. (Cl. 173—366)

1. A strain insulator comprising a unitary body of dielectric material including a pair of substantially crescent shaped portions intersecting at right angles with their outer edges of oppositely curved convex shape and grooved, the other edges being of hollow form to define relatively thin wall portions at the base of the grooves in the convex edges.

2,003,226



METHOD OF BURNING FUEL GAS

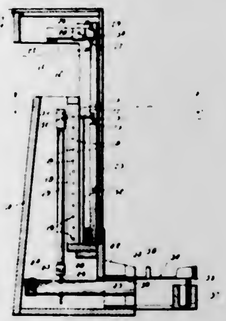
Harvey C. Weller, Salem, Ohio, assignor to Surface Combustion Corporation, Toledo, Ohio, a corporation of New York

Application July 20, 1933, Serial No. 681,342

3 Claims. (Cl. 158—117.5)

1. In the operation of a gas-fired furnace the method herein described of maintaining combustion which consists in projecting into the combustion chamber a horizontally stratified stream of the two components, air and gas, of a combustion mixture, the stream including an intermediate stratum of mingled air and gas, overlaid by a stratum of greater air content and underlaid by a stratum of greater gas content,

with the consequence and effect that the flame produced is of decreasing luminosity from the lower portion of the combustion chamber upwardly.



2,003,227

FOOT OPERABLE PLAYING ATTACHMENT FOR PIANOS

Carrol J. Wilson, Jonesboro, Tex.

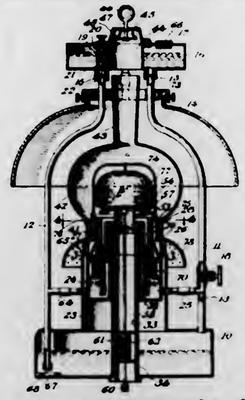
Application July 12, 1934, Serial No. 734,833

5 Claims. (Cl. 84—444)

1. A device of the class described for use in connection with a piano, the device having fingers to strike the base keys of the piano and fingers to strike the treble keys of the piano, means to operate the treble fingers individually, means connected to operate a plurality of the fingers simultaneously to play a chord, rocker bars, connections from the rocker bars to said fingers, pedal means to operate each rocker bar of the second mentioned fingers individually, connections from each of the first mentioned rocker bars to a plurality of each of the first mentioned fingers for the playing of chords, and pedal means operable to individually actuate said first mentioned rocker bars.

2,003,228

LAMP



Florentino E. Zara, Maasin, Leyte, P. I.

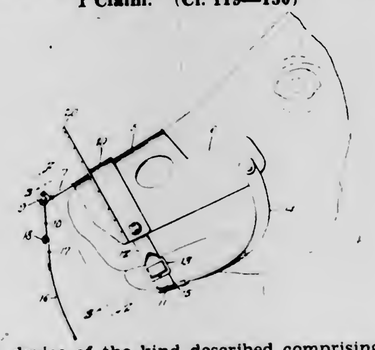
Application November 5, 1934, Serial No. 751,616

4 Claims. (Cl. 67—38)

1. A lamp of the character described comprising an oil reservoir, a gravity feed oil tank, an oil font between the reservoir and tank, an oil feed tube leading from the tank to said font, a burner head on said font, a chimney holder on the head, a chimney fitted in said holder, a wick barrel formed in the burner head, a wick

fitting said barrel, a wick raiser operating through said reservoir and manually controlled

below the same, and means for delivering oil from the reservoir to the said tank.



2,003,229

MUZZLE

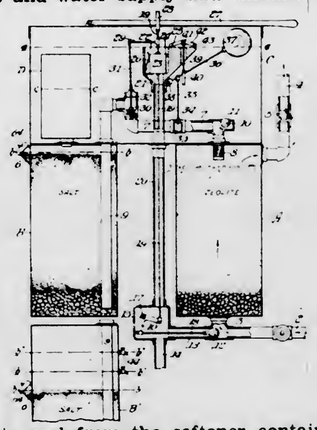
Bob B. Bailes, Stigler, Okla.

Application January 15, 1934, Serial No. 706,784

1 Claim. (Cl. 119—130)

A device of the kind described comprising an arched nose bridge formed from a single sheet of material and having a medial forwardly projecting portion provided with a pintle sleeve at its outer free end, ears formed on the nose bridge and extended rearwardly, an adjustable lower jaw strap carried by the nose bridge, a hitch on said jaw strap and having branches fixed to the ears, a substantially U-shaped loop, a pintle swingingly connecting the loop with the pintle sleeve, a curved plate having a central tab swingingly supported by said loop to be suspended directly in front of a mouth of an animal, and a row of radially upstanding pricking spurs supported by said nose bridge.

2,003,230



APPARATUS FOR SOFTENING WATER

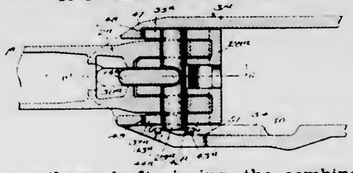
Arthur Barrett, Bellevue, Pa.

Application December 4, 1931, Serial No. 578,931

12 Claims. (Cl. 210—24)

1. In a water softening system employing a water softening material and brine, the herein described means consisting of a softener container, a brine container having an air confining chamber at its top for exerting an opposing balancing air pressure against a predetermined volume of brine under pressure of incoming raw water, means including a superimposed reservoir having an overflow sewer connection and a liquid circulating connection between the containers and water supply and exhaust connec-

tions to and from the softener container and from the latter to the sewer connection, for separating and maintaining a measured volume of water under a low static pressure and for passing the brine through the softening material on release of raw water pressure, and for flushing the softening material.



2,003,231

DRAFT RIGGING

Donald S. Barrows, Rochester, N. Y., assignor to The Symington Company, New York, N. Y., a corporation of Maryland

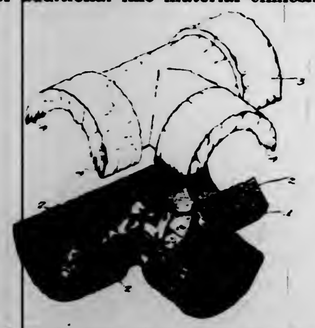
Application August 15, 1927, Serial No. 213,144

39 Claims. (Cl. 213—69)

7. In railway draft rigging, the combination of a coupler, a yoke, and means for connecting said yoke and coupler, said means including a bearing block slidable relative to said yoke and engageable therewith for transmittal of draft forces, and means for pivotally securing said coupler to said block.

2,003,232

HOLLOW ARTICLES, SUCH AS PIPE FITTINGS AND THE LIKE, AND METHOD OF MAKING THE SAME



Frank H. Benge, Norristown, Pa., assignor to Continental-Diamond Fibre Company, Newark, Del., a corporation of Delaware

Application May 15, 1933, Serial No. 671,260

6 Claims. (Cl. 18—55)

1. A method of making a composite hollow article, such as a pipe fitting, which comprises preforming a part of said article of binder-impregnated fibrous material to substantially

final shape with a relatively dense body and less dense ragged extended edges, placing said part in cooperative relation with a core, completing the preform of the article about said core of additional like material enmeshed with

said edges, heating the article and simultaneously applying molding pressure thereto to cause the material of the said body to flow toward the enmeshed edges so as to produce a finished homogeneous article, and thereafter removing said core.

2,003,233

PROCESS OF MANUFACTURING HIGH VISCOSITY INDEX OILS

Harry T. Bennett, Tulsa, Okla., assignor to Mid-Continent Petroleum Corporation, Tulsa, Okla., a corporation of Delaware

No Drawing. Application March 2, 1931, Serial No. 519,698

25 Claims. (Cl. 196—13)

1. In the art of making lubricating oils, the process of producing oils having high viscosity indices which comprises commingling halogenated ether with an oil having a low viscosity index, agitating the mixture to form a solution wherein the oil constituents having a relatively low viscosity index unite with the halogenated ether, then separating said solution from the constituents having a higher viscosity index, and separately distilling the halogenated ether from the resultant products.

2,003,234

PRODUCING HIGH VISCOSITY INDEX OILS

Harry T. Bennett, Tulsa, Okla., assignor to Mid-Continent Petroleum Corporation, Tulsa, Okla., a corporation of Delaware

No Drawing. Application April 21, 1932, Serial No. 606,764

10 Claims. (Cl. 196—13)

2. In the art of making high viscosity index lubricating oils, the process of treating oils having high and low viscosity index constituents, which comprises mixing dichlorethyl ether with the oil to be treated, separating the mixture into an oil fraction having a higher viscosity index than that of the original oil, and a dichlorethyl ether fraction, and distilling the dichlorethyl ether from one of said fractions in the presence of a neutralizing agent to neutralize the products of decomposition.

9. The process of treating oils having different constituents which comprises treating the oil with a chlorinated ether to effect a separation of the oil into fractions, separately distilling said fractions with steam to recover chlorinated ether from said fractions, condensing said steam, and recovering the chlorinated ether from said condensed steam.

2,003,235

PROCESS OF MANUFACTURING HIGH VISCOSITY INDEX OILS

Harry T. Bennett, Tulsa, Okla., assignor to Mid-Continent Petroleum Corporation, Tulsa, Okla., a corporation of Delaware

Application May 2, 1932, Serial No. 608,590

7 Claims. (Cl. 196—13)

1. The process of treating oils having high and low viscosity index constituents which comprises agitating a mixture of oil and dichlorethyl ether at a temperature at which the dichlorethyl ether is soluble with the low viscosity index constituents of the oil, and separating the solution of dichlorethyl ether and low viscosity index constituents from the high viscosity index constituent at approximately the same temperature at which the oil and dichlorethyl ether were agitated.

2,003,236

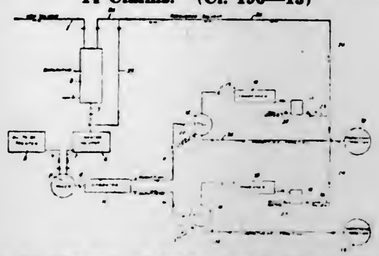
PROCESSES OF PRODUCING HIGH VISCOSITY INDEX OILS

Harry T. Bennett, Tulsa, Okla., assignor to Mid-Continent Petroleum Corporation, Tulsa, Okla., a corporation of Delaware.

No Drawing. Application October 22, 1932, Serial No. 639,046

7 Claims. (Cl. 196—13)

1. In the art of making high viscosity index oils from low viscosity index oils containing asphaltic materials, the process which comprises treating the oil including its asphaltic content with a chlorinated ether to effect a separation of the oil into high and low viscosity index fractions, removing the chlorinated ether from said fractions, and treating said high viscosity index fraction to further remove asphaltic materials.



2,003,237

PROCESS OF TREATING MINERAL OILS WITH SELECTIVE SOLVENTS

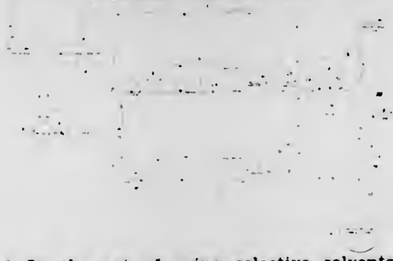
Harry T. Bennett, Tulsa, Okla., assignor to Mid-Continent Petroleum Corporation, Tulsa, Okla., a corporation of Delaware

Application June 23, 1933, Serial No. 677,256

14 Claims. (Cl. 196—13)

1. In the art of separating mineral oil into fractions more paraffinic and more naphthenic than the original oil, the process of using acid-containing solvents which comprises percolating the solvent through fullers earth to remove the acid from the solvent, thereafter treating the oil with said solvent to effect a separation of the oil into fractions more paraffinic and more naphthenic than the original oil, separately distilling said fractions and treating said fractions with steam to recover the solvent, and percolating the recovered solvent through fullers earth to remove acid formed in the solvent during the recovery thereof.

14. The method of recovering BB', dichlorethyl ether by distillation from hydrocarbon oils mixed therewith, comprising neutralizing said BB', dichlorethyl ether before and after the distillation step.



2,003,238

PROCESS OF SEPARATING MINERAL OILS

Harry T. Bennett, Tulsa, Okla., assignor to Mid-Continent Petroleum Corporation, Tulsa, Okla., a corporation of Delaware

Application June 23, 1933, Serial No. 677,257

6 Claims. (Cl. 196—13)

1. In the art of using selective solvents to separate lubricating oil into fractions more paraffinic and less paraffinic than the original oil, the process which comprises commingling the oil with chlorinated ether, thereafter separating the selected fraction from the other fraction, distilling from the more paraffinic fraction approximately all of the chlorinated ether contained therein, and thereafter subjecting said paraffinic fraction to a deodorizing operation whereby the ether odor is removed from the paraffinic oil.

2,003,239

PROCESS OF SEPARATING CONSTITUENTS OF MINERAL OILS

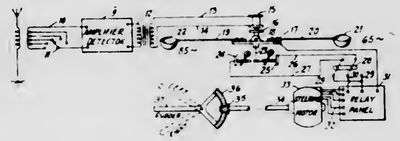
Harry T. Bennett, Tulsa, Okla., assignor to Mid-Continent Petroleum Corporation, Tulsa, Okla., a corporation of Delaware

Application June 23, 1933, Serial No. 677,258

5 Claims. (Cl. 196—13)

1. The process of treating oils having different constituents which comprises mixing the oil with a halogenated ether, separating the mixture into fractions, separately distilling one of said fractions with steam to separate the halogenated ether from said fraction, condensing said steam, distilling a relatively small quantity of said condensed steam to recover approximately all of the solvent contained in the condensed steam, and separating the last mentioned solvent from the condensed steam.

2,003,240



METHOD OF AND APPARATUS FOR RADIO-DYNAMIC STEERING CONTROL

Theophile E. Brockstedt, San Francisco, Calif., assignor to Washington Institute of Technology, Inc., a corporation of Delaware

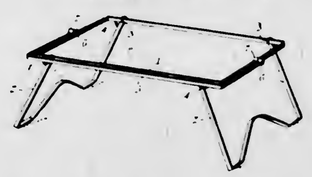
Application August 28, 1930, Serial No. 478,497

Renewed April 17, 1935

23 Claims. (Cl. 250—2)

2. The method of remote control of distant apparatus which includes the steps of simultaneously transmitting two distinctive and sustained directional control signals from a given point, utilizing said signals to establish two opposing control forces whose relative intensity is dependent upon the relative intensity of the respective signals, effecting the desired control by the differential force resultant from said control forces, and altering the characteristics of the transmitted signals to unbalance said control forces when desired and thereby effect the remote control of said distant apparatus.

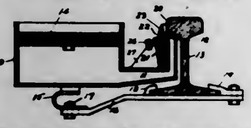
9. In combination, a plurality of angularly arranged directional antennas, means for radiating waves modulated with different audio frequencies from each of said antennas, a receiving device, a plurality of electro-mechanical resonance relays operatively connected with said receiving device for actuation thereby, and apparatus operatively connected to said relays to be controlled thereby.



2,003,241

BED TRAY TABLE

Alexander Brown, New York, N. Y.



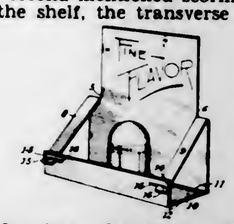
Application April 13, 1934, Serial No. 720,373

3 Claims. (Cl. 248—166)

1. A device of the character stated, including an open frame adapted to receive a tray or other device thereon, supports pivotally connected to the frame, a bail pivotally connected to the frame, and angular fingers connected to the pivots of said supports and said bail and projecting across the frame, so that said fingers limit the pivotal movement of the supports and bail.

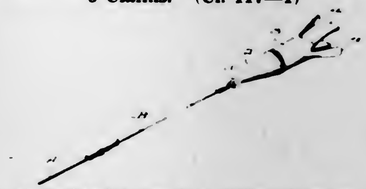
2,003,242
RAILWAY AND TRAMWAY RAIL AND WHEEL FLANGE LUBRICATION
Edwin George Butcher, Wahroonga, and William Edmund Jupe, Eastwood, New South Wales, Australia
Application August 19, 1933, Serial No. 685,942
In Australia July 13, 1933
17 Claims. (Cl. 184—3)

1. A rail and wheel flange lubricator adapted to supply lubricant intermittently in small quantities to the wheel flange side of a rail head and comprising a lubricant container filled with lubricant and positioned near the track, a container delivery mouth positioned near and parallel to the wheel flange side of the rail head, a weighted plunger within the container resting on the lubricant, springs secured to the base of the container, and horizontal bars carrying the springs and secured to the rail.



2,003,243
TOOTHBRUSH
Lawrence W. Campbell and Wilber P. Watson, Clarksburg, W. Va.; said Watson assignor to Ann Watson, Clarksburg, W. Va.
Application July 29, 1933, Serial No. 682,854
2 Claims. (Cl. 15—167)

1. A tooth brush comprising a handle, a head structure, said head structure being provided with a plurality of transversely extending slots, a plurality of bristle mounts, pins for slidably connecting the said bristle mounts to the head at the said slots, and means between the said bristle mounts whereby pressure on the intermediate bristle mounts will cause the outermost bristle mounts to move outwardly, while pressure on the outermost bristle mounts will cause the intermediate bristle mounts to move outwardly.



2,003,244
COMBINED ADVERTISING AND DISPLAY DEVICE
Ralph J. Carboni, New Orleans, La.
Application November 30, 1934, Serial No. 755,481
2 Claims. (Cl. 211—88)

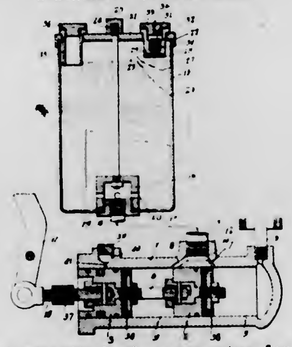
1. In a display device, a blank comprising pliable material having slits near its side edges at the upper edge thereof extending a suitable distance longitudinally of the blank, the portions between the slits and the side edges being adapted to form brackets when bent at the inner ends of the said slits, the portions of the brackets near their outer ends being transversely slitted to produce tabs at the ends of the brackets, the said material being scored transversely between its ends and having scores between the first mentioned scores and the lower end thereof, and the said blank having slits between the last mentioned scoring and the end adapted to receive the tabs of the bracket when the material is bent on the line of the first mentioned scoring to form a shelf and on the line of the second mentioned scoring to form a flange of the shelf, the transverse slits of the

brackets forming clearances whereby the brackets may be moved transversely of the blank in the slits at the lower end of the blank to form an interlocking connection.

2,003,245
DEVICE FOR RESTORING THE LAY TO TWISTED TEXTILE LINES
Charles Oliver Carey, Miami, Fla.
Application June 20, 1934, Serial No. 731,557
5 Claims. (Cl. 117—1)

1. A device for use in a body of water in retwisting partially untwisted normally twisted textile lines to restore the lay thereto, said device comprising a hollow cylindrical body of unbroken area having an open end, a hollow conical nose of unbroken area integral, and merging at its rear and point of greatest diameter, with said body, and an attaching eye integral with the forward tip of said nose for connection with the end portion of a textile line to turn therewith, the point of engagement between said line and eye being substantially in line with the axis of said device as a whole, and the hollow interiors of said nose and body being in communication and functioning to create a partial vacuum to increase the resistance of the device in the water in opposition to the pull of the line to which it is attached to thereby hold said line more taut and increase the speed of rotation of the device, in combination with a plurality of screw-type propeller blades integral with and extending from the rear edge of said body and adapted to be acted upon by the water as the device is pulled therethrough to cause rotation of said device, said blades being of such size and material and so connected to said body that they may by hand be spread apart or pressed toward each other or individually twisted to change their degree of, or to reverse the direction of their, twist.

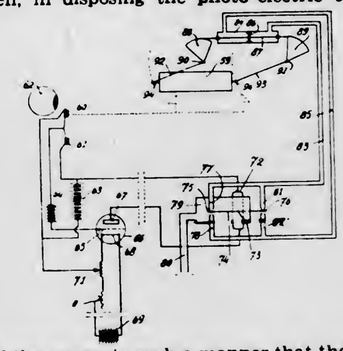
2,003,246
WINDOW FASTENER
Charles W. Carr, Lancaster, N. H.
Application May 1, 1934, Serial No. 723,392
2 Claims. (Cl. 292—228)



1. In a window fastener including a keeper strip having a plurality of equi-distantly arranged openings therein, a bearing sleeve, transversely curved ears extending from opposite sides of the bearing sleeve to receive attaching means, a bolt, an arm extending at an angle from one end of said bolt and mounted in the

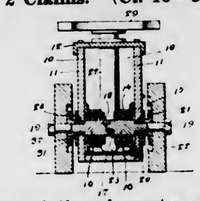
bearing sleeve for pivotal movement, an arm extending at an angle from the opposite end of said bolt and at right angles with respect

to the first mentioned arm to be received in any one of the openings and spring means for said bolt.



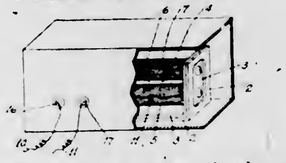
2,003,247
HYDRAULIC BRAKE APPARATUS
Eugene G. Carroll, Los Angeles, Calif., assignor, by mesne assignments, to Bendix Brake Company, South Bend, Ind., a corporation of Illinois
Application January 18, 1930, Serial No. 421,736
3 Claims. (Cl. 60—54.6)

1. In hydraulic brake apparatus for automobiles, the combination of a cylinder, two pistons of equal diameter mounted to move in the cylinder with means connecting the same for advancement in unison, means connected with the pistons for advancing the same to apply the brakes, said pistons having a position of rest and said cylinder having an inlet port for the operating fluid just in advance of the forward piston when in the said position of rest, and with a passage leading from the inlet port through the cylinder wall into the interior of the cylinder back of the forward piston, whereby the advance of the rear piston with the forward piston maintains a liquid seal back of the advancing forward piston, a pipe connection for connecting the forward end of the cylinder to the wheel brakes, and a reservoir for the operating liquid connected with the cylinder and supplying operating liquid to the said inlet port, said reservoir having a closed air chamber above the liquid level therein.



2,003,248
IMPROVEMENTS IN CONTROL OF GLARE SHIELDS OF VEHICLES
Constantin Chilowsky, Paris, France
Application July 27, 1932, Serial No. 625,173. Renewed May 2, 1935. In Germany August 7, 1931
9 Claims. (Cl. 296—97)

1. A method for protecting the eyes of a motor vehicle driver from the blinding action of illuminants such as the headlights of an approaching vehicle, which consists in mounting in the motor vehicle at least one photo-electric cell which is exposed to the blinding light, in providing a movable protecting screen in the form of a narrow strip and adapted to take position in front of the driver's eyes, mechanical means for moving the screen, an electrical connection between the photo-electric cell and the means for moving the screen, in disposing the photo-electric cell be-



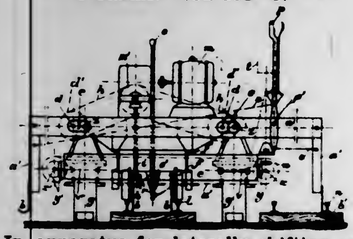
hind the screen in such a manner that the screen casts a shadow upon a part of the photo-electric cell when said screen casts a shadow upon the driver's eyes, the variations of current in the photo-electric cell according to the blinding light and the shadow cast by the screen acting on the means for moving the screen.

2,003,249
CASTER
Oscar Clay, South Bend, Ind.
Application July 2, 1934, Serial No. 733,507
2 Claims. (Cl. 16—36)

1. A caster of the character described comprising a hollow body, a swivel stem vertically fitted within the body, a bearing ball supported within the body against which the swivel stem operates, a pair of axles fitted transversely of said body and having interfitted ends, wheels upon said axles and at opposite sides of the body, and bearing ball boxings arranged within the body and about said axles and having bearing balls.

2,003,250
RADIO RECEIVING SET
Juan Antonio Vila y Colombo, Habana, Cuba
Application August 8, 1932, Serial No. 627,979
In Cuba August 1, 1932
3 Claims. (Cl. 250—20)

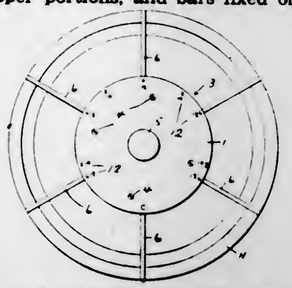
1. In a radio receiving set, two closely arranged coils, cores supporting said coils and insulated



from each other, one of said cores being formed of magnetizable material and the other being formed of copper, the coils being connected, respectively, with the antenna and ground leads.

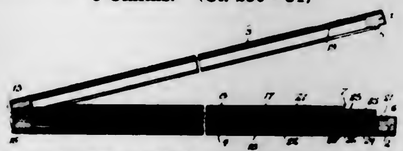
2,003,251
REENFORCED CONCRETE CONSTRUCTION SLAB
William P. Cummings, Woodside, N. Y.
Application May 19, 1934, Serial No. 726,539
3 Claims. (Cl. 72—71)

3. A concrete structure including an expanded metal member bent back and forth upon itself to produce successive rectangular sections, foraminous reenforcing metal members arranged on each side of the first mentioned metal member, a concrete body in which all of said metal members including the foraminous reenforcing members are embedded, and a plurality of reenforcing members distributed substantially uniformly in the space surrounded by said rectangular members.



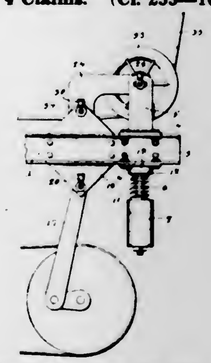
2,003,252
TRACK SHIFTING DEVICE
Hendrik Bernardus Marie de Lange, Nijmegen, Netherlands
Application June 30, 1930, Serial No. 465,013
In the Netherlands July 12, 1929
4 Claims. (Cl. 104—8)

1. In apparatus for laterally shifting railway tracks, a frame, wheels mounted on said frame and adapted to run on one of said tracks to transport the apparatus, means mounted on said frame for holding said track in fixed relation to said wheels, a pair of shafts mounted parallel to each other in suitable bearings on said frame, a source of power, means for coupling said source of power to said wheels, and means for coupling said source of power to said shafts to rotate said shafts in the same direction, in combination with a transverse bar, a pair of crank arms having their longitudinal central lines always disposed parallel to each other, and a pair of feet respectively mounted on the respective crank arms to move therewith about the respective axes of said shaft and disposed on opposite sides of said track and adapted to support the same and said apparatus during the actual lifting and transverse movement thereof, said crank arms being connected at one end to said shafts respectively to turn therewith.



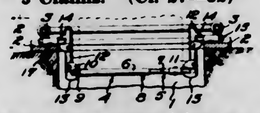
2,003,253
PIE CUTTER
Joseph B. Deutsch, Boulder City, Nev.
Application August 25, 1931, Serial No. 559,335
3 Claims. (Cl. 146—209)

1. A pie cutter comprising a substantially circular holder having a series of radially disposed sockets therein communicating with its periphery for selectively receiving a plurality of blades, and a plurality of blades removably mounted on the holder, said blades including extensions on their upper portions, and bars fixed on the ex-



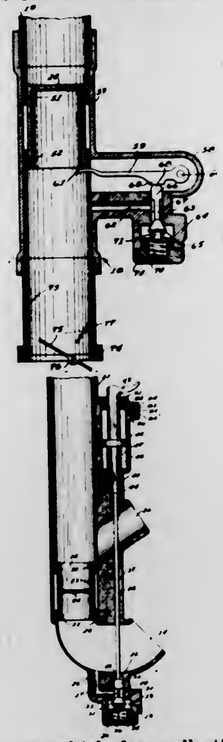
tensions and extending inwardly therefrom for slidable endwise insertion in the sockets.

2,003,254
X-RAY CASSETTE
Adolph E. Drexel, Palatka, Fla.
Application November 14, 1934, Serial No. 753,060
5 Claims. (Cl. 250—34)



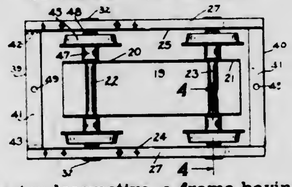
1. An X-ray cassette, comprising a pair of interlocking frames, means for hingedly connecting said frames along one edge, means at the opposite edges for disengageably locking said opposite edges together, a covering plate for each of said frames, a division member arranged interiorly of said frames, said division member being provided with a central steel plate, a lead plate on each side of said steel plate, a cushioning member mounted on each of the lead plates, and an intensifying screen positioned on each of said cushioning members and an intensifying screen secured to the inner face of each of said covering plates, X-ray plates being adapted to be placed between the respective pairs of intensifying screens and slightly pressed by said cushioning members so as to be held against accidental movement.

2,003,255
WIRE LINE SHOCK ABSORBER
Elmo E. Duff, Jennings, Okla.
Application March 12, 1934, Serial No. 715,250
4 Claims. (Cl. 255—16)



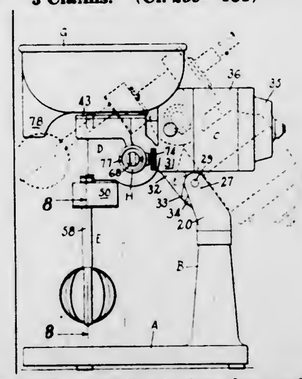
1. In a shock absorber for the line of a well drilling machine including a walking beam, guiding means for the line and including a pair of pulleys, a substantially U-shaped bracket having one of said pulleys journaled between the arms thereof, means for slidably and resiliently mounting the bracket with respect to the walking beam, bell crank arms having one of their ends pivotally connected to the bracket, means fixed to the walking beam and having the opposite ends of the bell crank arms pivotally connected thereto, and said fixed means having the other pulley journaled thereto.

2,003,256
SAFETY DEVICE
George D. Engle, Logan, Ohio
Application May 18, 1934, Serial No. 726,397
3 Claims. (Cl. 27—32)



1. A safety device comprising an adjustable member, side members hinged to the adjustable member, and supporting arms hinged to the side members to engage with opposite walls of a grave.

2,003,257
FARE COLLECTION METHOD AND APPARATUS
Frank R. Fageol and William B. Fageol, Kent, Ohio
Application January 29, 1931, Serial No. 512,165
40 Claims. (Cl. 243—3)

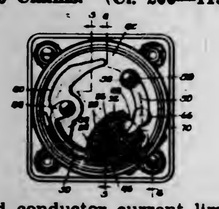


3. A system of vehicle fare collection comprising a fare receiving station, a fare-collecting station at a point remote from said receiving station, a carrier, means to guide said carrier from one of said stations to the other, mechanism at said receiving station to cause said carrier to be projected to said collecting station, and mechanism to automatically return said carrier to the receiving station.

2,003,258
TRUCK FOR TOY LOCOMOTIVE
Alfred C. Gilbert, North Haven, Conn., assignor to The A. C. Gilbert Company, New Haven, Conn., a corporation of Maryland
Application August 29, 1931, Serial No. 560,059
24 Claims. (Cl. 46—48)

24. In a toy locomotive, a frame having a pair of spaced apart members, a pair of wheels between said members, one of said wheels being adjacent each of said members, a generally U-shaped toy part disposed between said wheels in upstanding position, a wheel shaft extending between and passing through said members and through said wheels, and said shaft also passing through the upstanding sides of said toy part to suspend the latter therefrom with the bight portion thereof below said shaft.

2,003,259
KITCHEN UTILITY DEVICE
Alfred C. Gilbert, North Haven, and Arthur A. Arnold, New Haven, Conn., assignors to The A. C. Gilbert Company, New Haven, Conn.
Application January 4, 1933, Serial No. 650,112
3 Claims. (Cl. 259—131)



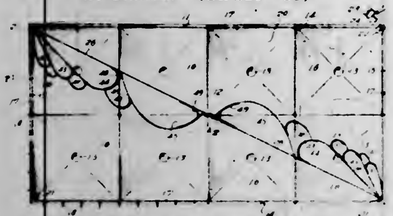
1. In a kitchen utility device, the combination of a base, a pedestal rising therefrom, a bracket pivoted to the upper end of the pedestal to swing in a vertical plane, a motor fixed on the bracket and movable therewith, a gear case adjacent one end of the motor casing, a vertical shaft journaled in said gear case, worm gearing for driving said vertical shaft from the motor shaft, a power shaft located below the motor shaft and below the gearing connecting the vertical shaft with the motor shaft, said power shaft being disposed substantially at right angles to the motor shaft and located between the vertical shaft and the motor, a socket on the gear case associated with said

power shaft for the connection of various accessory appliances, worm gearing connecting the power shaft with the vertical shaft so that it is driven therefrom, a fruit reamer connected with the upper end of the vertical shaft, and a depending agitator driven from the lower end of said vertical shaft.

2,003,260
CIRCUIT CONTROLLER

Stanley S. Green, La Fayette, Ind., assignor to Duncan Electric Manufacturing Company, La Fayette, Ind., a corporation of Illinois

Application March 6, 1933, Serial No. 659,775
26 Claims. (Cl. 200—113)

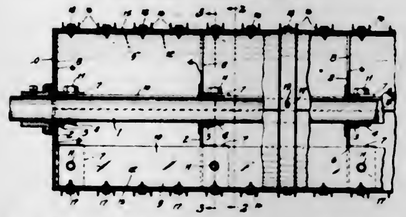


1. A liquid conductor current limiting circuit controller including: a control tube made of heat resisting insulation and having a current limiting bore therewithin, a casing surrounding said control tube and forming an expansion chamber with which said bore communicates suitably for the passage of a liquid into said bore, a pair of electrodes, a suitable quantity of liquid conductor within said container, said container including means for flowing said liquid conductor into said bore and into contact with said electrodes to electrically connect said electrodes lengthwise through said bore, the shape and arrangement of said container and control tube being such that liquid conductor expelled from said control tube by an overload will be prevented from reconnecting said electrodes except upon operation of said means; said controller being characterized by the fact that the portions of said electrodes exposed within said casing when not connected by liquid conductor are insulated from one another by a material which has the quality of maintaining substantially its full insulating qualities in spite of its exposure to high temperatures and to hot gases in contact with its surface.

2,003,261
THICKENER

Nels B. Lund, Seaford, N. Y., assignor, by mesne assignments, to The Dorr Company, Inc., New York, N. Y., a corporation of Delaware

Application February 16, 1931, Serial No. 515,917
Renewed November 15, 1934
26 Claims. (Cl. 210—55)

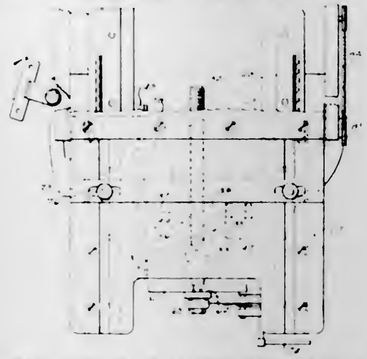


1. In settling apparatus, a tank having a bottom for collecting settled sludge, sludge conveying means for sweeping the tank bottom comprising a sludge scraping device, a motivating element therefore travelling around the circumference of the tank, a circumferential rigid guide for said motivating element, a flexible connection for securing the sludge scraping device to said travelling motivating element at a point above the liquid level of the tank, and means operable upon the travelling motivating element for counterbalancing lateral pull thereon of the sludge scraping device, and means for moving the motivating element.

2,003,262
SAW CYLINDER FOR COTTON EXTRACTING MACHINES

Orville Mitchell, Dallas, Tex.

Application May 19, 1934, Serial No. 726,437
2 Claims. (Cl. 19—63)

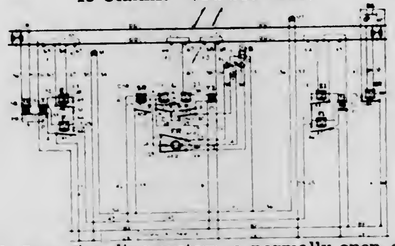


1. A saw cylinder for cotton extracting machines comprising, in combination, a shaft, a series of disks secured thereon in spaced relation, each of said disks being provided with equally spaced, circumferential radial recesses, corresponding recesses of the respective disks aligning, lips projecting, respectively, at right angles from corresponding sides of said recesses, an angle bar mounted in each aligning series of recesses, each angle bar extending the full length of the cylinder and comprising a straight flat metal member secured to the lips of its line of recesses and having an integral curved supporting member extending across the outer ends of said recesses, a sheet metal housing surrounding and supported on said disks and supporting members, and a series of saw bands encircling said housing at intervals throughout the length of the cylinder and secured in position by screws passed through apertures in the saw bands and engaged in said supporting members.

2,003,263
ADJUSTABLE WORK CARRYING TABLE

Henry Quintin Munn, Walkerville, Ontario, Canada, assignor to Michigan Tool Company, a corporation of Michigan

Application March 25, 1931, Serial No. 525,221
5 Claims. (Cl. 51—95)

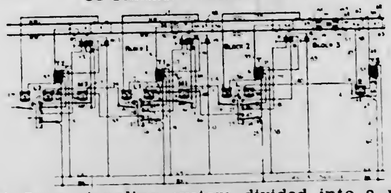


1. The method of varying the indexing of a work piece relative to the angle of lead of an indexing screw which includes the angular disposition of the screw relative to the normal retained position of the work piece.

2,003,264
RAILWAY CROSSING SIGNAL

Frank H. Richterkessing, Louisville, Ky., assignor to Nachod & United States Signal Co., Inc., Louisville, Ky., a corporation of New York

Application January 20, 1932, Serial No. 587,686
15 Claims. (Cl. 246—128)

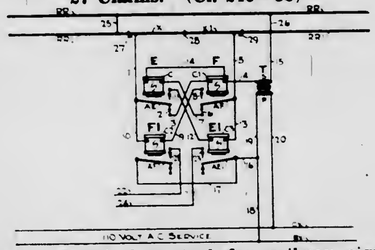


1. In a signaling system, a normally open circuit containing an operating coil of one relay and the armature of a second, means for closing the said circuit, a second normally open circuit containing the operating coil of the said second relay, the latter mentioned coil being adapted for attracting the said armature to interrupt the first said circuit, the said means likewise being adapted for closing the said second circuit, in combination with a circuit including an electromagnet and an armature adapted to be attracted by the first said operating coil, a circuit containing an armature adapted to be attracted by the said electromagnet, a signal controlled thereby, and another normally open circuit containing an operating coil, and other means controlled by the last mentioned coil for controlling the said signal and for restoring the said armature attracted by the said electromagnet to normal.

2,003,265
RAILWAY SIGNALING SYSTEM

Frank H. Richterkessing, Louisville, Ky., assignor to Nachod & United States Signal Co., Inc., Louisville, Ky., a corporation of New York

Application January 20, 1932, Serial No. 587,687
31 Claims. (Cl. 246—37)

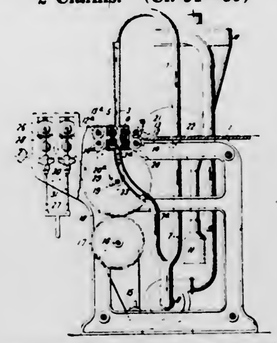


4. In a signaling system divided into a plurality of successive blocks and adapted to be operated by a train, in combination with a block or section of a railway and a track for the said train, said track comprising insulated sections at one of said stations, an electro-magnet adapted to be temporarily controlled by a train or car engaging the said insulated sections, a switch controlled by the said electro-magnet, a second switch, a normally indicating proceed signal controlled by the said second switch, a stop signal, and mechanical means cooperating with the said first and second switches whereby the first switch may control the second to discontinue the display of said proceed signal and cause the display of the said stop signal, and means responsive to the entry of the train into the successive block of the system, for restoring the said second switch to normal and to withhold the normal operation of the said proceed signal.

2,003,266
CONTROL FOR RAILWAY SIGNAL SYSTEMS

Frank H. Richterkessing, Louisville, Ky., assignor to Nachod & United States Signal Co., Inc., Louisville, Ky., a corporation of New York

Application February 1, 1932, Serial No. 590,245
27 Claims. (Cl. 246—58)



1. An electrical control for railway signals, comprising, a track, one of the rails of said track comprising insulated sections to be bridged by the wheels of a car or train, a plurality of electro-magnets, connections between the said insulated sections and said electro-magnets whereby the wheels of a train engaging the said sections when moving in different directions will energize different electro-magnets, and means responsive to the energization of either of the latter said electro-magnets and the successive engagement of the wheels with the said sections for energizing one or another of a second group of electro-magnets dependent upon the order of the successive engagement of the said sections, and means for retaining the energization of the selected electro-magnet of the first said group during the successive engagement of the said sections.

2,003,267
MACHINE FOR DUSTING SHEET MATERIALS

Gabriel Smith and Colman Smith, Leyton, London, England

Application October 12, 1933, Serial No. 693,359
In Great Britain March 21, 1933
2 Claims. (Cl. 91—59)

1. A machine of the character described, comprising in combination, a feed table and a de-

livery table, a suction space between the two tables through which material is passed from the former to the latter, means between the feed table and said suction space and like means between said space and the delivery table for feeding the material as stated, opposed stationary brushing means between the first of said feeding means and the applied suction area and opposed movable brushing means between said area and the second of said feeding means between each of which the material is directed in feed movement; said stationary and movable brushing means being both contained within a chamber providing the suction space, and said suction space being connected with means for the application of suction at both sides of the material passed therethrough.

2,003,268

METHOD OF ETCHING PLANOGRAPHIC PLATES, COMPOSITION THEREFOR, AND RESULTING PRODUCT

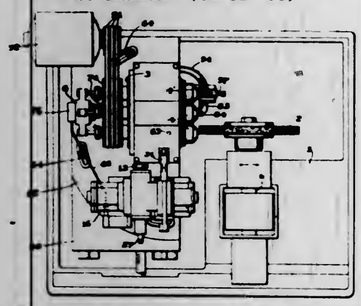
William B. Wescott, Dover, Mass., assignor to Multigraph Company, Wilmington, Del., a corporation of Delaware

No Drawing. Application September 13, 1933, Serial No. 689,285

36 Claims. (Cl. 41—41.5)

12. Method of treating the non-printing areas of the surface of a planographic printing plate carrying a light-hardened colloid image, with an aqueous solution comprising a passivator for the metal and an acid phosphate, characterized by being buffered substantially at the isoelectric point of the light-hardened colloid image substance, whereby the metal is passivated and the swelling of said image substance is maintained at a minimum.

16. A combined etching and dampening composition for metal planographic printing plates, comprising a passivator chosen from the designated class of passivating agents, an acid phosphate, a peptizing agent and water.



2,003,269

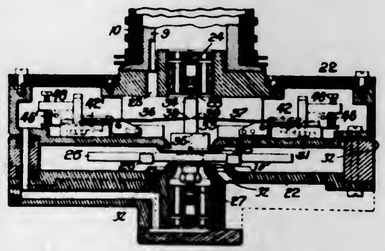
AUTOMATIC GRINDING MACHINE

Harry Arter, Worcester, and Warren F. Fraser, Westboro, Mass., assignors to Arter Grinding Machine Company, Worcester, Mass., a corporation of Massachusetts

Application March 25, 1933, Serial No. 662,754

20 Claims. (Cl. 51—95)

19. In a grinding machine, the combination of a turret carrying a series of work supporting chucks, a grinding wheel for acting on the work supported in said chucks, mechanism for indexing said turret to bring said chucks successively into loading and working positions, a fluid actuated operating mechanism associated with each individual chuck for controlling the clamping and releasing of the work, a valve comprising a valve body rigid with said turret and having ports communicating with said respective chuck operating mechanisms, said valve also including a valve plug around which said valve body is rotatable, and connections between said valve plug and said indexing mechanism for oscillating the plug in a definite timed relationship to the indexing movements of the turret.



2,003,270

FOLLOW-UP SYSTEM FOR MAGNETIC COMPASSES

Mortimer F. Bates, Brooklyn, N. Y., assignor to Sperry Gyroscope Company, Inc., Brooklyn, N. Y., a corporation of New York

Application January 11, 1934, Serial No. 706,207

6 Claims. (Cl. 33—204)

1. A remote or power control for magnetic compasses and the like comprising the combination with the magnetic needle element, a disc thereon, means for maintaining a superior air pressure thereunder than above the same to support the weight of said element, said element also having an eccentric aperture through which some of said air pressure escapes, a pair of biased pivoted vanes, the ends of which lie adjacent said aperture, and power means controlled by the relative movement of said vanes.

2,003,271

HURDLE WASHER

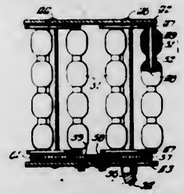
Wilhelm Beimann and Johann Hagenbeck, Bochum, Germany

Application January 20, 1934, Serial No. 707,456

In Germany September 19, 1932

3 Claims. (Cl. 261—111)

1. A vertical hurdle washer comprising a casing and hurdles therein consisting of superposed layers of strips of expanded metal with the strips in each layer arranged on edge and extending at an angle to the strips in an adjacent layer and inclined to the vertical, so that each layer forms a pervious mass continuously retarding and subdividing water flowing downwardly through the mass and bringing said water into intimate contact with gas passing upwardly through the mass.



2,003,272

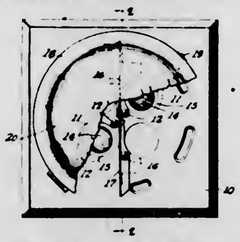
MASSAGING DEVICE

William G. Betz, Hammond, Ind.

Application January 31, 1931, Serial No. 512,612

3 Claims. (Cl. 128—59)

1. In a massaging device, a frame including a pair of end plates, a pair of rotatable shafts journalled in said plates, a massaging element carried by each of said shafts comprising discs encircling each shaft disposed between said end plates and adjacent thereto, rods lying parallel to the shaft and secured to said discs, independently revolving massaging rollers carried by said rods, and means for turning said shafts in opposite directions to rotate said massaging elements whereby the massaging rollers revolve when in contact with the skin to produce a kneading-massaging action on the skin.



2,003,273

HOSPITAL CORRIDOR LIGHT

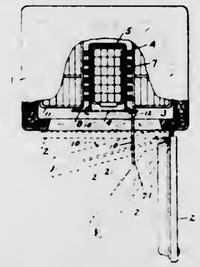
Frederic Lewis Garrigues, Meriden, Conn., assignor, by mesne assignments, to Connecticut Telephone & Electric Corporation, Meriden, Conn., a corporation of Delaware

Application June 12, 1928, Serial No. 284,863

4 Claims. (Cl. 177—329)

2. A signal lamp comprising a housing having an opening therein, a light transmitting cover for said opening, all portions of which are adapted to give the same signal indication when illuminated partitioning means in said housing dividing the same into a plurality of compartments, and a source of light in each of said compartments, all of said lights being connected in parallel and adapted to be normally simultaneously energized to transmit light rays through substantially all portions of said cover for giving a single signal indication when all of said lights are energized, a portion of said cover being darkened upon the failure of any of said lights.

2,003,274



REFRIGERATION CABINET

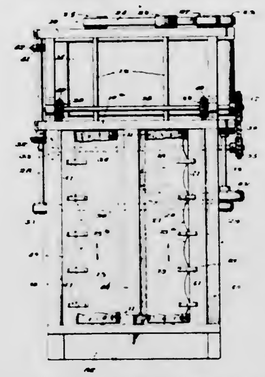
Philip A. Celander, Bloomington, Ill., assignor to Williams Oil-O-Matic Heating Corporation, Bloomington, Ill., a corporation of Illinois

Application March 29, 1934, Serial No. 717,908

1 Claim. (Cl. 62—89)

A refrigerating cabinet for a mechanical refrigeration system, a refrigerated compartment therein normally closed by a hinged air-tight door, a cooling element of the system mounted in said compartment, a casing for removably containing a plurality of ice cube trays mounted within and supported by the cooling element, a plate mounted upon the tray containing casing having an opening therein for the insertion and removal of the trays therethrough, a closure for said opening, a spring-actuated hinge on the

side adjacent the door hinge between the closure and plate normally maintaining the opening closed, and means actuated by the opening of the closure sufficiently for the removal of a tray to hold the closure in that position against the tension of the spring and means on the free side of the closure adapted to be engaged by the inner surface of the compartment door in closing to automatically free the closure to cover the plate opening.



2,003,275

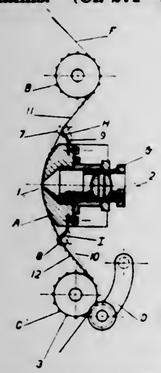
METHOD OF AND APPARATUS FOR TREATING FRUIT AND OTHER ARTICLES

Ernest M. Brogden, Pomona, Calif., assignor to Brogdex Company, Winter Haven, Fla., a corporation of Florida

Application September 2, 1931, Serial No. 560,816

11 Claims. (Cl. 146—193)

1. A machine for polishing fruit and the like comprising a substantially horizontal elongated rotary polishing element having a plurality of limp members along its length adapted to extend radially outward under the centrifugal force produced by the rotation of said element to form the polishing face of said element, a brushless fruit-supporting surface having a portion beneath and extending axially of said element and transversely curved on an arc concentric with said element and another portion upwardly and



outwardly inclined on the upward-run side of said polishing element, one of said surface portions being fixed and the other movable in a direction feeding fruit axially of said polishing element and both of said surface portions cooperating to provide a fruit runway having an unobstructed space between the polishing face of said element and said surface of radial extent increasing upwardly of said runway whereby fruit impacted by said polishing element is free to move upwardly over said surface under the force of said impact and returns by gravity downwardly over said surface for further contact with said polishing element and polishing action thereby.

2,003,276

MEANS AND METHOD OF PRODUCING UNIFORM MOTION IN A SOUND FILM

Leonard Day, New York, N. Y., assignor to Polytechnic Development Corporation, a corporation of New York

Application May 3, 1930, Serial No. 449,656
Renewed April 13, 1934
10 Claims. (Cl. 271—2.3)

10. In a sound-on-film sound projector, a sprocket adapted to draw the film by the engagement of sprocket teeth and an unloaded substantially inertialess leaf spring fixed at one end and free at the other end for filtering the fluctuating tension upon said film.

2,003,277

ACTIVATED CARBON

Edgar T. Olson, Marquette, Mich., assignor to The Cleveland Cliffs Iron Company, Cleveland, Ohio, a corporation of Ohio

No Drawing. Application August 2, 1933, Serial No. 683,380
10 Claims. (Cl. 252—3)

6. Activated hard wood charcoal having an electrical resistance of under 70 ohms to the cubic inch, an ash content in the unwashed state of under 7%, an iodine absorption of over 60%, a phenol absorption of under 30 parts per million (Bayliss), an apparent density of over .5, an iron content of under .1%, said charcoal being substantially free of arsenic and glycerine solubles.

10. Light, porous, cellular, substantially dust-free, granular activated hardwood charcoal having an iodine absorption value of over about 60%.

2,003,278

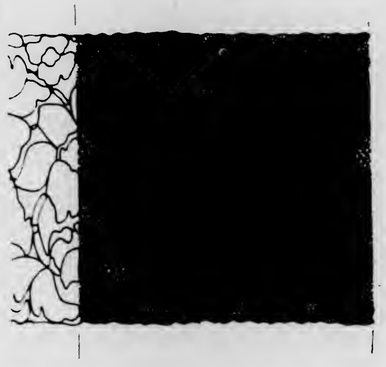
PREPARATION OF ACTIVATED CARBON

Edgar T. Olson, New York, N. Y., assignor to The Cleveland Cliffs Iron Company, Cleveland, Ohio, a corporation of Ohio

Application August 28, 1933, Serial No. 687,063
12 Claims. (Cl. 252—3)

1. The method of making activated wood charcoal which comprises carbonizing wood at temperatures below 1000° F. to form charcoal, granulating and grading the charcoal so that it will pass thru about 4 to 6 mesh screen, removing the dust from the charcoal granules, passing the charcoal granules between electrodes in a substantially air tight chamber, passing electric current thru the charcoal between the electrodes to resistance heat the charcoal, admitting steam near the discharge end of the chamber to pass thru the charcoal while the latter is being heated by the electric current and finally grinding the thus activated charcoal to the desired size, the initial size of the charcoal granules being so correlated with the size of the space between electrodes that changes in area between electrodes vary directly with the square of the volume of the charcoal granules, and the speed and duration of travel of the charcoal, the current employed and the amount of steam used being so correlated so as to result in the charcoal attaining while in the proper state for activation a temperature of between 3000° F. and 3300° for at least one hour.

DESIGNS



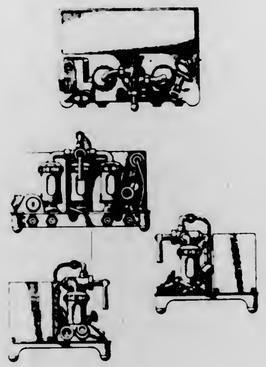
MAY 28, 1935

95,723

DESIGN FOR A LACE

William Roger Adaire, Washington, R. I., assignor to Gehring, Solomon & Birnbaum, Inc., New York, N. Y., a corporation of New York

Application March 19, 1935, Serial No. 55,942
Term of patent 3½ years



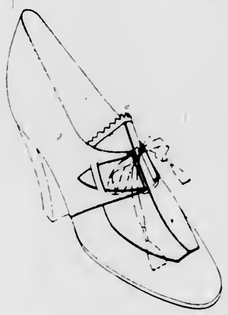
The ornamental design for a lace as shown and described.

95,724

DESIGN FOR A BEER COIL CLEANER

Harry W. Anderson, Chicago, Ill.

Application March 19, 1935, Serial No. 55,943
Term of patent 3½ years



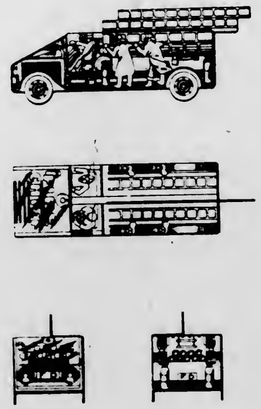
The ornamental design for a beer coil cleaner, as shown.

95,725

DESIGN FOR A SHOE

Jerome Edson Andrews, Andover, Mass.

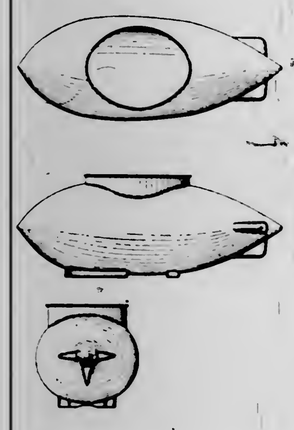
Application April 6, 1935, Serial No. 56,248
Term of patent 3½ years



The ornamental design for a shoe substantially as shown and described.

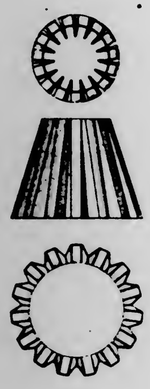
95,726

DESIGN FOR A COLLAPSIBLE CARTON



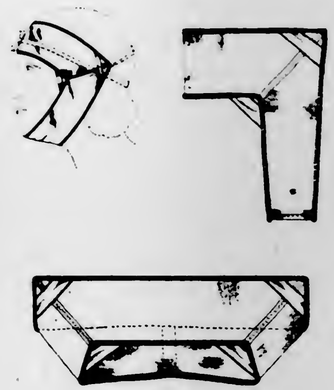
Stuart M. Andrews, Brooklyn, N. Y., assignor to P. L. Andrews Corporation, Glendale, L. L, N. Y., a corporation of New York

Application March 1, 1935, Serial No. 55,667
Term of patent 3½ years



The ornamental design for a collapsible carton, as shown.

95,727
DESIGN FOR A FISH BOWL OR SIMILAR ARTICLE
Charles P. Askew, Marion, Ind., assignor to The Canton Glass Company, Marion, Ind., a corporation of Indiana
Application March 19, 1935, Serial No. 55,953
Term of patent 3½ years

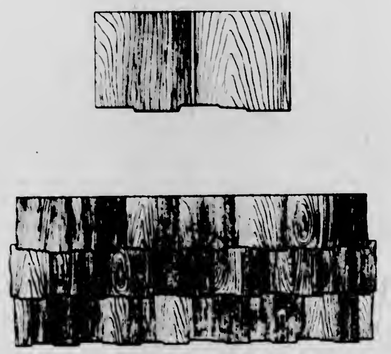


The ornamental design for a fish bowl or similar article, as shown.

95,728
DESIGN FOR A LAMP SHADE
Isaac Batkin, New York, N. Y.
Application July 20, 1934, Serial No. 52,641
Term of patent 3½ years

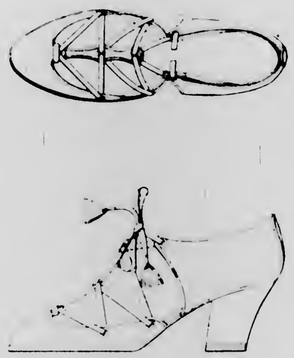
The ornamental design for a lamp shade, as shown and described.

95,729
DESIGN FOR A FACIAL SUPPORT
Florence Lund Brown, Chicago, Ill.
Application February 5, 1934, Serial No. 50,608
Term of patent 7 years



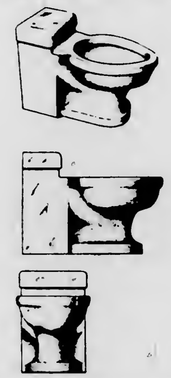
The ornamental design for a facial support, as shown.

95,730
DESIGN FOR A REFRIGERATOR CABINET OR SIMILAR ARTICLE
John C. Buchanan, Detroit, Mich., assignor, by mesne assignments, to Borg-Warner Corporation, a corporation of Illinois
Application August 19, 1933, Serial No. 49,068
Term of patent 14 years



The ornamental design for a refrigerator cabinet or similar article, substantially as shown and described.

95,731
DESIGN FOR A SIDING
John J. Cahill, Chicago, and Elmer F. McClintock, Oak Park, Ill., assignors to The Ruberoid Co., New York, N. Y., a corporation of New Jersey
Application March 26, 1935, Serial No. 56,062
Term of patent 7 years



The ornamental design for a siding, substantially as shown.

95,732
DESIGN FOR A SHOE
Ernest W. Dunbar, Hudson, Mass., assignor to Cambridge Rubber Co., Cambridge, Mass., a corporation of Massachusetts
Application February 28, 1935, Serial No. 55,663
Term of patent 7 years

The ornamental design for a shoe, substantially as shown and described.

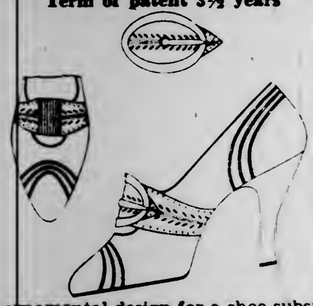
95,733
DESIGN FOR A TOILET
George C. Duncan, Jr., Los Angeles, Calif., assignor to Duncan No-Noise Valve & Bowl Co., Inc., Los Angeles, Calif., a corporation of California
Application March 16, 1934, Serial No. 51,082
Term of patent 14 years

The ornamental design for a toilet substantially as shown.

95,734
DESIGN FOR A SIGN
George D. Duntze, St. Louis, Mo., assignor to James T. Caradine, St. Louis, Mo.
Application March 11, 1935, Serial No. 55,819
Term of patent 7 years

The ornamental design for a sign, substantially as shown.

95,735
DESIGN FOR LACE
Bert Edson, Pawtucket, R. I.
Application April 24, 1935, Serial No. 56,533
Term of patent 3½ years

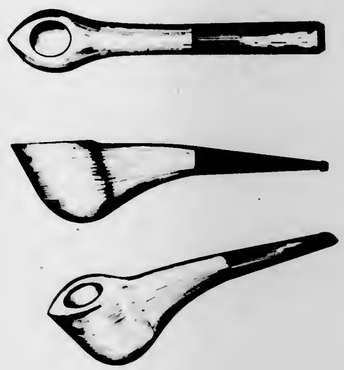


The ornamental design for lace, substantially as shown.

95,736
DESIGN FOR A SHOE
Jacob Fishman, Brooklyn, N. Y., assignor to Scholnick Shoe Co., Jamaica Plain, Mass., a corporation of Massachusetts
Application August 20, 1934, Serial No. 52,997
Term of patent 3½ years

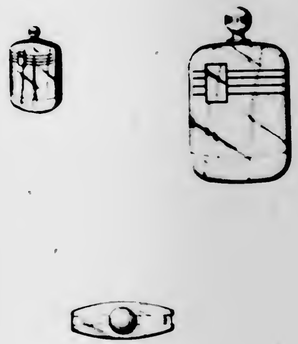
The ornamental design for a shoe substantially as shown and described.

95,737
DESIGN FOR A SHOE
Jacob Fishman, Brooklyn, N. Y., assignor to Scholnick Shoe Co., Jamaica Plain, Mass., a corporation of Massachusetts
Application January 30, 1935, Serial No. 55,135
Term of patent 3½ years



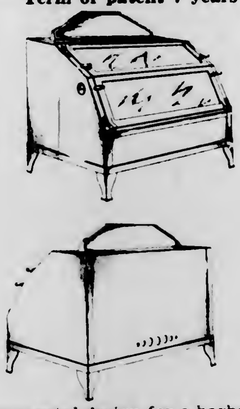
The ornamental design for a shoe substantially as shown and described.

95,738
DESIGN FOR A SHOE
Samuel Fradkin, Lewiston, Maine
Application March 21, 1935, Serial No. 55,990
Term of patent 3½ years



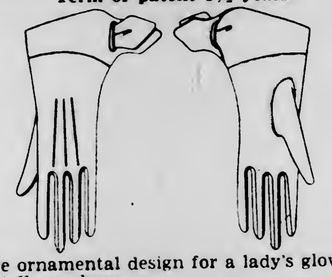
The ornamental design for a shoe, as shown.

95,739
DESIGN FOR A SMOKER'S PIPE
Lynn M. Francis, Birmingham, Mich.
Application January 2, 1935, Serial No. 54,662
Term of patent 7 years



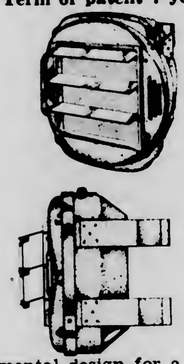
The ornamental design for a smoker's pipe, as shown, and described.

95,740
DESIGN FOR A POCKET LIGHTER
Jack Galter, Chicago, Ill.
Application September 17, 1934, Serial No. 53,307
Term of patent 3½ years



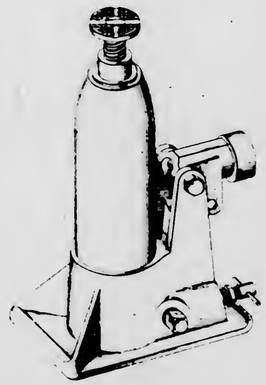
The ornamental design for a pocket lighter, substantially as shown.

95,741
DESIGN FOR A BARBECUE MACHINE CASING
Gus Garvis, Des Moines, Iowa
Application March 12, 1935, Serial No. 55,849
Term of patent 7 years



The ornamental design for a barbecue machine casing substantially as shown.

95,742
DESIGN FOR A LADY'S GLOVE
Oscar G. Goodhand, New York, N. Y.
Application April 5, 1935, Serial No. 56,227
Term of patent 3½ years

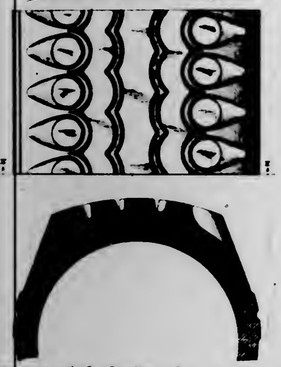


The ornamental design for a lady's glove, substantially as shown.

95,743
DESIGN FOR A HEATER
Harold F. Hadley, Toledo, Ohio
Application December 29, 1934, Serial No. 54,640
Term of patent 7 years

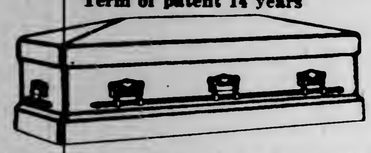
The ornamental design for a heater substantially as shown.

95,744
DESIGN FOR A JACK
Gothard G. Hein, Waukesha, Wis., assignor to Hein-Werner Motor Parts Corporation, Waukesha, Wis., a corporation of Wisconsin
Application August 16, 1934, Serial No. 52,963
Term of patent 7 years



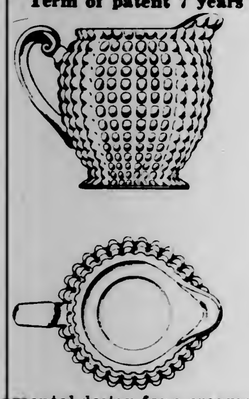
The ornamental design for a jack, as shown.

95,745
DESIGN FOR A CHAIR
Wolfgang Hoffmann, Chicago, Ill., assignor to The W. H. Howell Company, Geneva, Ill., a corporation of Illinois
Application February 5, 1935, Serial No. 55,250
Term of patent 7 years



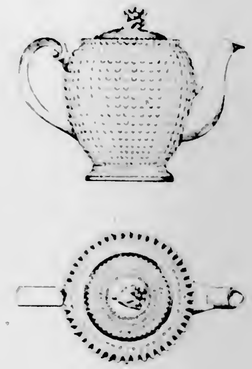
The ornamental design for a chair, as shown.

95,746
DESIGN FOR A TIRE OR SIMILAR ARTICLE
Ralph W. Hutchens, Eau Claire, Wis., assignor to Gillette Rubber Company, Eau Claire, Wis., a corporation of Wisconsin
Application March 7, 1935, Serial No. 55,761
Term of patent 14 years



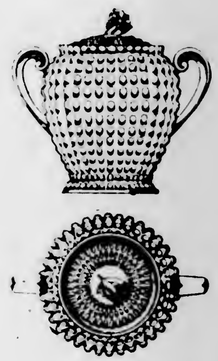
The ornamental design for a tire or similar article, as shown.

95,747
DESIGN FOR A BURIAL VAULT
Willard E. Jaquith, Syracuse, N. Y.
Application October 20, 1933, Serial No. 49,517
Term of patent 14 years



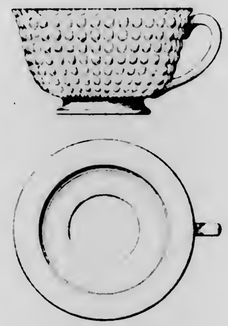
The ornamental design for a burial vault, as shown and described.

95,748
DESIGN FOR A CREAMER
Charles Kaiser, Great Neck, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a corporation of Japan
Application September 1, 1934, Serial No. 53,146
Term of patent 7 years



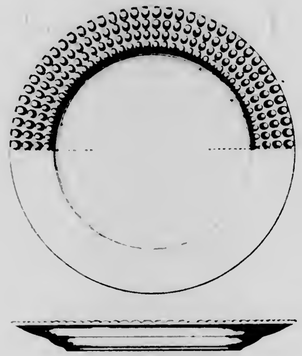
The ornamental design for a creamer, as shown.

95,749
DESIGN FOR A TEAPOT
Charles Kaiser, Great Neck, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a corporation of Japan
Application September 1, 1934, Serial No. 53,147
Term of patent 7 years



The ornamental design for a teapot, as shown.

95,750
DESIGN FOR A SUGAR BOWL
Charles Kaiser, Great Neck, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a corporation of Japan
Application September 1, 1934, Serial No. 53,148
Term of patent 7 years



The ornamental design for a sugar bowl, as shown.

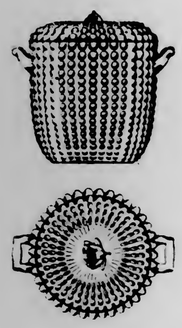
95,751
DESIGN FOR A CUP
Charles Kaiser, Great Neck, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a corporation of Japan
Application September 1, 1934, Serial No. 53,149
Term of patent 7 years

The ornamental design for a cup, as shown.

95,752
DESIGN FOR A PLATE OR SIMILAR ARTICLE
Charles Kaiser, Great Neck, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a corporation of Japan
Application September 1, 1934, Serial No. 53,150
Term of patent 7 years

The ornamental design for a plate or similar article, as shown and described.

95,753
DESIGN FOR A COFFEEPOT
Charles Kaiser, Great Neck, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a corporation of Japan
Application September 1, 1934, Serial No. 53,151
Term of patent 7 years

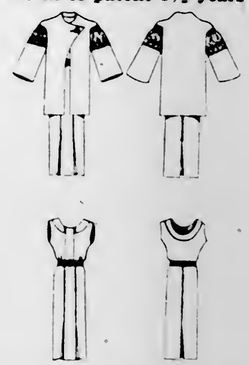


The ornamental design for a coffeepot, as shown.

95,754
DESIGN FOR A CREAMER
Charles Kaiser, Great Neck, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a corporation of Japan
Application September 1, 1934, Serial No. 53,152
Term of patent 7 years

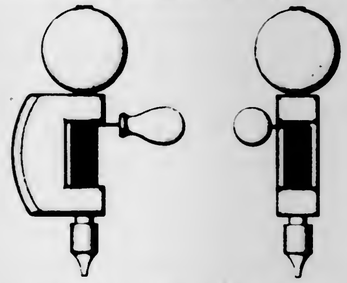
The ornamental design for a creamer, as shown.

95,755
DESIGN FOR A COOKY JAR
Charles Kaiser, Great Neck, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a corporation of Japan
Application September 1, 1934, Serial No. 53,154
Term of patent 7 years



The ornamental design for a cooky jar, as shown.

95,756
DESIGN FOR A TEAPOT
Charles Kaiser, Great Neck, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a corporation of Japan
Application September 1, 1934, Serial No. 53,155
Term of patent 7 years

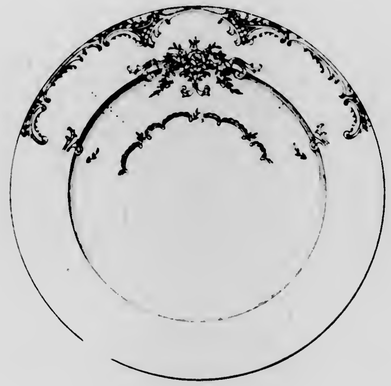


The ornamental design for a teapot, as shown.

95,757
DESIGN FOR AN ENSEMBLE DRESS
Jack Kirschner, New York, N. Y.
Application April 11, 1935, Serial No. 56,337
Term of patent 3½ years

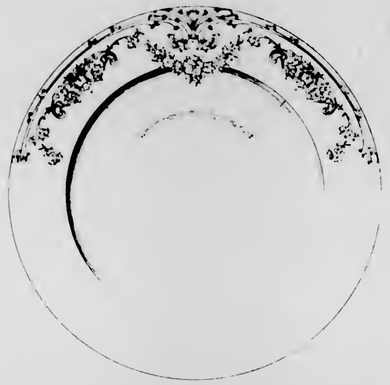
The ornamental design for an ensemble dress substantially as shown and described.

95,758
DESIGN FOR TOP SPINNING DEVICE
Edward Kleinofen, Evanston, Ill.
Application May 2, 1934, Serial No. 51,663
Term of patent 7 years



The ornamental design for a top spinning device, as shown.

95,759
DESIGN FOR A DRESS
Blanche Lahn, New York, N. Y., assignor to Franklin Simon & Co. Inc., New York, N. Y.
Application February 14, 1935, Serial No. 55,414
Term of patent 3½ years



The ornamental design for a dress, substantially as shown.

95,760
DESIGN FOR A PLATE OR SIMILAR ARTICLE
Cyril W. Leigh, East Orange, N. J., assignor to Morimura Bros. Inc., New York, N. Y., a corporation of Japan
Application September 1, 1934, Serial No. 53,144
Term of patent 7 years

The ornamental design for a plate or similar article, as shown and described.

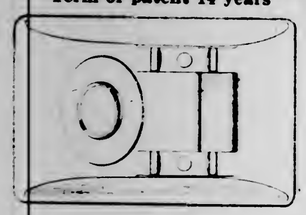
95,761
DESIGN FOR A PLATE OR SIMILAR ARTICLE
Cyril W. Leigh, East Orange, N. J., assignor to Morimura Bros. Inc., New York, N. Y., a corporation of Japan
Application September 1, 1934, Serial No. 53,145
Term of patent 7 years

The ornamental design for a plate or similar article, as shown and described.

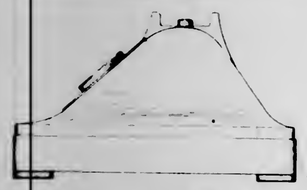
95,762
DESIGN FOR A BEVERAGE DISPENSER
Oscar J. Leins, Milwaukee, Wis., assignor to Milwaukee Gas Specialty Company, Milwaukee, Wis., a corporation of Wisconsin
Application September 10, 1934, Serial No. 53,243
Term of patent 14 years

The ornamental design for a beverage dispenser as shown.

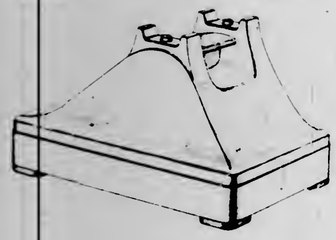
95,763
DESIGN FOR A VAGINAL SYRINGE NOZZLE
Rosemarie Lewis, Los Angeles, Calif.
Application December 24, 1934, Serial No. 54,563
Term of patent 7 years



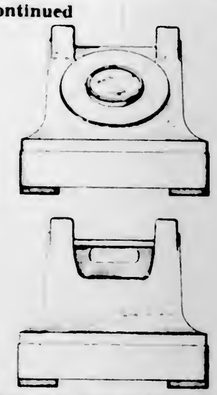
The ornamental design for a vaginal syringe nozzle as shown.



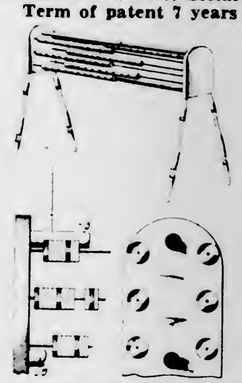
95,764
DESIGN FOR A TEXTILE FABRIC OR SIMILAR ARTICLE
Jean L. Lien, New York, N. Y., assignor to A. W. Baylis Co., New York, N. Y.
Application April 17, 1935, Serial No. 56,441
Term of patent 3½ years



The ornamental design for a textile fabric or similar article as shown and described.



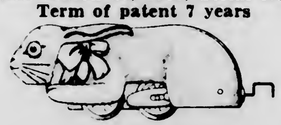
95,765
DESIGN FOR A DESK STAND FOR A HAND TELEPHONE
George R. Lum, New York, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application March 27, 1935, Serial No. 56,070
Term of patent 14 years



95,765—Continued

The ornamental design for a desk stand for a hand telephone as shown.

95,766
DESIGN FOR A GAME SCORING DEVICE
Walter L. Mann, Phillipston, Mass.
Application March 28, 1935, Serial No. 56,102
Term of patent 7 years

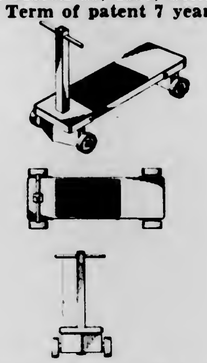


The ornamental design for a game scoring device as shown.

95,767
DESIGN FOR A SANDAL OR SIMILAR ARTICLE
John C. Marks, New York, N. Y.
Application March 27, 1935, Serial No. 56,069
Term of patent 3½ years

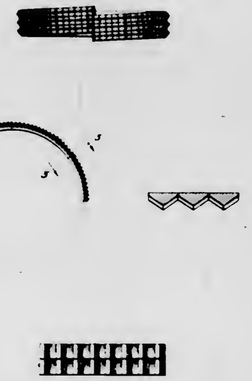
The ornamental design for a sandal or similar article substantially as shown and described.

95,768
DESIGN FOR A TOY LOCOMOTIVE
Louis Marx, New York, N. Y.
Application March 29, 1935, Serial No. 56,116
Term of patent 7 years



The ornamental design for a toy locomotive substantially as shown.

95,769
DESIGN FOR AN ERASER
Joseph Meilner, West Orange, N. J., assignor to Eagle Pencil Company, New York, N. Y., a corporation of Delaware
Application January 16, 1935, Serial No. 54,879
Term of patent 14 years

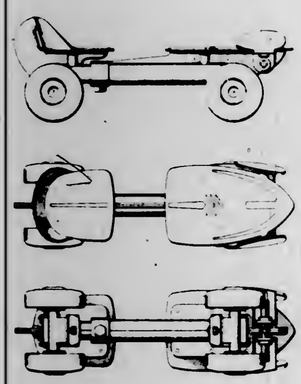


The ornamental design for an eraser, as shown.

95,770
DESIGN FOR A CHILD'S VEHICLE
George R. Mellon, Kansas City, Mo.
Application March 29, 1935, Serial No. 56,115
Term of patent 7 years

The ornamental design for a child's vehicle, as shown.

95,771
DESIGN FOR A BRACELET OR SIMILAR ARTICLE OF JEWELRY
John M. Miller and George F. Fenton, Providence, R. I., assignors to The Progressive Ring Company, Providence, R. I., a corporation of Rhode Island
Application February 25, 1935, Serial No. 55,613
Term of patent 7 years



The ornamental design for a bracelet or similar article of jewelry, as shown and described.

95,772
DESIGN FOR A DECANTER TYPE BOTTLE
James V. Mondi, Chicago, Ill.
Application February 26, 1935, Serial No. 55,625
Term of patent 3½ years

The ornamental design for a decanter type bottle as shown.

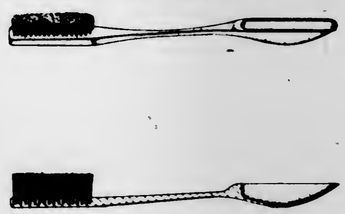
95,773
DESIGN FOR A ROLLER SKATE
John Richard Morgan, Chicago, Ill., and John S. Caldwell, Milwaukee, Wis., assignors to Globe-Union Mfg. Co., Milwaukee, Wis., a corporation of Wisconsin
Application February 23, 1935, Serial No. 55,580
Term of patent 7 years

The ornamental design for a roller skate, as shown.

95,774
DESIGN FOR A MOTOR CASING
Edward R. Mross, Racine, Wis., assignor to Scovill Manufacturing Company, Waterbury, Conn., a corporation of Connecticut
Application March 21, 1935, Serial No. 55,982
Term of patent 7 years

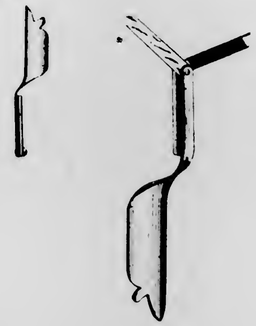
The ornamental design for a motor casing as shown.

95,775
DESIGN FOR A SHOE
Andre Perugia, Paris, France
Application April 8, 1935, Serial No. 56,272
Term of patent 3½ years



The ornamental design for a shoe, as shown.

95,776
DESIGN FOR A SHOE
Andre Perugia, Paris, France
Application April 8, 1935, Serial No. 56,273
Term of patent 3½ years

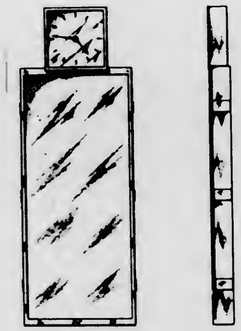


The ornamental design for a shoe, as shown.

95,777
DESIGN FOR A TOOTHBRUSH SPOON
Jessie Evelyn Peterkin and Frederick William Marlow, Toronto, Ontario, Canada
Application August 20, 1934, Serial No. 53,000
Term of patent 14 years

The ornamental design for a toothbrush spoon, as shown.

95,778
DESIGN FOR A COMBINED KNIFE, NAIL FILE, AND PENCIL CLIP
Per A. Peterson, New York, N. Y.
Application February 25, 1935, Serial No. 55,592
Term of patent 7 years

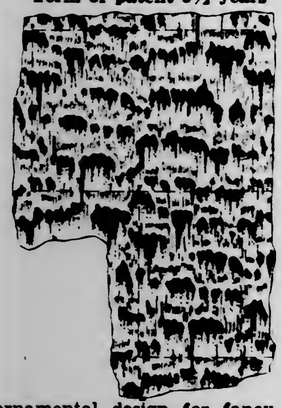


The ornamental design for a combined knife, nail file and pencil clip, as shown and described.

95,779
DESIGN FOR A SCORE SHEET
Richard Fitz Power, Hampstead, London, England
Application October 29, 1934, Serial No. 53,803
In Great Britain July 3, 1934
Term of patent 14 years

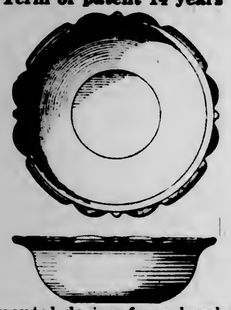
The ornamental design for a score sheet as shown.

95,780
DESIGN FOR A COMBINATION ADVERTISING DISPLAY CABINET AND CLOCK
Markus Pufeles, New York, N. Y.
Application March 26, 1935, Serial No. 56,051
Term of patent 7 years



The ornamental design for a combination advertising display cabinet and clock, as shown.

95,781
DESIGN FOR A TEXTILE FABRIC OR SIMILAR ARTICLE OF MANUFACTURE
Albert Schumacher, Passaic, N. J., assignor to Botany Worsted Mills, Passaic, N. J., a corporation of New Jersey
Application February 1, 1935, Serial No. 55,206
Term of patent 14 years

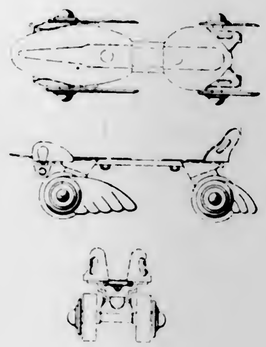


The ornamental design for a textile fabric or similar article of manufacture substantially as shown and described.

95,782
DESIGN FOR FANCY PAPER OR SIMILAR ARTICLE
Norman E. Scott, Atlantic, Mass., assignor to Deerfield Glassine Company, Inc., Monroe Bridge, Mass., a corporation
Application October 3, 1934, Serial No. 53,466
Term of patent 3½ years

The ornamental design for fancy paper or similar article as shown and described.

95,783
DESIGN FOR A BOWL
Maurice A. Smith, Jeannette, Pa.
Application March 12, 1935, Serial No. 55,851
Term of patent 14 years



The ornamental design for a bowl as shown.

95,784
DESIGN FOR A COOKY
Frank Charles Werner, Grand Rapids, Mich.
Application March 18, 1935, Serial No. 55,920
Term of patent 3½ years

The ornamental design for a cooky as shown.

95,785
DESIGN FOR A ROLLER SKATE
Edward Earle Whitney, Worcester, Mass., assignor to Matthews Manufacturing Company, Worcester, Mass., a corporation of Massachusetts
Application March 28, 1935, Serial No. 56,101
Term of patent 7 years

The ornamental design for a roller skate as shown and described.

95,786
DESIGN FOR A KNITTED DRESS
Morris Feldman, New York, N. Y.
Application April 19, 1935, Serial No. 56,462
Term of patent 3½ years

The ornamental design for a knitted dress, substantially as shown.

Powell, John M., Mount Vernon, Ill. Combination grave marker and flower vase. 19,602; June 4.

LIST OF PLANT PATENTEES

Witterstaetter, Richard, deceased, Cincinnati, Ohio, by R. C. Witterstaetter, executor, assignor to R. Witterstaetter Carnation Company, Cincinnati, Ohio. Carnation variety. 127; June 4.
Witterstaetter, R., Carnation Company. (See Witterstaetter, Richard, assignor.)
Witterstaetter, Richard C., executor. (See Witterstaetter, Richard.)

LIST OF DESIGN PATENTEES

Ahrens, Clyde W., assignor to Mission Dry Corporation, New York, N. Y. Bottle. 95,787; June 4.
Allen, James. (See Van Schelle, M., and Allen.)
Aluminum Cooking Utensil Company, The. (See Brenneman, Anetta, assignor.)
Alvin Corporation, The. (See Price, James R., assignor.)
American Fabrics Company, The. (See Barnum, Harry B., assignor.)
Andino, Lorenzo, East Elmhurst, N. Y. Shoe or similar article. 95,788; June 4.
Andino, Lorenzo, East Elmhurst, N. Y. Shoe or similar article. 95,789; June 4.
Awgumy, Michael E., New York, N. Y. Two-piece slip. 95,790; June 4.
Baetz, Walter, New York, N. Y. Toy vehicle or the like. 95,791; June 4.
Baetz, Walter, New York, N. Y. Toy vehicle or the like. 95,792; June 4.
Baetz, Walter, New York, N. Y. Toy vehicle or the like. 95,793; June 4.
Barnum, Harry B., Stratford, assignor to The American Fabrics Company, Bridgeport, Conn. Lace. 95,794; June 4.
Barnum, Harry B., Stratford, assignor to The American Fabrics Company, Bridgeport, Conn. Lace. 95,795; June 4.
Barnum, Harry B., Stratford, assignor to The American Fabrics Company, Bridgeport, Conn. Lace. 95,796; June 4.
Berger, Emil J., Hatfield, assignor to Dexdale Hosiery Mills, Lansdale, Pa. Display stand for hosiery or the like. 95,797; June 4.
Berlnstein, Harry L., Elmira, N. Y. Vanity case. 95,798; June 4.
Berkshire Knitting Mills. (See Janssen, Henry, assignor.)
Blumenthal, Sidney, & Co. Inc. (See Todd, Juanita, assignor.)
Brenneman, Anetta, Factoryville, assignor to The Aluminum Cooking Utensil Company, New Kensington, Pa. Drip coffeepot. 95,799; June 4.
Brenneman, Anetta, Factoryville, assignor to The Aluminum Cooking Utensil Company, New Kensington, Pa. Coffee pot. 95,800; June 4.
Burkhart, Evangeline, New York, N. Y. Powder puff. 95,801; June 4.
Caplan, Moses, Boston, Mass. Wall pocket for pot holders, memorandum pads, and pencils. 95,802; June 4.
Carr-Lowrey Glass Co. (See Leach, Walter R., assignor.)
Carr-Lowrey Glass Co. (See McLaughlin, Frank, assignor.)
Cohen, Joseph H., Bridgeport, Conn. Fender guide. 95,803; June 4.
Columbus Metal Products Inc. (See Donley, Harold B., assignor.)
Compton, Henry P. and L. Solomon, Abilene, Tex. Game apparatus. 95,804; June 4.
Continental Optical Company. (See Soden, Fred H., assignor.)
Cox, Irwin W., Denver, Colo. Memorial marker. 95,805; June 4.
Cox, Orin K., Los Angeles, Calif. Dishwashing machine. 95,806; June 4.
Davock, Harlow N., Birmingham, Mich. Lavatory. 95,807; June 4.
De Boer, Rudolph F., Grand Rapids, Mich. Ash receiver. 95,808; June 4.
De Liso, Vincent, Astoria, N. Y. Shoe. 95,809; June 4.
Dexdale Hosiery Mills. (See Berger, Emil J., assignor.)
Donley, Harold B., assignor to Columbus Metal Products Inc., Columbus, Ohio. Vehicle lamp globe or similar article. 95,810; June 4.
Duro Metal Products Company. (See Hedgpeth, Theron L., assignor.)
Ellsworth, Charles K. (See Van Doren, H. L., and Ellsworth.)
Farr, Fred D., Mamaroneck, N. Y., assignor to Revere Copper and Brass Incorporated, Rome, N. Y. Book end. 95,811; June 4.
Feinauer, George A., assignor to Gorham Manufacturing Company, Providence, R. I. Spoon or other article of flatware. 95,812; June 4.
Fostoria Glass Company. (See Stahl, Eugene, assignor.)
Ganz, Paul H., New York, N. Y. Lip stick container. 95,813; June 4.
Garvey, James, New York, N. Y., assignor to Optic Liquid Measures Inc., Norfolk, Va. Liquid dispensing rack. 95,814; June 4.
Garvey, James, New York, N. Y., assignor to Optic Liquid Measures Inc., Norfolk, Va. Liquid dispensing rack. 95,815; June 4.
Geddes, Norman B., New York, assignor to Revere Copper and Brass Incorporated, Rome, N. Y. Box. 95,816; June 4.
Geddes, Norman B., New York, and W. I. Hamby, Great Neck, assignors to Servel, Inc., New York, N. Y. Refrigerator cabinet. 95,817; June 4.
Gehring, Solomon & Birnbaum, Inc. (See Stenson, Henry, assignor.)
Goldberg, Julius A., Highland Park, Ill. Shoe. 95,818; June 4.
Gorham Manufacturing Company. (See Feinauer, George A., assignor.)
Gourlay, James, Glencoe, Ill. Golf club head. 95,819; June 4.
Grünstein, Martin, assignor to the firm Müller & Grünstein, Elger-Jorger Feuerzeugfabrik, Elgersburg, Germany. Pocket lighter. 95,820; June 4.
Guyer, William, New York, N. Y., assignor to Joseph E. Seagram & Sons, Inc., Lawrenceburg, Ind. Bottle. 95,821; June 4.
Halbert, Alfred, Los Angeles, Calif. Air compressor unit. 95,822; June 4.

Hamby, William I. (See Geddes, N. B., and Hamby.)
Hathaway, Chester W., and E. Krumsiek, assignors to Mueller Co., Decatur, Ill. Shower head. 95,823; June 4.
Haywood, William R., New York, N. Y. Textile fabric. 95,824; June 4.
Hedgpeth, Theron L., Oak Park, assignor to Duro Metal Products Company, Chicago, Ill. Sanding machine. 95,825; June 4.
Hedstrom, Knute W., assignor to Hedstrom-Union Company, Gardner, Mass. Velocipede. 95,826; June 4.
Hedstrom-Union Company. (See Hedstrom, Knute W., assignor.)
Hoffman, Charles, New York, N. Y. Wrap. 95,827; June 4.
Huber, Otto E., Reading, Pa., assignor to The Narrow Fabric Company, West Reading, Pa. Elastic lace braid. 95,828; June 4.
Huber, Otto E., Reading, Pa., assignor to The Narrow Fabric Company, West Reading, Pa. Elastic lace braid. 95,829; June 4.
Huber, Otto E., Reading, Pa., assignor to The Narrow Fabric Company, West Reading, Pa. Elastic lace braid. 95,830; June 4.
Huber, Otto E., Reading, Pa., assignor to The Narrow Fabric Company, West Reading, Pa. Elastic lace braid. 95,831; June 4.
Huber, Otto E., Reading, Pa., assignor to The Narrow Fabric Company, West Reading, Pa. Elastic lace braid. 95,832; June 4.
Illinois Watch Case Company. (See Wewetzer, Albert, assignor.)
Jamieson, Samuel A., Des Moines, Iowa. Coat garment. 95,833; June 4.
Janssen, Henry, assignor to Berkshire Knitting Mills, Wyomissing, Pa. Stocking display cabinet. 95,834; June 4.
Kaiser, Charles, Great Neck, N. Y., assignor to Morimura Bros., Inc., New York, N. Y. Marmalade jar. 95,835; June 4.
Kirschner, Jack, New York, N. Y. Ensemble dress. 95,836; June 4.
Kirschner, Jack, New York, N. Y. Ensemble dress. 95,837; June 4.
Kirschner, Jack, New York, N. Y. Dress. 95,838; June 4.
Kirschner, Jack, New York, N. Y. Ensemble dress. 95,839; June 4.
Kirschner, Jack, New York, N. Y. Ensemble dress. 95,840; June 4.
Kirschner, Jack, New York, N. Y. Ensemble dress. 95,841; June 4.
Kirschner, Jack, New York, N. Y. Ensemble dress. 95,842; June 4.
Kramer, Andrew A. (See Kramer, Joseph M., assignor.)
Kramer, Andrew A., Kansas City, Mo. Tank vehicle body. 95,843; June 4.
Kramer, Andrew A., Kansas City, Mo. Tank vehicle body. 95,844; June 4.
Kramer, Andrew A., and J. M. Kramer, said J. M. Kramer, assignor to said A. Kramer, Kansas City, Mo. Tank vehicle body. 95,845; June 4.
Kramer, Joseph M. (See Kramer, Andrew A., and J. M.)
Kramer, Joseph M., assignor to A. A. Kramer, Kansas City, Mo. Tank vehicle body. 95,846; June 4.
Kramer, Joseph M., assignor to A. A. Kramer, Kansas City, Mo. Tank vehicle body. 95,847; June 4.
Krumsiek, Ernest. (See Hathaway, C. W., and Krumsiek.)
Lanz, Josef, Salzburg, Austria, assignor to The Stetson Shoe Company, Inc., South Weymouth, Mass. Ski boot. 95,848; June 4.
Leach, Walter R., assignor to Carr-Lowrey Glass Co., Baltimore, Md. Bottle. 95,849; June 4.
Lelong, Lucien, Inc. (See Stein, Joseph S., assignor.)
Lobl, Frederick, Middleboro, Mass. Nasal inhaler. 95,850; June 4.
Lobl, Frederick, Middleboro, Mass. Switch casing. 95,851; June 4.
Maitland, Frank K., Hermosa Beach, Calif., assignor to F. C. McClellan, Chicago, Ill. Amusement game board. 95,852; June 4.
Marbelite Corporation of America, Ltd. (See Waggoner, Ralph, assignor.)
Mayer, William H., Jr., New York, N. Y. Textile fabric or similar article. 95,853; June 4.
McLaughlin, Frank, Chicago, Ill., assignor to Carr-Lowrey Glass Co., Baltimore, Md. Bottle. 95,854; June 4.
McClelland, Fred C. (See Maitland, Frank K., assignor.)
Meyer, Samuel, New York, N. Y. Shoe. 95,855; June 4.
Miller, Charles, New York, N. Y. Shoe or similar article. 95,856; June 4.
Miller, Charles, New York, N. Y. Shoe or similar article. 905,857; June 4.
Miller, Charles, New York, N. Y. Shoe or similar article. 95,858; June 4.
Minard, Herbert H., Wichita, Kans. Broiler. 95,859; June 4.
Mission Dry Corporation. (See Ahrens, Clyde W., assignor.)
Morimura Bros. Inc. (See Kaiser, Charles, assignor.)
Mueller Co. (See Hathaway, C. W., and Krumsiek, assignors.)
Müller & Grünstein, Elgersburger Feuerzeugfabrik. (See Grünstin, Martin, assignor.)
Narrow Fabric Company, The. (See Huber, Otto E., assignor.)
Neuhoff, Max M., New York, N. Y. Pen point. 95,860; June 4.
Optic Liquid Measures Inc. (See Garvey, James, assignor.)
Perugia, Andre, Paris, France. Shoe. 95,861; June 4.
Polley, Flora R., New York, N. Y. Shoe. 95,862; June 4.
Polley, Flora R., New York, N. Y. Shoe. 95,863; June 4.
Price, James R., assignor to The Alvin Corporation, Providence, R. I. Spoon or other article of flatware. 95,864; June 4.
Raphael, Hannah M., New York, N. Y. Blouse. 95,865; June 4.
Revere Copper and Brass Incorporated. (See Farr, Fred D., assignor.)
Revere Copper and Brass Incorporated. (See Geddes, Norman B., assignor.)
Schnefel, Maximilian, East Orange, N. J. Container for nail polish manicure set. 95,866; June 4.
Seagram, Joseph E., & Sons, Inc. (See Guyer, William, assignor.)
Sebring, Charles L., assignor to The Sebring Pottery Company, Sebring, Ohio. Plate or similar article. 95,867; June 4.
Sebring Pottery Company. (See Sebring, Charles L., assignor.)
Seidenquist, Robert, Elgin, Ill. Shoe. 95,868; June 4.
Servel, Inc. (See Geddes, N. B., and Hamby, assignors.)
Soden, Fred H., assignor to Continental Optical Company, Inc., Rochester, N. Y. Eyeglass bridge. 95,869; June 4.
Sofransky, Joseph, New York, N. Y. Shoe or similar article. 95,870; June 4.
Sofransky, Joseph, New York, N. Y. Shoe or similar article. 95,871; June 4.
Solomon, Louis. (See Compton, H. P., and Solomon.)
Stahl, Eugene, assignor to Fostoria Glass Company, Moundsville, W. Va. Decanter or similar article. 95,872; June 4.
Stein, Joseph S., assignor to Lucien Lelong, Inc., Chicago, Ill. Bottle or similar article. 95,873; June 4.
Stenson, Henry, Long Eaton, England, assignor to Gehring, Solomon & Birnbaum, Inc., New York, N. Y. Lace. 95,874; June 4.
Stetson Shoe Company, The. (See Lanz, Josef, assignor.)
Todd, Juanita, Yonkers, assignor to Sidney Blumenthal & Co. Inc., New York, N. Y. Textile fabric. 95,875; June 4.
Trafton, Howard A., New York, N. Y. Printing type font. 95,876; June 4.
Van Doren, Harold L., and C. K. Ellsworth, Toledo, Ohio, assignors to Wheeling Steel Corporation, Wheeling, W. Va. Closure for containers or similar article. 95,877; June 4.
Van Schelle, Martial, Brussels, Belgium, and J. Allen, London, England. Tennis racket or similar article. 95,878; June 4.
Villas, John D., Minneapolis, Minn. Steering wheel. 95,879; June 4.
Vlock, Sidney, New York, N. Y. Lady's suit. 95,880; June 4.
Waggoner, Ralph, assignor to Marbelite Corporation of America, Ltd., Los Angeles, Calif. Lamp-post or similar article. 95,881; June 4.
Weigel, Norman E., Short Hills, N. J. Fountain pen nib. 95,882; June 4.
Wewetzer, Albert, assignor to Illinois Watch Case Company, Elgin, Ill. Brush or similar article. 95,883; June 4.
Wheeling Steel Corporation. (See Van Doren, H. L., and Ellsworth, assignors.)
Wolff, Harry, Lincoln, Nebr. Lever. 95,884; June 4.
Wood, Harry F., Burslem, England. Coffeepot or like article. 95,885; June 4.
Wood, Schuyler A., Dolgeville, N. Y. Shoe or similar article. 95,886; June 4.
Wood, Schuyler A., Dolgeville, N. Y. Shoe or similar article. 95,887; June 4.

LIST OF PATENTEES

TO WHOM

PATENTS WERE ISSUED ON THE 4TH DAY OF JUNE, 1935

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

A C Spark Plug Company. (See Babitch, A. M., and Harry, assignors.)
Abbott, Albert L. (See Miller, W. C., and Abbott.)
Acme Weaving Mills, Inc. (See Bullard, Ellerslie W., assignor.)
Adams, Guy S. (See Burnett, F. C., and Adams.)
Agombar, Bert, Hanover, Ontario, Canada. Shoeshine box. 2,003,279; June 4.
Air-Way Electric Appliance Corporation. (See Riebel, Frederick, Jr., assignor.)
Albertson & Company. (See Albertson, Frans O., assignor.)
Albertson, Frans O., assignor to Albertson & Company, Inc., Sioux City, Iowa. Making valve seat tools. 2,003,570; June 4.
Alden, Herbert W., and L. R. Buckendale, assignors to The Timken-Detroit Axle Company, Detroit, Mich. Assembling resilient joints. 2,003,412; June 4.
Alfaro, Heraclio, Abington, assignor to Autogiro Company of America, Philadelphia, Pa. Aircraft having sustaining rotors. 2,003,331; June 4.
Alfaro, Heraclio, Cambridge, Mass., assignor to Autogiro Company of America, Philadelphia, Pa. Aircraft having sustaining rotors. 2,003,620; June 4.
Allen, Rufus S., and B. Oakes, Detroit, Mich. Camp trailer. 2,003,816; June 4.
Allmänna Svenska Elektriska Aktiebolaget. (See Rönnberg, Daniel, assignor.)
Allyne, Edmund. (See Gruber, Edward, assignor.)
Allyne, Edmund E., Cleveland, Ohio. Oil burner manipulating mechanism. 2,003,413; June 4.
Allyne, Edmund E., Cleveland, Ohio. Evaporator for refrigerating systems. 2,003,414; June 4.
Almen, John O., Royal Oak, assignor to General Motors Corporation, Detroit, Mich. Disk spring governor. 2,003,817; June 4.
Alton, William H., assignor to R. T. Vanderbilt Company, Incorporated, New York, N. Y. Colored granule. 2,003,849; June 4.
Alton, William H., assignor to R. T. Vanderbilt Company, Incorporated, New York, N. Y. Colored granule and making same. 2,003,850; June 4.
Aluminum Company of America. (See Keller, F., and Merritt, assignors.)
Amantea, Samuel, Niagara Falls, N. Y. Belt fastener. 2,003,387; June 4.
American Brass Company, The. (See Freeman, John R., Jr., assignor.)
American Brass Company, The. (See Hook, Ira T., assignor.)
American Brass Company, The. (See Jennison, H. C., and Montgomery, assignors.)
American Car and Foundry Company. (See Ecoff, Francis A., assignor.)
American Car and Foundry Company. (See Willoughby, V., and Lapworth, assignors.)
American Car and Foundry Company. (See Willoughby, Victor, assignor.)
American Engineering Company. (See Bennett, Joseph S., assignor.)
American Laundry Machinery Company, The. (See Beattie, William P., assignor.)
American Laundry Machine Company, The. (See Couch, Forrest J., assignor.)
American Magnesium Metals Corporation. (See Hansgirg, Fritz, assignor.)
American Reenforced Paper Company. (See White, Edwin H., assignor.)
American Sales Book Company. (See Hagemann, Louis F., assignor.)
American Steel Foundries. (See Oelkers, Alfred H., assignor.)
American Telephone and Telegraph Company. (See Cowan Frank A., assignor.)
American Telephone and Telegraph Company. (See Henneberger, Thomas C., assignor.)
American Telephone and Telegraph Company. (See Watson, Edward F., assignor.)
American Television Laboratories, Inc. (See De Forest, Lee, assignor.)
Anmann, Paul, Paris, France. Treating earth-nut kernels. 2,003,415; June 4.
Amsler, Walter O., Toledo, Ohio, assignor to Simplex Engineering Company, Washington, Pa. Apparatus for drawing glass. 2,003,525; June 4.
Anchor Cap & Closure Corporation. (See Hammer, Charles, assignor.)
Andersen Frame Corporation. (See Swanson, Earl C., assignor.)
Anderson, David E., assignor to Rohn Aluminum & Brass Corporation, Detroit, Mich. Cylinder head for internal combustion engines. 2,003,571; June 4.
Andersson, Gustav H., Stockholm, Sweden, assignor to The De Laval Separator Company, New York, N. Y. Centrifugal separator. 2,003,621; June 4.
Anderson, James C., Highland Park, Ill. Pipe tamper. 2,003,416; June 4.
Anderson Manufacturing Company. (See Eisenhauer, Warren F., assignor.)
Anderson Manufacturing Company. (See Eisenhauer, W. F., and Ferguson, assignors.)
Andis, Mathew, Racine, Wis. Power driven vibrator. 2,003,332; June 4.
Andreas, Arno, Munster, Germany. Feeding mechanism for filling machines. 2,003,417; June 4.
Angier, Edward H., Framingham, Mass. Sheet material for curing and protecting concrete and method of making. 2,003,988; June 4.
Ankarlo, Hannah C., et al. (See Ankarlo, Victor, assignor.)
Ankarlo, Victor, Milwaukee, Wis., assignor of three per cent to R. C. Peterson, Duluth, Minn., and ninety-seven per cent to Hannah C. Ankarlo, Milwaukee, Wis. Car. 2,003,418; June 4.
Arbuckle, Samuel F., Highland Park, Mich., assignor, by mesne assignments, to Guide Lamp Corporation, Anderson, Ind. Head lamp testing device. 2,003,797; June 4.
Archea, Walter D., and M. Romaine, Cincinnati, Ohio, assignors to The Cincinnati Milling Machine Company, Cincinnati, Ohio. Milling machine. 2,003,572; June 4.
Archer, Ira, Brooklyn, N. Y. Safety device for centrifugal pumps. 2,003,819; June 4.
Armacost, Wilbur H., assignor to The Superheater Company, New York, N. Y. Superheater boiler. 2,003,818; June 4.
Arnold, Arthur A. (See Gilbert, A. C., and Arnold.)
Arisay, Nicholas, New York, N. Y. Boiler. 2,003,419; June 4.
Ashworth Fred, Wenham, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J. Outsole shoe sewing machine. 2,003,526; June 4.
Astradsson, Per A. (See Dillström, T. V., Astradsson, and Dahlgren.)
Attapulgus Clay Company. (See Russell, Brinton, and C. B., assignors.)
Auto Dairy Pioneers Limited. (See Enock, Arthur G., assignor.)
Autogiro Company of America. (See Alfaro, Heraclio, assignor.)
Automatic Drive and Transmission Company. (See Vail, Henry H., assignor.)
Auto Research Corporation. (See Bijur, Joseph, assignor.)
Automatic Drive and Tranmission Company. (See Vail, Henry H., assignor.)
Autographic Register Company. (See Johnson, Arthur A., assignor.)
Babcock & Wilcox Company, The. (See Stillman, Thomas B., assignor.)
Babcock & Wilcox Company, The. (See Kerr, Howard J., assignor.)
Babcock & Wilcox Company, The. (See Trainer, J. E., and Ziegler, assignors.)
Babitch, Abraham M., and G. W. Harry, assignors to A C Spark Plug Company, Flint, Mich. Fuel pump. 2,003,420; June 4.
Bachus, Spencer T. (See McCartney, W. J., and Bachus.)
Bacon, John W., and T. S. Warren, assignors to T. S. Warren, Hermosa Beach, Calif. Therapeutic device. 2,003,527; June 4.
Bagley and Sewall Company, The. (See Valentine, Charles W., assignor.)
Bailey, Ernest L., Boscawen, N. H. Corn shock holding and binding device. 2,003,874; June 4.
Baker, C. E., et al. (See Frye, Jason S., assignor.)
Balbi, Charles M. R., London, England. Adjusted sound amplification. 2,003,875; June 4.
Baldwin, Harry W., Hamakuapoko, Territory of Hawaii. Flume. 2,003,730; June 4.
Baldwin, Curtis C., and V. S. Miller, Ottawa, Kans. Centrifugal concentrator. 2,003,767; June 4.
Ballauf, Fritz, and A. Schmelzer, Cologne-Mulheim, Germany, assignors to General Aniline Works, Inc., New York, N. Y. Indol compound. 2,003,421; June 4.
Balsam, Maurice M. (See Rubin, H. H., and Balsam.)
Banker, Oscar H., Philadelphia, Pa., assignor to Continental Illinois Bank and Trust Company, Chicago, Ill. Tranmission. 2,003,963; June 4.
Bannister, Sydney H. (See Olpin, H. C., and Bannister.)

Barber, Howard M., Pawcatuck, Conn., assignor to C. B. Cottrell & Sons Company, Westerly, R. I. Offset printing press. 2,003,798; June 4.

Barber, Howard M., Pawcatuck, Conn., assignor to C. B. Cottrell & Sons Company, Westerly, R. I. Offset printing press. 2,003,799; June 4.

Barber, Howard M., Pawcatuck, Conn., assignor to C. B. Cottrell & Sons Company, Westerly, R. I. Offset printing press. 2,003,800; June 4.

Barnard, Kenneth H., West Newton, and H. F. Kane, assignors to Pacific Mills, Lawrence, Mass. Method and material for preventing the tarnishing of silverware. 2,003,333. June 4.

Barnard, William C., Good Thunder, Minn. Double set stage. 2,003,573. June 4.

Barney, Freeman. (See Lee, J. E., Gylleck, and Barney.)

Bartley, Charles B., Pittsburgh, Pa. Electric signal and control device. 2,003,706; June 4.

Bartsch, Herbert E., assignor to Universal Draft Gear Attachment Co., Chicago, Ill. Follower block for draft gears. 2,003,989; June 4.

Bassett, Preston R., Rockville Center and F. R. House, Baldwin Harbor, assignors to Sperry Gyroscope Company Inc., Brooklyn, N. Y. Searchlight director. 2,003,661; June 4.

Batcholts, Clinton, assignor to Specialty Insulation Manufacturing Company, Inc., Hoosick Falls, N. Y. Weatherproof socket. 2,003,622; June 4.

Bausman, Alonzo L., Springfield, Mass. Confection coating machine. 2,003,851; June 4.

Baxter, Donald E., Los Angeles, Calif. Closure for containers. 2,004,027; June 4.

Bayreuther, Andrew, Albany, N. Y., assignor to The Standard Stoker Company, Incorporated. Stoker fuel deflector. 2,003,422; June 4.

Beattie, William P., Norwood, assignor to The American Laundry Machinery Company, Cincinnati, Ohio. Safety device for automatic controls. 2,003,852; June 4.

Becker, Joseph, O'Hara Township, Allegheny County, Pa., assignor to The Koppers Company of Delaware. Coking retort oven. 2,003,574; June 4.

Belto, Rangvald C., Terrace, Minn. Doorlatch. 2,003,731; June 4.

Belden, Albert G., and R. A. Cole, assignors to Norton Company, Worcester, Mass. Caliper controlled grinding machine. 2,003,334; June 4.

Bell, Margaret R., Great Falls, Mont. Hair winding device. 2,003,280; June 4.

Bell Punch Company. (See Black, H. D., and Webb, assignors.)

Bell Telephone Laboratories, Incorporated. (See Black, Harold S., assignor.)

Bell Telephone Laboratories, Incorporated. (See Gray, Alvin N., assignor.)

Bell Telephone Laboratories, Incorporated. (See Green, C. W., and Black, assignors.)

Bell Telephone Laboratories, Incorporated. (See Harrison, Henry C., assignor.)

Bell Telephone Laboratories, Incorporated. (See Hickman, C. N., and Wente, assignors.)

Bell Telephone Laboratories, Incorporated. (See Horton, Joseph W., assignor.)

Bell Telephone Laboratories, Incorporated. (See Hunt, Franklin L., assignor.)

Bell Telephone Laboratories, Incorporated. (See Jacobs, Oliver B., assignor.)

Bell Telephone Laboratories, Incorporated. (See Kelsay, Le Roy W., assignor.)

Bell Telephone Laboratories, Incorporated. (See Morton, Edmund R., assignor.)

Bell Telephone Laboratories, Incorporated. (See Ronci, Victor L., assignor.)

Bell Telephone Laboratories, Incorporated. (See Smith, L. T., and Thuras, assignors.)

Bell Telephone Laboratories, Incorporated. (See St. John, Everett, assignor.)

Bell Telephone Laboratories, Incorporated. (See Terry, Roy V., assignor.)

Bell Telephone Laboratories, Incorporated. (See Wente, Edward C., assignor.)

Bemis Bro. Bag Co. (See Brady, C. V., and Linda, assignors.)

Bendix Aviation Corporation. (See Reichel, Wladimir A., assignor.)

Bennett, Joseph S., Merion, assignor to American Engineering Company, Philadelphia, Pa. Furnace grate structure. 2,003,423; June 4.

Berg, Frederick A., Chicago, Ill. High intensity multiple automatic arc lamp. 2,003,675; June 4.

Berkshire Knitting Mills. (See Westkott, Hans, assignor.)

Berthold, Hermann, Leverkusen-on-the-Rhine, and C. Krauss, Frankfort-on-the-Main-Fechenheim, and A. Hagenböcker, Frankfort-on-the-Main-Hochst, Germany, assignors to General Aniline Works, Inc., New York, N. Y. Printing of textile fabrics with vat dyestuffs. 2,003,641; June 4.

Best, Clarence L., Mission San Jose, assignor to Caterpillar Tractor Co., San Leandro, Calif. Wear compensating means. 2,003,528; June 4.

Bijur, Joseph, New York, N. Y., assignor to Auto Research Corporation. Lubricating system and the constituent parts thereof. 2,003,281; June 4.

Bins, Frank M., Butte, Mont. Coupling for canvas tubing. 2,003,732; June 4.

Birkenmaier, Theodore. (See Boll, L. P., and Birkenmaier.)

Birmingham, Thomas F., Hammond, Ind., assignor to The Superheater Company, New York, N. Y. Making welded article. 2,003,820; June 4.

Birtcher, John, Memphis, Tenn. Stairway. 2,003,876; June 4.

Bishop, George E., Cleveland Heights, Ohio. Golf bag. 2,003,733; June 4.

Bishop, J., & Company Platinum Works. (See Kerk, Paul C., assignor.)

Black, Carl A., Cleveland Heights, assignor to The Ric-Wil Company, Cleveland, Ohio. Thermo nonconducting water repellant packing material. 2,003,335; June 4.

Black, Harold S., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Wave translation system. 2,003,282; June 4.

Black, Harold S., Westfield, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Repeatered line system. 2,003,964; June 4.

Black, Harold S. (See Green, C. W., and Black.)

Black, Horace D., Uxbridge, and C. F. Webb, Easteote, assignors to Bell Punch Company Limited, London, England. Manifold writing device. 2,004,028; June 4.

Black, Sivalls & Bryson, Inc. (See Gordon, Joseph C., assignor.)

Blake, Valerie F., New York, N. Y. Table or similar article of furniture. 2,003,821; June 4.

Blankenship, John B. (See Lehrer, O. J., and Blankenship.)

Blatterman, Albert S., Asbury Park, N. J. Remote control system for radio broadcast receivers. 2,003,877; June 4.

Blaw Knox Company. (See McCrery, Harold E., assignor.)

Bloch, Ignaz, Dessau, Germany. Production of pure white sugar. 2,003,965; June 4.

Bockmühl, Max, W. Krohs, and G. Ehrhart, Frankfort-on-the-Main, Germany, assignors to Winthrop Chemical Company, Inc., New York, N. Y. Heterocyclically substituted perhydrocarbazoles. 2,003,623; June 4.

Bohn Aluminum & Brass Corporation. (See Anderson, David E., assignor.)

Boll, Lester P., University City, and T. Birkenmaier, assignors to W. N. Matthews Corporation, St. Louis, Mo. Fuse switch. 2,003,768; June 4.

Bollman, Roland R., Mount Washington, and C. L. Ornes, assignors to The Perfect Manufacturing Company, Cincinnati, Ohio. Method and material for repairing shoes. 2,004,059; June 4.

Bond Charles Company. (See Grundy, John R., assignor.)

Bongrand, Jean E. C., Paris, and L. S. M. Le Jeune, Wasquehal, France. Impregnation of textile materials by latex. 2,004,029; June 4.

Bonnell, William A., New York, N. Y. Cable connecter. 2,003,676; June 4.

Borden, Stephen W. (See Roe, Ralph C., assignor.)

Born, William T., Tulsa, Okla., assignor to Geophysical Research Corporation, New York, N. Y. Seismic surveying. 2,003,780; June 4.

Botenstein Charles E. (See Widen, Henry R., assignor.)

Boughton, Willis A., Cambridge, assignor to New England Mica Co., Waltham, Mass. Colloidal inorganic bonding composition. 2,004,030; June 4.

Bovard, Charles M., Grove City, Pa., assignor to Cooper-Bessemer Corporation, Mount Vernon, Ohio. Overspeed device. 2,003,478; June 4.

Bovier, Lloyd S. (See Scott, W. B., Bovier, and Matthews.)

Bowden, James G., Millbury, assignor to The Felters Company, Boston, Mass. Handle grip. 2,003,917; June 4.

Bowen, William S., Westfield, N. J. Spray wheel. 2,003,575; June 4.

Bower, George D., Columbia Heights, Minn., assignor to Minneapolis Honeywell Regulator Company, Minneapolis, Minn. Control system for burners producing high temperature flames. 2,003,624; June 4.

Boyer, George C., Los Angeles, Calif. Game device. 2,003,801; June 4.

Boyer, George D. (See Stanitz, J., and Boyer.)

Boyer, John A., assignor to Globar Corporation, Niagara Falls, N. Y. Terminal connection for electric heating elements. 2,003,625; June 4.

Bozzer, George, and J. Haversin, Detroit, Mich. Universal measuring instrument. 2,003,626; June 4.

Braddon, Fred D., Eltingville, and A. N. Lawrence, Lawrence, assignors to Sperry Products, Inc., Brooklyn, N. Y. Indicating device for flaw detector mechanism. 2,003,356; June 4.

Brady, Charles V., Webster Groves, and F. R. Linda, St. Louis, assignors to Bemis Bro. Bag Co., St. Louis, Mo. Bag closing machine. 2,003,337; June 4.

Braman, Verne T. (See Ranger, R. H., Braman, and Nelson.)

Brandstrom, Folke A., assignor to The John Gabel Mfg. Co., Chicago, Ill. Automatic phonograph. 2,003,424; June 4.

Brewster Development Corporation. (See Brewster, Oswald C., assignor.)

Brewster, Oswald C., Kansas City, Mo., assignor to Brewster Development Corporation, New York, N. Y. Avoiding the deleterious effect of detonation in internal combustion engines. 2,003,822; June 4.

Bristol Aeroplane Company, The. (See Fedden, Alfred H. R., assignor.)

Broadhurst, Harold M., Mossley Hill, Liverpool, England, assignor to Pennsylvania Salt Manufacturing Company, Philadelphia, Pa. Treating caustic soda solutions. 2,003,734; June 4.

Brostrom, Charles G., Lynn, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J. Cover trimming machine. 2,003,338; June 4.

Brown, Alfred T., assignor to The Warner Elevator Mfg. Company, Cincinnati, Ohio. Residence elevator. 2,004,060; June 4.

Brown, Gerald, Barnes, London, and E. Pollard, London, England. Display window. 2,003,735; June 4.

Brown, Thomas L., assignor to W. J. Pearson, Los Angeles, Calif. Moistener. 2,003,736; June 4.

Brown, Vincent H., Ozone Park, N. Y., assignor to Radio Corporation of America. Radio telegraph concentrator. 2,003,425; June 4.

Brown, Wallace E., Fairfield, Conn., assignor to E. I. Du Pont de Nemours & Company, Wilmington, Del. Hose coupling. 2,003,918; June 4.

Brunn, Carl F., Brisbane, Calif. Washing machine. 2,003,642; June 4.

Bruson, Herman A., Germantown, and O. Stein, assignors to Röhm & Haas Company, Philadelphia, Pa. Preparing alkylated aromatic ketones and product. 2,004,069; June 4.

Buckendale, Laurence R. (See Alden, H. W., and Buckendale.)

Bucklen, Herbert E., Elkhart, Ind., and J. N. Mahoney, Brooklyn, N. Y. Shock absorber. 2,003,823; June 4.

Buckwalter, Tracy V., assignor to The Timken Roller Bearing Company, Canton, Ohio. Axle bearing. 2,003,339; June 4.

Budd, Edward G., Manufacturing Company. (See Lewinka, Joseph, assignor.)

Buffalo Brake Beam Company. (See Crone, Seth A., assignor.)

Buhren, Alfred O., Sacramento, Calif. Oboe mouth piece. 2,003,576; June 4.

Builders Iron Foundry. (See Smith, Ed. S., Jr., assignor.)

Bullard, Ellerslie W., assignor to Acme Weaving Mills, Inc., Anniston, Ala. Loom. 2,004,031; June 4.

Burdick, Wayne E. (See Loehr, L. K., and Burdick.)

Burghoff, Louis L., assignor to The E Ingraham Company, Bristol, Conn. Pendant for watches and the like. 2,003,781; June 4.

Burkhardt, Thomas E., Dayton, Ohio. Lifting and propelling mechanism for vehicles. 2,003,627; June 4.

Burnett, Fred C., and G. S. Adams, assignors to Riverson & Haynes, Inc., Jackson, Mich. Spare wheel carrier. 2,003,853; June 4.

Burrows, Robert J., and A. O. Williams, assignors to Clark Tractor Company, Battle Creek, Mich. Bell ringer. 2,003,340; June 4.

Burt, John S., Highland Park, assignor to John Waldron Corporation, New Brunswick, N. J. Paper napkin embossing, printing, and folding machine. 2,004,032; June 4.

Burton-Dixie Corporation. (See Vinar, Washington, assignor.)

Busse, Edwin G. (See Ekholm, H. W., and Busse.)

Busse, Edwin G., assignor to Chicago Railway Equipment Company, Chicago, Ill. Brake beam safety device. 2,003,499; June 4.

Butler, Homer, Bronaugh, Mo. Weighing scale. 2,003,737; June 4.

Buttross, George A., assignor to Lourey Corporation, Los Angeles, Calif. Bottle cap former. 2,003,643; June 4.

Buzzard, Gale H., and R. W. Tracy, assignors to The De Vilbiss Company, Toledo, Ohio. Spray head. 2,004,033; June 4.

Cadlet, Charles, assignor to the firm Société Anonyme des Etablissements Charles Testut, Paris, France. Poise device. 2,004,034; June 4.

Calloway Mills. (See Daughdrill, James H., assignor.)

Campbell, Argyle, assignor to Enterprise Railway Equipment Company, Chicago, Ill. Underframe construction for railway cars. 2,003,341; June 4.

Campbell, Argyle, Chicago, and G. B. Willard, Western Springs, assignors to Enterprise Railway Equipment Company, Chicago, Ill. Car door. 2,003,577; June 4.

Campbell, Donald J., Spring Lake Township, Ottawa County, assignor to Campbell, Wyant & Cannon Foundry Company, Muskegon, Mich. Composite brake drum. 2,004,061; June 4.

Campbell, Wyant & Cannon Foundry Company. (See Campbell, Donald J., assignor.)

Canfield, Earl L., Hillside, N. J. Meter. 2,003,919; June 4.

Carbide and Carbon Chemicals Corporation. (See Cox, Henry L., assignor.)

Carbide and Carbon Chemicals Corporation. (See Cox, H. L., and Clapsadle, assignors.)

Carbide and Carbon Chemicals Corporation. (See Reid, Ernest W., assignor.)

Carborundum Company, The. (See McKon, R. L., and Fitzpatrick, assignors.)

Carlson, George, Bridgeport, Conn., assignor to General Electric Company. Weatherproof armored cable. 2,003,991; June 4.

Carlson, George, Bridgeport, and H. G. Knoderer, Fairfield, Conn., assignors to General Electric Company. Electric cable. 2,003,990; June 4.

Carman, Herbert L., Arlington, N. J. Fountain pen. 2,003,479; June 4.

Carr-Lowrey Glass Co. (See Garwood, Charles B., assignor.)

Carter, Winnie, Wallington, assignor of one-half to G. S. Moulton & Company, Limited, London, England. Bathing cap. 2,003,920; June 4.

Cartwright, Frank P., Chevy Chase, Md. Fabricated structure and elements thereof. 2,003,738; June 4.

Case, Samuel L. (See Graham, H. W., and Case.)

Caterpillar Tractor Co. (See Best, Clarence L., assignor.)

Caterpillar Tractor Co. (See Thoen, Lowell H., assignor.)

Cavalero, John V., Bloomfield, N. J. Plaque. 2,003,824; June 4.

Cavanaugh, Howard M., assignor to Claude Neon Displays, Inc., Buffalo, N. Y. Lighting apparatus. 2,003,342; June 4.

Celanese Corporation of America. (See Olpin, H. C., and Bannister, assignors.)

Celanese Corporation of America. (See Taylor, W. I., and Gibbins, assignors.)

Celanese Corporation of America. (See Whitehead, William, assignor.)

Chadwick, John E., Toronto, Ontario, Canada. Device for spreading road material. 2,003,628; June 4.

Challenge Machinery Company, The. (See Lee, J. E., Gylleck, and Barney, assignors.)

Chase, Theron P., assignor, by mesne assignments, to General Motors Corporation, Detroit, Mich. Brake. 2,004,062; June 4.

Chatelain, Arthur B., assignor of one-half to U. Fischer, Los Angeles, Calif. Tube paste dispenser. 2,003,283; June 4.

Chemical Construction Corporation. (See Hechenbleikner, Ingenuin, assignor.)

Chemical Construction Corporation. (See Hechenbleikner, I., Oliver, and Spangler, assignors.)

Chemical Manufacturing Company. (See Elliott, Phillip H., assignor.)

Chevrillon, Louis, Paris, France, assignor to The Francois Cementation Company Limited, London, England. Waterproofing or filling cavities in the ground or in structures. 2,003,921; June 4.

Chicago Pump Company. (See Durdin, Augustus C., 3d, assignor.)

Chicago Railway Equipment Company. (See Busse, Edwin G., assignor.)

Chicago Railway Equipment Company. (See Ekholm, H. W., and Busse, assignors.)

Christenson, George, Plainfield, N. J., assignor to Johns-Manville Corporation, New York, N. Y. Packing for pistons. 2,003,759; June 4.

Christian, David A., assignor to Siemens Brothers & Company Limited, London, England. Electric switching mechanism. 2,003,782; June 4.

Church, Harold D., assignor to The White Motor Company, Cleveland, Ohio. Internal combustion engine. 2,003,677; June 4.

Cilley, Jared F., Wadhams, N. Y. Vacuum relief valve. 2,003,678; June 4.

Cinch Manufacturing Corporation. (See Knutson, Carl L., assignor.)

Cincinnati Milling Machine Company, The. (See Archea, W. D., and Romaine, assignors.)

Cincinnati Milling Machine Company, The. (See Sassen, Bernard, assignor.)

Clapsadle, Leo J. (See Cox, H. L., and Clapsadle.)

Clark, Thomas B. (See Sweeney, O. R., and Clark.)

Clark, Thomas B., Rockford, Ill., assignor, by mesne assignments, to The Permutit Company (1934), Wilmington, Del. Water softening apparatus. 2,003,739; June 4.

Clark Tractor Company. (See Burrows, R. J., and Williams, assignors.)

Claret, Roger J., assignor to Natural By-Products Corporation, New York, N. Y. Production of carbon-dioxide from flue gases. 2,003,922; June 4.

Claude Neon Displays, Inc. (See Cavanaugh, Howard M., assignor.)

Clausen, George, Longview, Wash. Screen plate support. 2,003,923; June 4.

Clement, Ivan C., Greenwood, assignor to Submarine Signal Company, Boston, Mass. Acoustic apparatus. 2,003,284; June 4.

Clement, Victor A., Bayside, N. Y. Pastry cake and method and mold of making the same. 2,003,578; June 4.

Cleveland, Dorothy B., Los Angeles, Calif. Convertible and portable wardrobe and clothes drier. 2,004,035; June 4.

Cleveland Pneumatic Tool Company, The. (See Scott, Arthur, assignor.)

Cleveland Rock Drill Company, The. (See Curtis, John C., assignor.)

Clifford, Percy C., and J. Crespo y Garcia, Mexico, D. F., Mexico. Biophysical process for preserving and conserving fermentable liquids. 2,003,644; June 4.

Cloer, Venus U. (See Sims, W. F., and Cloer.)

Cockrell, William D., Schenectady, N. Y., assignor to General Electric Company. Time delay circuit controlling apparatus. 2,003,992; June 4.
Coenning, Ernst, Halensee, near Berlin, Germany. Anti-skidding tire. 2,004,036; June 4.
Coffey, Irven E., Santa Ana, Calif. In and out terminal cleaning tool. 2,003,629; June 4.
Cohn, Herman, Baltimore, Md. Necktie holder. 2,003,740; June 4.
Cole, Raymond A. (See Belden, A. G., and Cole.)
Combustion Utilities Corporation. (See Klees, Albert L., assignor.)
Compagnie Royale Asturienne des Mines. (See Guignet, Léon A., assignor.)
Conant, John H., assignor to Holyoke Heater Company, Holyoke, Mass. Heater. 2,003,579; June 4.
Cone, Bessie, et al. (See Esterling, William M., assignor.)
Conlon, Thomas A. (See Gurney, D. A., and Conlon.)
Continental Can Company. (See Trombly, Alexander A., assignor.)
Continental-Diamond Fibre Company. (See Landt, Gustave K., assignor.)
Continental Illinois Bank and Trust Company. (See Banker, Oscar H., assignor.)
Continental Motors Corpoation. (See Kalb, Lewis P., assignor.)
Continental Motors Corporation. (See Timian, Harold H., assignor.)
Cooper-Bessemer Corporation. (See Bovard, Charles M., assignor.)
Cooper-Bessemer Corporation. (See Gehres, Hewitt A., assignor.)
Corbella, Theophile, Garwood, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y. Method of and apparatus for working materials. 2,003,426; June 4.
Corless, Thomas K., Long Island City, N. Y. Muffler. 2,003,500; June 4.
Cornell, Fritz G., Jr., Mountain Lakes, N. J. Treatment of cream. 2,003,427; June 4.
Cota, Fernando B. (See Hodges, G. F., and Cota.)
Cottrell, C. B., & Sons Company. (See Barber, Howard M., assignor.)
Cottrell, C. B., & Sons Company. (See Barber, Howard M., assignor.)
Couch, Forrest J., assignor to The American Laundry Machinery Company, Cincinnati, Ohio. Double side ironer. 2,003,903; June 4.
Cowan, Frank A., East Orange, N. J., assignor to American Telephone and Telegraph Company. Volume control for transmission circuits. 2,003,428; June 4.
Cox, George D., assignor to Williams and Marcus Company, Philadelphia, Pa. Data sheet holder. 2,003,854; June 4.
Cox, Henry L., South Charleston, W. Va., assignor to Carbide and Carbon Chemicals Corporation. Liquid composition. 2,003,429; June 4.
Cox, Henry L., South Charleston, W. Va., and L. J. Clapsadle, Buffalo, N. Y., assignors to Carbide and Carbon Chemicals Corporation. Liquid medium for heat and pressure transfer. 2,003,662; June 4.
Craigshead, Magruder, Greenburgh, N. Y. Underground conduit construction. 2,003,580; June 4.
Crane Co. (See Sorensen, Alfred K., assignor.)
Crickmer, Charles S., Dallas, Tex., and H. R. Standlee, Tulsa, Okla., assignors to The Gulberson Corporation, Dallas, Tex. Flexible pump plunger. 2,003,679; June 4.
Criswell, Walter H., Seattle, Wash. Repairing tire casings. 2004,037; June 4.
Crockett, Robert E., Pompton Lakes, N. J., assignor to Dings Magnetic Separator Co., Milwaukee, Wis. Apparatus for removing magnetic from nonmagnetic material. 2,003,430; June 4.
Crone, Seth A., East Orange, N. J., assignor to Buffalo Brake Beam Company, New York, N. Y. Safety support for brake rods. 2,003,802; June 4.
Crone, Seth A., East Orange, N. J., assignor to Buffalo Brake Beam Company, New York, N. Y. Safety support for brake rods. 2,003,803; June 4.
Crown Cork & Seal Company. (See McManus, Charles E., assignor.)
Cummings, Tom. (See Shinn, J. V., and Cummings.)
Cuppies Company, Manufacturers. (See Thener, Arthur F., assignor.)
Curtis, John C., assignor to The Cleveland Rock Drill Company, Cleveland, Ohio. Drill steel retainer. 2,003,924; June 4.
Curtis, Myron S., assignor to W. W. Potter, Pawtucket, R. I. Timing mechanism. 2,004,038; June 4.
Dahlgren, Fredrik. (See Dillström, T. V., Astradsson, and Dahlgren.)
Daller, Adrian O., Dennisport, Mass., assignor to Daller Carton Co., Inc., New York, N. Y. Container. 2,003,925; June 4.
Daller Carton Co. (See Daller, Adrian O., assignor.)
Dalton, William T., Anstead, W. Va. Mine car bumper. 2,003,645; June 4.
Daly, Charles, Jr., St. Louis, Mo. Adjustable scaffold. 2,003,881; June 4.
Daniel, Clarence P., Bristol, Va. Mine car. 2,003,878; June 4.
Daughdrill, James H., assignor to Calloway Mills, LaGrange, Ga. Production of laundry pads. 2,003,741; June 4.
David & Lewis. (See De Spain, Thomas H., assignor.)
Davis, Clarence R., assignor to Davis Tool & Engineering Company, Detroit, Mich. Automobile license plate holder. 2,003,343; June 4.
Davis, Ernest, and A. Kagi, assignors to The Prosperity Company, Inc., Syracuse, N. Y. Table model pressing machine. 2,003,501; June 4.
Davis Tool & Engineering Company. (See Davis, Clarence R., assignor.)
D'Avocourt, Pierre de Vitry, Basses-Pyrenees, France. Marble-sawing wire. 2,003,994; June 4.
De Biasio, Michele, Wilkes-Barre, Pa. Foot aerating device. 2,003,646; June 4.
De Boer, Jan H., and M. C. Teves, Eindhoven, Netherlands, assignors to Radio Corporation of America. Photo-electric tube. 2,003,344; June 4.
Deere & Company. (See Johnson, Ellsworth T., assignor.)
De Forest, Lee, Hollywood, Calif., assignor to American Television Laboratories, Inc. Television receiving and projecting. 2,003,680; June 4.
De Laval Separator Company, The. (See Andersson, Gustav H., assignor.)
De Laval Separator Company, The. (See Erling, Sven J., assignor.)
De Laval Separator Company, The. (See Hapgood, Cyrus H., assignor.)
De Lange, Samuel. (See von Forster, H., and de Lange.)
Demag Aktiengesellschaft. (See Wilsing, Paul, assignor.)
De Maris, Elmer L., Los Angeles, Calif. Device for orienting test cores. 2,003,345; June 4.
Dennison, Brook J. (See Fix, E. L., and Dennison.)
Derrah, Robert V., Beverly Hills, Calif. Torque transmission device. 2,003,825; June 4.
Despard, Victor R., assignor to Pass & Seymour, Inc., Syracuse, N. Y. Pilot light. 2,004,039; June 4.
De Spain, Thomas H., Paducah, Ky., assignor, by mesne assignments, to David & Lewis, New York, N. Y. Sewing machine. 2,003,879; June 4.
Deutsche Celluloid-Fabrik. (See Weihe, Adolf, assignor.)
Deutsche Gold & Silber-Scheideanstalt vormals Roessler. (See Naujoks, Erich, assignor.)
De Vilbiss Company, The. (See Buzzard, G. H., and Tracy, assignors.)
De Vry, Herman A., Chicago, Ill. Stereoscope. 2,003,480; June 4.
De Witt, William J., assignor to Shoe Form Co., Inc., Auburn, N. Y. Hosiery form. 2,003,707; June 4.
Dictograph Products Company. (See Koch, Henry, assignor.)
Diebold Safe & Lock Co. (See Miller, W. C., and Abbott, assignors.)
Dietrich, Wilhelm, and M. Harder, Oppau, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. Desulphurization and oxidation of hydrocarbons. 2,003,584; June 4.
Dilks, Charles F. (See Eaves, W. C., and Dilks.)
Dillström, Torbjörn V., and P. A. Åstradsson, Stockholm, and F. Dahlgren, Djursholm, near Stockholm, Sweden. Electric motor. 2,003,647; June 4.
Dings Magnetic Separator Co. (See Crockett, Robert E., assignor.)
Ditcham, William T., Chelmsford, Essex, England, assignor to Radio Corporation of America. Signaling. 2,003,285; June 4.
Dinfilhac, Jean G., assignor to Society "Yacco S. A. F.", Paris, France. Air cooling system for motors. 2,004,040; June 4.
Dodge, John H., et al., trustees. (See Dodge, John S., assignor.)
Dodge, John S., Paxton, assignor to H. Sinclair, J. H. Dodge, Worcester, and L. C. Smith, Newton Center, Mass., trustees. Reversible ratchet wrench. 2,003,346; June 4.
Doherty Research Company. (See Morgan, J. D., and Levitt, assignors.)
D'Ollier, Henry, Jr., Bridgeport, Conn. Electrical connecter and fixture support. 2,003,966; June 4.
Dowden, William T. (See Hester, Loring B., assignor.)
Doyle, Edgar D., assignor to Leeds and Northrup Company, Philadelphia, Pa. Measuring apparatus. 2,003,681; June 4.
Dreis, Edward J., San Francisco, Calif. Clutch for punch presses. 2,003,529; June 4.
Dreyfus, Henry, London, England. Manufacture of cellulose or cellulosic materials. 2,003,347; June 4.
Driver, John M., San Francisco, Calif. Utilization of cellulosic films, sheets, and the like. 2,004,041; June 4.
Du-Gas Fire Extinguisher Corporation. (See Meigs, Charles H., assignor.)
Dulac, Pierre, Paris, assignor to Societe Charles Chedeville, Albert Lelandais et Cie., Eure, France. Machine for cutting and resharpening the reeds of wind instruments. 2,003,348; June 4.
Dumble, Clifford R., Arlington, assignor to W. B. Spieler, Brookline, Mass. Dispensing and game playing machine. 2,003,349; June 4.
Duncan, William A., Statesville, N. C. Table with foldable leaves. 2,003,926; June 4.
Dunham, C. A., Company. (See Dunham, Clayton A., assignor.)
Dunham, Clayton A., Glencoe, Ill., assignor to C. A. Dunham Company, Marshalltown, Iowa. Method and apparatus for heating with steam. 2,003,585; June 4.

Dunlop Tire and Rubber Corporation. (See Twiss, D. F., and Jones, assignors.)
Duplate Corporation. (See Fix, E. L., and Dennison, assignors.)
Duplate Corporation. (See Zola, John C., assignor.)
Du Pont, E. I., de Nemours & Company. (See Brown, Wallace E., assignor.)
Du Pont, E. I., de Nemours & Company. (See Izard, Emmette F., assignor.)
Du Pont, E. I., de Nemours & Company. (See Lee, Henry R., assignor.)
Du Pont, E. I., de Nemours & Company. (See Spiegler, Louis, assignor.)
Du Pont, E. I., de Nemours & Company. (See Vittengl, Morgan J., assignor.)
Du Pont, E. I., de Nemours & Company. (See Woodhouse, John C., assignor.)
Durdin, Augustus C., 3d, assignor to Chicago Pump Company, Chicago, Ill. Pump. 2,003,350; June 4.
Durirron Company, The. (See Jacobsen, Oystein, assignor.)
Dwork, Max, Brooklyn, N. Y. Jacking attachment. 2,003,502; June 4.
Eagle Manufacturing Company. (See Paull, Samuel O., assignor.)
Eagle-Picher Lead Company, The. (See Gregory, F. E., and Hallows, assgnors.)
Eason, Sidney L., Charleston, S. C. Roofing or surfacing material. 2,003,503; June 4.
Easthampton Rubber Thread Co. (See Shaw, Kenneth R., assignor.)
Eaves, William C., and C. F. Dilks, Long Island City, assignors to Hoovenaire Corporation, New York, N. Y. Pneumatic sound reproducer and projector. 2,003,880; June 4.
Eberhardt, Otto Karlsbad, Czechoslovakia, assignor to A. Riebeck'sche Montanwerke Aktiengesellschaft, Halle/Saale, Germany. Cleaning heating surfaces. 2,004,042; June 4.
Eclipse Aviation Corporation. (See Nardone, Romeo M., assignor.)
Eclipse Machine Company. (See Lansing, Raymond P., assignor.)
Ecoff, Francis A., St. Louis, Mo., assignor to American Car and Foundry Company, New York, N. Y. Hatch cover operating means. 2,003,927; June 4.
Eells, Paul W., assignor to Le Roi Company, West Allis, Wis. Power control. 2,003,351; June 4.
Ehrhart, Gustav. (See Bockmühl, M., Krohs and Ehrhart.)
Ehrke, Louis F., Newark, N. J., assignor to Westinghouse Lamp Company. Clad metal and producing the same. 2,003,481; June 4.
Einhorn, Nathan, Philadelphia, Pa. Guilding action for various valves and slides for musical, brass, and other instruments. 2,003,995; June 4.
Eisenbauer, Warren F., assignor to Anderson Manufacturing Company, Cambridge, Mass. Tool for reservicing springs equipped with spring covers. 2,003,708; June 4.
Eisenbauer, Warren F., Cambridge, and W. T. Ferguson, Waban, assignors to Anderson Manufacturing Company, Cambridge, Mass. Tool for reservicing springs equipped with spring covers. 2,003,709; June 4.
Ekholm, Herbert W., and E. G. Busse, assignors to Chicago Railway Equipment Company, Chicago, Ill. Brake beam support. 2,003,530; June 4.
Electric Service Supplies Company. (See Graham, Herbert J., assignor.)
Electrical Patent Holding Corporation. (See Johnson, Gustave A., assignor.)
Electrons, Inc. (See Riggs, Alger S., assignor.)
Electrolux Servel Corporation. (See Taylor, Robert S., assignor.)
Elliott, Philip H., Charleston, assignor to Chemical Manufacturing Company, Point Pleasant, W. Va. Apparatus for utilizing heat transferring medium. 2,003,742; June 4.
Ellstrom, Elmer G., and W. P. Hicks, Webster Groves, assignors to Sefton National Fibre Can Co., Maplewood, Mo. Spool. 2,003,663; June 4.
Engels, Hans, Offenbach-on-the-Main, assignor to the firm Oswald Rögner, Offenbach-on-the-Main, Germany. Producing patterns on dark colored skins or leathers. 2,004,043; June 4.
Englehart, Harry. (See Frye, Fred L. and J. K., assignors.)
Enock, Arthur G., Wembley Park, assignor to Auto Dairy Pioneers Limited, London, England. Capping of bottles and an apparatus therefor. 2,003,682; June 4.
Enterprise Railway Equipment Company. (See Campbell, Argyle, assignor.)
Enterprise Railway Equipment Company. (See Campbell, A., and Willard, assignors.)
Epley, Frederic L., North Pelham, assignor to The Superheater Company, New York, N. Y. Oil field superheater. 2,003,826; June 4.
Equitable Paper Bag Co. Inc. (See Poppe, George W., assignor.)
Erling, Sven J., Nockeby, Sweden, assignor to The De Laval Separator Company, New York, N. Y. Milking machine connecter and pneumatic and electric conductor thereof. 2,003,586; June 4.
Errig, William F., Philadelphia, and G. M. Pfundt, Churchville, assignors to Peco Manufacturing Corporation, Philadelphia, Pa. Pipe cutter. 2,003,630; June 4.
Esterling, William M., Long Beach, assignor of fifteen per cent to H. Walters, fifteen per cent to M. P. Walters, five per cent to C. Kling, and/or Ida M. Kling, eighteen per cent to B. M. Cone, two per cent to Z. B. West and F. G. West known as West & West and twenty per cent to R. F. Wussow, Santa Ana, Calif. Oil burner. 2,003,827; June 4.
Evans, John G., and L. G. Lawrie, Blackley, Manchester, Westminster, England, assignors to Imperial Chemical Industries Limited, Westminster, England. Stripping and discharging dyed textiles. 2,003,928; June 4.
Evans, Roland D., Granite City, Ill., assignor to Handlan-Buck Manufacturing Company, St. Louis, Mo. Lantern. 2,003,352; June 4.
Evans, Will, Hawthorne, Calif. Mop. 2,003,286; June 4.
Ey, Victor, New York, N. Y. Pressure regulating and filtering device for fluids. 2,003,828; June 4.
Fafnir Bearing Company, The. (See Searles, Raymond R., assignor.)
Fageol, William B., Kent, Ohio. Motor vehicle control. 2,003,431; June 4.
Fahlman, Everett G., assignor to The Permold Company, Cleveland, Ohio. Rotor for electric motors. 2,003,587; June 4.
Fairmont Railway Motors, Inc. (See Protzeller, Harry W., assignor.)
Faige, Robert N., Birmingham, assignor, by mesne assignments, to General Motors Corporation, Detroit, Mich. Lens. 2,003,804; June 4.
Faige, Robert N., Anderson, Ind., and C. E. Godley, Ypsilanti, Mich., assignor, by mesne assignments, to General Motors Corporation, Detroit, Mich. Headlamp. 2,003,805; June 4.
Falls, Robert L., Charlotte, N. C., assignor of five per cent to J. F. Kelley, Rock Hill, S. C. Composition and preparing same. 2,003,789; June 4.
Fancher, Howard M., assignor to The Rochester Folding Box Co., Rochester, N. Y. Easel construction. 2,003,482; June 4.
Fantone, Charles B., Lyndhurst, and R. M. Jameson, Teaneck, assignors to Syncro Machine Company, Newark, N. J. Automatic stop device. 2,003,353; June 4.
Fantone, Charles B., Lyndhurst, and E. G. Parvin, Roselle, assignors to Syncro Machine Company, Newark, N. J. Machine for applying a web to a strand. 2,003,354; June 4.
Farkas, Eugene, New York, N. Y. Vanity box. 2,003,355; June 4.
Fedden, Alfred H. R., assignor to The Bristol Aeroplane Company Limited, Bristol, England. Sleeve-valve mechanism for internal combustion engines. 2,003,743; June 4.
Felten & Guilleaume Carlswerk Actien Gesellschaft. (See Zapf, Georg, assignor.)
Felters Company, The. (See Bowden, James G., assignor.)
Felters Company, The. (See Hansel, Lawrence H., assignor.)
Ferguson, Warren T. (See Eisenbauer, W. F., and Ferguson.)
Fiegel, Stella M., Marshall, Tex. Brush and comb combination for packets. 2,004,044; June 4.
Finch, Arnold R., assignor to West Bend Aluminum Co., West Bend, Wis. Mold. 2,003,432; June 4.
Fingado, Rudolf. (See Wahl, O., Müller, and Fingado.)
Finzer Brothers Clay Company, The. (See Finzer, Charles S. and E. G., assignors.)
Finzer, Charles S. and E. G., assignors to The Finzer Brothers Clay Company, Sugarcreek, Ohio. Veneer wall construction. 2,003,996; June 4.
Finzer, Edward G. (See Finzer, Charles S. and E. G.)
Fischel, Eduard, Berlin-Charlottenburg, and G. Rieper, Berlin-Marlendorf, assignors to Siemens & Halske, Aktiengesellschaft, Siemensstadt, near Berlin, Germany. Fluid compass. 2,003,929; June 4.
Fischel, Eduard, Berlin-Charlottenburg, assignor to Siemens-Apparate und Maschinen G. m. b. H., Berlin, Germany. Automatic rudder control device. 2,003,930; June 4.
Fischer, Ulrich. (See Chatelain, Arthur B., assignor.)
Fitch, Benjamin F., Greenwich, Conn., assignor to Motor Terminals Company, Wilmington, Del. Demountable truck body. 2,003,287; June 4.
Fitzpatrick, John. (See Melton, R. L., and Fitzpatrick.)
Fix, Earl L., New Kensington, and B. J. Dennison, Tarentum, Pa., assignors to Duplate Corporation. Laminated glass and making the same. 2,003,288; June 4.
Flockhart, James, Newark, N. J. Oil cooler. 2,003,744; June 4.
Fontaine, Robert A. (See Schottland, M. R., and Fontaine.)
Foudem, David S., New York, N. Y. Child's garment. 2,003,683; June 4.
Foothorap, Harry A., Harrisburg, Pa., assignor, by mesne assignments, to Underwood Elliott Fisher Company, New York, N. Y. Crossfooter register. 2,003,997; June 4.
Ford, James B., Tulsa, Okla. Aircraft body. 2,003,433; June 4.
Ford, Jay T. (See Randolph, D. W., and Ford.)
Forsberg, Ted, San Leandro, Calif. Gas generator for fumigation purpose. 2,003,745; June 4.
Francois Cementation Company Limited, The. (See Chevrillon, Louis, assignor.)

Frantz, Emile, San Francisco, Calif. Incense. 2,003,684; June 4.
Fraser, Gordon, N., and J., Arbroath, Angus, Scotland. Silver roll forming machine. 2,004,045; June 4.
Fraser, John. (See Fraser, Gordon, N., and J.)
Fraser, Norman. (See Fraser, Gordon, N., and J.)
Fredrickson, Gustav, Bristol, Conn., assignor, by mesne assignments, to General Motors Corporation, Detroit, Mich. Electric heater. 2,003,855; June 4.
Freeman, John R., Jr., Cheshire, assignor to The American Brass Company, Waterbury, Conn. Aluminum brass alloy. 2,003,685; June 4.
Friedrich, Max, Chicago, Ill. Sand braking device, particularly adapted for use on automobiles. 2,003,631; June 4.
Frye, Fred L. and J. K., New Boston, Ill., assignors of one-half to H. Englehart, Davenport, Iowa. Combined jack and wheel and gear puller. 2,003,648; June 4.
Frye, Jason S., Sacramento, assignor of one-third to C. E. Baker, one-third to A. I. Richards, and one-third to H. M. Rich, Sacramento, Calif. Fuse igniter. 2,003,483; June 4.
Frye, John K. (See Frye, Fred L. and J. K.)
Fuller, Frederick L., West Orange, N. J., assignor to International Business Machines Corporation, New York, N. Y. Accounting machine. 2,003,783; June 4.
Funk, Ernest R. (See Ryan, E., and Funk.)
Gabel, John, Mfg. Co., The. (See Brandstrom, Folke A., assignor.)
Galante, Ermanno, Woburn, Mass. Metal connection for frame members. 2,003,531; June 4.
Ganz, Joseph, Frankfort-on-the-Main, Germany. Oscillatable pivotally mounted axle. 2,004,063; June 4.
Garwood, Charles B., Linthicum Heights, assignor to Carr-Lowrey Glass Co., Baltimore, Md. Grinding and polishing machine. 2,003,504; June 4.
Gaudry, Louis A., Greenfield, Mass. Protective device for elevators and elevator shaftways. 2,003,588; June 4.
Gauthier, Edouard, Timmins, Ontario, Canada. Door operating apparatus. 2,003,484; June 4.
Gebres, Hewitt A., assignor to Cooper-Bessemer Corporation, Mount Vernon, Ohio. Exhaust manifold and connection. 2,003,485; June 4.
Gelbman, Louis, Yonkers, N. Y. Building block machines. 2,003,635; June 4.
Gelsthorp, Frederick, and W. G. Koupal, Tarentum, Pa., assignors to Pittsburgh Plate Glass Company. Making plate glass. 2,003,289; June 4.
General Aniline Works, Inc. (See Ballauf, F., and Schmelzer, assignors.)
General Aniline Works, Inc. (See Perthold, H., Krauss, and Hagenbücker, assignors.)
General Aniline Works, Inc. (See Herz, R., and Schubert, assignors.)
General Aniline Works, Inc. (See Koeberle, K., and Floetz, assignors.)
General Aniline Works, Inc. (See Wahl, O., Müller, and Fingado, assignors.)
General Bronze Corporation. (See Peremi, E., and Kish, assignors.)
General Chemical Company. (See Shinn, J. V., and Cummings, assignors.)
General Electric Company. (See Carlson, George, assignor.)
General Electric Company. (See Carlson, G., and Knoderer, assignors.)
General Electric Company. (See Cockrell, William D., assignor.)
General Electric Company. (See Knoderer, Homer G., assignor.)
General Household Utilities Company. (See Jordan, James D., assignor.)
General Motors Corporation. (See Almen, John O., assignor.)
General Motors Corporation. (See Chase, Theron P., assignor.)
General Motors Corporation. (See Faige, Robert N., assignor.)
General Motors Corporation. (See Faige, R. N., and Godley, assignors.)
General Motors Corporation. (See Fredrickson, Gustav, assignor.)
General Motors Corporation. (See Little, John H., assignor.)
General Motors Corporation. (See McDougal, Taine G., assignor.)
General Motors Corporation. (See Nutt, Frank N., assignor.)
General Motors Corporation. (See Rabezzana, Hector, assignor.)
General Motors Corporation. (See Randolph, D. W., and Ford, assignors.)
General Motors Corporation. (See Randolph, D. W., and Rabezzana, assignors.)
General Motors Corporation. (See Reeves, Donald H., assignor.)
General Motors Corporation. (See Van Degrift, Thomas C., assignor.)
General Railway Signal Company. (See Langdon, Andrew, assignor.)
General Railway Signal Company. (See Stephenson, James E., assignor.)
General Railway Signal Company. (See Phinney, Robert M., assignor.)
General Research Corporation. (See Lotts, Delbert L., assignor.)
Gensburg, Myer, Chicago, Ill. Game apparatus. 2,003,356; June 4.
Gensch, Karl. (See Kronemann, E., and Gensch.)
Geophysical Research Corporation. (See Born, William T., assignor.)
Gesellschaft des ächten Naxos-Schmirgels Naxos-Union Schmirgel-Dampfwerk Frankfurt a. m. Julius Pfungst. (See Grundstein, Julius, assignor.)
Gesellschaft für Drucktransgformatoren (Koenemann-Transformatoren) G. m. b. H. (See Koenemann, E., and Gensch, assignors.)
Giaimo, Charles V., Irvington, N. J., assignor to The Lionel Corporation, New York, N. Y. Circuit breaker. 2,003,686; June 4.
Gibbins, Leslie B. (See Taylor, W. I., and Gibbins.)
Gilbert, A. C., Company, The. (See Gilbert, Alfred C., assignor.)
Gilbert, Alfred C., North Haven, and A. A. Arnold, assignors to The A. C. Gilbert Company, New Haven, Conn. Mixing apparatus. 2,003,829; June 4.
Gilbert, A. C., Company, The. (See Gilbert, A. C., and Arnold, assignors.)
Gilbert, Alfred C., North Haven, assignors to The A. C. Gilbert Company, New Haven, Conn. Heating pad. 2,003,830; June 4.
Gilbert, Alfred C., North Haven, assignor to The A. C. Gilbert Company, New Haven, Conn. Mixing apparatus. 2,003,931; June 4.
Gilbert, Kenmon R. (See Studley, O. A., and Gilbert.)
Gilchrist, William A., Chicago, Ill. Apparatus for clarification. 2,003,357; June 4.
Gillet, Alexis F., assignor to Jubilee Manufacturing Co., Omaha, Nebr. Warning signal. 2,003,505; June 4.
Gillette Safety Razor Company. (See Testi, Nicholas, assignor.)
Gimbel, Conrad, North Bend, Wash. Box cover attaching clip. 2,003,856; June 4.
Glaser, Jacob L., and S. Segal, Brooklyn; said Segal assignor of one-fourth to C. M. Palmer, New York, N. Y. Eyelash curler. 2,004,046; June 4.
Glaves, Archie H., Toledo, Ohio, assignor to H. A. Wallace, Secretary of Agriculture, of the United States of America. Self-aligning disk jointer. 2,003,831; June 4.
Globar Corporation. (See Hediger, Ernst, assignor.)
Globar Corporation. (See Boyer, John A., assignor.)
Globe Iron Roofing & Corrugating Company, The. (See Little, Howard J., assignor.)
Globe Steel Tubes Co. (See Nygren, K. A., and Zschiesche, assignors.)
Globe-Wernicke Company, The. (See Schmitz, Fred A., assignor.)
Gloor, George A., Dearborn, Mich. Beverage cooling and dispensing device. 2,003,532; June 4.
Godley, Charles E. (See Faige, R. N., and Godley.)
Goldhaumer, Leo, Munich, assignor to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. Phonograph. 2,003,434; June 4.
Goodhart, Louis, St. Louis, Mo. Floor drain. 2,003,770; June 4.
Goodman, Solomon, Brooklyn, N. Y. Lace yoke and making the same. 2,003,998; June 4.
Gordon, Joseph C., assignor to Black, Sivalls & Bryson, Inc., Oklahoma City, Okla. Apparatus for treating liquids. 2,003,589; June 4.
Goss, Albert, Dunedin, Fla. Collapsible tube cap. 2,003,506; June 4.
Govers, Francis X., Vincennes, Ind., assignor to Indian Refining Company, Lawrenceville, Ill. Filtration of wax from oil. 2,003,664; June 4.
Graf, Emil, Jamaica, assignor of one-half to H. E. Rubens, New York, N. Y. Coin testing device. 2,003,771; June 4.
Graham, Herbert J., assignor to Electric Service Supplies Company, Philadelphia, Pa. Headlight. 2,003,687; June 4.
Graham, Herbert W., and S. L. Case, Pittsburgh, assignors to Jones & Laughlin Steel Corporation, Pittsburgh, Pa. Metal body resistant to fluctuating stresses. 2,003,710; June 4.
Gram, Thomas, assignor to Techno-Chemical Laboratories, Limited, London, England. Harvesting of peat or peat forming materials more especially in connection with the production of peat powder. 2,004,047; June 4.
Grant, Harry C., Jr., assignor to Walter Kidde & Company, Inc., New York, N. Y. System for indicating the presence and location of fire. 2,003,358; June 4.
Gray, Alvin N., Baltimore, Md., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Insulated conductors. 2,003,772; June 4.
Gray Telephone Pay Station Company, The. (See Long, George A., and W. W., assignors.)
Green, Charles W., Millburn, and H. S. Black, Westfield, N. J., assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y. Signaling and power supply system. 2,003,967; June 4.
Green, Mason V., assignor to F. D. Hayes, Lansing, Mich., trustee for F. D. Hayes Electric Company. Electric door opening device. 2,003,533; June 4.

Green, Mason V., assignor to F. D. Hayes, trustee for F. D. Hayes Electric Company, Lansing, Mich. Motor operated door control. 2,003,534; June 4.
Gregory, Fred E., Galena, Kans., and R. L. Hallows, Joplin, Mo., assignors to The Eagle-Picher Lead Company, Cincinnati, Ohio. Treating lead sulphide mineral. 2,003,711; June 4.
Greig, John W., Detroit, Mich. Radio direction finder. 2,003,932; June 4.
Greig, John W., Detroit, Mich. Three dimension radio direction finder. 2,003,933; June 4.
Griesser, George J., et al. (See Stark, John F., assignor.)
Grimm, John E., Dayton, Ohio, assignor, by mesne assignments, to Radio Corporation of America, New York, N. Y. Radiocabinet. 2,003,436; June 4.
Groff, William C., and W. C. Siebens, St. Louis, Mo. Protecting device for automobile upholstery. 2,003,435; June 4.
Gross, Herman, New York, N. Y. Burner guard for cooking utensils. 2,003,773; June 4.
Grosset, Georges, Montreuil Sous Bois, V. Hudeley, Clichy, and J. Lagrave, Paris, France. Auto-collimated objective for color photography. 2,003,881; June 4.
Gruber, Edward, Cleveland, assignor to E. E. Allyne, Shaker Heights, Ohio. Absorption refrigerating apparatus. 2,003,437; June 4.
Gruman, Horace F., assignor to Lewis Invisible Stitch Machine Company, St. Louis, Mo. Looper mechanism for sewing machines. 2,003,882; June 4.
Gruna, Andrew, Union City, and F. Radhuber, North Bergen, N. J., assignors to Michael Zimic, Forest Hills West, N. Y. Stop motion for knitting machines. 2,003,774; June 4.
Grundstein, Julius, assignor to Gesellschaft des ächten Naxos-Schmirgels Naxos-Union Schmirgel-Dampfwerk Frankfurt a. m. Julius Pfungst, Frankfort-on-the-Main, Germany. Device for spherical grinding on circular grinding machines. 2,003,883; June 4.
Grundy, John R., assignor to Chasles Bond Company, Philadelphia, Pa. Flexible coupling. 2,003,848; June 4.
Guedry, Edith A., administratrix. (See Guedry, France E., assignor.)
Guedry, France E., deceased, by E. A. Guedry, administratrix, assignor to E. A. Guedry, Fort Worth Tex. Envelope-filling machine. 2,004,048; June 4.
Guilberson Corporation, The. (See Crickmer, C. S., and Stanlee, assignors.)
Guide Lamp Corporation. (See Arbuckle, Samuel F., assignor.)
Guignet, Léon A., La Varenne Ste., Hilaire, assignor to The Compagnie Royale Asturienne des Maines, Paris, France. Tool for making cartridge shells. 2,003,438; June 4.
Gulf Research Development Corporation. (See von Forster, H., and de Lange, assignors.)
Gulljas, Nicholas L., Jr., South Bend, Ind. Quick-detachable lamp and socket. 2,003,507; June 4.
Gulliford, Nicholas L., deceased, Peabody, by A. T. Gulliford, Lynn, Mass., administrator, assignor to Gulliford Wood Heel Company. Heel breasting machine. 2,004,070; June 4.
Gulliford, Archibald T., administrator. (See Gulliford, Nicholas L.)
Gulliford Wood Heel Company. (See Gulliford, Nicholas L., assignor.)
Gurney, Dayton A., Silver Spring, Md., and T. A. Conlon, Caro, Mich. Gun. 2,003,290; June 4.
Gylleck, Olaf T. (See Lee, J. E., Gylleck, and Barney.)
Habersin, Julius. (See Rozzer, G., and Habersin.)
Hacker, Horace W., La Grange, Ill. Printing plate base. 2,003,712; June 4.
Hagemann, Louis F., Niagara Falls, N. Y., assignor to American Sales Book Company, Limited, Toronto, Ontario, Canada. Autographic register. 2,003,999; June 4.
Hagenbucker, Alfred. (See Berthold, H., Krauss, and Hagenbücker.)
Haiste, John H. (See Riseam, William, assignor.)
Hale, Jesse W., Newton Center, Mass. Centrifugally controlled valve. 2,003,857; June 4.
Halford, Marion E., Greensboro, N. C. Control valve for automatic sprinkler systems. 2,003,884; June 4.
Hall, Earl K. (See Weaver, I. A., Squyer, and Hall.)
Hallows, Raymond L. (See Gregory, F. E., and Hallows.)
Halpern, Max, and W. Mayer, New York, N. Y. Adjustable necktie. 2,003,359; June 4.
Hammer, Charles, New York, assignor to Anchor Cap & Closure Corporation, Long Island City, N. Y. Metal container. 2,003,784; June 4.
Handlan-Buck Manufacturing Company. (See Evans, Roland D., assignor.)
Hankins, Thomas J., Jr., Springfield, N. J., assignor to Westinghouse Lamp Company. Heat treatment of metals. 2,003,486; June 4.
Hannesschlager, Otto, Houston, Tex. Strainer. 2,004,071; June 4.
Hansel, Lawrence H., Brookline, assignor to The Felters Company, Boston, Mass. Grease retaining washer for bearings. 2,003,934; June 4.
Hansen, Marius H., assignor to Hanson Scale Company, Chicago, Ill. Weighing scale. 2,003,360; June 4.
Hansgirg, Fritz, Radenthein, Austria, assignor to American Magnesium Metals Corporation, Pittsburgh, Pa. Producing substantially pure magnesium. 2,003487; June 4.
Hanson Scale Company. (See Hansen, Marius H., assignor.)
Hapgood, Cyrus H., Nutley, N. J., assignor to The De Laval Separator Company, New York, N. Y. Milking machine check valve chamber. 2,003,590; June 4.
Harder, Max. (See Dietrich, W., and Harder.)
Hardy, James Harris, Columbus, Miss. Gauge. 2,003,439; June 4.
Harless, William H., Patchogue, N. Y. Parking device for automobiles. 2,003,361; June 4.
Harrison, Henry C., Port Washington, assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Vibration absorbing worm. 2,003,440; June 4.
Harry, Gordon W. (See Babitch, A. M., and Harry.)
Hartford-Empire Company. (See Ingle, Henry W., assignor.)
Haskin, Joseph J., Oakland, Calif. Fish pole holder. 2,003,535; June 4.
Hass, Henry B., and E. T. McBee, assignor to Purdue Research Foundation, West Lafayette, Ind. Chlorination process and product thereof. 2,004,072; June 4.
Hass, Henry B., and E. T. McBee, assignors to Purdue Research Foundation, West Lafayette, Ind. Chlorinating propane and its partially chlorinated derivatives. 2,004,073; June 4.
Hasselbach, Alexander, Dessau, Germany. Heat exchange apparatus. 2,003,649; June 4.
Hathaway, Clarence B., Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company. Power-supply system for electric shovels and the like. 2,003,688; June 4.
Hause, Daniel M. (See Imler, G. C., and Hause.)
Hayden, Howard A., Detroit, Mich. Self locking nut. 2,003,591; June 4.
Hayes, F. D., Electric Company. (See Green, Mason V.)
Hayes, Frank D., trustee. (See Green, Mason V., assignor.)
Hazel-Atlas Glass Company. (See Stenhouse, David, assignor.)
Headington, Florence E., Iowa City, Iowa. Book, chart, and reference holder. 2,003,746; June 4.
Heald Machine Company, The. (See Highberg, Carle J., assignor.)
Hebebrand, George H., St. Louis, Mo. Driving mechanism for producing gyrator movement. 2,003,441; June 4.
Hechenbleikner, Ingenuin, Charlotte, N. C., and T. C. Oliver, Great Neck, and S. F. Spangler, Flushing, N. Y., assignors to Chemical Construction Corporation, Charlotte, N. C. Manufacture of sulphuric acid from hydrogen sulphide gas. 2,003,442; June 4.
Hechenbleikner, Ingenuin, Charlotte, N. C., assignor, by mesne assignments, to Chemical Construction Corporation. Process and apparatus for manufacture of nitric acid. 2,004,000; June 4.
Hediger, Ernst, assignor to Globar Corporation, Niagara Falls, N. Y. Glaze for non-metallic resistors. 2,003,592; June 4.
Heid, Jacob B., assignor to Universal Oil Products Company, Chicago, Ill. Cracking hydrocarbon oils. 2,003,536; June 4.
Heid, Jacob B., assignor to Universal Oil Products Company, Chicago, Ill. Cracking hydrocarbon oil. 2,003,537; June 4.
Hendrickson, Fred K., Worcester, assignor to Whitin Machine Works, Whitinsville, Mass. Roving frame builder motion. 2,003,362; June 4.
Henkle, Louis R., Lawrenceburg, Ind., assignor to Pneumatic Process Corporation, St. Louis, Mo. Apparatus for conditioning grain. 2,004,001; June 4.
Hennecberger, Thomas C., Caldwell, N. J., assignor to American Telephone and Telegraph Company. Contactor indicator. 2,003,443; June 4.
Henry, Donald E. (See Rentschler, H. C., and Henry.)
Hercules Powder Company. (See Norton, Sereno G., assignor.)
Hercules Powder Company. (See Rummelsburg, Alfred L., assignor.)
Herz, Richard, Frankfort-on-the-Main, and M. Schubert, Frankfort-on-the-Main-Fechenheim, Germany, assignors to General Aniline Works, Inc., New York, N. Y. Producing amino-aryl-thiazole-compounds. 2,003,444; June 4.
Hester, Loring B., assignor of one-third to W. T. Dowden, Tallahassee, Fla. Chock. 2,003,747; June 4.
Hickey, Daniel W., St. Paul, Minn. Pipe elbow. 2,003,538; June 4.
Hickman, Clarence N., Jackson Heights, and E. C. Wente, assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y. Magnetic telegraphone system. 2,003,968; June 4.
Hicks, William P. (See Ellstrom, E. G., and Hicks.)
Highberg, Carle J., assignor to The Heald Machine Company, Worcester, Mass. Grinding machine. 2,003,713; June 4.
Hill, Rowland, Cheadle Hulme, England, assignor to Imperial Chemical Industries Limited. Resinous composition. 2,003,291; June 4.
Hisey-Wold Machine Company, The. (See Ritz, Emil, Jr., assignor.)
Hochstetter, Paul E. (See Jordan, R. H., and Hochstetter.)
Hodges, George F., and F. B. Cota, San Diego, Calif. Carburetor. 2,003,363; June 4.

Hoekstra, Harold D., Kenmore, N. Y. Retractable landing gear. 2,003,885; June 4.
Hoffeld, Louis, New York, N. Y. Combined sweat-band and removable lining. 2,003,886; June 4.
Holzwarth Gas Turbine Co. (See Holzwarth, Hans, assignor.)
Holzwarth, Hans, Dusseldorf, Germany, assignor to Holzwarth Gas Turbine Co., San Francisco, Calif. Method of and apparatus for regulating constant volume explosion chambers. 2,003,292; June 4.
Holzwarth, Hans, Dusseldorf, Germany, assignor to Holzwarth Gas Turbine Co., San Francisco, Calif. Explosion chamber. 2,003,293; June 4.
Holyoke Heater Company. (See Conant, John H., assignor.)
Holzwarth Gas Turbine Co. (See Holzwarth, Hans, assignor.)
Homeyer, August H. (See Whitmore, F. C., Homeyer, and Trent.)
Hook, Ira T., New Haven, assignor to The American Brass Company, Waterbury, Conn. Threadless pipe connection and making same. 2,003,488; June 4.
Hooker Electrochemical Company. (See Scott, W. B., Bovier, and Matthews, assignors.)
Hoovenaire Corporation. (See Eaves, W. C., and Dilks, assignors.)
Hoover, Charles E., Lancaster, Pa. Connecting cables to batteries. 2,004,049; June 4.
Hopkins, William E., Pittsburgh, Pa. Toy. 2,003,748; June 4.
Hopkinson, Lawrence T., Washington, D. C. Production of fertilizer. 2,003,887; June 4.
Horton, Joseph W., Cambridge, Mass., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Television system. 2,003,294; June 4.
Hosking, George T., assignor of one-fourth to T. G. Phillips, Somerville, Mass., and one-fourth to G. R. Lewis, Waterbury, Conn. Combination lock with electrical switch control. 2,003,650; June 4.
House, Frank R. (See Bassett, P. R., and House.)
Howard, Joseph A., Streatham Hill, London, England. Manufacture of upholstery padding. 2,003,935; June 4.
Huber, Albert F. (See Strong, J. B., and Huber.)
Hucal, Wasyl, Chicago, Ill. Milling machine. 2,003,936; June 4.
Hudeley, Victor. (See Grosset, G., Hudeley and Lagrave.)
Hufferd, George H., assignor to Thompson Products, Incorporated, Detroit, Mich. Universal joint. 2,003,539; June 4.
Hughes, Ausker E., Orlando, Fla., dedicated to the free use of the public. Fruit testing device. 2,003,749; June 4.
Hunt, Franklin L., Summit, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Sound picture set. 2,003,937; June 4.
Husson, Harry L., Westfield, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y. Humidifying apparatus. 2,003,938; June 4.
Hydraulic Brake Company. (See McDougall, George F., assignor.)
Hydraulic Brake Company. (See Oliver, Wallace F., assignor.)
I. G. Farbenindustrie Aktiengesellschaft. (See Goldhammer, Leo, assignor.)
I. G. Farbenindustrie Aktiengesellschaft. (See Schweitzer, Eugen, assignor.)
I. G. Farbenindustrie Aktiengesellschaft. (See Dietrich, W., and Harder, assignors.)
Ichter, John H., Ashley, Pa., assignor to The Standard Stoker Company, Incorporated. Fuel distributor. 2,003,445; June 4.
Illinois Watch Case Company. (See Irelan, Ellison S., assignor.)
Imler, Glover C., and D. M. Hause, Seminole, assignors of one-third to R. L. Imler, Tulsa, Okla. Well tubing hanger. 2,003,446; June 4.
Imler, Robert L. (See Imler, G. C., and Hause, assignors.)
Imperial Chemical Industries Limited. (See Evans, J. G., and Lawrie, assignors.)
Imperial Chemical Industries Limited. (See Hill, Rowland, assignor.)
Imperial Chemical Industries Limited. (See Tonkin, R., and Wilson, assignors.)
Imperial Chemical Industries Limited. (See Whitworth, Edward, assignor.)
Indergand, Joseph, Baar, Switzerland, assignor to Landis & Gyr, A-G. Electricity meter. 2,003,939; June 4.
Indian Refining Company. (See Govers, Francis X., assignor.)
Industrial Patents Corporation. (See McKee, Harry H., assignor.)
Ingle, Henry W., Windsor, assignor to Hartford-Empire Company, Hartford, Conn. High speed bottle making process. 2,003,940; June 4.
Ingraham, E., Company, The. (See Burghoff, Louis L., assignor.)
Ingraham, E., Company, The. (See Ingraham, Dudley S., assignor.)
Ingraham, Dudley S., assignor to The E. Ingraham Company, Bristol, Conn. Modulated alarm clock. 2,003,785; June 4.
International Business Machines Corporation. (See Fuller, Frederick L., assignor.)
International Business Machines Corporation. (See Lake, Clair D., assignor.)
International Business Machines Corporation. (See Rieger, Paul, assignor.)
International Motor Company. (See Masury, Alfred F., assignor.)
International Patents Development Company. (See Kelling, Alfred H., assignor.)
Irelan, Ellison S., assignor to Illinois Watch Case Company, Elgin, Ill. Container lid. 2,003,540; June 4.
Irmscher, Hans, assignor to Millie Patent Holding Co. Inc., New York, N. Y. Feeding mechanism for printing presses. 2,003,364; June 4.
Izard, Emmette F., Elsmere, assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Cellulose derivative composition. 2,003,295; June 4.
Jacobs, Oliver B., Morristown, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Telephone transmission system. 2,003,969; June 4.
Jacobsen, Oystein, Dayton, Ohio, assignor to The Duriron Company, Inc. Heat exchanger. 2,003,593; June 4.
James Manufacturing Company. (See Shodron, John G., assignor.)
Jameson, Reuben M. (See Fantone, C. B., and Jameson.)
Jamieson, Charles C., Jacksonville, Fla. Constructing asphalt pavement with natural aggregates. 2,003,888; June 4.
Jawort, Frank A., assignor of one-half to J. A. Westland, Spokane, Wash. Baker's peel. 2,003,541; June 4.
Jay, Webb, Miami Beach, Fla., and L. Pengilly, San Francisco, Calif., said Pengilly assignor to said Jay. Cigarette vending machine. 2,003,489; June 4.
Jeffrey, Douglas C., and H. J. Wolfe, Akron, N. Y., assignors to Universal Gypsum & Lime Co., Chicago, Ill. Weighing and mixing mechanism. 2,003,832; June 4.
Jencick, Stephen, Chagrin Falls, Ohio. Propeller shaft. 2,003,508; June 4.
Jencick, Stephen, Chagrin Falls, Ohio. Tappet. 2,003,509; June 4.
Jennison, Herbert C., Bridgeport, and R. B. Montgomery, Seymour, assignors to the American Brass Company, Waterbury, Conn. Making deoxidized copper. 2,003,296; June 4.
Jennison, Herbert C., Bridgeport, and R. B. Montgomery, Seymour, assignors to The American Brass Company, Waterbury, Conn. Making deoxidized copper and copper alloys. 2,003,889; June 4.
Johns Manville Corporation. (See Christensen, George, assignor.)
Johns-Manville Corporation. (See Powell, Edward R., assignor.)
Johns Manville Corporation. (See Townshend, Bailey, assignor.)
Johnson, Arthur A., Bridgeport, Conn., assignor to Autographic Register Company, Hoboken, N. J. Typewriting machine. 2,003,858; June 4.
Johnson, Ellsworth T., assignor to Deere & Company, Moline, Ill. Agricultural implement. 2,003,365; June 4.
Johnson, Gunnar R., Milton, Mass. Bottle attachment. 2,003,594; June 4.
Johnson, Gustave A., Newark, N. J., assignor to Electrical Patent Holding Corporation, New York, N. Y. Portable electric heater. 2,003,714; June 4.
Johnston, Eugene E., Buffalo, N. Y. Gas price sign. 2,003,542; June 4.
Johnston, Marriott T., assignor to Walgreen Co., Chicago, Ill. Knockdown wall fixture. 2,003,633; June 4.
Jones, Frank N., Chicago, Ill. Projection unit. 2,003,890; June 4.
Jones, Frederick A. (See Twiss, D. F., and Jones.)
Jones & Laughlin Steel Corporation. (See Graham, H. W., and Case, assignors.)
Jordan, James D., Elmhurst, assignor, by mesne assignments, to General Household Utilities Company, Chicago, Ill. Separating solution components and effecting separation thereof. 2,003,543; June 4.
Jordan, Richard H., and P. E. Hochstetter, Springfield, Mass., assignors to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa. Clothes spinner. 2,004,004; June 4.
Jordan, William M., Birmingham, Ala., assignor to South Bend Bait Company, South Bend, Ind. Fishing lure. 2,003,356; June 4.
Jordhoy, Hans C., North Plainfield, N. J., assignor to Wood Newspaper Machinery Corporation, New York, N. Y. Ink fountain regulator. 2,003,544; June 4.
Joyce, Lyndon W., assignor to Southern Webbing Mills, Inc., Greensboro, N. C. Cord elastic suspender end assemblage. 2,003,750; June 4.
Jubilee Manufacturing Co. (See Gillet, Alexis F., assignor.)
Julich, Herman, New Rochelle, N. Y. Headgear. 2,003,367; June 4.
Kaczmarek, Eugen, Berlin-Hermsdorf, Germany. Dental plate. 2,003,891; June 4.
Kagi, Albert. (See Davis, E., and Kagi.)
Kahl, Leopold, Charlottenburg-Berlin, assignor to Rütgerswerke-Aktiengesellschaft, Berlin, Germany. Production of phenol. 2,003,041; June 4.
Kahlisch, Gustav. (See Reiners, W., and Kahlisch.)
Kaisser, Karl, Munich, Germany. Electrolytic treatment of liquids. 2,004,065; June 4.

Kalb, Lewis P., Grosse Pointe Village, assignor to Continental Motors Corporation, Detroit, Mich. Engine. 2,004,002; June 4.
Kaltenbach, Robert W., Cleveland Heights, Ohio. System and apparatus for reeving counterweight cables. 2,003,715; June 4.
Kane, Henry F. (See Barnard, K. H., and Kane.)
Karle, John D., Roselle Park, assignor to The Singer Manufacturing Company, Elizabeth, N. J. Presser-foot for sewing machines. 2,003,665; June 4.
Karle, John D., Roselle Park, assignor to The Singer Manufacturing Company, Elizabeth, N. J. Fabric-gripper. 2,003,942; June 4.
Karnopp, Karl W., Winnetka, Ill. Sterlizing apparatus. 2,003,651; June 4.
Katsaros, Michael et al. (See Stark, John F., assignor.)
Kauffman, Walter L., 2d., assignor to Lovell Manufacturing Company, Erie, Pa. Headed pin. 2,003,595; June 4.
Keller, Andreas R., Lombard, Ill. Examination and control device for wort handling equipment. 2,003,892; June 4.
Keller, Fred, and R. S. Merritt, New Kensington, assignors to Aluminum Company of America, Pittsburgh, Pa. Aluminum alloy. 2,003,297; June 4.
Keller, Rex E., Beverly Hills, Calif. Automatic transmission. 2,003,634; June 4.
Kelley, J. F. (See Falls, Robert L., assignor.)
Kelling, Alfred H., Chicago, Ill., assignor to International Patents Development Company, Wilmington, Del. Lubricant. 2,003,368; June 4.
Kelsay, Le Roy W., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Cable terminal. 2,003,447; June 4.
Ken-Crip Corporation. (See Kennedy, Guy L., assignor.)
Kennedy, Guy L., assignor to Ken-Crip Corporation, New York, N. Y. Carburetor. 2,004,003; June 4.
Kerk, Paul C., Exton, assignor to J. Bishop & Company, Platinum Works, Malvern, Pa. Hypodermic needle package. 2,004,050; June 4.
Kerr, Howard J., Westfield, assignor to The Babcock & Wilcox Company, Bayonne, N. J. Mercury boiler headers with enslugs. 2,003,780; June 4.
Kick, August, St. Louis, Mo., assignor to United Shoe Machinery Corporation, Paterson, N. J. Skiving machine. 2,003,369; June 4.
Kidde, Walter, & Company. (See Grant, Harry C., Jr., assignor.)
Kiley, Le Roy D., Larchmont, N. Y. Apparatus for and method of recovering vapors vented from storage tanks. 2,004,074; June 4.
Kimball, John A., Taylorville, Ill. Game apparatus. 2,003,370; June 4.
King, Walter G., and M. E. Krause, Chicago, Ill. Film reel. 2,003,510; June 4.
Kinsler, Albert J., and J. Kinsler, Pittsburgh, Pa. Door operator. 2,003,652; June 4.
Kinsler, Joseph. (See Kinsler, Albert J. and J.)
Kish, Charles. (See Peremi, E., and Kish.)
Kless, Albert L., assignor to Combustion Utilities Corporation, New York, N. Y. Heating process and apparatus. 2,003,943; June 4.
Kling, Charles, et al. (See Esterling, William M., assignor.)
Kling, Ida M., et al. (See Esterling, William M., assignor.)
Knoderer, Homer G. (See Carlson, G., and Knoderer.)
Knoderer, Homer G., Fairfield, Conn., assignor to General Electric Company. Weatherproof armored cable. 2,004,004; June 4.
Knutson, Carl L., Maywood, assignor to Cinch Manufacturing Corporation, Chicago, Ill. Making contact devices for radio sockets and the like. 2,004,076; June 4.
Koch, Earl L., Chicago, Ill., assignor, by mesne assignments, to Earl L. Koch Holding Corporation, New York, N. Y. Constant frequency oscillator. 2,003,371; June 4.
Koch, Earl L., Holding Corporation. (See Koch, Earl L., assignor.)
Koch, Henry, Jamaica, assignor to Dictograph Products Company, Inc., New York, N. Y. Automatic signal lock and release for switchboards. 2,003,689; June 4.
Koeberle, Karl, and E. Ploetz, Ludwigshafen-on-the-Rhine, Germany, assignors to General Aniline Works, Inc., New York, N. Y. Producing azanthracene derivatives. 2,003,596; June 4.
Koenemann, Ernst, and K. Gensch, assignors to Gesellschaft für Drucktransformatoren (Koenemann Transformatoren) G. m. b. H., Berlin, Germany. Evaporator, especially for high pressure steam. 2,004,075; June 4.
Koepping, Emil D., Haddon Heights, assignor to Radio Condenser Company, Camden, N. J. Applying a trimming condenser to a main condenser. 2,003,545; June 4.
Koppers Company of Delaware, The. (See Becker, Joseph, assignor.)
Koppers Company of Delaware, The. (See Shoeld, Mark, assignor.)
Koppers Company of Delaware, The. (See van Ackeren, Joseph, assignor.)
Koupal, Walter G. (See Geistharp, F., and Koupal.)
Kramer, William L., Houston, Tex. Foot accelerator pedal. 2,003,751; June 4.
Krause, Max E. (See King, W. G., and Krause.)
Krauss, Carl. (See Berthold, H., Krauss, and Hagenböcker.)
Krohs, Walter. (See Bockmühl, M., Krohs, and Ehrhart.)
Kruse, Hermann H. J., Hemelingen, near Bremen, Germany, assignor to No-Nail Cases Proprietary Limited, London, England. Apparatus for making metal binding strips. 2,003,448; June 4.
Kühlewind, Walter, assignor to Telefunken Gesellschaft für Drahtlose Telegraphie m. b. H., Berlin, Germany. Directional receiver. 2,003,372; June 4.
Kuhn, Lee B., Brooklyn, N. Y. Memorandum card. 2,003,449; June 4.
Ladd, Lester L., Lockport, Ill. Conveyer for kilns. 2,003,450; June 4.
Ladd, Lester L., Lockport Ill. Kiln. 2,003,451; June 4.
Lagrave, Jean. (See Grosset, G., Hudeley, and Lagrave.)
Lake, Clair D., Binghamton, assignor to International Business Machines Corporation, New York, N. Y. Time stamp. 2,003,787; June 4.
Langdon, Andrew, assignor to General Railway Signal Company, Rochester, N. Y. Indicating means for switch machines. 2,003,944; June 4.
Landis & Gyr., A. G. (See Indergand, Joseph, assignor.)
Lapworth, William L. (See Willoughby, V., and Lapworth.)
Lancaster Asphalt, Inc. (See Robinson, Thomas, assignor.)
Landt, Gustave E., Norristown, Pa., assignor to Continental-Diamond Fibre Company, Newark, N. J. Bendable laminated product. 2,003,752; June 4.
Lansing, Raymond P., Montclair, N. J., assignor to Eclipse Machine Company, Elmira, N. Y. Engine starter. 2,003,452; June 4.
La Pan, Lester K., Glens Falls, N. Y. Fishing rod. 2,003,893; June 4.
Lapeyronse, Lawrence L., Mobile, Ala. Vertically adjustable table for fourdrinier machines. 2,003,753; June 4.
Lauterbur, Edward J., and F. X. Lauterbur, Sidney, assignors to The Peerless Bread Machine Company, Sidney, Ohio. Apparatus for conveying and conditioning pulverulent material. 2,003,716; June 4.
Lauterbur, Frank X. (See Lauterbur, Edward J., and F. X.)
Lavietes, David P., Brooklyn, N. Y. Tobacco pipe. 2,003,373; June 4.
Lawrence, Alfred N. (See Braddon, F. D., and Lawrence.)
Lawrence, William H., Jr., Marblehead, assignor to Lee Laboratories, Incorporated, Cambridge, Mass. Preparation of calcium acetylsalicylate. 2,003,374; June 4.
Lawrie, Leslie G. (See Evans, J. G., and Lawrie.)
Ladwinka, Joseph, assignor to Edward G. Budd Manufacturing Company, Philadelphia, Pa. Rail car truck. 2,003,546; June 4.
Lee, Henry R., South Milwaukee, Wis., assignor to E. I. duPont de Nemours & Company, Wilmington, Del. Preparation of quinizarine. 2,003,859; June 4.
Lee, James Edgar, O. T. Gylleck, and F. Barney, assignors to The Challenge Machinery Company, Grand Haven, Mich. Printer's quoin. 2,003,597; June 4.
Lee Laboratories Incorporated. (See Lawrence, William H., Jr., assignor.)
Lee, Orval W., Spokane, Wash. Optical appliance. 2,003,806; June 4.
Leeds and Northrup Company. (See Doyle, Edgar D., assignor.)
Leghorn, George M., Winchester, Mass. Crate. 2,003,717; June 4.
Lehrer, Oscar J., and J. B. Blankenship, Norman, Okla. Camping trailer. 2,003,598; June 4.
Leib, August, assignor to Telefunken Gesellschaft für Drahtlose Telegraphie m. b. H., Berlin, Germany. Direction finding coil antenna. 2,003,375; June 4.
Lejeune, Leon S. M. (See Bongrand, J. E. C., and Lejeune.)
Lemaire, Maurice H., Paris, France. Apparatus for continuously cleaning railway ballast. 2,004,051; June 4.
Lemmon, George N., Homewood, assignor to Southern States Equipment Company, Birmingham, Ala. Electrical protective apparatus. 2,003,298; June 4.
Le Roi Company. (See Eells, Paul W., assignor.)
Lesmeister, Anthony B., Portland, Oreg. Ring, brooch pin, bracelet, and the like. 2,003,376; June 4.
Le Tourneau, Robert G., Stockton, Calif. Tractor derrick. 2,003,599; June 4.
Levitt, Percy B. (See Morgan, J. D., and Levitt.)
Lewis, Gomer R., et al. (See Hosking, George T., assignor.)
Lewis Invisible Stitch Machine Company. (See Grunman, Horace F., assignor.)
Lewton, Lucy O., Portchester, N. Y. Tobacco product. 2,003,690; June 4.
Linda, Frank R. (See Brady, C. V., and Linda.)
Line Material Company. (See Steinmayer, A. G., and Schultz, assignors.)
Lloyd Corporation, The. (See Giaimo, Charles V., assignor.)
Little, Howard J., Fort Thomas, Ky., assignor to The Globe Iron Roofing & Corrugating Company. Sheet metal roofing and similar construction. 2,004,052; June 4.
Little, John H., assignor to General Motors Corporation, Detroit, Mich. Illumination of instrument dials. 2,003,807; June 4.
Long, George A., and W. W., assignors to The Gray Telephone Pay Station Company, Hartford, Conn. Telephone toll apparatus. 2,003,945; June 4.
Long, William W. (See Long, George A. and W. W.)

Lonroy Corporation. (See Buttress, George A., assignor.)

Lohr, Leslie K., and W. E. Burdick, assignors to The Startomatic Corporation, Los Angeles, Calif. Automatic starting mechanism. 2,004,053; June 4.

Logan, Frank L., Mount Vernon, N. Y., assignor to Ward Leonard Electric Company. Electric controlling apparatus. 2,003,945; June 4.

Lotts, Delbert L., assignor, by mesne assignments, to General Research Corporation, Chicago, Ill. Free wheeling clutch. 2,003,833; June 4.

Lovell Manufacturing Company. (See Kauffman, Walter L., assignor.)

Lowenfels, Albert, White Plains, N. Y. Butter package and making same. 2,003,600; June 4.

Luedtke, Hans, Berlin-Tempelhof, Germany. Keyboard. 2,003,894; June 4.

Lummus Company, The. (See Worn, George A., assignor.)

Lundberg, Carl E., Seattle, Wash. Photographic copying. 2,003,691; June 4.

Machlet, Adolph W., Elizabeth, N. J. Bell retort furnace. 2,003,970; June 4.

MacKenzie, Fred L., Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J. Fastening-supplying apparatus. 2,003,377; June 4.

MacMullin, Robert B., Niagara Falls, assignor to The Mathieson Alkali Works, Inc., New York, N. Y. Production and recovery of sodium carbamate and ammonium chloride. 2,003,378; June 4.

Mahan, Joseph R., and J. B. Picard, assignors to The National-Superior Company, Toledo, Ohio. Geared pumping power. 2,003,601; June 4.

Mahoney, Joseph N. (See Backlen, H. E., and Mahoney.)

Malcom, Robert, Chicago, Ill. Retaining cup for lenses and the like. 2,003,379; June 4.

Mallinckrodt Chemical Works. (See Whitmore, F. C., Homeyer, J., and Trent, assignors.)

Mallory Hat Company, The. (See Reynolds, Ralph K., assignor.)

Marians, Morris, New York, N. Y., assignor, by mesne assignments, to Roach Appleton Manufacturing Company, South Bend, Ind. Outlet box. 2,003,602; June 4.

Markham, Charles M., Detroit, Mich. Beam lanyer. 2,003,635; June 4.

Marlowe, Harold J., Brooklyn, N. Y., assignor to Marlowe Devices, Inc. Device for cutting and pressing vegetables and the like. 2,003,229; June 4.

Marlowe Devices, Inc. (See Marlowe, Harold J., assignor.)

Mart, Leon T., Mission Township, Johnson County, Kans. Forced draft multiple fan cooling tower. 2,003,547; June 4.

Martin, William S., Rochester, N. Y. Serving utensil. 2,003,895; June 4.

Masench, Joseph J., Newark, N. J. Liquid tank. 2,003,808; June 4.

Master Builders Company, The. (See Scripture, Edward W., Jr., assignor.)

Master Metal Products, Inc. (See Pearson, Charles L., assignor.)

Masterson, Frank J., Brooklyn, N. Y. Float operated valve. 2,003,380; June 4.

Masury, Alfred F., assignor to International Motor Company, New York, N. Y. Independently mounted traction unit. 2,003,548; June 4.

Mathieson Alkali Works, Inc., The. (See McMullin, Robert B., assignor.)

Matthews, Ernest D. (See Scott, W. B., Boyer, and Matthews.)

Matthews, W. N., Corporation. (See Ball, L. P., and Birkenmeier assignors.)

Maul, Michael, Berlin-Johannisthal, Germany. Printing and punching record controlled machine. 2,003,636; June 4.

Maul, Michael, Berlin-Johannisthal, Germany. Record controlled punching machine. 2,003,637; June 4.

May, Russell P., Woodbury, N. J., assignor to Radio Corporation of America. Portable talking motion picture apparatus. 2,003,381; June 4.

Mayer, William. (See Halpern, M., and Mayer.)

McBee, Earl T. (See Hass, H. B., and McBee.)

McCartney, William J., and S. T. Bachus, Birmingham, Ala. Coupling. 2,004,077; June 4.

McCarthy, William, and G. Wolff, Clifton, N. J. Front wheel drive. 2,003,718; June 4.

McClave-Brooks Company. (See Warg, Charles A., assignor.)

McConnaughay, Kenneth E., assignor to Pre Cote Corporation, Indianapolis, Ind. Bituminous emulsion. 2,003,860; June 4.

McConnaughay, Kenneth E., assignor to Pre Cote Corporation, Indianapolis, Ind. Paving material and process of preparing it. 2,003,861; June 4.

McCrery, Harold E., Pittsburgh, assignor to Blaw-Knox Company, Blawnox, Pa. Automatic reversing mechanism. 2,003,719; June 4.

McDanal, Michael R., Denver, Colo. Mounting for rimless spectacles and eyeglasses. 2,004,005; June 4.

McDougal, Taine G., Flint, assignor, by mesne assignment, to General Motors Corporation, Detroit, Mich. Igniting device for internal combustion engines. 2,003,453; June 4.

McDougall, George E., Portland, Oreg., assignor to Hydraulic Brake Company, Detroit, Mich. Hydraulic brake mechanism. 2,004,078; June 4.

McGinnis, Walter, Eagle Rock, and Z. Wirt, Los Angeles, Calif. Electrical connection. 2,003,788; June 4.

McKee, Harry H., assignor to Industrial Patents Corporation, Chicago, Ill. Meat package. 2,003,862; June 4.

McKeon, Harry J., Galesburg, Ill. Fastening device. 2,004,006; June 4.

McKernan, Edward J., Topeka, Kans. Floor resurfacing device. 2,003,603; June 4.

McKinley, Edwin W., Los Angeles, Calif. Snap action thermostat. 2,003,917; June 4.

McLeod, Archie K., Charlotte, N. C. Ironing board. 2,003,601; June 4.

McManus, Charles E., assignor to Crown Cork & Seal Company, Inc., New York, N. Y. Forming sealed containers. 2,004,079; June 4.

McWhirter, William C., Wilkinsburg, assignor to The Union Switch & Signal Company, Swissvale, Pa. Railway switch operating apparatus. 2,003,382; June 4.

Meadows, James E., San Francisco, Calif. Dental appliance. 2,003,692; June 4.

Meek, Jessie W., assignor of one-half to L. H. Walton, Deer Park, Wash. Closure for vacuum cleaner bags. 2,003,720; June 4.

Meiss, Charles H., assignor to Lux Gas Fire Extinguisher Corporation, New York, N. Y. Fire extinguishing device. 2,003,599; June 4.

Melton, Ronnie L., and J. Fitzpatrick, assignors to The Carborundum Company, Niagara Falls, N. Y. Apparatus for determining toughness or resistance to breakage of abrasive bodies by impact. 2,003,853; June 4.

Menger, Edward W., San Antonio, Tex. Horn mount. 2,003,806; June 4.

Meghan, Geo. S., Corporation. (See Stinson, Thane K., assignor.)

Mercier, Jean, Neuilly-sur-Seine, France. Compensating device acting between two different pneumatic mountings of a vehicle. 2,003,511; June 4.

Merritt, Richard S. (See Keller, E., and Merritt.)

Mess, Wilbur K., Newark, N. J. Attachment plug and receptacle. 2,003,948; June 4.

Metal Alloys, Inc. (See Warner, Thomas H., assignor.)

Metropolitan Sewing Machine Corporation. (See Weis, John P., assignor.)

Michelson, Fritz, and J. Richter, assignors to Telefunken Gesellschaft für Drahtlose Telegraphie m. b. H., Berlin, Germany. Electron tube. 2,003,301; June 4.

Miguet, Paul L. J., and M. P. Perron, St. Julien de Maurienne, France. Electric furnace operation. 2,003,673; June 4.

Miller, Carl, Philadelphia, Pa. Photographic apparatus. 2,003,754; June 4.

Miller, Robert A., Tarentum, Pa., assignor to Pittsburgh Plate Glass Company. Process and apparatus for bending glass sheets. 2,003,383; June 4.

Miller, Robert S., Ashton-under-Lyne, England. Direction indicator. 2,004,007; June 4.

Miller, Swift, Wauwatosa, assignor to E. R. Wagner Manufacturing Company, Milwaukee, Wis. Seat adjuster. 2,003,549; June 4.

Miller, Verne S. (See Baldwin, C. C., and Miller.)

Miller, William C., and A. L. Abbott, assignors to Diebold Safe & Lock Co., Canton, Ohio. Safe structure. 2,003,302; June 4.

Mills Patent Holding Co. Inc. (See Irmscher, Hans, assignor.)

Minneapolis-Honeywell Regulator Company. (See Bower, George D., assignor.)

Minnelli, Vincent, Paterson, Pa. Safety razor blade. 2,004,008; June 4.

Mitchell, Allister S., Detroit, Mich., assignor to National Automotive Fibres, Inc., Oakland, Calif. Upholstery machine. 2,003,807; June 4.

Mitchell, John K., Villanova, Pa. Game table. 2,003,834; June 4.

Mitchell, John K., Bryn Mawr, Pa. Folding leg construction. 2,003,835; June 4.

Mitchell, John K., Bryn Mawr, Pa. Folding leg construction and locking means therefor. 2,003,836; June 4.

Mitchell, Joseph F. (See Pityo, A. E., and Mitchell.)

Mitscherling, Waldemar O., assignor to Neon Research of Connecticut, Inc., Bridgeport, Conn. Catalytic conversion of hydrocarbons. 2,003,393; June 4.

Mitscherling, Waldemar O., assignor to Neon Research of Connecticut, Inc., Bridgeport, Conn. Treatment of hydrocarbons. 2,003,398; June 4.

Moir, William A., New York, N. Y. Method of and apparatus for conditioning chocolate or the like. 2,004,009; June 4.

Moneyhun, Charles H., Detroit, Mich. Pump. 2,003,666; June 4.

Montgomery, Richard B. (See Jennison, H. C., and Montgomery.)

Monty, Paul S. (See Schenck, J. F., Sr., and Monty.)

Moore, Daniel M., East Orange, N. J. Piano chord player. 2,003,384; June 4.

Moore, Lou Q., assignor to The Moore Seal Co. Inc. Pueblo, Colo. Seal. 2,003,755; June 4.

Moore Seal Co., The. (See Moore, Lou Q., assignor.)

Morey, Walter W. Wilmette, assignor by mesne assignments to Teletypesetter Corporation, Chicago, Ill. Typographical slug. 2,003,693; June 4.

Morgan, John D., South Orange, N. J., and P. B. Levitt, Jackson Heights, assignors to Doherty Research Company, New York, N. Y. Gas engine leakage tester. 2,003,949; June 4.

Morrill, Alfred R., Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J. Machine for use in the manufacture of shoes. 2,003,512; June 4.

Morsbach, Kurt, Berlin-Lichterfelde, assignor to Siemens & Halske, Aktiengesellschaft, Siemensstadt, near Berlin, Germany. Motion picture camera. 2,003,971; June 4.

Morton, Edmund R., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Regulator circuit. 2,003,457; June 4.

Motor Terminals Company. (See Fitch, Benjamin F., assignor.)

Moulton, George Spencer & Company. (See Carter, Windle, assignor.)

Muller, Peter, Detroit, Mich. Fish bait. 2,003,550; June 4.

Müller, Werner. (See Wahl, O., Müller, and Fingado.)

Mund, Charles J. (See Parker, Sidney E., assignor.)

Munson, John K., Olympia, Wash. Self-dumping scow. 2,003,604; June 4.

Murray, Henry L., Auckland, assignor to The Te Aroha Dairy Company, Limited, Te Aroha, New Zealand. Deodorizing, pasteurizing and concentrating fluids. 2,003,454; June 4.

Myers, John W., Roanoke, Va., assignor to The Standard Stoker Company, Incorporated. Locomotive and tender. 2,003,455; June 4.

Myers, Lloyd D., Minneapolis, Minn. Animal trap. 2,003,513; June 4.

Nagel, Howard K., Seymour, Wis. Hydraulic puller. 2,003,756; June 4.

Nakazawa, Haruo. (See Yamaguchi, Y., and Nakazawa.)

Nardone, Romeo M., assignor to Eclipse Aviation Corporation, East Orange, N. J. Engine starting apparatus. 2,003,456; June 4.

National Automatic Doughnut Machine Company. (See Toews, Peter J., assignor.)

National Automotive Fibres, Inc. (See Mitchell, Allister S., assignor.)

National Lock Co. (See North, Edwin W., assignor.)

National Superior Company, The. (See Mahan, J. R., and Picard, assignors.)

Natural By-Products Corporation. (See Claret, Roger J., assignor.)

Naudecks, Erich, Constance, assignor to Deutsche Gold & Silber-Scheideanstadt vormals Roessler, Frankfort-on-the-Main, Germany. Producing pentaerythrite. 2,004,010; June 4.

Nelson, Carl E. (See Rancer, R. H., Branan, and Nelson.)

Neon Research of Connecticut, Inc. (See Mitscherling, Waldemar O., assignor.)

Nesbit, Arthur F., Wilkinsburg, Pa. Cleaning and sizing of coal. 2,003,899; June 4.

New England Mica Co. (See Boughton, Willis A., assignor.)

Niranđylitch, Nilsola. (See Škorić, Danilo, assignor.)

Nock, Leo F., Elyria, Ohio. Permanent mold manufacture. 2,003,864; June 4.

No Nail Cases Proprietary Limited. (See Kruse, Hermann H. J., assignor.)

North, Edwin W., assignor to National Lock Co., Rockford, Ill. Illuminated mirror. 2,004,054; June 4.

Norton Company. (See Belden, A. G., and Cole, assignors.)

Norton Company. (See Ridgway, Raymond R., assignor.)

Norton, James P., assignor to Riley Stoker Corporation, Worcester, Mass. Automatic stoker. 2,003,857; June 4.

Norton, Sereno G., Brunswick, Ga., assignor to Hercules Powder Company, Wilmington, Del. Dehydrating pine oil. 2,003,458; June 4.

Nothstine, Paul A., Dayton, Ohio. Cartridge thermostat. 2,003,638; June 4.

Nutt, Frank N., Flint, assignor, by mesne assignments, to General Motors Corporation, Detroit, Mich. Piston. 2,003,459; June 4.

Nyeren, Karl A., and J. A. Zschiesche, assignors to Globe Steel Tubes Co., Milwaukee, Wis. Tube rolling mill. 2,003,551; June 4.

Oakes, Ben. (See Allen, R. S., and Oakes.)

Oelkers, Alfred H., assignor to American Steel Foundries, Chicago, Ill. Coupler. 2,003,582; June 4.

Oelkers, Alfred H., assignor to American Steel Foundries, Chicago, Ill. Draft gear. 2,003,583; June 4.

Oelkers, Alfred H., assignor to American Steel Foundries, Chicago, Ill. Roller bearing assembly. 2,003,605; June 4.

Olds, Ambrose D., Wichita, Kans. Beverage maker. 2,003,490; June 4.

Oliver, Thomas C. (See Hechenbleikner, I., Oliver, and Spangler.)

Oliver, Wallace F., Detroit, Mich., assignor to Hydraulic Brake Company, Los Angeles, Calif. Braking system. 2,003,972; June 4.

Oliver, Wallace F., assignor to Hydraulic Brake Company, Detroit, Mich. Hydraulic brake. 2,003,973; June 4.

Olpin, Henry C. and S. H. Bannister, Spondon, near Derby, England, assignors to Celanese Corporation of America. Production of hydroxyalkylated amino compounds. 2,003,386; June 4.

O'Neill, Joseph, Port Chester, N. Y. Woven wire fabric. 2,003,695; June 4.

Ornes, Conrad L. (See Rollman, R. R., and Ornes.)

Ott, Harvey N., assignor to Spencer Lens Company, Buffalo, N. Y. Microscope. 2,003,387; June 4.

Oxweld Railroad Service Company, The. (See Ryan, Leo C., assignor.)

P. & M. Company, The. (See Shepherd, Charles B., assignor.)

Pacific Mills. (See Barnard, K. H., and Kane, assignors.)

Page, John W., Chicago, Ill. Excavating apparatus. 2,003,900; June 4.

Palmer, C. M. (See Glaser, J. L., and Segal, assignor.)

Palmer, Donald R., Little Neck, N. Y. Box construction. 2,003,388; June 4.

Palmer, Gideon H., East Orange, N. J. Utilization of cotton plant cellulose. 2,003,696; June 4.

Panhandle Refining Company. (See Sims, W. F., and Cloer, assignors.)

Parker, Sidney E., assignor to C. J. Mund, Los Angeles, Calif. Boiler construction. 2,003,491; June 4.

Parker, Walter H., and N. J. Seibert, assignors to Pittsburgh Equitable Meter Company, Pittsburgh, Pa. Piston meter. 2,003,901; June 4.

Parvin, Edward G. (See Fantone, C. R., and Parvin.)

Lass & Seymour, Inc. (See Despard, Victor R., assignor.)

Patent Engineering Corporation. (See Van Deventer, Harry R., assignor.)

Paull, Samuel O., assignor to Eagle Manufacturing Company, Wellsburg, W. Va. Removable cap for cans or the like. 2,003,460; June 4.

Paxton Credit Corporation. (See Paxton, Hale, assignor.)

Paxton, Hale, Redlands, assignor to Paxton Credit Corporation, Sanger, Calif. Lidding machine. 2,003,304; June 1.

Pearson, Charles L., assignor to Master Metal Products, Inc., Buffalo, N. Y. Camp stove and the like. 2,003,974; June 4.

Pearson, Walter, Whitman, Mass. Sewing machine. 2,003,461; June 4.

Pearson, William J. (See Brown, Thomas I., assignor.)

Peco Manufacturing Corporation. (See Errig, W. F., and Pfundt, assignors.)

Peerless Bread Machine Company, The. (See Lauterbur, Edward J., and F. X., assignors.)

Peets, Wilbur J., and I. F. Webb, assignors to The Singer Manufacturing Company, Elizabeth, N. J. Unitary electric motor and power transmitter. 2,004,055; June 4.

Pejchar, Joseph, Corona, N. Y. Finger ring, bracelet, and the like. 2,003,950; June 4.

Pengilly, Lewis. (See Jay, W., and Pengilly.)

Pennsylvania Salt Manufacturing Company. (See Broadhurst, Harold M., assignor.)

Pepin, Thomas, New York, N. Y. Golf club. 2,003,951; June 4.

Peremi, Edmund, Manhasset, and C. Kish, Elmhurst, assignors to General Bronze Corporation, Long Island City, N. Y. Revolving door. 2,003,305; June 4.

Perfect Manufacturing Company, The. (See Bollman, R. R., and Ornes, assignors.)

Perl, John, Los Angeles, Calif., Method and apparatus for distillation. 2,003,306; June 4.

Permold Company, The. (See Fahlman, Everett G., assignor.)

Permutit Company, (1934), The. (See Clark, Thomas B., assignor.)

Permutit Company, (1934) The. (See Pick, Eric, assignor.)

Permutit Company, (1934) The. (See Sweeney, O. R., and Clark, assignors.)

Perron, Marcel P. (See Miguet, P. L. J., and Perron.)

Pestalozza, Ugo, assignor to Società Italiana Pirelli, Milan, Italy. Manufacture of threads or strips of rubber or the like. 2,003,721; June 4.

Peterson, R. C., et al. (See Ankarlo, Victor, assignor.)

Petrie, Robert E., Chicago, Ill. Lubricating system and installing the same. 2,003,389; June 4.

Pevere, Ernest F. Beacon, assignor to The Texas Company, New York, N. Y. Dewaxing hydrocarbon oil. 2,003,667; June 4.

Pfundt, Georg. M. (See Errig, W. F., and Pfundt.)

Phillips, Thomas G., et al. (See Hosking, George T., assignor.)

Phinney, Robert M., assignor to General Railway Signal Company, Rochester, N. Y. Centralized traffic controlling system. 2,003,952; June 4.

Piatanesi, Finan, Chicago, Ill. Piano accordion. 2,003,953; June 4.

Picard, John B. (See Mahan, J. R., and Picard.)

Pick, Eric, New York, N. Y., assignor to The Permutit Company, (1934), Wilmington, Del. Continuous automatic water softening. 2,003,757; June 4.

Pick, Eric, New York, N. Y., assignor to The Permutit Company, (1934), Wilmington, Del. Heat exchanger. 2,003,758; June 4.

Pilling, John E., Providence, R. I. Composition for use in soldering chain links. 2,003,865; June 4.

Pipkin, Wilbur A., Safety Harbor, Fla. Method and machine for extracting oil from the peels of citrus fruit. 2,004,056; June 4.

Pittenger, Paul S., assignor to Sharp & Bohme, Incorporated, Philadelphia, Pa. Apparatus for cleaning bottles. 2,003,668; June 4.

Pittman, Ralph R., Pine Bluff, Ark. Over-voltage protective device. 2,003,954; June 4.

Pittsburgh Equitable Meter Company. (See Parker, W. H., and Seibert, assignors.)
Pittsburgh Plate Glass Company. (See Gelsthorp, F., and Koupal, assignors.)
Pittsburgh Plate Glass Company. (See Miller, Robert A., assignor.
Pityo, Albert F., Clifton, and J. F. Mitchell, Parsippany, N. J. Container cover. 2,003,307; June 4.
Ploetz, Ernst. (See Koeberle, K., and Ploetz.)
Pneumatic Process Corporation. (See Henkle, Louis R., assignor.
Podbielniak, Walter J., Chicago, Ill. Centrifugal fractionating method and apparatus. 2,003,308; June 4.
Podbielniak, Walter J., Tulsa, Okla. Centrifugal counter current contact apparatus. 2,004,011; June 4.
Poll, Benjamin. (See Poll, Louis and B.)
Poll, Louis, Hamilton, and B. Poll, Holland, Mich. Planting machine. 2,003,390; June 4.
Pollard, Edward. (See Brown, G., and Pollard.)
Polson, Rebecca V., Kansas City, Mo. Sanitary pad and belt. 2,003,654; June 4.
Pool, Morris W., Brooklyn, and E. A. Turner, New York, N. Y., assignors to The Standard Stoker Company, Incorporated. Stoker. 2,003,462; June 4.
Poppe, George W., assignor to Equitable Paper Bag Co. Inc., Brooklyn, N. Y. Paper bag construction. 2,003,697; June 4.
Popsicle Corporation of the United States, The. (See Schnaier, Milton, assignor.)
Potter, Robert S., Greenwich, assignor to The Yale & Towne Mfg. Co., Stamford, Conn. Door closer. 2,003,669; June 4.
Potter, William W. (See Curtis, Myron S., assignor.)
Powell, David, Chicago, Ill. Golf game. 2,003,809; June 4.
Powell, Edward R., Alexandria, Ind., assignor to Johns-Manville Corporation, New York, N. Y. Lightweight article and manufacturing the same. 2,003,309; June 4.
Powell, John O., Gorseinon, Swansea, South Wales. Machine for automatically sorting plates or other articles according to weight. 2,003,722; June 4.
Poythress, Carl H., Laurel, Miss. Hoe shank and making the same. 2,003,463; June 4.
Pre Cote Corporation. (See McConnaughay, Kenneth E., assignor.)
Prohaska, Albert E. (See Smith, C., Prohaska, and Wilson.)
Prosperity Company, The. (See Davis, E., and Kagi, assignors.)
Pretzeller, Harry W., assignor to Fairmont Railway Motors, Inc., Fairmont, Minn. Ballast excavating and cleaning apparatus. 2,003,606; June 4.
Prudhomme, Michael A., Outremont, Quebec, Canada. Hand Brake mechanism. 2,003,607; June 4.
Public, Free use of, The. (See Hughes, Ausker E.)
Purdue Research Foundation. (See Hass, H. B., and McBee, assignors.)
Pusey, John R. (See Yedd, Guy A., assignor.)
Rabezzana, Hector. (See Randolph, D. W., and Rabezzana.)
Rabezzana, Hector, Flint, assignor, by mesne assignments, to General Motors Corporation, Detroit, Mich. Making spark plugs. 2,003,464; June 4.
Rabezzana, Hector, Flint, assignor, by mesne assignments, to General Motors Corporation, Detroit, Mich. Machine for assembling spark plugs. 2,003,465; June 4.
Radhuber, Ferdinand. (See Gruna, A., and Radhuber.)
Radio Condenser Company. (See Koepping, Emil D., assignor.)
Radio Corporation of America. (See Brown, Vincent H., assignor.)
Radio Corporation of America. (See de Boer, J. H., and Teves, assignors.)
Radio Corporation of America. (See Ditcham, William T., assignor.)
Radio Corporation of America. (See Grimm, John E., assignor.)
Radio Corporation of America. (See May, Russell P., assignor.)
Radio Corporation of America. (See Ranger, R. H., Braman, and Nelson, assignors.)
Radio Corporation of America. (See Rinia, H., and van Embden, assignors.)
Radio Corporation of America. (See Young, Lloyd L., assignor.)
Radio Corporation of America. (See Weinberger, Julius, assignor.)
Ramano Ajax Corporation. (See Strong, J. B., and Huber, assignors.)
Rand, Rufus R., Jr., Wayzata, Minn. Amphibian aeroplane. 2,003,975; June 4.
Randlett, Albert J., Richmond, Va. Feed board attachment for flat work ironing machines. 2,003,902; June 4.
Randolph, Donald W., and H. Rabezzana, Flint, assignors, by mesne assignments, to General Motors Corporation, Detroit, Mich. Spark generating system. 2,003,466; June 4.
Randolph, Donald W., and J. T. Ford, Flint, assignors, by mesne assignments to General Motors Corporation, Detroit, Mich. Spark plug electrode. 2,003,467; June 4.
Ranger, Richard H., Newark, N. J., and V. T. Braman, and C. E. Nelson, Brooklyn, N. Y., assignors to Radio Corporation of America. Air controlled speed regulator. 2,003,552; June 4.
Raymond, Lambert L., Minneapolis, Minn. Fishing bait device. 2,003,976; June 4.
Reed, Clarence E., Wichita, Kans. Roller cutter and spindle assembly for earth boring drills. 2,004,012; June 4.
Reed, Clarence E., Wichita, Kans. Anti-friction bearing assembly for drills. 2,004,013; June 4.
Reeves, Donald H., Dayton, Ohio, assignor, by mesne assignments, to General Motors Corporation. Refrigerating apparatus. 2,003,492; June 4.
Reichel, Wladimir A., Philadelphia, Pa., assignor to Bendix Aviation Corporation, South Bend, Ind. Liquid level indicator. 2,003,759; June 4.
Reid, Ernest W., Pittsburgh, Pa., assignor to Carbide and Carbon Chemicals Corporation. Composition of matter. 2,003,655; June 4.
Reiners, Wilhelm, and G. Kahlisch, assignors to W. Schlafhorst & Co., Munich-Gladbach, Germany. Cop winding machine. 2,003,903; June 4.
Remington, Joseph P., assignor to Stokes & Smith Company, Philadelphia, Pa. Method of and apparatus for separating sheets from stacks thereof. 2,003,698; June 4.
Remington Rand Inc. (See Walker, Robert C., assignor.)
Rentschler, Harvey C., East Orange, and D. E. Henry, Bloomfield, N. J., assignors to Westinghouse Lamp Company. Negative glowlamp. 2,003,493; June 4.
Rexwinkle, Fred D., Whiting, Ind., assignor to Standard Oil Company, Chicago, Ill. Refrigeration. 2,003,310; June 4.
Reynolds, Ralph K., assignor to The Mallory Hat Company, Danbury, Conn. Hat construction. 2,003,955; June 4.
Reynolds Research Corporation. (See Reynolds, Richard S., assignor.)
Reynolds, Richard S., Glen Cove, assignor to Reynolds Research Corporation, New York, N. Y. Laminated material. 2,003,494; June 4.
Ricardo, Harry R., London, England. Internal combustion engine of the liquid fuel injection compression ignition type. 2,003,311; June 4.
Rich, H. M., et al. (See Frye, Jason S., assignor.)
Rich Pump & Ladder Company, The. (See Richardson, Jesse W., assignor.)
Richards, A. L., et al. (See Frye, Jason S., assignor.)
Richards Wilcox Manufacturing Company. (See Tamsitt, Joseph C., assignor.)
Richardson, Jesse W., assignor to The Rich Pump & Ladder Company, Cincinnati, Ohio. Ironing board. 2,003,866; June 4.
Richter, Johann. (See Michelssen, F., and Richter.)
Rie Wil Company, The. (See Black, Carl A., assignor.)
Ridgway, Raymond R., Niagara Falls, N. Y., assignor to Norton Company, Worcester, Mass. Making crystalline alumina and a composition of matter containing the same. 2,003,867; June 4.
Rübeck'sche, A., Montanwerke Aktiengesellschaft. (See Eberhardt, Otto, assignor.)
Riebel, Frederick, Jr., assignor to Air Way Electric Appliance Corporation, Toledo, Ohio. Suction cleaner floor tool. 2,003,312; June 4.
Rieger, Paul, Frankfort-on-the-Main Hochst, Germany, assignor to International Business Machines Corporation, New York, N. Y. Sorting machine. 2,003,790; June 4.
Rieper, Gerhard. (See Fischel, E., and Rieper.)
Riggs, Alger S., New York, N. Y., assignor, by mesne assignments, to Electrons, Inc. Preparation of composite substances. 2,003,609; June 4.
Riley Stoker Corporation. (See Norton, James P., assignor.)
Rinia, Herre, and H. J. M. van Embden, Eindhoven, Netherlands, assignors to Radio Corporation of America. Electric gas filled discharge tube. 2,003,468; June 4.
Riseam, William, assignor of one half to J. H. Halste, Hull, England. Propulsion of boats. 2,003,904; June 4.
Ritz, Emil, Jr., Mount Healthy, assignor to The Hilsey-Wolf Machine Company, Cincinnati, Ohio. Grinding machine. 2,003,495; June 4.
Ritzerfeld, Wilhelm, Berlin, Germany. Duplicating apparatus. 2,003,469; June 4.
Riverside Cement Company. (See Starke, Howard R., assignor.)
Roach Appleton Manufacturing Company. (See Marlans, Morris, assignor.)
Roberts, W. T. B., Leicester, England, assignor to United States Machinery Corporation, Paterson, N. J. Tack supplying device. 2,003,391; June 4.
Robinson, Thomas, Goldenbridge, assignor to Lancaster Asphalt, Inc., New York, N. Y. Roofing product. 2,003,699; June 4.
Roby, Edward R., assignor to The S and R Folding Machine Co., Inc., New York, N. Y. Textile hemstitching machine. 2,004,080; June 4.
Rochester Folding Box Co., The. (See Fancher, Howard M., assignor.)
Roe, Ralph C., Englewood, assignor of one half to Stephen W. Rorden, Summit, N. J. Heat storage device. 2,003,496; June 4.
Roethel, George, Jr., Chicago, Ill., assignor to E. H. Scott Tuning control. 2,003,808; June 4.
Röhm & Haas Company. (See Bruson, H. A., and Stehn, assignors.)
Romaine, Millard. (See Archea, W. D., and Romaine.)
Ronci, Victor L., Brooklyn, assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Temperature controlling device. 2,003,956; June 4.

Rönnberg, Daniel, Ludvika, assignor to Allmänna Svenska Elektriska Aktiegolaget, Vasteras, Sweden. Fusible cut-out. 2,003,977; June 4.
Root, Ralph C., Indianapolis, Ind. Key holder. 2,003,553; June 4.
Rosenbaum, Joel, West Orange, N. J. Plug fuse with a replaceable fuse link. 2,003,792; June 4.
Rosler, Charles A., New York, N. Y. Carburetor. 2,003,313; June 4.
Ross, Oscar A., New York, N. Y. Paper fastener. 2,003,554; June 4.
Rowe, Emmett A., Oakland, Calif. Oven protector. 2,003,555; June 4.
Rubel, Charles F., assignor to Union Special Machine Company, Chicago, Ill. Edge guide for sewing machines. 2,003,470; June 4.
Rubens, Harry E. (See Graf, Emil, assignor.)
Rubin, Herman H., New York, N. Y. Grip strap. 2,003,514; June 4.
Rubin, Herman H., and M. M. Balsam, New York, N. Y.; said Balsam assignor to said Rubin. Grip strap. 2,003,515; June 4.
Rucker, Leonard F., Hollywood, Calif. Foot therapy device. 2,003,392; June 4.
Ruesch, August, New York, N. Y. Embroidering fabrics. 2,003,810; June 4.
Rügner, Oswald. (See Engels, Hans, assignor.)
Rummelsburg, Alfred L., assignor to Hercules Powder Company, Wilmington, Del. Sulphonated terpene product and producing same. 2,003,471; June 4.
Russell, Brinton and C. B., Norristown, assignors to Attapulgus Clay Company, Philadelphia, Pa. Water purification. 2,003,314; June 4.
Russell, Cecil B. (See Russell, Brinton, and C. B.)
Rutherford System, Incorporated. (See Van Voorst, George, Jr., assignor.)
Rütgerswerke-Aktiengesellschaft. (See Kahl, Leopold, assignor.)
Ruths, Johannes, Djursholm, Sweden, assignor to Ruths-accumulator Aktiebolag, Berlin, Germany. Steam power installation for momentary reserve. 2,003,315; June 4.
Ruthsaccumulator Aktiebolag. (See Ruths, Johannes, assignor.)
Ryan, Edward, Knox, Ind., and E. R. Funk, Galesburg, Ill., assignors to The Standard Stoker Company, Incorporated, New York, N. Y. Stoking mechanism. 2,003,472; June 4.
Ryan, Leo C., Chicago, Ill., assignor to The Oxweld Railroad Service Company. Repairing rail joints. 2,004,081; June 4.
Rydahl, Herman G. V., Viggbyholm, Sweden. Window. 2,003,723; June 4.
Ryerson & Haynes, Inc. (See Burnett, F. C., and Adams, assignors.)
S and R Folding Machine Co, The. (See Roby, Edward R., assignor.)
Sabalbus, Erwin, assignor to Joseph Weidenhoff, Inc., Chicago, Ill. Gauge for fuel pump rocker arms. 2,003,556; June 4.
St. John, Everett, Westport, Conn., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Guy shield. 2,003,959; June 4.
St. John, Joseph F., Chicago, Ill. Match book. 2,003,870; June 4.
Salisbury, Moses B., Chicago, Ill. Jingle ball. 2,003,957; June 4.
Salisbury, Moses B., Chicago, Ill. Imitation bone and the like. 2,003,958; June 4.
Sanford, Alfred F., Knoxville, Tenn. Refrigerating apparatus. 2,004,014; June 4.
Santurello, Peter, Columbus, Ohio. Hair drier. 2,003,610; June 4.
Santurello, Peter, Columbus, Ohio. Hair waving apparatus. 2,003,611; June 4.
Sassen, Bernard, assignor to The Cincinnati Milling Machine Company, Cincinnati, Ohio. Hydraulically controlled automatic die sinking machine. 2,003,557; June 4.
Satre, Hilmar E., Chicago, Ill., assignor, by mesne assignments, to Spencer, White & Prentis, Incorporated, New York, N. Y. Forming piles. 2,003,393; June 4.
Schein, Alexander E., New York, assignor to Sperry Gyroscope Company, Inc., Brooklyn, N. Y. High speed bearing. 2,003,316; June 4.
Schenck, John F., Sr., Lawndale, and P. S. Monty, Charlotte, N. C.; said Monty assignor to said Schenck. Stop motion for braiding machines. 2,003,978; June 4.
Scherf, Rudolph, Detroit, Mich. Hose coupling. 2,004,082; June 4.
Schlafhorst, W., & Co. (See Reiners, W., and Kahlisch, assignors.)
Schlesinger, Kurt, Berlin, Germany. Braun tube. 2,003,775; June 4.
Schmelzer, Albert. (See Ballauf, F., and Schmelzer.)
Schmidt, Grayson, Fort Monroe, Va., assignor of one half to H. F. Townsend, Fort Mills, P. I. Method and mechanism for governing rotating bodies. 2,003,558; June 4.
Schmidt, O. B. (See Smith, C., Prohaska, and Wilson, assignors.)
Schmitz, Fred A., Cincinnati, assignor to The Globe-Wernicke Company, Norwood, Ohio. Filing drawer. 2,004,057; June 4.
Schnaier, Milton, New York, N. Y. Manufacturing and packaging articles. 2,003,516; June 4.
Schnaier, Milton, New York, N. Y. Stick handling mechanism. 2,003,517; June 4.
Schnaier, Milton, New York, N. Y. Apparatus for and method of processing frozen confections. 2,003,518; June 4.
Schnaier, Milton, New York, N. Y. Apparatus for arranging articles. 2,003,519; June 4.
Schnaier, Milton, New York, N. Y., assignor to The Popsicle Corporation of the United States. Frozen confection. 2,003,612; June 4.
Schoffstall, Michael R., and R. A. Fontaine, Martinsville, Va. Glass grinding machine. 2,003,905; June 4.
Schubert, Max. (See Herz, R., and Schubert.)
Schultz, William O. (See Steinmayer, A. G., and Schultz.)
Schulz, Alfred J. and H. H., Milwaukee, Wis. Chain type door fastener. 2,003,473; June 4.
Schulz, Herbert H. (See Schulz, Alfred J. and H. H.)
Schweitzer, Eugen, assignor to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. Fluid flow meter. 2,003,474; June 4.
Scott, Arthur, assignor to The Cleveland Pneumatic Tool Company, Cleveland, Ohio. Tool attachment. 2,004,083; June 4.
Scott, E. H. (See Roethel, George, Jr., assignor.)
Scott, Eric A., Indianapolis, Ind. Ash hopper for fireplaces. 2,003,559; June 4.
Scott, Walton B., L. S. Bovier, and E. D. Matthews, assignors to Hooker Electrochemical Company, Niagara Falls, N. Y. Making olefine derivatives. 2,004,084; June 4.
Scott, William H., Rochester, N. Y. Dispensing device. 2,004,015; June 4.
Scripture, Edward W., Jr., Cleveland Heights, assignor to The Master Builders Company, Cleveland, Ohio. Waterproofing concrete. 2,003,613; June 4.
Searles, Raymond R., assignor to The Fafnir Bearing Company, New Britain, Conn. Bearing and forming same. 2,003,906; June 4.
Seeber, Myron E., San Diego, Calif. Orchard or field heating and irrigating apparatus. 2,003,520; June 4.
Sefton National Fibre Can Co. (See Ellstrom, E. G., and Hicks, assignors.)
Segal, Samuel. (See Glaser, J. L., and Segal.)
Seibert, Nelson J. (See Parker, W. H., and Seibert.)
Seitz-Werke G. m. b. H. (See Stegemann, Friedrich, assignor.)
Sell, Joseph C., Detroit, Mich. Automatic rear door lock for vehicle bodies. 2,003,394; June 4.
Sharpe & Dohme, Incorporated. (See Pittenger, Paul S., assignor.)
Shaw, Kenneth R., assignor to Easthampton Rubber Thread Co., Easthampton, Mass. Manufacture of rubber threads. 2,004,085; June 4.
Shepherd, Charles B., New York, N. Y., assignor to The P & M Company, Chicago, Ill. Rail anchor. 2,003,395; June 4.
Shetzline, Walter F., Los Angeles, Calif. Automobile window operating means. 2,003,614; June 4.
Shinn, John V., Flushing, and T. Cummings, Brooklyn, assignors to General Chemical Company, New York, N. Y. Manufacture of acid compositions. 2,003,907; June 4.
Shipp, Robert C., East Orange, N. J., assignor to Westinghouse Lamp Company. Wire-drawing die. 2,003,475; June 4.
Shodron, John G., assignor to James Manufacturing Company, Fort Atkinson, Wis. Farm. 2,003,868; June 4.
Shoe Form Co. (See De Witt, William J., assignor.)
Shoeld, Mark, Mount Lebanon Township, Allegheny County, Pa., assignor to The Koppers Company of Delaware. Treatment of fuel gas to remove ammonia. 2,003,560; June 4.
Siebens, Walter C. (See Groff, W. C., and Siebens.)
Siemens Apparate und Maschinen G. m. b. H. (See Fischel, Eduard, assignor.)
Siemens Brothers & Company Limited. (See Christian, David A., assignor.)
Siemens & Halske. (See Fischel, E., and Rieper, assignors.)
Siemens & Halske Aktiengesellschaft. (See Morsbach, Kurt, assignor.)
Simplex Engineering Company. (See Ansler, Walter O., assignor.)
Sims, Willis F., and V. U. Cloer, assignors to Panhandle Refining Company, Wichita Falls, Tex. Apparatus for the treatment of hydrocarbon oils. 2,003,724; June 4.
Sinclair, Harry, et al., trustees. (See Dodge, John S., assignor.)
Singer Manufacturing Company, The. (See Karle, John D., assignor.)
Singer Manufacturing Company, The. (See Peets, W. J., and Webb, assignors.)
Skinner, Lewis B., Denver, Colo. Protection of metallic conduits exposed to high temperatures. 2,003,725; June 4.
Skoglund, Joseph A., St. Paul, Minn. Nozzle holder. 2,003,837; June 4.
Skorić, Danilo, assignor of one half to N. Nirandyitch, New York, N. Y. Drum game. 2,003,979; June 4.
Sloyan, Jerome J., Red Bank, N. J. Oil burner. 2,003,700; June 4.

Smith, Alfred J., Detroit, Mich., assignor to Woodall Industries Incorporated. Body trim structure. 2,003,396; June 4.

Smith, Bert, Teaneck, N. J., assignor to The Superheater Company, New York, N. Y. Superheater support. 2,003,838; June 4.

Smith, Charles, A. E. Prohaska, and A. L. Wilson, assignors of one-fourth to O. B. Schmidt, Denver, Colo. Rotary pump. 2,003,615; June 4.

Smith, Ed. S., Jr., assignor to Builders Iron Foundry, Providence, R. I. Apparatus for metering through the medium of the versed sine. 2,003,839; June 4.

Smith, Ernest L., San Francisco, Calif. Hair waving device. 2,003,811; June 4.

Smith, Horace L., Jr., assignor to Thermal Engineering Corporation, Richmond, Va. Moisture extraction. 2,003,397; June 4.

Smith, Lee T., Madison, N. J., and A. L. Thuras, assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y. Acoustic device. 2,003,008; June 4.

Smith, Louis C., et al., trustees. (See Dodge, John S., assignor.)

Smith, Norman A., Adelaide, Australia. Instrument for enciphering and deciphering. 2,003,812; June 4.

Smith, Ralston R., Oakland, Calif. Combined orange reamer and beater. 2,003,321; June 4.

Smyth, Paul H., Jr., Evanston, Ill. Selective phonographic playing machine. 2,004,016; June 4.

Società Italiana Pirelli. (See Pestalozza, Ugo, assignor.)

Société Anonyme des Etablissments Charles Testut. (See Cadiet, Charles, assignor.)

Société Charles Chedeville, Albert Lelandais et Cie. (See Dulac, Pierre, assignor.)

Society "Yacco S. A. F." (See Dintilhac, Jean G., assignor.)

Sorensen, Alfred K., assignor to Crane Co., Chicago, Ill. Lubricant sealed seat. 2,003,840; June 4.

Sorensen, Rasmus L., Cincinnati, Ohio. Drawing board. 2,003,841; June 4.

South Bend Bait Company. (See Jordan, William M.)

Southern States Equipment Company. (See Lemmon, George N., assignor.)

Southern Webbing Mills, Inc. (See Joyce, Lyndon W., assignor.)

Spangler, Samuel F. (See Hechenbleikner, I. Oliver, and Spangler.)

Spannet, Edward F., Blackheath, London, England. Steam boiler and water-heater. 2,003,980; June 4.

Specialty Insulation Manufacturing Company. (See Batcholts, Clinton, assignor.)

Spencer Lens Company. (See Ott, Harvey N., assignor.)

Spencer, White & Prentis, Incorporated. (See Satre, Hilmer E., assignor.)

Sperry Gyroscope Company. (See Bassett, P. R., and House, assignors.)

Sperry Gyroscope Company. (See Schein, Alexander E., assignor.)

Sperry, James W., South Pasadena, Calif. Rotary disk bit. 2,003,791; June 4.

Sperry, James W., South Pasadena, Calif. Rotary rock disk bit. 2,003,793; June 4.

Sperry Products, Inc. (See Braddon, F. D., and Lawrence, assignors.)

Spiegler, Louis, South Milwaukee, Wis., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Manufacture of 2'-nitro-2-carboxy-diphenylamine. 2,003,842; June 4.

Spieler, William B. (See Dumble, Clifford R., assignor.)

Squyer, Albert R. (See Weaver, I. A., Squyer, and Hall.)

Standard Oil Company. (See Rexwinkle, Fred D., assignor.)

Standard Stoker Company, The. (See Bayreuther, Andrew, assignor.)

Standard Stoker Company, The. (See Ichter, John H., assignor.)

Standard Stoker Company, The. (See Myers, John W., assignor.)

Standard Stoker Company, The. (See Pool, M. W., and Turner, assignors.)

Standard Stoker Company, The. (See Ryan, E., and Funk, assignors.)

Standlee, Harvey R. (See Crickmer, C. S., and Standlee.)

Stanitz, Jacques, and G. D. Boyer, assignors to The Youngstown Pressed Steel Company, Warren, Ohio. Corrugating sheet metal receptacles. 2,003,981; June 4.

Stark, John F., Rushville, Ind., assignor of one-fourth to D. G. Van Osdol, one-fourth to G. J. Griesser, and one-fourth to M. Katsaros. Electrical outlet receptacle. 2,003,909; June 4.

Starke, Howard R., Riverside, assignor to Riverside Cement Company, Los Angeles, Calif. Cement product and making the same. 2,003,656; June 4.

Startomatic Corporation, The. (See Loehr, L. K., and Burdick, assignors.)

Stegemann, Friedrich, Bad Kreuznach, assignor to Seltz-Werke G. m. b. H., Kreuznach, Germany. Apparatus for the sterilization and sterile filling of vessels and the like in one continuous working process. 2,003,869; June 4.

Stein, Otto. (See Bruson, H. A., and Stein.)

Steinmayer, Alwin G., Milwaukee, and W. O. Schultz, assignors to Line Material Company, South Milwaukee, Wis. Oil fuse. 2,003,616; June 4.

Stenhouse, David, Washington, Pa., assignor to Hazel-Atlas Glass Company, Wheeling, W. Va. Glass feeding apparatus. 2,004,017; June 4.

Stephenson, James E., assignor to General Railway Signal Company, Rochester, N. Y. Tension testing device for spring contacts. 2,003,910; June 4.

Stillman, Thomas B., South Orange, assignor to The Babcock & Wilcox Company, Bayonne, N. J. Boiler. 2,004,058; June 4.

Stinson, Thane K., assignor to Geo. S. Mepham Corporation, East St. Louis, Ill. Oil well drilling mud 2,003,701; June 4.

Stokes and Smith Company. (See Remington, Joseph P., assignor.)

Strandgren, Carl B., Versailles, France. Power transmission. 2,003,317; June 4.

Stratford, William M., assignor to The Texas Company, New York, N. Y. Treatment of hydrocarbon oils 2,003,776; June 4.

Straub, Francis J., New Kensington, Pa. Concrete block making apparatus. 2,003,702; June 4.

Strauss, Luke J., Buffalo, N. Y. Beverage bottle cap 2,004,018; June 4.

Strong, James B., New York, N. Y., and A. F. Huber, St. Louis, Mo., assignors to Ramapo Ajax Corporation, New York, N. Y. Railroad cross-over. 2,003,398; June 4.

Stuart, Charles H., Newark, N. Y. Fluid dispensing device. 2,003,562; June 4.

Stubblefield, Roy I., Bloomington, Tex. Cap for drinking glasses. 2,003,657; June 4.

Studley, Oscar A., and K. R. Gilbert, Sonoma, Calif. Egg grading machine. 2,003,561; June 4.

Submarine Signal Company. (See Clement, Ivan C., assignor.)

Superheater Company, The. (See Armacost, Wilbur H., assignor.)

Superheater Company, The. (See Birmingham, Thomas F., assignor.)

Superheater Company, The. (See Epley, Frederic L., assignor.)

Superheater Company, The. (See Smith, Bert, assignor.)

Super Mold Corporation. (See Woock, Herbert J., assignor.)

Svatos, Joseph, assignor of one-fourth to J. Svatos, Jr., Yankton, S. Dak. Earth working implement 2,003,871; June 4.

Svatos, Joseph, Jr. (See Svatos, Joseph, assignor.)

Swanson, Earl C., assignor to Andersen Frame Corporation, Bayport, Minn. Window construction. 2,003,982; June 4.

Swartwout, Everett W., Scarsdale, N. Y. Compressor. 2,003,476; June 4.

Sweeney, Orland R., Ames, Iowa, and T. B. Clark, Rockford, Ill., assignors, by mesne assignments, to The Permutit Company, (1934), Wilmington, Del. Indicator for zeolite softeners. 2,003,760; June 4.

Swetenham, Charles C., assignor to himself, C. A. and L. M. Swetenham, Sherborne, England. Power transmission. 2,004,019; June 4.

Swetenham, Clement A., et al. (See Swetenham, Charles C., assignor.)

Swetenham, Leslie M., et al. (See Swetenham, Charles C., assignor.)

Synero Machine Company. (See Fantone, C. R., and Jameson, assignors.)

Synero Machine Company. (See Fantone, C. R., and Parvin, assignors.)

Szekely, Otto E., Holland, Mich. Internal combustion engine. 2,003,563; June 4.

Tamsitt, Joseph C., assignor to Richards-Wilcox Manufacturing Company, Aurora, Ill. Door operator. 2,003,399; June 4.

Taylor, John L., Kenosha, Wis. Atomizer. 2,003,813; June 4.

Taylor, John L., Milwaukee, Wis. Oil engine atomizer 2,003,814; June 4.

Taylor, Robert S., Evansville, Ind., assignor to Electrolux Servel Corporation, New York, N. Y. Refrigerator sealing strip. 2,003,726; June 4.

Taylor, William L., and L. B. Gibbins, Spondon, near Derby, England, assignors to Celanese Corporation of America. Manufacture of staple fiber yarns. 2,003,400; June 4.

Te Aroha Dairy Company, The. (See Murray, Henry L., assignor.)

Techno-chemical Laboratories, Limited. (See Gram, Thomas, assignor.)

Telefunken Gesellschaft für Drahtlose Telegraphie m. b. H. (See Kühlewind, Walter, assignor.)

Telefunken Gesellschaft für Drahtlose Telegraphie m. b. H. (See Leib, August, assignor.)

Telefunken Gesellschaft für Drahtlose Telegraphie m. b. H. (See Michelssen, E., and Richter, assignors.)

Teletypesetter Corporation. (See Morey, Walter W., assignor.)

Temple, Robert, Jr., assignor to Robert Temple, Inc., Denver, Colo. Power press. 2,003,843; June 4.

Temple, Robert, Inc. (See Temple, Robert, Jr., assignor.)

Terry, Roy V., Montclair, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Inspection device. 2,003,401; June 4.

Testi, Nicholas, New York, N. Y., assignor to Gillette Safety Razor Company, Boston, Mass. Safety blade. 2,003,761; June 4.

Testi, Nicholas, New York, N. Y., assignor to Gillette Safety Razor Company, Boston, Mass. Safety razor and blade. 2,004,086; June 4.

Testi, Nicholas, New York, N. Y., assignor to Gillette Safety Razor Company, Boston, Mass. Safety razor. 2,004,087; June 4.

Teves, Marten C. (See de Boer, J. H., and Teves.)

Tewelow, Bernard, Wilmington, Del., and S. Tewelow, Philadelphia, Pa. Cutter blade holder. 2,003,497; June 4.

Tewelow, Solomon. (See Tewelow, B. and S.)

Texas Company, The. (See Pevere, Ernest F., assignor.)

Texas Company, The. (See Strafford, William M., assignor.)

Textile Machine Works. (See Zwicky, Melchior, assignor.)

Thener, Arthur F., assignor to Cupples Company, Manufacturers, St. Louis, Mo. Wrench. 2,003,983; June 4.

Thermal Engineering Corporation. (See Smith, Horace L., Jr., assignor.)

Thistlethwaite, Arthur W., Atchison, Kans. Safety razor. 2,003,872; June 4.

Thoen, Lowell H., assignor to Caterpillar Tractor Co., San Leandro, Calif. Threshing. 2,003,522; June 4.

Thoen, Lowell H., assignor to Caterpillar Tractor Co., San Leandro, Calif. Threshing. 2,003,523; June 4.

Thomas, Albert, Homestead Park, Pa. Boring tool. 2,003,402; June 4.

Thomas, Lawrence J., Mount Angel, Oreg. Strainer. 2,003,058; June 4.

Thomsen, Carl L., Milwaukee, Wis. Poultry feeding and watering device. 2,003,318; June 4.

Thompson Products, Incorporated. (See Hufford, George H., assignor.)

Thorpe, William C., Toronto, Ontario, Canada, assignor to Robert E. Wark, Toronto, Canada, trustee. Graphite lubricant. 2,003,564; June 4.

Thuras, Albert L. (See Smith, L. T., and Thuras.)

Tinnian, Harold H., assignor to Continental Motors Corporation, Detroit, Mich. Carburetor. 2,003,403; June 4.

Tinnian, Harold H., assignor to Continental Motors Corporation, Detroit, Mich. Engine. 2,003,984; June 4.

Timken-Detroit Axle Company, The. (See Alden, H. W., and Ruckendale, assignors.)

Timken Roller Bearing Company, The. (See Buckwalter, Tracy V., assignor.)

Tintner, Fritz, Vienna, Austria. Foldable stretcher 2,003,844; June 4.

Towns, Peter J., assignor to National Automatic Doughnut Machine Company, Minneapolis, Minn. Dough divider for doughnut machines and the like. 2,003,617; June 4.

Toffemire, Benjamin F., Berkeley, Calif. Mounting frame for dental articulators. 2,003,727; June 4.

Tonkin, Ronald, and J. S. Wilson, Earl's Road, Grangemouth, Scotland, assignors to Imperial Chemical Industries Limited. Printing. 2,003,960; June 4.

Townsend, Harry F. (See Schmidt, Graydon, assignor.)

Townshend, Bailey, Westfield, N. J., assignor to Johns-Manville Corporation, New York, N. Y. Lightweight ceramic article and making the same. 2,003,319; June 4.

Tracy, Robert W. (See Buzzard, G. H., and Tracy.)

Trainer, James E., Fairlawn, and C. Ziegler, Barberton, Ohio, assignors to the Babcock & Wilcox Company, Bayonne, N. J. Welding device. 2,003,320; June 4.

Trent, Walter R. (See Whitmore, F. C., Homeyer, and Trent.)

Trimont Manufacturing Co. (See Williamson, Ralph J., assignor.)

Trogdon, William H., Worthville, N. C. Cotton lap weight indicator. 2,004,020; June 4.

Trombly, Alexander A., Chicago, Ill., assignor to Continental Can Company, Inc., New York, N. Y. Machine for attaching keys to containers. 2,003,321; June 4.

Tucker, Raymond M., Sherman, Tex. Feeding mechanism for cutting machines. 2,004,021; June 4.

Turner, Edward A. (See Pool, M. W., and Turner.)

Turner, Edward T., Dayton, Ohio, assignor to The Permutit Company (1934), Wilmington, Del. Water treating apparatus. 2,003,762; June 4.

Twik, John, South Ozone Park, N. Y. Truck. 2,004,022; June 4.

Twiss, Douglas F., Sutton Coldfield, and F. A. Jones, Birmingham, England, assignors to Dunlop Tire and Rubber Corporation, Buffalo, N. Y. Benzyl piperidine-1-carbothionolate and preparing the same. 2,003,703; June 4.

Uffen, John, Santa Paula, Calif. Toilet seat hinge. 2,004,023; June 4.

Underwood Elliott Fisher Company. (See Foothorap, Harry A., assignor.)

Union Special Machine Company. (See Rubel, Charles F., assignor.)

Union Switch & Signal Company, The. (See McWhirter, William C., assignor.)

United Shoe Machinery Corporation. (See Ashworth, Fred, assignor.)

United Shoe Machinery Corporation. (See Brostrom, Charles G., assignor.)

United Shoe Machinery Corporation. (See Kick, August, assignor.)

United Shoe Machinery Corporation. (See MacKenzie, Fred L., assignor.)

United Shoe Machinery Corporation. (See Morrill, Alfred R., assignor.)

United Shoe Machinery Corporation. (See Roberts, William T. B., assignor.)

Universal Draft Gear Attachment Co. (See Bartsch, Herbert E., assignor.)

Universal Gypsum & Lime Co. (See Jeffrey, D. C., and Wolfe, assignors.)

Universal Oil Products Company. (See Held, Jacob B., assignor.)

Vail, Henry H., Camden, assignor to Automatic Drive and Transmission Company, Gloucester City, N. J. Automatic clutch. 2,003,322; June 4.

Vail, Henry H., Camden, assignor to Automatic Drive and Transmission Company, Gloucester City, N. J. Automatic clutch. 2,003,323; June 4.

Vail, Henry H., Camden, assignor to Automatic Drive and Transmission Company, Gloucester City, N. J. Automatic clutch device. 2,003,324; June 4.

Valentine, Charles W., assignor to The Bagley and Sewall Company, Watertown, N. Y. Slitting mechanism for paper making machines. 2,003,404; June 4.

Van Ackeren, Joseph, O'Hara Township, Allegheny County, Pa., assignor to The Koppers Company of Delaware. Coking retort oven. 2,003,565; June 4.

Van Aken, John C., Ridgway, Pa. Hat holder. 2,003,659; June 4.

Van Degrift, Thomas C., assignor, by mesne assignments, to General Motors Corporation, Detroit, Mich. Gear shift mechanism. 2,003,794; June 4.

Vanderbilt, R. T., Company. (See Alton, William H., assignor.)

Van Devanter, Harry R., New York, N. Y., assignor to Patent Engineering Corporation. Combination clock and radioreceiver. 2,003,405; June 4.

Van Embden, Hendrick J. M. (See Rinia, H., and van Embden.)

Van Osdol, Dwight G., et al. (See Stark, John F., assignor.)

Van Voorst, George, Jr., assignor to Rutherford System Incorporated, Kansas City, Mo. Cooking apparatus. 2,004,024; June 4.

Van Voorst, George, Jr., assignor to Rutherford System, Incorporated, Kansas City, Mo. Combined track-forming, spacing, and retaining structure. 2,004,025; June 4.

Vavruska, Bartlett F., Prairie du Chien, Wis. Garment hanger. 2,003,763; June 4.

Vickers-Armstrongs Limited. (See Watson, John P., assignor.)

Vinar, Washington, Cicero, assignor to Burton-Dixie Corporation, Chicago, Ill. Wire spiral spring. 2,003,406; June 4.

Vittengl, Morgan J., Fairfield, Conn., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Inner sole and like product. 2,003,961; June 4.

Von Forster, Hermann, Niedenursel, near Frankfort-on-the-Main, Germany, and S. de Lange, Hilversum, Netherlands, assignors, by mesne assignments, to Gulf Research & Development Corporation, Pittsburgh, Pa. Roofing material. 2,003,728; June 4.

Wagner, E. R., Manufacturing Company. (See Miller, Swift, assignor.)

Wahl, Ottmar, Leverkusen-I. G.-Werk, W. Müller, Cologne-on-the-Rhine, and R. Fingado, Leverkusen-Wiesdorf, Germany, assignors to General Aniline Works, Inc., New York, N. Y. Dyestuffs of the triarylmethane series. 2,003,407; June 4.

Waldron, John, Corporation. (See Willis, Charles C., assignor.)

Waldron, John, Corporation. (See Burt, John S., assignor.)

Walgreen Co. (See Johnston, Merriott T., assignor.)

Walker, Robert C., Scarsdale, assignor to Remington Rand Inc., Buffalo, N. Y. Book stack. 2,003,670; June 4.

Walker, Robert C., Scarsdale, assignor to Remington Rand Inc., Buffalo, N. Y. Book stack construction. 2,003,671; June 4.

Walker, William R., Roxboro, N. C. Method and apparatus for operating in a spinning or other room. 2,003,911; June 4.

Wallace, Henry A., Secretry of Agriculture. (See Glaves, Archie H., assignor.)

Wallene, Frank O., Lakewood, Ohio. Fuel control system. 2,003,985; June 4.

Walters, Henry, et al. (See Esterling, William M., assignor.)

Walters, Mary P., et al. (See Esterling, William M., assignor.)

Walton, Lean H. (See Meek, Jessie W., assignor.)

Ward Leonard Electric Company. (See Logan, Frank G., assignor.)

Warg, Charles A., Scranton, assignor to McClave-Brooks Company, Scranton, Pa. Dumping grate. 2,003,729; June 4.

Wark, Robert E., Trustee. (See Thorpe, William C., assignor.)

Warner, Thomas H., Union City, N. J., assignor to Metal Alloys, Inc., Wilmington, Del. Alloy. 2,003,524; June 4.

Warren Elevator Mfg. Company, The. (See Brown, Alfred T., assignor.)

Warren, Thomas S. (See Bacon, J. W., and Warren.)
Watson, Edward F., Larchmont, N. Y., assignor to American Telephone and Telegraph Company. Telegraph system. 2,003,325; June 4.
Watson, John P., Westminster, London, assignor to Vickers-Armstrongs Limited, London, England. Anti-aircraft gun fire control apparatus. 2,004,067; July 4.
Weaver, Ira A., A. R. Squyer, and E. K. Hall, Springfield, Ill., assignors to Weaver Manufacturing Company, Springfield, Ill. Wheel testing apparatus. 2,003,912; June 4.
Weaver Manufacturing Company. (See Weaver, I. A., Squyer, and Hall, assignors.)
Webb, Christopher F. (See Black, H. D., and Webb.)
Webb, Irving F. (See Peets, W. J., and Webb.)
Weidenhoff, Joseph, Inc. (See Sabailus, Erwin, assignor.)
Weihe, Adolf, assignor to Deutsche Celluloid-Fabrik, Eilenburg-in-Sachsen, Germany. Cellulose esters of partly esterified polybasic acids. 2,003,408; June 4.
Weis, John P., assignor to Metropolitan Sewing Machine Corporation, Nyack, N. Y. Sewing machine for stitching multiple seams. 2,003,672; June 4.
Weisbach, Rudolph, Los Angeles, Calif. Bottle closure. 2,003,873; June 4.
Weinberger, Julius, New York, N. Y., assignor to Radio Corporation of America. Radio frequency distribution system. 2,003,962; June 4.
Welch, Carl B., Attapulgus, Ga. Piston and ring. 2,003,764; June 4.
Wellman, Charles P., Medford, Mass. Container. 2,003,326; June 4.
